EASTER FOOTWEAR

The New REGAL*f*ORM Last Insures the Only Custom Fit Found in Ready-to-Wear Shoes

Sign of ye REGAL

Regal Shoes are now being made on the new REGAL*f*ORM Last, invented and owned exclusively by us. When a Regal Shoe made on this Last is finished, the REGAL*f*ORM Last is withdrawn *in sections*, first part A, then part B. The great advantage of this REGAL*f*ORM Last is that it enables Regal Shoes to be shaped in perfect proportion at the instep or "waist," duplicating the snugness found heretofore only in the highest-priced custom shoes. All other ready-to-wear shoes are built on old-style lasts, large enough at the "waist" to allow the broad part of the last to be withdrawn. That is why they are so apt to wrinkle over the instep and under the arch, and to allow the foot to slide forward.

Regal *quarter-sizes* have given thousands of people the only perfect fit they ever obtained in ready-to-wear shoes. Remember that Regal quarter-sizes offer you *double* the usual number of fittings.

REGAL SHOES

FOR MEN AND WOMEN

252 Smart Regal Styles for Spring

These Spring styles are, as always, exact reproductions of the most approved custom models. The perfect fit and comfort of Regal quarter-sizes, together with custom style and quality, make Regal Shoes the greatest shoe values in the world. Regal Shoes are sold directly from the Regal factories to *you*, with all intermediate profits eliminated.

$3.50 $4.00 and $5.00

TRUAX $4.00

(Delivered, Prepaid, $4.25)

Style M 7261—(As illustrated) Oxford, Blucher-cut. Made of Black King Calf.

Style M 8668—Same, except made of Russet King Calf.

Spring and Summer Style Book Illustrates the correct models for both men and women. It's an acknowledged authority on styles. Magazine size. Handsome cover in colors. Free on request.

If you don't live near one of the 624 Regal Stores and Agencies, order from the Regal Mail Order Department. If the shoes are not exactly as ordered, we will cheerfully exchange them, or refund your money if desired.

REGAL SHOE CO., Mail Order Dept. 707 Summer St., BOSTON, MASS.

MAIL ORDER SUB-STATIONS: { Factory, Whitman, Mass., Box 707. San Francisco, Cal., Phelan Building. London, Eng., 97 Cheapside, cor. Lawrence Lane, E. C.

ONLY IN REGALS do you get, in addition to the usual half and full sizes, the *quarter-sizes in between*

1/4 SIZES

Copyright 1909 by Hart Schaffner & Marx

Before we made clothes as they ought to be made, and illustrated them artistically in advertising, as they really look, on living active human beings, ready-made clothes were usually worn with an apology.

Today the best dressed men wear our clothes, and are proud of it; the standards of taste in dress are high; the standards of the clothing business are high; men demand quality, style, tailoring; and get them.

Our work as clothes-makers and advertisers has been, we think the most powerful influence in producing this great change; and the merits of the goods have been the real force in it.

We send our Style Book to any address for six cents.

A Brush That Sheds Bristles Is Worse Than None

Did You Ever Do This?

Ever stop to pick loose bristles out of your brush when in the midst of a job of varnishing or refinishing?

No one can do smooth work with such a brush, no matter how good the paint, varnish, or enamel.

The all-round good brush for all sorts of home finishing that is *guaranteed* never to lose a bristle from its setting is the

1 in., 20 cents
1½ in., 30 cents
2 in., 40 cents
2½ in., 50 cents
3 in., 60 cents
Entire Set, $1 85

The bristles of Rubberset Home Brushes are held in a solid bed of hard, vulcanized rubber. They may be cleaned as often as you please with turpentine, benzine, ammonia, alcohol, or the strongest cleaners, without affecting them in the least, and can be used over and over for a lifetime.

In quality, Rubberset Home Brushes are perfect. Long, selected China bristles, full of life and spring—tapered uniformly to a chisel edge.

They hold more paint, varnish or enamel than ordinary kinds and lay it on more smoothly. All sizes for all purposes, from gilding a picture frame to painting a floor.

For sale at all hardware, department and paint stores. If your dealer can't supply you, send us his name.

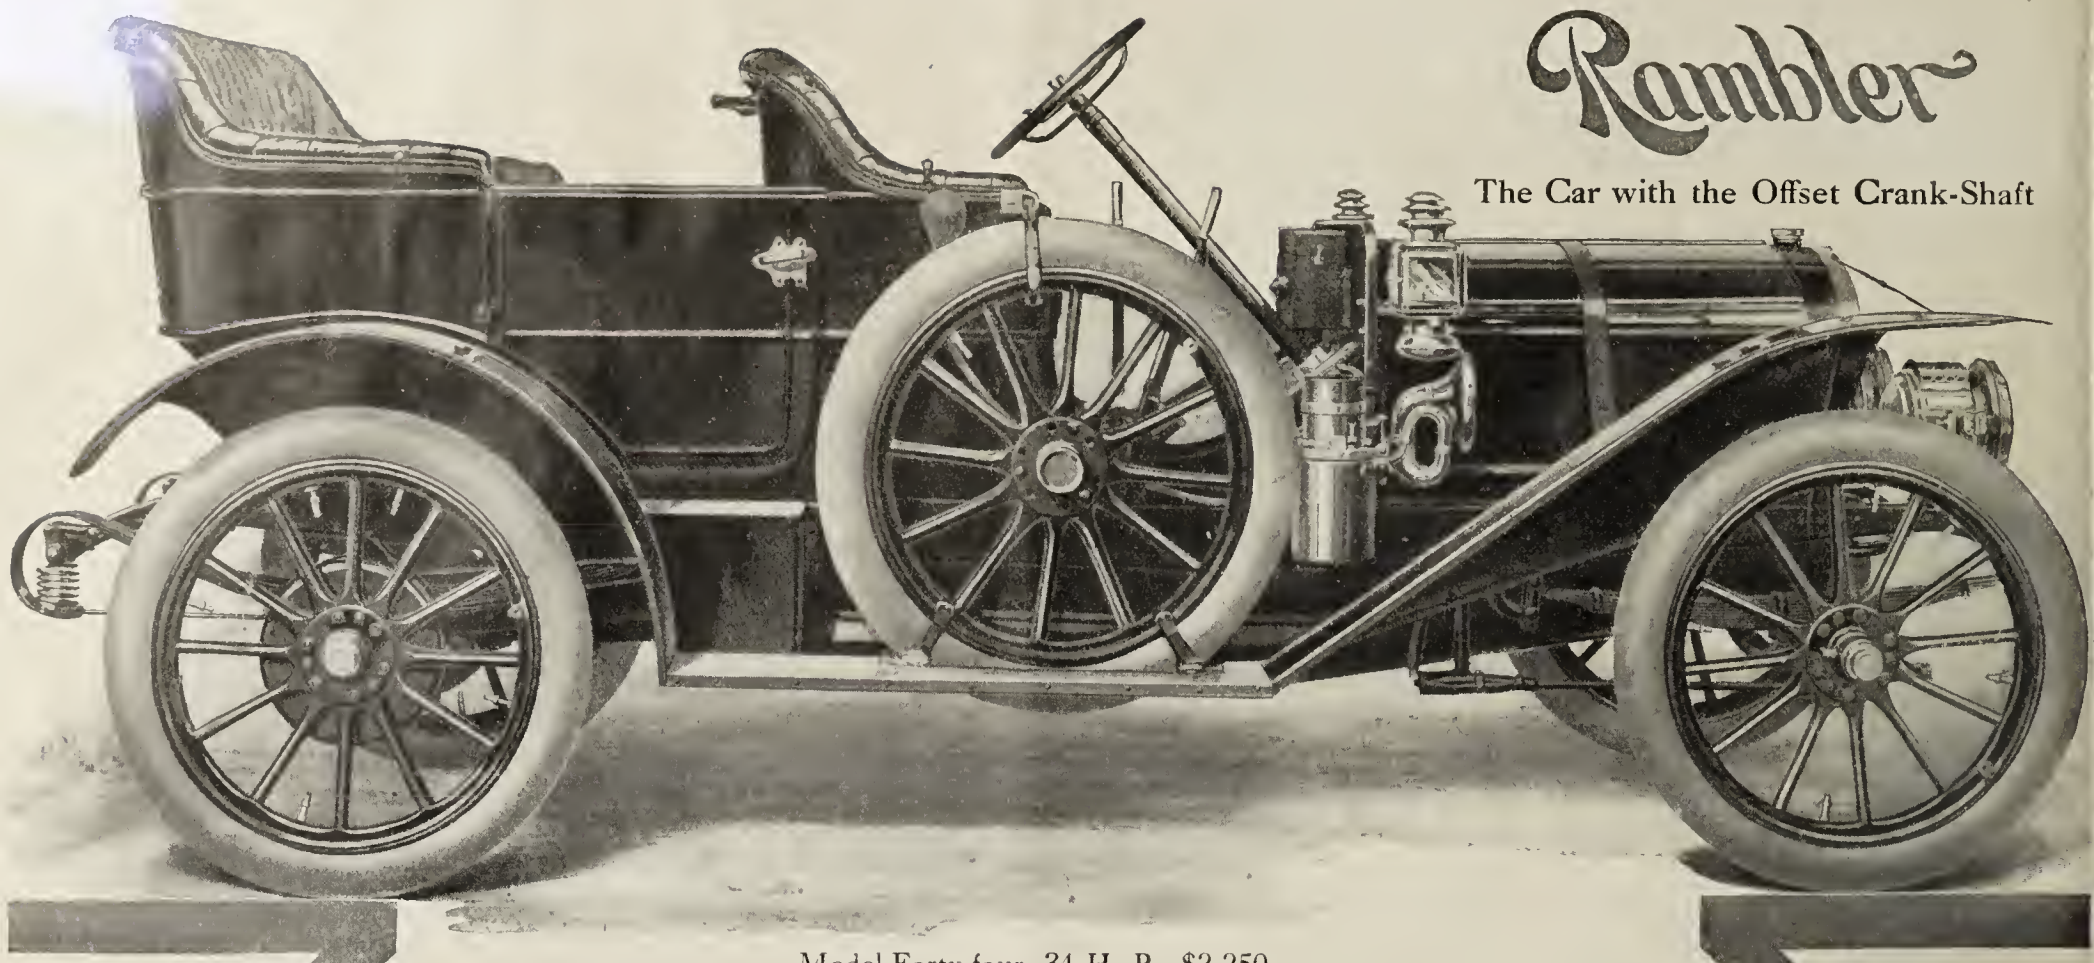
Buy A *Guaranteed* LEATHER BELT



You can't afford to buy unreliable belting that nobody backs up—
Reliance belting is guaranteed and if it *should* go wrong we make it right—
We can afford to guarantee it because we spare no pains or expense in the making—
We cut it from the choicest center stock of No. 1 Packer hides—no shoulders or belly—oak tanned by the long process.
Skilled hand labor and the most improved machinery combine to turn out a flawless product. For instance, currying, cutting and selecting—all particular work—is done by experts *by hand.*
Scarfing, feather edging, joining are done by modern machines that work with infinitely greater exactness than the most practiced band.
But that's only a single one of many points that go to make the name
RELIANCE
mean so much on a belt. We can't tell you all the others here, but write us and we'll go into details and advise you what size and ply belt will do your work most effectively.
We also manufacture four other brands that are equally as good as Reliance for specific purposes.
Don't experiment with belts. No mill man or manufacturer can afford to. It means fearful loss before you get through. Specify Reliance—the guaranteed belt—and save needless expense and trouble.
Write for book today and learn more about Reliance superiority.
Chicago Belting Co., 16 South Green St., Chicago

Rambler

The Car with the Offset Crank-Shaft

Model Forty-four, 34 H. P., $2,250.
Spare Wheel, with Inflated Tire, Brackets, and Tools, $74. Magneto, $150.

THE CALL OF THE OPEN ROAD

For the most part we do not travel in our leisure hours to go anywhere, but just to go. The delightful thing is to move; to feel the familiar things slipping away behind us, and to enjoy the open road as it unfolds before us.

We like the stir and speed of the journey, the fresh breeze in our faces, and at the wheel of a Rambler you enjoy the added sense of power and control. Besides, you have a feeling of confidence and satisfaction in driving a car of such unusual quality.

The Rambler Offset Crank-Shaft makes this car silently powerful—capable of running at forty or three miles an hour on high speed, and climbing any hill with gratifying ease.

The Rambler Spare Wheel obviates all tire worries—makes punctures mere incidents of a trip—saves the tiresome task of pumping up the new tire, and can be substituted for regular wheel within three minutes' time.

May we send you the new Rambler catalog or a copy of the Rambler Magazine, a monthly publication for owners? Rambler automobiles, $1,150 to $2,500.

PUBLICATION LIBRARY,

The Theater Trust

ABE ERLANGER has drawn his tomahawk. He seeks the scalp of FAVERSHAM. Will he add this trophy to his collection? He will not.

Ignorant and brutal, this rough egotist rules the syndicate which rules our stage. With no success but money, no eloquence but profanity, he has, nevertheless, been able to beat the other managers into subordinates. Long has been the jealousy between him and CHARLES FROHMAN. In sheer power to-day, ERLANGER has FROHMAN distanced. KLAW, NIXON, ZIMMERMANN, DANIEL FROHMAN, even HAYMAN, more and more become his puppets. If, as he looks into the future, ERLANGER fears the end of his despotism from any man, that man is LEE SHUBERT.

By the number of theaters which he controlled, ERLANGER built the first stages of his power. Actors, playwrights, managers, must bow to him, pay his terms, meet his tastes, or most towns were closed to them. CHARLES FROHMAN then was the principal producer. As he furnished the new plays, his power perhaps was greatest. Latterly, however, ERLANGER has been an increasing producer of tawdry shows, and with this double weapon he has driven FROHMAN from his throne. He speaks scornfully of FROHMAN to-day; snaps his fingers at him, as at all mankind. ERLANGER is as ruthless as he is coarse, as persistent as he is ill-bred. If he dons for a moment the raiment of respectability, then indeed the angels weep. He spoke latterly, with austerity and sternness, of impropriety on the stage, thundering that he would stamp out all tainted shows. What these mortals be! ABRAHAM ERLANGER was the real producer of "The Soul Kiss," the stupid pandering to crass licentiousness which bears the Ziegfeld label. Lumbering hypocrisy, therefore, must be added to his stock of qualities, high among which are vanity and boorishness and cruelty. In no haste are these words written. The American drama and its vicissitudes we have followed with affection since before the syndicate was established. We have watched the influence of this group of men; seen what a blight is their monopoly; and of the whole unlovely group ERLANGER it is who lies farthest outside the pale of sympathy.

The Faversham case has not until now been made public; let us hope that before summer every theatergoer may understand it. Even on ERLANGER'S list there are few performances in which the elements of irrational oppression stand so neatly forth. What had this man against FAVERSHAM? Nothing. No "rake-off" had been refused. There was no personal hostility. The actor had never been identified with rebellion. He had even been booked by the syndicate in such a way as to injure WARFIELD (and incidentally himself)—one of the pet trust methods of fighting rivals—and even then there had been no falling-out. This season he was informed, from a clear sky, that KLAW & ERLANGER would no longer book his plays. The exquisite reason far surpassed Sir Andrew Aguecheek. FAVERSHAM, in his starring venture, had borrowed money from a man named ISMAN. Afterward ERLANGER and ISMAN came into some sort of conflict, in an outside matter, wholly unrelated to FAVERSHAM or his productions. Therefore, to punish ISMAN, ERLANGER undertook to break FAVERSHAM. He not only refused to book him. He forbade local theaters to book him through the SHUBERTS. FAVERSHAM might, perhaps, have sued ERLANGER at once for the loss inflicted upon him, but he has gone ahead, making as profitable a season as possible, and he or the SHUBERTS may bring suit later, when the damage can be more exactly estimated. The outcome of the fight depends largely upon the power and courage of the SHUBERTS, who have undertaken to book FAVERSHAM in spite of ERLANGER'S decree. The czar went beyond his customary length. Usually his spoken word is sufficient, and it is more difficult to prove. He seems to us to have been incautious in sending out letters to the owners of theaters, warning them not to book FAVERSHAM. The outcome depends, in part, also on the courage of local managers, and they are more inclined to declare their independence than they have been for years. ERLANGER is consistently hated, especially since he has towered more and more arrogantly, arbiter and bully in an art which supplies pleasure to eighty millions of people. If GEORGE W. WICKERSHAM wishes to make himself a popular hero, behold an opportunity, made to his hand.

Why are the SHUBERTS a menace to ERLANGER'S authority? They have been expanding rapidly as producers; more important, they are quietly extending their control of a number of theaters so widely as to promise them immunity from ERLANGER'S domination. They already manage DE WOLF HOPPER, LEW FIELDS, "Girls," MAXINE ELLIOTT, "The Wolf," JOHN MASON, Madame NAZIMOVA, LULU GLASER, "The Mimic World," MARY MANNERING, "The Road to Yesterday," SAM BERNARD, JULIA MARLOWE, E. H. SOTHERN, LOUISE GUNNING, EDDIE FOY, JAMES T. POWERS, BERTHA GALLAND, and other well-known plays and actors. In securing control of theaters they are working so quietly that nobody knows exactly what progress they are making, but in theatrical circles it is generally believed that they will soon defy the trust entirely. In New York City they control the following: The Lyric, Maxine Elliott's, Daly's, the Casino, the Herald Square, the Majestic, the Hippodrome, the West End, the Yorkville, the Plaza, the Metropolis, and the Brooklyn Grand Opera House. In Philadelphia the Lyric and Adelphi, in Chicago the Garrick, in Washington the Belasco, in Pittsburg the Duquesne, in St. Louis the Garrick, in Cincinnati the Lyric, in Boston the Majestic and New Lyric. They have their theaters in Kansas City, Milwaukee, Buffalo, Providence, New Haven, Rochester, Syracuse, Utica, Toronto, Cleveland, Albany, and many other important towns. Already have the SHUBERTS demonstrated their strength by whipping the syndicate on a main issue between them: namely, they are able to own and conduct theaters in the principal cities and still to play those houses for which the syndicate acts as agent. If they fight this Faversham case out fully, the SHUBERTS will certainly prove themselves too strong to be made a catspaw for ERLANGER.

The advantage to the public, the dramatist, and the actor of having two booking routes can scarcely be overstated. Of course there ought to be more, but between one and two lies all the difference between slavery and freedom. Even when the power of the syndicate was most severe, a few managers held out. Such were the men who control the local theaters at Binghamton, New York, and Williamsport, Pennsylvania; but, as may be guessed from illustrations of such modesty, a rare bird has been the local manager who, in defying the trust, has managed his house to suit himself. With the central power divided between the syndicate and the SHUBERTS, the local managers will take heart and open their theaters to plays in which they themselves have confidence. It will no longer be possible for Mr. ERLANGER to decide alone whether dramas like STEPHEN PHILLIPS'S "Herod" shall be produced; whether a play which New York did not happen to accept shall be refused a hearing on the road. No longer will the payment of an excessive "rake-off" to ERLANGER be the test of fitness to survive. No longer will it be possible to smother an actor-manager, or other individual producer, because one set of stupid autocrats find his play beyond their comprehension. The playgoing public of the United States will not have its rights until there is freedom in the theater. Imagine a situation by which no book could be published unless it pleased one man, and he ignorant of literature; no picture could be sold unless it pleased a certain creature who hated SARGENT and had never heard of REMBRANDT; no music could be heard unless it pleased a clown whose appreciation of ragtime equaled his contempt for MOZART. Such has been the situation in our theaters. The growing Shubert power promises a change. Despotism so bizarre as ERLANGER is now inflicting should hasten the day of freedom, by arousing comprehension, interest, and resentment in every city of the United States. Some trusts are supposed to be beneficent, others malign. Good and evil in this world are inextricably mixed up, but a microscope would be needed to discover benefits accruing to America from the grinding monopoly of the theater syndicate. Its disastrous effects on the drama and dramatists are unremitting and extreme. Either by law or by competition we should find for it a grave, where it can repose forever, unwept, unhonored, and [illegible]

Marines

SECRETARY MEYER, in asking Mr. WICKERSHAM for an opinion about the legality of the action of Congress in reference to marines, brought forward an interesting aspect of that unworthy procedure. The President is Commander-in-Chief of the army and navy. He issued his order about the marines in response to the overwhelming desire of naval officers. Foreign experience, as well as the experience of our own commanders, argued strongly for the change. What does Congress say? "To the devil with efficiency and discipline. Let us talk about jobs." Therefore it makes its appropriation for naval expenses dependent on the restoration of the marines to their former positions. We rather regretted that Mr. ROOSEVELT did not treat this outrageous bit of log-rolling as he did the attempted census grab, and send in a veto that would have helped the country to understand what Congress was about.

Swimmer and Diver

TO SEE ANNETTE KELLERMAN is to increase one's faith in the human form divine. Unaided by corsets and high heels, in trustful reliance on daily exercise, clean cold water, and all the open air that a busy life will permit, she has made herself into the likeness of Greek sculpture—the long flowing lines, the strength and definiteness of outline, the touch of austerity that clothes in chastity those ladies of the marble past. She has become this creature of vigor and beauty by ardent and unbroken pursuit of the noble art of swimming. The posters call Miss KELLERMAN "the Diving Venus." Now, there is distinct evidence that Venus emerged from the unplumbed salt, but there lives no record that the Lady Aphrodite ever cut the sounding furrows with a "dolphin plunge," as Miss KELLERMAN's little herald at the right wing labels one of her stirring "numbers." She dives twelve times for the audience—twelve kinds of dive—each with the perfect posture attained just at the instant of touching the water. The curve of her descent would make the lasting fame of the draftsman who could catch it. All lovers of the water, all lovers of the beautiful, should see this refreshing young woman playing around like a nymph or Rhine-maiden in the younger days of creation.

About Loan Sharks

TWO STATEMENTS are made with frequency by harassed lenders of money to low-salaried men and needy housekeepers. These answers summarize the "loan shark's" defense:

Ten per cent a month is the usual charge for money.

Ten per cent a month is as low a rate as the sharks can charge and continue to do business.

Now, compare these statements with the following statistics:

The average capital invested in a loan office is somewhere between $5,000 and $10,000.

A typical loan office will show a profit of from $5,000 to $10,000 a year.

If some clear thinker among the men engaged in the business will reconcile these figures, he will cast light into dark places. Our present opinion, based on a long investigation, is that the business, as now conducted by D. H. TOLMAN, CHARLES E. STRATTON, S. J. MASTERS, JOHN MULHOLLAND, and their many rivals and imitators, is about all that it ought not to be. The poor man often has need to borrow. We ought to be able to arrange methods by which he can escape being skinned by the usurers. In some early issues we shall give details. Meanwhile our ears are attentive to all who wish to prove that the shark should earn one hundred per cent a year on his investment.

Statesmen

THIS IS FROM THE CONGRESSIONAL RECORD of February 17 last:

"MR. TILLMAN [speaking on the question of appropriations for the navy, and referring to the policy of the Senate not to inquire too closely into the appropriations for reclamation of public lands and other Western projects]— . . . It comes with a bad grace from men on that side who have been getting their share of chicks and eggs from the national Government to get up and captiously criticize the rest of us who are only doing the same thing.

"MR. HALE—Mr. President, we have, in the reclamation work, done precisely what the Senator is opposing in the naval bill. We have been leaving the reclamation matter almost entirely to the Western Senators, *and we have stood by them every time.*

"MR. TILLMAN—And Indian matters and public-land matters are also left to those Senators.

"MR. HALE—Almost entirely.

"MR. GALLINGER—And we all vote for the bills.

"MR. HALE—And we all vote for them."

Does Senatorial courtesy extend to deliberate ignorance of what other Senators are doing with the public funds? Is it division and silence? The excuse of the director of the looted bank is always that he didn't know.

Fun

HELD UNDER COLD WATER by some of his witty and spirited fellow students at the Oregon State University at Eugene last December, RALPH BRISTOL, aged twenty-one, at length ceased to struggle. He has since lost his reason. The facts have just leaked out. BRISTOL had violated some rule of the students, and the cold-water douche was his punishment. If the prosecuting officer of that county will effectively prosecute the culprits it may not return BRISTOL's reason nor appease the misery of his parents, but it may save some other youth.

The Modern Slavers

"THE PITTSBURG SURVEY" is rounding up its study, so accurate and thorough, into the conditions of life and labor of the wage-earners of the American steel district. The prosperous city, throbbing with energy, fecund in natural resources, with a colossal bank balance, is put upon the witness-stand and heckled in a searching cross-examination. Our only stricture on the patient and sure work of the investigators, the sum total of whose voluminous findings will be permanently valuable, is the dull presentation of the material. Many of the articles are so many cross-sections of tedium, unlighted by style or narrative skill. To that extent they will prove ineffectual, as their main driving force is entirely dependent on the arousal of public opinion. There is incorporated in the findings, however, an effectual summing-up, as may be seen by extracts:

"An altogether incredible amount of overwork by everybody, reaching its extreme in the twelve-hour shift for seven days in the week in the steel mills and the railway switchyards."

Criticism of these conditions in relation to charitable and educational gloss is thus vigorously put:

"Certainly no community before, in America or Europe, has ever had such a surplus, and never before has a great community applied what it had so meagerly to the rational purposes of human life. Not by gifts of libraries, galleries, technical schools, and parks, but by the cessation of toil one day in seven and sixteen hours in the twenty-four, by the increase of wages, by the sparing of lives, by the prevention of accidents, and by raising the standards of domestic life, should the surplus come back to the people of the community in which it is created."

And here is something which hits hard, and which no sympathetic or just American can ignore:

"The unadorned fact remains that in our most highly developed industrial community, where the two greatest individual fortunes in history have been made, and where the foundations of the two most powerful business corporations have been laid, the mass of the workers in the master industry are driven as large numbers of laborers, whether slave or free, have scarcely before in human history been driven."

"The Pittsburg Survey" is no superficial comment. It dives deep into the lives of common men. The facts which it presents are there for us all to reckon with.

Classification

A RESTAURANT lists among its phonographic allurements the following:

"CARUSO, Grand Opera, and Music."

Some, whose taste is confined to symphonic and chamber music, will be pleased. The announcement deserves a place beside that lunch-counter legend which read: "Sandwiches and Food."

Censorship

WHY PLAGIARIZE foreign absurdities? The English censor has ever been a cause of discouragement among the educated, yet there is heard occasionally a suggestion that we should introduce a similar creature in this country. The Briton has recently forbidden a burlesque on DU MAURIER'S "An Englishman's Home." He is continuously occupied in drawing pencil-marks about single phrases and words in serious drama which do not please his taste. In our Land of Freedom clamor is raised not against light-hearted salubrity, from cheap variety up to "The Merry Widow," but against serious thought, such as caused the outcry against "Mrs. Warren's Profession." Likewise, in England, what frightens the censor is not gay abandonment, however vulgar, but the attempt to give frank consideration to topics of importance. The first duty of a censor is to complain of honesty and originality. Who was it that said England was governed by the Dull, who had never had more than one great idea—to call themselves the Respectable?

English Traits

DON'T TAKE THAT SENTENCE about Dulness and Respectability as our own opinion. Look at the Suffragettes. Englishwomen have been long marveled at by Americans and by visitors from the Continent for their meekness under masculine domination. The English distaste for illegalities, disorder, the spectacular, are things accepted. EMERSON talked about the languid Oxford gentlemen who thought that nothing was new, nothing was true, and nothing mattered, and he merely summarized remarks made by CHAUCER on Oxonians some centuries earlier. Now come these ladies from the several classes that are the very strongholds of these same traditions, and fight and suffer and stand fast for their convictions after a fashion that is at least recognizably English in its tenacity. There are traits deep and traits superficial in a nation's make-up, and nowhere are the things on the surface less a clue to what is at the core than in England. The English worship the practical, the regular, the accepted; but it is not for its practicality they cherish the memory of the charge of the Light Brigade; it is not for his red-tape regularity that NELSON'S name is worshiped, and from Magna Charta to old-age pensions radical innovations have continuously starred their political history.

The Fight Against Cannonism

The Twelve Men Who Voted Against Cannon, and the Thirty-one Who Defeated the Old Rules

By MARK SULLIVAN

THE organization of the Lower House of Congress revealed two groups of courageous men. The first consists of twelve Republicans. They have opposed CANNON for two years or more, and they carried that opposition through the caucus of their party, which, in spite of the known feeling of the country, nominated CANNON for Speaker. These twelve Republicans voted against CANNON on the floor of the House. Their districts are given, as well as the counties and towns which compose their districts, because the loyal backing of their constituents is as much entitled to recognition as the personal courage of the members. The counties named in this list have better reason to be proud of their Representatives than any other constituencies.

Republican Congressmen Who Voted Against Cannon

VICTOR MURDOCK of Wichita, member for the Eighth District of Kansas, made up of the counties of Butler, Harvey, McPherson, Sedgwick, and Sumner.

HENRY ALLEN COOPER of Racine, member for the First District of Wisconsin, made up of the counties of Green, Kenosha, Lafayette, Racine, Rock, and Walworth.

IRVINE L. LENROOT of Superior, member for the Eleventh District of Wisconsin, made up of the counties of Barron, Bayfield, Burnett, Chippewa, Douglas, Dunn, Pierce, Polk, Rusk, St. Croix, Sawyer, and Washburn.

ELMER ADDISON MORSE of Antigo, member for the Tenth District of Wisconsin, made up of the counties of Ashland, Florence, Forest, Iron, Langlade, Lincoln, Marathon, Oneida, Price, Shawano, Taylor, Vilas, and Wood.

ARTHUR W. KOPP of Plattville, member for the Third District of Wisconsin, made up of the counties of Crawford, Grant, Iowa, Juneau, Richland, Sauk, and Vernon.

JOHN MANDT NELSON of Madison, member for the Second District of Wisconsin, made up of the counties of Adams, Columbia, Dane, Green Lake, Jefferson, and Marquette.

WILLIAM JOSEPH CARY of Milwaukee, member for the Fourth District of Wisconsin, made up of several wards of Milwaukee and the towns of South Milwaukee, Wauwatosa, Franklin, Greenfield, Lake, Oak Creek, Cudahy, and West Allis.

ELBERT HAMILTON HUBBARD of Sioux City, member for the Eleventh District of Iowa, made up of the counties of Buena Vista, Cherokee, Clay, Dickinson, Lyon, Ida, Monona, O'Brien, Osceola, Plymouth, Sac, Sioux, and Woodbury.

CHARLES RUSSELL DAVIS of St. Peter, member for the Third District of Minnesota, made up of the counties of Carver, Dakota, Goodhue, Lesueur, McLeod, Nicollet, Rice, Scott, and Sibley.

CHARLES A. LINDBERGH of Little Falls, member for the Sixth District of Minnesota, made up of the counties of Benton, Cass, Crowwing, Douglas, Hubbard, Meeker, Morrison, Sherburne, Stearns, Todd, Wadena, and Wright.

EDMUND HOWARD HINSHAW of Fairbury, member for the Fourth District of Nebraska, made up of the counties of Butler, Fillmore, Gage, Hamilton, Jefferson, Polk, Saline, Saunders, Seward, Thayer, and York.

MILES POINDEXTER of Spokane, Representative at large from the State of Washington.

These men who voted against CANNON have, for the present, on this issue, only the satisfaction of having stood by their convictions. CANNON was elected Speaker; but on the motion to adopt the old rules which gave CANNON most of his power, CANNON and the Cannon organization lost.

Republicans Who Voted Against the Old Cannon Rules

Thirty-one Republicans voted against the old rules and were the means of defeating them. These thirty-one include the twelve above named, who also voted against CANNON, and, in addition, the following:

MOSES P. KINKAID of O'Neill, member for the Sixth District of Nebraska, composed of the counties of Banner, Blaine, Boxbutte, Boyd, Brown, Buffalo, Cherry, Cheyenne, Custer, Dawes, Dawson, Dueul, Garfield, Grant, Greeley, Holt, Hooker, Howard, Keith, Keyapaha, Kimball, Lincoln, Logan, Loup, McPherson, Rock, Scotts Bluff, Sheridan, Sherman, Sioux, Thomas, Valley, and Wheeler.

GEORGE WILLIAM NORRIS of McCook, member for the Fifth District of Nebraska, composed of the counties of Adams, Chase, Clay, Dundy, Franklin, Frontier, Furnas, Gosper, Hall, Harlan, Hayes, Hitchcock, Kearney, Nuckolls, Perkins, Phelps, Redwillow, and Webster.

JAMES H. DAVIDSON of Oshkosh, member for the Eighth District of Wisconsin, made up of the counties of Calumet, Manitowoc, Portage, Waupaca, Waushara, and Winnebago.

EDMOND H. MADISON of Dodge City, member for the Seventh District of Kansas, made up of the counties of Barber, Barton, Clark, Comanche, Edwards, Finney, Ford, Grant, Gray, Greeley, Hamilton, Harper, Haskell, Hodgeman, Kearney, Kingman, Kiowa, Lane, Meade, Morton, Ness, Pawnee, Pratt, Reno, Rice, Rush, Scott, Seward, Stafford, Stanton, Stevens, and Wichita.

GUSTAV KÜSTERMANN of Green Bay, member for the Ninth District of Wisconsin, made up of the counties of Brown, Door, Kewaunee, Marinette, Oconto, and Outagamie.

CHARLES N. FOWLER of Elizabeth, member for the Fifth District of New Jersey, made up of the counties of Morris, Union, and Warren.

AUGUSTUS P. GARDNER of Hamilton, member for the Sixth District of Massachusetts, made up of the cities of Beverly, Gloucester, Haverhill, Newburyport, and Salem, and towns of Amesbury, Boxford, Danvers, Essex, Georgetown, Groveland, Hamilton, Ipswich, Manchester, Marblehead, Merrimac, Middleton, Newbury, Peabody, Rockport, Rowley, Salisbury, Swampscott, Topsfield, Wenham, and West Newbury.

ANDREW J. VOLSTEAD of Granite Falls, member for the Seventh District of Minnesota, made up of the counties of Bigstone, Chippewa, Grant, Kaudiyohi, Lac qui Parle, Lincoln, Lyon, Pope, Redwood, Renville, Stevens, Swift, Traverse, and Yellow Medicine.

ASLE J. GRONNA of Lakota, member at large from North Dakota.

EVERIS ANSON HAYES of San Jose, member for the Fifth District of California, made up of the counties of San Mateo and Santa Clara and part of San Francisco.

CHARLES E. PICKETT of Waterloo, member for the Third District of Iowa, made up of the counties of Black Hawk, Bremer, Buchanan, Butler, Delaware, Dubuque, Franklin, Hardin, and Wright.

FRANK P. WOODS of Estherville, member for the Tenth District of Iowa, made up of the counties of Boone, Calhoun, Carroll, Crawford, Emmet, Greene, Hamilton, Hancock, Humboldt, Kossuth, Palo Alto, Pocahontas, Webster, and Winnebago.

GILBERT N. HAUGEN of Northwood, member for the Fourth District of Iowa, made up of the counties of Allamakee, Cerro Gordo, Chickasaw, Clayton, Fayette, Floyd, Howard, Mitchell, Winneshiek, and Worth.

N. E. KENDALL of Albia, member for the Sixth District of Iowa, made up of the counties of Davis, Jasper, Keokuk, Mahaska, Monroe, Poweshiek, and Wapello.

WILLIAM C. LOVERING of Taunton, member for the Fourteenth District of Massachusetts, made up of the county of Barnstable, the cities of Taunton and Brockton, and the towns of Attleboro, Easton, Mansfield, Norton, Raynham, Cohasset, Abington, Bridgewater, Carver, Duxbury, East Bridgewater, Halifax, Hanover, Hanson, Hingham, Hull, Kingston, Lakeville, Marshfield, Middleboro, Norwell, Pembroke, Plymouth, Plympton, Rockland, Scituate, Wareham, West Bridgewater, and Whitman.

JAMES W. GOOD of Cedar Rapids, member for the Fifth District of Iowa, made up of the counties of Benton, Cedar, Grundy, Jones, Linn, Marshall, and Tama.

DAVID A. HOLLINGSWORTH of the Sixteenth District of Ohio, ADNA R. JOHNSON of the Tenth District of Ohio, and HALVOR STEENERSON of the Ninth District of Minnesota are also entitled to credit for having voted with the insurgents against the old rules. After staying with the insurgents for several votes, they finally left to vote with the majority for a compromise. ESCH of Wisconsin would have voted with the insurgents, but was unavoidably absent.

These men won a substantial victory. The cartoon which appeared on this page two weeks ago, showing a Congressman in CANNON'S private office asking permission to call up his bill, will never again be possible. No man with a proper purpose need ever go to CANNON'S private chambers again. The members who have always considered these visits degrading can now perform the functions of their office as they could not before. The men named on this page won this victory by choosing the harder path for themselves. For the cost they paid, and must continue to pay so long as CANNON and his machine have power to visit resentment upon them, they should be compensated by the gratitude of the country. A good deal more than a normal proportion of them come from Wisconsin, Nebraska, Minnesota, and Iowa; more than a normal proportion are of Scandinavian origin; more than a normal proportion got part of their education at the University of Wisconsin.

Part of the Victory Lost Through Cannon Democrats

A share of the victory won by the insurgents was lost through a handful of Cannon Democrats. By the votes of these men, CANNON was able to retain for himself the important power of appointing all the committees. The chief result of this is the opportunity it gives him to visit resentment upon the insurgent Republicans by denying them the committee appointments to which their ability entitles them.

Does This Come from a Chastened Heart?

From Uncle JOE'S speech of acceptance after he was elected Speaker:

"We must subordinate personal feelings to the general good."

Let us hope so.

The Other Republicans

If your Representative is a Republican and is not among those whose names appear on this page, he voted for CANNON and also for the old rules which gave CANNON his power.

Who Heard These Promises?

Any person who heard the Hon. Irrigation BILL REEDER of the Sixth Kansas District make his public promises to vote against CANNON—by virtue of which promises he crept into Congress with a majority of 277 votes—will confer an obligation upon COLLIER'S and contribute something to the sum of recorded human knowledge by sending us the exact language of the Hon. BILL'S promise.

The same as to the Hon. ALFRED B. GARNER of the Twelfth Pennsylvania District. The same as to the Hon. JOHN H. PRAY of Montana.

Now for the Tariff

From now on, public attention should be focused on the tariff. At this present special session of Congress that is the only business to be considered. Everything else must wait till next December.

Collier's

Dithyrambs and Cacomacaques

The Expansive and Lyrical Haitians—Their Dinners and Duels and Substitutes for Marriage —and the Tragedy that Underlies the Surface Drolleries of the Black Republic

By ARTHUR RUHL

Photographs by JAMES H. HARE

A typical house in Port au Prince, where fires are never needed and windows rarely closed

The palm-tree and stand known as "Altar of the Country" which is a familiar sight in every Haitian town

Logwood, one of the leading exports of Haiti, piled on the beach awaiting shipment

THE night before President Simon was elected there was a banquet at our little hotel in Port au Prince. A German concessionaire, trimming his sails for the new wind, had arranged the dinner, and the guests included one of the President's sons, two or three white merchants, and several young blacks and mulattoes who were fluttering feverishly, and it was supposed rather closely, about the new government. From the veranda, where I was reading the evening paper in which all good Haitians were urged to offer their "sterile dissensions *en holocauste à la Patrie*," I could watch the diners addressing one another with that studied and almost Parisian elegance which the Haitian so loves to assume in public, and at the same time hear the sharp "ket-voos" of the sentinels on the Champs de Mars near by, and, from somewhere out of the warm, black night the strangely thrilling beat of tom-toms at a native dance.

This palpitating "Thump! Thump-ti-tump! Thump-*ti-ti-ti-ti-ti*—tump-tump!" rising in quick syncopations on the tepid breeze until it seems almost at hand, then dying away in a low muffled throb that comes apparently from the verdure-buried depths of some mountain gorge, is one of the common voices of the night in Haiti—a constant overtone, as it were, vaguely savage, sensuous, echoing from beneath the mask of ordinary things. It struck in strangely on this conventional dinner, even as the airy demeanor of the guests contrasted with the funereal cries rising and falling over the sleeping city—those "*clameurs sinistres*," as a Haitian novelist has called them, the "*qui-vive de nos légionnaires veillant sur la dolente Haïti.*"

One dapper young negro, near the head of the table, attracted especial attention. He was determined that he should. He was constantly proposing toasts, calling out vivaciously to those at the other end of the table, and in general taking the responsibility of the affair upon himself. He had been sent abroad to study engineering and had come back with a suit of American clothes and one of those green felt hats which were so frequent along Broadway last autumn, and whenever one met him he would shake hands and bow and say: "Very-well-thank-you—and *you?*" with such explosiveness as quite to deprive one of breath or the ability to frame a reply. He was one of the young men on whom, theoretically at least, this undeveloped country ought to depend, and I could not but think of the tremendously solemn and utilitarian advice about roads, water systems, irrigation canals, and what-not a young American similarly situated would have felt it necessary to give. No speeches had been planned, but when the table was cleared he could no longer restrain himself, and, jumping to his feet, he soared into declamatory French verse. Hugo, De Musset, Lamartine—I don't know just which it was, but something with a superb "*Sur mon cœur!*" (both hands pressed over his heart as if that expansive organ were about to leap through his coat) and a "*plus clair que l'astre du soir*" twanged from a lyre dripping sighs and tears.

His exhibition fired another young man, who, jumping up and raising his glass, dashed into a toast in heroic French verse, several hundred words long, and nobody knows when this flood of temperament would have been checked had not some strong man pushed his chair back and started for the veranda. Introductions all round followed, the lyrical engineer taking charge and giving each name every possible syllable that could be attached to it: "*Monsieur le docteur* Turnbull—*Monsieur le Secrétaire d'état aux relations imaginaires*," etc., etc. The other young man, not to be outdone, soared into another dithyrambic toast "to that great human family of which we were all," etc., etc. Then we said good night all round, shook hands—then, with renewed enthusiasm, did it all over again—*Encore messieurs! Bon soir!*—until the party finally tore itself away and disappeared into the brilliant tropic night.

It is with no intention of criticizing these amiable gentlemen that I have mentioned this incident, but merely to call attention to that "expansiveness" which is so characteristic of the Haitian temperament. "It is not our fault," as one of their writers has remarked, "if we are all born poets," and in fact it might be said that every Haitian has a "*lyre aux cordes pleureuses*" under his coat which he is only waiting the chance to whip out and twang upon. All day long in Port au Prince the politicians sit in little groups in the bars and cafés, with their glasses of rum and their *cacomacaque* sticks as big almost as baseball clubs, and their solemn frock coats, and listen while one of their number recounts some tiny adventure of the hour or expounds his opinion on the "disorientation of our unhappy country," etc., etc., with a prodigality of gesture and florid phrase scarcely to be exceeded were he addressing the Chamber of Deputies. Just as the caressing murmur of French phrases enchants them even when they scarcely know what they mean, so they dress themselves up in all sorts of French veneers without considering how little there may be underneath, as the blacks of Toussaint's time threw off their backs the coffee-sacks and sugar they had carried as slaves and hopped into the uniforms of French generals. Their fondness for musical and high-sounding names borrowed from French and classical literature—Télémaque, Cicéron, Altidor, Neptune, Louis Bonaparte, Demosthenes, Voltaire, and the like—is a habit handed down doubtless from slave days when there, as in our own country, such names as Pompey and Cæsar were commonly applied to slaves. The witty and not altogether reliable Texier avers that the Haitians even borrow names from botany and chemistry, and he mentions one gentleman of the name of Oxygène—surely a perfectly good name, almost as euphonious as Eugene and scarcely more illogical than the Pearls and Rubies we have at home. And, however extraordinary may be the things done and said under the sway of this exuberance, the average Haitians never dream that they are not intimately familiar with the final points of *ton* and *tenue*, and what might be considered merely clownish and vulgar in other societies they are convinced is quite "*Tartarinesque*" and proves conclusively that they are full of "*l'esprit gaulois.*"

The "*point d'honneur*" is an exceedingly delicate thing, naturally, among such a people, and one dark gentleman must be very scrupulous about the tone of voice in which he intimates to another gentleman that he hopes they will meet again lest the second gentleman, with a curt bow, reply: "Wherever, whenever, and however you wish, Monsieur!" and send round his seconds the next morning. The first paper I picked up in Haiti, the little "Le Cable" of Cape Haitien, contained a lengthy correspondence between two gentlemen of that town whose efforts to meet each other on the field of honor had been temporarily frustrated by the failure of the jury to meet and declare which was the aggrieved party. The one who thought he had this honor concluded his remarks, however, with the request that the other "would make no retraction, in order that he might measure himself" with his opponent. And while we were in Port au Prince a returned exile sent to the "Nouvelliste" one day the following:

"M. Edmond Polynice—En Ville

"Monsieur:

"Desiring to be certain as to the meaning of the remarks you made at St. Thomas, at the home of General Albert Salnave, and of the ironical gestures which you constantly indulged in during the passage from St. Thomas to Port au Prince, it would give me infinite pleasure to know without delay whether or not you intended them to have any significance, in order that I may know what action to take.

"I salute you, Monsieur, *parfaitement.*

"O. Castor."

The signature or "*paraphe*" is another matter of grave importance to the ordinary Haitian, and he spends almost as much time over it as an architect would in designing a house. And as Haitians are constantly changing their names or adding to them by taking the name of some ancestor, the newspapers almost always contain some such notice as that "the undersigned has the honor to announce to the public and *to commerce in general* that he will no longer be known as Jean Baptiste Demosthenes Lebour Fabius, but as Fabius Lebour, signing himself, however, *tout simplement*, with the same *paraphe.*"

Count Lemonade and Other Nobles

IN THEIR day, to be sure, the Haitians have even indulged in a nobility, and when Soulouque made himself Emperor Faustin I in 1852, he created also four princes of the blood, fifty-nine dukes, and numerous marquises, counts, and barons. Among them were the Duke of Marmalade and the Count Lemonade (*Marmalade* and *Limonade* were districts in Haiti), the Prince du Sale-Trou, and the Marquis de la Seringue. Soulouque was born a slave, but he had a very vivid conviction of his nobility, once he was in power, and he is said to have leaned out of a window of his palace on at least one occasion and yelled at a Spanish diplomat who was passing below: "What does that white mean by passing by without saluting my palace!" He was finally banished, "to the great despair," as Texier puts it, of "amateurs of anecdotes," and the nobility passed away. Christophe, the second ruler of Haiti, really succeeded in cutting a pretty imposing figure as a grand monarch. It was he who built near Cape Haitien the famous Sans Souci and the citadel above it, the ruins of which may be seen from the harbor to-day.

Sans Souci was a sort of African Versailles, designed and built by Frenchmen whom Christophe imported. The citadel was on the top of an almost inaccessible mountain near by. The tradition is that thirty thousand men lost their lives during its construction. Christophe would set a certain number of days for the completion of a piece of work. If the work was not done on time he would have, it is said, one workman thrown off the top of the rock for each day exceeding the limit. The method was scarcely economical, but there were plenty of subjects, and the final result was a fortress well-nigh impregnable, except against starvation, filled with secret passages and galleries bristling with French cannon, beautifully molded and decorated as cannon were in those days. Foreigners are not allowed to visit the citadel to-day except by very special permission, but you can buy post-cards with pictures of the ruined galleries and "*le canon favori du roi*" and "*de la reine.*" Christophe never had a chance to test his Gibraltar, for his men turned on him one day and he shot himself to escape assassination.

The obvious insignia of gentility to-day are the revolver, the *cacomacaque*, and the top hat and frock coat. The *cacomacaque* cane is cut from a certain palm, light

but dense and very durable. Policemen use these canes to beat their prisoners, officers use them in place of swords, and all but those of the lowest class generally carry them. In spite of the tremendous heat a frock coat and high hat must be worn by every one who wishes to be taken *au serieux*, and of course to doctors and lawyers they are indispensable. One of the first things one notices on landing in a Haitian town is these solemn gentlemen in their insufferably hot garments, picking their way through refuse and razor-backed hogs down the middle of the narrow street. The revolver is a rather higher mark of gentility, and of course the politician never knows when he may have to use one. The delegates who boarded our steamer on their way to Port au Prince were walking arsenals. All had revolvers, some knives and *machetes*, and one deputy carried a rusty old rifle "*pour bombarder la capitale*," as the little Jesuit priest whispered, coming over to my side of the deck after he had solemnly greeted the militant statesman on the other.

The author of "Aux Pays des Généraux" estimates the Haitian army to consist of 18,000 generals and 200 men, but of course he had to live up to his title, and he may be assumed to be somewhat prejudiced. It is nevertheless almost as true that Haitians are born generals as that they are born with a tearful lyre in their hands. Some are generals before they are born. Every one is told in Port au Prince of the man who, for some political service, received a general's commission for an unborn child which, inconveniently, turned out to be a girl. A friend of mine who never saw Haiti now holds a general's commission in the Haitian army because during the regular course of his duties as reporter on a New York paper he wrote interviews with a Haitian exile which pleased the next administration.

Adventures with the Haitian Army

MOST of these warriors take themselves very seriously. While strolling about Cape Haitien the day our steamer touched there we passed the *délégué's* headquarters. The country being in a state of revolution, the place was noisy with soldiers, and at the street crossing four tiny cannon glowered down each street. The moment Mr. Hare pointed his camera at one of these miniature guns there was a great hubbub and waving of swords and *cacomacaques*, and we retired under the impression that only retreat would prevent our immediate slaughter. Even when we returned later under the wing of the American Consul the same manifestations were repeated and a score of excited warriors surrounded the guns so as to screen them from view. Mr. Hare took a picture of them, which he sent home with many others in an envelope fastened with string but not sealed. When the envelope arrived in New York the others were safe, but that particular betrayal of Haitian military secrets was gone.

Generally speaking, however, I should say that a camera was one of the most effective weapons with which to advance against a Haitian army. Many times when our position seemed to be one of imminent peril the magic picture-box acted as an open sesame before which bayonets were lowered and scowling warriors melted into delighted smiles. We touched at Gonaïves the same morning the Revolutionary Committee arrived from Port au Prince to demand the resignation of the General of Arrondissement, a curious, little monkey-like fellow, with a terrific reputation for cruelty, of the name of Rameau. Had not the United States ship *Dolphin* accompanied the Haitians and warned them that if they attacked the defenseless city they would be fired on there would doubtless have been a spirited family party. As it was, Rameau just escaped the mob and was rowed to our steamer that afternoon without having had time to put his shoes on. In the morning, however, he was still nominally supreme, and he had ordered that no one be allowed to land. Inasmuch as no state of war had been declared this seemed a trifle arbitrary, and we decided to go ashore in spite of it. Met at the wharf by an officer, we were promptly escorted to the guard-house, and as we were about to walk demurely out, sentries with bayonets suddenly blocked the way in front and in the rear, and an officer shouted: "*Attention, messieurs!*"

He started in to ask us where we were born and what we were doing, tried to get the General of Arrondissement on the telephone, but in his excitement seemed unable to make the telephone work, and all in all acted as if convinced that he had just captured important prisoners of state. A few deferential words reassured him somewhat, and when I told him that we merely wanted to take a look at his extremely interesting city he melted, and, remarking with some pride: "It isn't bad," asked if we didn't want an escort. We declined this, and it was while drifting through the streets alone that we came upon the terrific little Rameau bidding farewell to his army. Knowing his reputation and not knowing what the ceremony was about, the soldiers and the drums and screaming bugles looked formidable enough, but the instant the local Nero caught sight of the camera he took off his cap politely, struck an attitude, with one foot slightly advanced, *cacomacaque* thrust firmly into the ground and the general air of Ajax defying the lightning. And the end of it all was that we shook hands and exchanged cards with half the army, while the dreaded Rameau never saw us on the streets of Port au Prince afterward without bowing as if we were life-long friends.

Haitian family life is so curious from our point of view that some mention of it is necessary in any discussion of Haitian manners and customs, although there is no space here to give this complex subject the consideration it deserves. As is pretty generally known, marriage, as we know it, is very little practised in Haiti. Indeed, it is almost unknown outside of what is called "*la société haïtienne*," which, so educated Haitians will assure you, is "a rigorous guardian of the principles and, in certain respects, the prejudices of French education." Mothers are only solicitous that their daughters be *placé*, placed, with some reliable man, preferably a young unmarried man who will take good care of them and their children. This custom, established by long usage, seems to them quite as natural and proper as our legal and religious ceremony. Without going into the final results of such a system, it can at least be said that it bestows certain temporary mercies—natural children are received on practically the same basis as legitimate ones, and no disgrace whatever attaches to motherhood without marriage.

Another curious condition is the endlessly complicated mixture of black and white, even that of children of markedly different colors in the same family. Marriages between Europeans and Haitians have not been uncommon and many of them seem to have continued happily. An illustration of the interesting social phenomena which may result is given in the Haitian novel "Séna." I do not know the source of this particular episode, but most of the characters in the book are lifted very literally from contemporary Haitian life. In an early chapter, in describing the family of Senator Rorotte—

Pausing near Port au Prince to rest and water the locomotive. The latter's name is "Progress"

a typical, big, well-meaning, ignorant mulatto—the author, Mr. Fernand Hibbert, mentions his daughter Matoute, the "real strong mind of the family."

The Rise of a Lady of Fashion

SHE was not pretty, but she had a certain *je ne sais quoi*, and both she and her father were determined that she should marry a white. The plan decided on was that they should start a dry-goods store—the heart's desire of most Haitians—import a white man to act as proprietor, and marry him to Matoute. She had explained it carefully.

"'Listen, papa,' said she, 'every year there are a hundred thousand Germans, who, dying of hunger in their own country, emigrate to other countries without a cent. When you go to Europe you will sign a contract with one of those one hundred thousand who haven't a sou, and as he will be dependent upon you and as you will always possess the capital, the scheme will fairly go itself and your daughter will become a great lady.'

"'You are right, you are right,' said Rorotte, delighted. 'I would have preferred *un petit français*. They are winning, they know how to talk—'

"'No, no, papa, no! No Frenchman! A German—a big German.'

"'Very well, very well, my child. We shall give you a big German.'"

Some months afterward, as the Haitian Senator sat dozing before the fire in his hotel in Paris, the boy who generally brought him his laundry came in with a bill. When Rorotte made some remark, the boy responded in an extraordinary Teutonic-French which astonished the good Senator.

"'Ah, so you are not French, my good fellow?' The boy explained as well as he could that he came from Mainz; that circumstances made it necessary for him to work in France; and in order not to die of hunger he had found a job in a laundry, but he hoped to emigrate to Brazil as soon as he had saved up a bit. In other words, Rorotte had before him a German deserter. He thought for a moment, as he looked the poor devil over, who, silent, with a very humble attitude, turned his hat round and round in his great paws. He was a huge fellow, rosy and with blond hair cut short. Rorotte asked him how he would like to go to Haiti.

"The eyes of the poor lad flashed. Haiti! For that wretched one it was some far-off Eldorado waved before his eyes. Haiti! Paradise of his brothers in distress!

"'I will pay your first cabin passage,' said Rorotte. 'I will employ you in a commercial house which I am about to start at Port au Prince. I will pay you five hundred francs a month plus board and lodging. Later, if I am satisfied with you, I will give you the management of the establishment besides, and keep still another surprise in store for you. Would you like to go?'

"The man fell on his knees, wrung Rorotte's hands, and swore that Rorotte was his Providence."

And in the epilogue, one reads, "Under the vigorous management of Kraussmann, Mme. Rorotte's business has become the solid bank 'Kraussmann & Company.' Matoute has married Kraussmann, and people who affected to disdain her before overwhelm her with calls to-day and are dizzy with pride if she spends five minutes with them, and they manage that every one shall know that Mme. Kraussmann was at our house to-day and spent the whole afternoon with us. And when Mme. Kraussmann, haughty as an idol, passes motionless and erect in her carriage, she enjoys a marvelous pleasure in imagining that all Port au Prince is petrified and regards her with admiration, rage, and envy. And that sentiment makes all her happiness. . . ."

The Tragedy Under the Dithyrambs

ONE could go on enumerating Haitian differences and drolleries, but the eye soon becomes accustomed to the most obvious of them, and the lot of the Haitians under their grotesqueness is so essentially tragic that one soon ceases to regard them merely as a cause for jocularity. In the preceding articles I have suggested some of the reasons why the Haitians so commonly speak of "our unhappy country" and mentioned the peculiarly difficult situation of that educated minority who understand their country's needs yet find themselves helpless between the inert lower class, which asks only to be left alone, and the ignorant militarism of those who rule.

The Haitian politician exhibits two very well defined phases—out of power he is gentle as a sucking dove, but the country is going to the bow-wows and everything is very *triste* and *malheureux;* in power, he is a raging lion, but Haiti is the best republic in the best of all possible worlds.

All efforts to improve the country then, all that discussion through the press and otherwise, which is assumed as a matter of course in more enlightened countries, is prohibited and punished. A very typical example of this occurred in the latter days of the Nord Alexis régime. Dr. Leon Audain, a physician graduated from a Paris medical school, a member of the Legion of Honor, and an intelligent and public-spirited Haitian, wrote a series of articles for a paper called "Le Pacificateur." Another Port au Prince paper, "Le Matin," had been conducting a campaign for Anglo-Saxon education as opposed to French education, and in his articles Dr. Audain analyzed Anglo-Saxon and Latin characteristics, discussed the possibilities of the Negro race, and then taking up such specific subjects as the Army, Education, etc., pointed out some of the difficulties under which Haiti is laboring and what would tend to their solution. The articles were published in pamphlet form while I was in Port au Prince, under the title "*Le Mal d'Haïti, Ses Causes et Son Traitement*"—purely a social study, written with moderation and quite impersonal.

Especially interesting, coming from a Haitian with a physician's training, were his remarks on the negro's future. Granting all that anthropologists say about the inferior size of the African brain and the differences in facial angles, Dr. Audain would not admit that such measurements determined finally the "essence of the cerebral tissue itself" and its possibilities of development. The African's backwardness was caused, he thought, by the tropical environment in which he had always lived, and which had tended to keep him in a state of nature. Once a race had acquired that habit they might go on in an indefinite circle until special circumstances came to break that circle and push them into new paths. And he called attention to Haitian families of blacks, who after cultivating their brains through several generations, now presented a type very different from the original African and approaching much nearer to the Caucasian.

In short, here was a book which discussed intelligently questions of vital importance to all Haitians. The most significant chapter in the book, pointing out the lamentable results of the distrust which exists between government and governed in Haiti, was refused by "Le Pacificateur" altogether, on the ground that it was too dangerous. It did, however, publish the one on the army in which Dr. Audain mildly pointed out what is painfully obvious to every traveler, that a great deal of the country's vitality is thrown away on an army useless to repel invasion and principally occupied in making trouble at home.

"He closed with an eloquent appeal to the politicians to save their country by using themselves the same remedies which foreigners would use on them, and to prevent intervention by proving that they could govern themselves."

No sooner had this article appeared than the "regenerator," Nord Alexis, stamped into the office of "Le Pacificateur" in a violent rage, suppressed the paper, discharged its editor from his position as professor in the Lycée National, and ordered his Minister of Interior to express to Dr. Audain his *extrême mécontentement*. The letter which M. Audain felt obliged to write to the President is so typical of the grotesque humiliations which Haitians have to endure from their [illegible]

their chiefs that it seems worth quoting in part. It should not be forgotten that this communication, addressed as if to the Grand Monarch, was written by an educated man to a doddering old negro who scarcely knew how to read or write.

"Port au Prince, le 24 Septembre, 1908.

"A Son Excellence M. le Général Nord Alexis,
"Président de la République d'Haiti,
"Au Palais National.

"Monsieur le Président:

"I had the honor to see this morning Monsieur the Minister of the Interior and of the General Police, who informed me of your extreme displeasure at the subject of an article of mine appearing in the 'Pacificateur' of the 18th inst. Although not having committed any illegal act by the simple publication of a general critical study, I promised M. the Minister of the Interior, because of my desire to be personally agreeable to you, to write to Your Excellency, in order to demonstrate the impersonal and innocuous character of the article and thus to efface the bad impression which wrongly interpreted, it might produce on your mind. . . ."

After a laborious and patient explanation, as if to a child, of this point, he continues:

"You will permit me, Excellence, to say to you that the foreigner knows better than many Haitians what is going on in our country. The agents which they have everywhere inform their governments with the greatest exactitude about whatever they wish to know. Consequently, I have taught the foreigner nothing new about our military organization. . . .

"Can any one see in the description which I have written an unpatriotic act? Excellence, Docteur Audain has proved too well since his return to Haiti that he loves his country for such an idea to occur to any one. . . .

"I hope the day will come when, in the face of our menaced Fatherland, all those hates which separate us will cease, when all, united under the same banner will be able to defend, if not successfully, at least gloriously, the one spot on earth where the negro has the right to walk with head erect.

"I am not a politician. I know nothing of politics, which, moreover, do not interest me, but I love my country. My one ambition is to be useful to it, and if my feeble voice can have any influence on the high decisions which you are susceptible of taking, I would say to you, of whom every one recognizes the great patriotism: 'President, be he who by a great clemency shall bring about concord between all children of Haiti to safeguard our independence, for the hour is a solemn one. As under Dessalines, *but by other means*, you must save our country.'"

So end the best-meant intentions of public-spirited Haitians to help their country. If such an experience seems an argument that a foreign government should step in and depose these stupid chiefs, it ought no less to stir a little fellow-feeling and sympathy for those who are working to make their people capable of governing themselves.

No open-minded foreigner can live among the Haitians for a few weeks, seeing the results of this struggle—little pamphlets published at the authors' expense, endless communications in the newspapers, hectic orations over the rum glasses in little bars and cafés; ignorant often, amusingly dithyrambic, yet the result of a very real intellectual groping and unrest—without having such a sympathy and fellow-feeling stirred. Happy-go-lucky children of a Nature that dulls and stupefies while it mothers and protects, they have suddenly been commanded to work and think for themselves—lifted from their tropic paradise, as it were, to confront our grim and relentless north. Grotesque they naturally are, but they are humans nevertheless, fighting with the exaggerated fear and savagery of outcasts who feel that every hand is against them for a little corner of the earth where they can hold up their hands and work out their own destiny.

THIS *is the last of a series of three articles written by Mr. Ruhl as a result of his visit to Haiti at the time of the recent revolution in the Black Republic. The other two were published: "Unhappy Haiti," February 6, 1909; "Vive A. T. Simon!" February 20, 1909.*

Hawaii's Annual Washington's Birthday Floral Parade

These two prize-winning cars may well be chosen as types of the many that gathered for the day's display. The one represents the native spirit in its exposition of the "Rainbow Legend," while the other pictures the new era—the American Suzerainty,—the coming of the white islander, the beauty and charm of the fairer conquest

Sometimes Gihon saw the whole procession of the hunt silhouetted against the morning sky, bearing him company for many merry miles

LITTLE FOXES

A Tale of the Gihon Hunt

By RUDYARD KIPLING

Illustrated by C. B. FALLS

COPYRIGHT 1909 BY RUDYARD KIPLING

IN the United States where fox-hunting is confined to two or three small districts, it is difficult to understand the extent to which the sport exists to-day in England, Ireland, and Scotland. There are no less than 159 foxhound packs in England and Wales, containing 6,040 couples of hounds; in Scotland, 10 packs with 353 couples; and in Ireland, 24 packs, of 884 couples. In these three countries 50,000 men and women follow the hounds every week of the hunting season, which lasts for about five months. According to a recent estimate there is over $78,000,000 invested in the sport in Great Britain and over $43,000,000 is spent annually.—EDITOR'S NOTE

A FOX came out of his earth on the banks of the great River Gihon, which waters Ethiopia. He saw a white man riding through the dry durra-stalks, and, that his destiny might be fulfilled, barked at him.

The rider drew rein among the villagers round his stirrup.

"What," said he, "is that?"

"That," said the Sheikh of the village, "is a fox, O Excelleney our Governor."

"It is not, then, a jackal?"

"No jackal, but Abu Hussein, the father of cunning."

"Also," the white man spoke half-aloud, "I am Mudir of this Province."

"It is true," they cried. "Ya, Saart el Mudir" (O Excellency our Governor).

The great River Gihon, well used to the moods of kings, slid between his mile-wide banks toward the sea while the Governor praised God in a loud and searching cry never before heard by the river.

When he had lowered his right forefinger from behind his right ear, the villagers talked to him of their crops—barley, durra, millet, onions, and the like. The Governor stood in his stirrups. North he looked up a strip of green cultivation a few hundred yards wide that lay like a carpet between the river and the tawny line of the desert. Sixty miles that strip stretched before him, and sixty miles behind. At every half-mile a groaning water-wheel lifted the soft water from the river to the crops by way of a mud-built aqueduct. A foot or so wide was the water-channel; five foot or more high was the bank on which it ran, and its base was broad in proportion. Abu Hussein, misnamed the Father of Cunning, drank from the stream below his earth, and his shadow was long in the low sun. He could not understand the loud cry which the Governor had cried.

The Sheikh of the Village spoke of the crops from which the rulers of all lands draw revenue, but the Governor's eyes were fixed, between his horse's ears, on the nearest water-channel.

"Very like a ditch in Ireland," he murmured, and smiled, dreaming of a razor-topped bank in distant Kildare.

Encouraged by that smile, the Sheikh continued: "When crops fail it is necessary to remit taxation. Then it is a good thing, O Excellency our Governor, that you come and see the crops which have failed, and discover we have not lied."

"Assuredly." The Governor shortened his reins. The horse cantered on, rose at the embankment of the water-channel, changed leg cleverly on top, and hopped down in a cloud of golden dust.

Abu Hussein from his earth watched with interest. He had never before seen such doings.

"Assuredly," the Governor repeated, and came back by the way he had gone. "It is always best to see for oneself."

An ancient and still bullet-speckled stern-wheel steamer, with a barge lashed to her side, came round the river bend. She whistled to tell the Governor his dinner was ready, and the horse, seeing his fodder piled on the barge, whinnied back.

"Moreover," the Sheikh added, "in the days of the oppression the Emirs and their creatures dispossessed many people of their lands. All up and down the river our people are waiting to return to their lawful fields."

"Judges have been appointed to settle that matter," said the Governor. "They will presently come in steamers and hear the witnesses."

"Wherefore? Did the Judges kill the Emirs? We would rather be judged by the men who executed God's judgment on the Emirs. We would rather abide by *your* decision, O Excellency our Governor."

The Governor nodded. It was a year since he had seen the Emirs stretched close and still round the reddened sheepskin where lay El Mahdi, the Prophet of God. Now there remained no trace of their dominion except the old steamer, once part of a Dervish flotilla, which was his house and office. She sidled into the shore, lowered a plank, and the Governor followed his horse aboard.

Lights burned on her till late, dully reflected in the river that tugged at her mooring-ropes. The Governor read, not for the first time, the administration reports of one John Jorroeks, M.F.H.

"We shall need," he said suddenly to his Inspector, "about ten couple. I'll get 'em when I go home. You'll be Whip, Baker?"

The Inspector, who was not yet twenty-five, signified his assent in the usual manner, while Abu Hussein barked at the vast desert moon.

"Ha!" said the Governor, coming out in his pajamas, "we'll be giving you capivi in another three months, my friend!"

IT WAS four, as a matter of fact, ere a steamer with a melodious bargeful of hounds anchored at that landing. The Inspector leaped down among them, and the homesick wanderers received him as a brother.

"Everybody fed 'em everything on board ship; but they're real dainty hounds at bottom," the Governor explained. "That's Royal you've got hold of—the pick of the bunch—and the bitch that's got hold of you—she's a little excited—is May Queen. Merriman, out of Cottesmore Maudlin, you know."

"I know. Grand old beteh with the tan eyebrows," the Inspector cooed. "Oh, Ben! I shall take an interest in life now. Hark to 'em! Oh, hark!"

Abu Hussein, under the high bank, went about his night's work. An eddy carried his scent to the barge, and three villages heard the crash of music that followed. Even then Abu Hussein did not know better than to bark in reply.

"Well, what about my Province?" the Governor asked.

"Not so bad," the Inspector answered, with Royal's head between his knees. "Of course, all the villages want remission of taxes, but, as far as I can see, the whole country's stinkin' with foxes. Our trouble will be chop-pin' 'em in cover. I've got a list of the only villages entitled to any remission. What d'you call that flat-sided, blue-mottled beast with the jowl?"

"Beagle-boy. I have my doubts about him. Do you think we can get two days a week?"

"Easy, and as many byes as you please. The Sheikh of this village here tells me that his barley has failed, and he wants a fifty per cent remission."

"We'll begin with him to-morrow, and look at his crops as we go. Nothing like personal supervision," said the Governor.

They began at sunrise. The pack flew off the barge in every direction, and, after gambols, dug like terriers at Abu Hussein's many earths. Then they drank themselves pot-bellied on Gihon water while the Governor and the Inspector chastised them with whips. Scorpions were added; for May Queen nosed one, and was removed to the barge lamenting. Mystery (a puppy, alas!) met a snake, and the blue-mottled Beagle-boy (never a dainty hound) ate that which he should have passed by. Only Royal, of the Belvoir tan head and the sad, discerning eyes, made any attempt to uphold the honor of England before the watching village.

"You can't expect everything," said the Governor after breakfast.

"We got it, though—everything except foxes. Have you seen May Queen's nose?" said the Inspector.

"And Mystery's dead. We'll keep 'em coupled next time till we get well in among the crops. I say, what a babbling body-snatcher that Beagle-boy is! Ought to be drowned!"

"They bury people so dam casual hereabouts. Give him another chance," the Inspector pleaded [illegible] that he should live to repent most bitterly.

"Talkin' of chances," said the Governor, [illegible] lies about his barley bein' a failure. If it' [illegible]

to hide a hound at this time of year, it's all right. And he wants a fifty per cent remission, you said?"

"You didn't go on past the melon patch where I tried to turn Wanderer. It's all burned up from there on to the desert. His other water-wheel has broken down, too," the Inspector replied.

"Very good. We'll split the difference and allow him twenty-five per cent off. Where'll we meet to-morrow?"

"There's some trouble among the villages down the river about their land-titles. It's good goin' ground there, too," the Inspector said.

The next meet, then, was some twenty miles down the river, and the pack were not enlarged till they were fairly into the fields. Abu Hussein was there in force—four of him. Four delirious hunts of four minutes each—four hounds per fox—ended in four earths just above the river. All the village looked on.

"We forgot about the earths. The banks are riddled with 'em. This'll defeat us," said the Inspector.

"Wait a moment!" The Governor drew forth a sneezing hound. "I've just remembered I'm Governor of these parts."

"Then turn out a black battalion to stop for us. We'll need 'em, old man."

The Governor straightened his back. "Give ear, O people!" he cried. "I make a new law!"

The villagers closed in. He called:

"Henceforward I will give one dollar to the man on whose land Abu Hussein is found. And another dollar"—he held up the coin—"to the man on whose land these dogs shall kill him. But to the man on whose land Abu Hussein shall run into a hole such as is this hole, I will give not dollars, but a most unmeasurable beating. Is it understood?"

"Our Excellency," a man stepped forth, "on my land Abu Hussein was found this morning. Is it not so, brothers?"

None denied. The Governor tossed him over four dollars without a word.

"On my land they all went into their holes," cried another. "Therefore I must be beaten."

"Not so. The land is mine, and mine are the beatings."

This second speaker thrust forward his shoulders already bared, and the villagers shouted.

"Hullo! Two men anxious to be licked? There must be some game on about the land," said the Governor. Then in the local vernacular: "What are your rights to the beating?"

As a river-reach changes under a slant of the sun, that which had been a scattered mob changed to a court of most ancient justice. The hounds tore and sobbed at Abu Hussein's hearthstone, all unnoticed among the legs of the witnesses, and Gihon, also accustomed to laws, purred approval.

"You will not wait till the Judges come up the river to settle the dispute?" said the Governor at last.

"No!" shouted all the village save the man who had first asked to be beaten. "We will abide by our Excellency's decision. Let our Excellency turn out the creatures of the Emirs who stole our land in the days of the Oppression."

"And thou sayest?" the Governor turned to the man who had first asked to be beaten.

"I say *I* will wait till the wise Judges come down in the steamer. Then I will bring my many witnesses," he replied.

"He is rich. He will bring many witnesses," the village Sheikh muttered.

"No need. Thy own mouth condemns thee!" the Governor cried. "No man lawfully entitled to his land would wait one hour before entering upon it. Stand aside!" The man fell back, and the village jeered him.

The second claimant stooped quickly beneath the lifted hunting-crop. The village rejoiced.

"Oh, Sueh an one; Son of Sueh an one," said the Governor, prompted by the Sheikh, "learn, from the day when I send the order, to block up all the holes where Abu Hussein may hide—on—thy—land!"

The light flicks ended. The man stood up triumphant. By that accolade had the Supreme Government acknowledged his title before all men.

While the village praised the perspicacity of the Governor, a naked poekmarked child strode forward to the earth, and stood on one leg, unconcerned as a young stork.

"Ha!" he said, hands behind his back. "This should be blocked up with bundles of durra-stalks—or, better, bundles of thorns."

"Better thorns," said the Governor. "Thick ends innermost."

The child nodded gravely and squatted on the sand.

"An evil day for thee, Abu Hussein," he shrilled into the mouth of the earth. "A day of obstacles to thy [illegible]rn in the morning."

"Who is it?" the Governor asked the Sheikh. "It thinks."

"Farag the Fatherless. His people were slain in the days of the Oppression. The man to whom Our Excellency has awarded the land is, as it were, his maternal uncle."

"Will it come with me and feed the big dogs?" said the Governor.

The other peering children drew back. "Run!" they cried. "Our Excellency will feed Farag to the big dogs."

"I will come," said Farag. "And I will never go." He threw his arm round Royal's neck, and the wise beast licked his face.

"Binjamin, by Jove!" the Inspector cried.

"No!" said the Governor. "I believe he has the makings of a James Pigg!"

Farag waved his hand to his uncle, and led Royal on to the barge. The rest of the pack followed.

"Hullo! Two men anxious to be licked? There must be some game on about the land"

GIHON, that had seen many sports, learned to know the hunt barge well. He met her rounding his bends on gray December dawns to music wild and lamentable as the almost forgotten throb of Dervish drums, when, high above Royal's tenor bell, sharper even than lying Beagle-boy's falsetto break, Farag chanted deathless war against Abu Hussein and all his seed. At sunrise the river would shoulder her carefully into her place and listen to the rush and scutter of the pack fleeing up the gangplank, and the tramp of the Governor's Arab behind them. They would pass over the brow into the dewless crops where Gihon, low and shrunken, could only guess what they were about when Abu Hussein flew down the bank to scratch at a stopped earth, and flew back into the barley again.

As Farag had foretold, it was evil days for Abu Hussein ere he learned to take the necessary steps and to get away crisply. Sometimes Gihon saw the whole procession of the hunt silhouetted against the morning blue, bearing him company for many merry miles. At every half-mile the horses and the donkeys jumped the water-channels—up, on, change your leg, and off again—like figures in a zoetrope, till they grew small along the line of the water-wheels. Then Gihon waited their rustling return through the crops, and took them to rest on his bosom at ten o'clock. While the horses ate, and Farag slept with his head on Royal's flank, the Governor and his Inspector worked for the good of the hunt and his Province.

After a little while there was no need to beat any man for neglecting his earths. The steamer's destinations were telegraphed from water-wheel to water-wheel, and the villagers stopped out and put to according. If an earth was overlooked, it meant some dispute as to the ownership of the land, and then and there the Hunt checked and settled it in this wise: The Governor and the Inspector side by side, but the latter half a horse's length to the rear; both bare-shouldered claimants well in front; the villagers half mooned behind them, and Farag with the pack, who quite understood the performance, sitting down on the left. Twenty minutes were enough to settle the most complicated case, for, as the Governor said to a judge on the steamer, "One gets at the truth in a hunting-field a heap quicker than in your law courts."

"But when evidence is conflicting—?" the Judge suggested.

"Watch the field. They'll throw tongue fast enough if you're running a wrong scent. You've never had an appeal from one of my decisions yet."

The Sheikhs on horseback—the lesser folk on clever donkeys—the children so despised by Farag—soon understood that villages who repaired their water-wheels and channels stood highest in the Governor's favor. He bought their barley for his horses.

"Channels," said he, "are necessary that we may all jump them. They are necessary, moreover, for the crops. Let there be many wheels and sound channels—and much good barley."

"Without money," replied an aged Sheikh, "there are no water-wheels."

"I will lend the money," said the Governor.

"At what interest, O our Excellency?"

"Take you two of May Queen's puppies to bring up in your village in such a manner that they do not eat filth, nor lose their hair, nor catch fever from lying in the sun, but become wise hounds."

"Like Ray-yal—not like Biggle-bai?" (already it was an insult along the river to compare a man to the shifty anthropophagous blue-mottled harrier).

"Certainly, like Ray-yal—not in the least like Biggle-bai. *That* shall be the interest on the loan. Let the puppies thrive and the water-wheel be built, and I am content," said the Governor.

"The wheel shall be built; but, O our Excellency, if by God's favor the pups grow to be well-smellers, not filth-eaters, not unaccustomed to their names, not lawless, who will do them and me justice at the time of judging the young dogs?"

"Hounds, man, hounds! Ha-wands, O Sheikh, we call them in their manhood."

"The ha-wands when they are judged at the Sha-ho. I have unfriends down the river to whom our Excellency has also entrusted ha-wands to bring up."

"Puppies, man! Pah-peaz, we call them, O Sheikh, in their childhood."

"Pah-peaz. My enemies may judge my pah-peaz unjustly at the Sha-ho. This must be thought of."

"I see your difficulty. Hear now! If the new water-wheel is built in a month without oppression, thou, O Shiekh, shalt be named one of the judges to judge the pah-peaz at the Sha-ho. Is it understood?"

"Understood. We will build the wheel. I and my seed are responsible for the repayment of the loan. Where are my pah-peaz? If they eat fowls, must they on any account eat the feathers?"

"On no account must they eat the feathers. Farag in the barge will tell thee how they are to live."

There is no instance of any default on the Governor's personal and unauthorized loans, for which they called him the Father of Water-wheels. But the first puppy-show at the capital needed enormous tact and the presence of a black battalion ostentatiously drilling in the barrack square to prevent trouble after the prize-giving.

But who can chronicle the glories of the Gihon Hunt—or their shames? Who remembers the kill in the market-place, when the Governor bade the assembled sheikhs and warriors observe how the hounds would instantly devour the body of Abu Hussein, but how, when he had scientifically broken it up, the weary pack turned from it in loathing, and Farag wept because he said the world's face had been blackened? What men who have not yet ridden beyond the sound of any horn recall the midnight run which ended—Beagle-boy leading—among tombs, the hasty whip-off, and the oath taken above bones to forget the worry? The desert run, when Abu Hussein forsook the cultivation, and made a six-mile point to earth in a desolate khor—when strange armed riders on camels swooped out of a ravine, and instead of giving battle, offered to take the tired hounds home on their beasts. Which they did, and vanished.

Above all, who remembers the death of Royal, when a certain Sheikh wept above the body of the stainless hound as it might have been his son's—and that day the hunt rode no more? The badly-kept log-book says little of this, but at the end of their second season (forty-nine brace) appears the dark entry:

"New blood badly wanted. They are beginning to listen to Beagle-boy!"

THE Inspector attended to the matter when his leave fell due.

"Remember," said the Governor, "you must get us the best blood in England—real, dainty hounds—expense no object, but don't you trust your own judgment. Present my letters of introduction, and take what they give you."

The Inspector presented his letters in a society where they make much of horses, more of hounds, and are tolerably civil to men who can ride. They passed him from house to house, mounted him according to his merits, and fed him, after five years of goat chop and Worcester sauce, perhaps a thought too richly.

The seat or castle where he made his great coup does not much matter. Four Masters of Foxhounds were at table, and in a mellow hour the Inspector told them stories of the Gihon Hunt. He ended: "Ben said I wasn't to trust my own judgment about hounds, but *I* think there ought to be a special tariff for empire-makers."

As soon as his hosts could speak, they reassured him on this point.

"And now tell us about your first puppy-show all over again," said one.

"And about the earth-stoppin'. Was that all Ben's own invention?" said another.

"Wait a moment," said a large, clean-shaven man—not an M.F.H.—at the end of the table. "Are your villagers habitually beaten by your Governor when they fail to stop foxes' holes?"

The tone and the phrase were enough even if, as the Inspector confessed afterward, the big, blue double-chinned man had not looked so like Beagle-boy. He took him on for the honor of Ethiopia.

"We only hunt twice a week—sometimes three times. I've never known a man chastised more than four times a week—unless there's a bye."

The large, loose-lipped man flung his napkin over his shoulder, came round the table, cast himself into the chair next the Inspector, and leaned forward earnestly, so that he breathed in the Inspector's calm face.

"Chastised with what?" he asked.

"With the *kourbash*—on his feet. A *kourbash* is a strip of old hippo-hide with a sort of keel on it, like the cutting edge of a boar's tusk. We use the rounded side for a first offender."

"And do any consequences follow this sort of thing? For the victim, I mean—not for you."

"Ve-ry rarely. Let me be fair. I've never seen a man die under the lash, but gangrene may set up if the *kourbash* has been pickled."

"Pickled in what?" All the table was still and interested.

"In copperas, of course. Didn't you know *that?*" said the Inspector.

"Thank God I didn't." The man sputtered visibly.

The Inspector wiped his face and grew bolder.

"You mustn't think we're careless about our earth-stoppers. We've a hunt fund for hot tar. Tar's a splendid dressing if the toe-nails aren't beaten off. But huntin' as large a country as we do, we mayn't be back at that village for a month, and if the dressings ain't renewed, and gangrene begins, often as not you find your man pegging about on his stumps. We've a well-known Arabic name for 'em down the river. We call 'em the Mudir's cranes. You see, I persuaded the Governor to bastinado on one foot only."

"Only on one foot? The Mudir's cranes!" The large man turned purple to the top of his bald head. "Would you mind giving me the local word for Mudir's cranes?"

From a too well stocked memory the Inspector drew one short adhesive word which surprises by itself even unblushing Ethiopia. He spelt it out, saw the large man write it down on his cuff and withdraw. Then the Inspector translated a few of its significations and implications to the four Masters of Foxhounds. He left three days later with eight couple of the best hounds in England—a free and a friendly and an ample gift from four packs to the Gihon Hunt. He had honestly meant to undeceive the large blue-mottled man, but somehow forgot about it.

The new draft marks a new chapter in the Hunt's history. From an isolated phenomenon in a barge it became a permanent institution with brick-built kennels ashore, and an influence social, political, and administrative, coterminous with the boundaries of the Province. Ben, the Governor, departed to England, where he kept a pack of real dainty hounds, but never ceased to long for the old lawless lot. His successors were *ex-officio* Masters of the Gihon Hunt, as all Inspectors were Whips. For one reason, Farag, the kennel huntsman, in khaki and puttees, would obey nothing under the rank of an Excellency, and the hounds would obey no one but Farag; for another, the best way of estimating crop returns and revenue was by riding straight to hounds; for a third, though Judges down the river issued signed and sealed land-titles to all lawful owners, yet public opinion along the river never held any such title valid till it had been confirmed, according to precedent, by the Governor's hunting-crop in the hunting-field, above the wilfully neglected earth. True, the ceremony had been cut down to three mere taps on the shoulder, but Governors who tried to evade that much found themselves and their office compassed about with a great cloud of witnesses who took up their time with lawsuits, and, worse still, neglected the puppies. The older sheikhs, indeed, stood out for the unmeasurable beatings of the old days—the sharper the punishment, they argued, the surer the title; but here the hand of Modern Progress was against them, and they contented themselves with telling tales of Ben the first Governor,

Last to fall was the city-trained Abdul. He held on to the edge of apoplexy

whom they called the Father of Water-wheels, and of the heroic age when men, horses, and hounds were worth following.

The same Modern Progress which brought dog-biscuit and brass water-taps to the kennels was at work all over the world. Forces, Activities, and Movements sprang into being, agitated themselves, coalesced, and in one political avalanche overwhelmed a bewildered, and not in the least intending it, England. The echoes of the New Era were borne into the Province on the wings of inexplicable cables. The Gihon Hunt read speeches and sentiments, and policies which amazed them, and they thanked God, prematurely, that their Province was too far off, too hot, and too hard worked to be reached by the speakers or their policies. But they, with others, underestimated the scope and purpose of the New Era.

One by one the Provinces of the Empire were hauled up and baited, hit and held, lashed under the belly, and forced back on their haunches for the amusement of their new masters in the parish of Westminster. One by one they fell away, sore and angry, to compare stripes with each other at the ends of the uneasy earth. Even so, the Gihon Hunt, like Abu Hussein in the old days, did not understand. Then it reached them in the press that they habitually flogged to death good revenue-paying cultivators who neglected to stop earths; and that the few, the very few, who did not die under hippo-hide whips soaked in copperas, walked about on the gangrenous ankle-bones, and were known in derision as the Mudir's cranes. The charges were vouched for in the House of Commons by a Mr. Lethabie Groombride, who had formed a Committee, and was disseminating literature. The Province groaned; the Inspector—now an Inspector of Inspectors—whistled. He had forgotten the gentleman who sputtered in people's faces.

"He shouldn't have looked so like Beagle-boy!" was his sole defense when he met the Governor at breakfast on the steamer after a meet.

"You shouldn't have joked with an animal of that class," said Peter the Governor. "Look what Farag has brought me!"

It was a pamphlet, signed on behalf of a Committee by a lady secretary, but composed by some person who thoroughly understood the language of the Province. After telling the tale of the beatings, it recommended all the aggrieved to institute criminal proceedings against their Governor, and, as soon as might be, to rise against English oppression and tyranny. Such documents were new in Ethiopia in those days.

The Inspector read the last half page. "But—but," he stammered, "this is impossible. White men don't write this sort of stuff."

"Don't they, just?" said the Governor. "They get made Cabinet Ministers for doing it too. I went home last year. *I* know."

"It'll blow over," said the Inspector weakly.

"Not it. Groombride is coming down here to investigate the matter in a few days."

"For himself?"

"The Imperial Government's behind him. Perhaps you'd like to look at my orders." The Governor laid down a coded cable. The whiplash to it ran: "You will afford Mr. Groombride every facility for his inquiry, and will be held responsible that no obstacles are put in his way to the fullest possible examination of any witnesses which he may consider necessary. He will be accompanied by his own interpreter, who must not be tampered with."

"That's to me—Governor of the Province!" said Peter.

"It seems about enough," the Inspector answered.

Farag, kennel huntsman, entered the salon, as was his privilege.

"My uncle, who was beaten by the Father of Water-wheels, would approach, O Excellency," he said, "and there are others on the bank."

"Admit," said the Governor.

There tramped aboard sheikhs and villagers to the number of seventeen. In each man's hand was a copy of the pamphlet; in every man's eye terror and uneasiness of the sort that Governors spend and are spent to clear away. Farag's uncle, now Sheikh of the village, spoke: "It is written in the book, O Excellency, that the beatings whereby we hold our lands are all valueless. It is written that every man who received such a beating from the Father of Water-wheels who slew the Emirs, should instantly begin a lawsuit, because the title to his land is not valid."

"It is so written. We do not wish lawsuits. We wish to hold the land as it was given to us after the days of the Oppression," they cried.

The Governor glanced at the Inspector. This was serious. To cast doubt on the ownership of land means, in Ethiopia, the letting in of waters, and the getting out of troops.

"Your titles are good," said the Governor. The Inspector confirmed with a nod.

"Then what is the meaning of these writings which come from down the river where the Judges are?" Farag's uncle waved his copy. "By whose order are we ordered to slay you, O Excellency our Governor?"

"It is not written that you are to slay me."

"Not in those very words, but if we leave an earth unstopped, it is the same as though we wished to save Abu Hussein from the hounds. These writings say: 'Abolish your rulers.' How can we abolish except we kill? We hear rumors of one who comes from down the river soon to lead us to kill."

"Fools!" said the Governor. "Your titles are good. This is madness!"

"It is so written," they answered like a pack.

"Listen," said the Inspector smoothly. "I know who caused the writings to be written and sent. He is a man of a blue-mottled jowl, in aspect like Biggle-bai who ate unclean matters. He will come up the river and will give tongue about the beatings."

"Will he impeach our land-titles? An evil day for him!"

"Go slow, Baker," the Governor whispered. "They'll kill him if they get scared about their land."

"I tell a parable." The Inspector lit a cigarette. "Declare which one of you took to walk the children of Milk-maid?"

"Melik-meid first or second?" said Farag quickly.

"The second—the one that was lamed by the thorn."

"No—no. Melik-meid the second strained her shoulder leaping my water-channel," a Sheikh cried. "Melik-meid the first was lamed by the thorns on the hunt when our Excellency fell thrice."

"True—true. The second Melik-meid's mate was Malvolio, the pied hound," said the Inspector.

"I had two of the second Melik-meid's pups," said Farag's uncle. "They died of the madness in the [illegible]

The Face of Doom, with the air of an intelligent but cruel potato, startles the tuneful piratical chorus

THE HANT

Wherein is Veraciously Set Forth for the First Time in Any Language the Authentic History of Eight Melodious Pirates and the Terrible Pallid Face at the Window

By RALPH BERGENGREN

Illustrated by JOHN SLOAN

"MMMM, nnnnn, pyggy, pyggy, pyggy," muttered a lone pirate sitting in the cabin of the *Sacred Sarah* and laboriously scribbling on a stout sheet of vellum. It was an old, old cabin, the only part of the wreck that still projected from the sand of the beach, and as the busy pirate puffed at his short clay pipe a subtle odor of sweet fern expanded around him and probably penetrated even to the deepest hold of the sunken vessel. Outside the sun lay hot and lazy on Nonesuch Island, and from the open hatchway the bald white beach stretched flatly to the bald blue ocean.

Like the beach and the ocean, the industrious pirate was completely bald. His head was yellow where a hat might cover it; otherwise wind and sun had given him, with his knob of a nose, something of the air of an intelligent but cruel potato, capped by some passing humorist with a neatly fitting eggshell. Short white muslin pantaloons, edged with tattered Honiton lace, separated him from the old oak bench on which he sat in a peculiarly cramped and uncomfortable attitude. His body and head inclined stiffly to the left; his weight rested on his left forearm; his forearm rested mathematically parallel with the top of his parchment. It was the position, in 1825 or thereabout, of all who would attain and practise the graceful art of penmanship—a period when to write well was to write hard; but although the solitary pirate was evidently a conscientious pupil the blade of his rusty cutlas hiked up one swallow-tail of his fashionable blue broadcloth coat in a gay and reckless way quite out of harmony with his clerical employment. Now and then he glanced cautiously over his right shoulder to make sure that his quill pointed in that direction, and the movement, innocent enough in itself, added to his occupation something furtive and mysterious. Despite the heat, he wrote steadily; and at regular intervals, like an eccentric clock that ticks once a minute, a drop of perspiration splashed on his manuscript.

Sixty splashes of perspiration had fallen. The bald-headed man pushed aside his exercises and turned to another little pile of sheets, evidently representing a more consecutive effort. These he began to read, following the straggling lines and childishly formed letters with inky forefinger, and occasionally referring to a small water-stained volume (on whose cover the title, "Primer," was vaguely visible) as if to settle some nice point in orthography.

"I went two walk with"—so began the first paragraph, but here the writer's spelling had failed him and he had resorted to a hieroglyph which might represent either some unknown insect or a tall, thin man with long mustaches. "—by the See. He made me mad and i made him mad and We had a nice fierce fight. I fell in the See. When i came up he put his big strong hand on top of my head and gave me a fierce push down in the See. I came up and he gave me a push down and i came up and he gave me a push down and i came up and he gave me a push down with his big strong hand on top of my head. Then he thought i was dead and went off with a fierce laugh and i came up all wet but not dead. It is hard two kill me. Here am i on the isle and not dead.

"The ship went from the isle. All went in her. I see them go from on top of the hill. I went two the tort, but the door was two strong and the hedge two [illegible] and full of thorns and i could not went two the wall two try two climb it. I wish i knew how two spell bad words. I have my book two teach me how two read but the worst words in it are rot and blame and they are two mild two do me much good. Why is one word bad and one word good when both are of the same size? I do not know. But i can say bad words and it would be nice if i could write some of them here. It would show how i feel two be left on this isle. O rot.

"This is what I have. I have my book to teach me how to read. I have my cut lass. I have my pipe. I have my health. I have my hands and my feet and my nose and my mouth and my eyes and my ears and my pants and my coat. I have my flint and steal. I have some things to eat. This is what i have not. I have no home. I have no thing to smoke. I have no thing to drink but what comes out of a spring.

Bobbing, spinning, overturning—vicious Bald Head races the rakish schooner

"It is hard to beat me when i use my mind. Now i have a fine home. It is in the old ship that was drove on the shore by a storm. Her name is on the back of her where she sticks up out of the sand and it is *Sacred Sarah*, that is how it looks but it is two much for me two read. I can read words in one piece but no more. This ship is as old as the hills i think. She is deep in the sand but i can get in and then i am all right. There is a old book in her and if i had a pen and some ink i could write my thoughts.

"I have made a pen with my cut lass out of a quill. All so i have some sweet fern for my pipe. It is good but two mild.

"I have got some ink and this is how. It came from a fish. The fish has a lot of arms and legs and a fierce face and a bag of ink in him. He does not know how two write but when he fights he shys ink at you. The tide left him in a pool and i got him with my cut lass.

"If I am dead when you find this and all bones i will tell you what i look like and why i think i am left here like this. I fear a plot. There was one girl on this isle and ten men and she was in love with me. We were the kind of men that go to See in a ship and when we see a ship we take her and rob her. Our flag is the head of a dead man when he is all bones and we are a bad lot and full of vice. When we take a ship we make the men and girls in her walk on a plank and they fall in the See with a sad cry and we give fierce laughs. When i write girls i mean girls and old hens two.

"My head is round like a ball and i have no hair on it. I am like a small new born kid two look at. That is why the girl that was on the isle was in love with me. All girls love two look at small new born kids and say how sweet and so they love to look at me and say how sweet. It is not my fault. I am made that way and i can not help it.

"I can not live like this all my life. It is no fun. I long for vice.

"I have a bold thought. I will stay on this isle no more and drink no thing but what comes out of a spring. Way down in this ship there are a lot of large old kegs and some rope. I will make a raft that is my bold thought. I will begin now.

"2 weeks have gone by. I have made my raft and it was blame hard work. When the wind is right i will put two See and find a ship. I must have a drink. Sink or swim that is what i say now."

This determined sentence ended the chronicle, and the lonely author rose from the table and went out on the beach. The sun was some hours past the meridian, and not far from the cabin floated a good-sized raft clumsily contrived of empty hogsheads and three or four weather-worn planks. The wind blew gently off the island, and the raft tugged modestly at her painter; but the tide was leaving her and the forward kegs already scraped on the beach. Without even a backward glance the bald-headed man waded into the water, severed the painter with a single blow of his cutlas, and, throwing his weight on the stern of the raft, lifted the bow so that she floated gracefully out on the bosom of the wide ocean.

The Shrewd Adventure of the Disappearing Hogsheads, and the Pirate Who Bends His Handkerchief, and Lights His Pipe, the While a Salt Tear is Blown to Leeward

ONCE indubitably afloat, Bald Head the Pirate proceeded more calmly to make everything shipshape for his desperate venture. His first care was to overhaul his provisions, stored in two upright hogsheads, one filled with water and the other with a substantial supply of tropical fruit, nice dried lizards (of an edible variety indigenous to the island), and sweet fern to while away the likely monotony of his solitary journey. Then, after an instinctively modest glance toward the island, he slipped out of his nether garments and bent them as a sort of leg-o'-pirate sail to a small mast ingeniously driven into a bunghole just abaft the food hogsheads; and, this done, he shipped a rude but practicable rudder, lighted his pipe, and, taking his tiller

under his arm, sat down at the stern of his vessel and bore away from the island.

His course lay about northeast by north, and the tide helped him. Soon the island was far astern in the blue desert, a speck of oasis, on whose beach the long-legged flamingoes pomponsly promenaded, looking for supper in the wet sand. Had they looked seaward even their sharp eyes would have been unable to distinguish the raft, but the last rays of the sun now and again reflected cheerily from the bald head of its stout but lonely occupant.

Twilight settled into night. The solitary seaman, after a hearty supper of dried lizard and bananas, lit his pipe and contemplated the stars, wondering, in his simple way, whether there were other men like himself on those myriad distant worlds, and, if so, what they had to drink. But the deeper swell of the ocean now carried his tiny craft monotonously up and down, and the soothing motion reminded him of his hammock and suggested bedtime. He reefed his sail by tying a knot in one leg of it, made fast the sheet, and, having lashed the tiller amidships and himself to one of the planks, was soon lost in a slumber which was at least healthy if not completely innocent; it was the most innocent slumber that he had and he made the best of it. Now and then a wave washed over the raft; and about midnight, the wind backing up due east, she hesitated for a moment and then bore bravely westward. But the trustful sleeper snored peacefully, and it was only when the sun was again high in the heavens that Bald Head the Pirate sat up and stretched himself.

Never was pirate more completely alone. The raft still forged ahead under a fair wind, and the deep swell of the ocean carried her monotonously from one long green undulation to another. Neither sail nor land broke the monontony, nothing but a large hogshead some distance astern, placidly bobbing out of sight over the summit of a lazy swell. At sea (as has been frequently pointed out by observant travelers) even the smallest things attract our attention, and, having nothing better to do, the adventurous pirate thoughtfully contemplated the vanishing hogshead. Suddenly he sat up straighter, uttered a horrid oath, and brought his eyes sharply to the stern of his vessel. The tiller had vanished; the raft was smaller by four substantial hogsheads; and, to his infinite horror, a fifth was just slipping away from under him.

Awful as is the sensation of being alone in mid-ocean on a raft, it is mild and innocuous compared with the unpleasant surprise of finding that your raft is coming to pieces. For a long minute Bald Head sat stunned and bewildered, leaning backward on the extended tips of his rough fingers and gazing despairingly at the deserting hogshead; then he was on his hands and knees, thrusting his throbbing head far down into the water as he peered under the raft to examine the full extent of his unforeseen calamity. The old rope with which he had lashed his casks together was slowly fraying, and already the structure wabbled. Again he cast an agonized glance around the horizon, but no sail gladdened him; and even as he looked another hogshead carelessly detached itself from the raft and with a sardonically cheerful motion bobbed after the others.

Fortunately, however, the sudden immersion of his throbbing head in the cold water calmed the pirate, and he rose to his feet with the dangerous look of one who would sell his life dearly were anybody present to sell it to. Although he had lost his appetite, he bravely forced himself to eat a dried lizard, and this matter-of-course action still further restored his wonted self-possession. "While there be dried lizards there be hope," he told himself grimly, and even as he reached into the hogshead for a second sustaining morsel the way of salvation opened before him. As we have seen by his own journal, he was not only a hard man to kill but equally hard to beat when he used his mind; and circumstances were compelling him to work that useful organ with unusual rapidity.

Now that he had settled upon a plan, every motion of this brave but sorely pressed rascal revealed the quiet determination of his rugged nature, and bore out his journal. He unbent and put on his useless sail, lit his pipe, and turned his undivided attention to the food hogshead. This he quickly emptied, leaving only the sand which he had put in the bottom to steady it, and over the sand he jammed the cover of the water barrel, which he trimmed with his cutlas until it neatly fitted its new position. It was a generous hogshead, and there was still room in it for even a fat pirate to sit on his haunches with comparative comfort, as he now proved by trying the experiment. His chin came even with the rim of the hogshead; and his round face beamed with the satisfied pride of an inventor as he climbed nimbly out again, picked up the remaining cover, and with a single blow of his weapon severed it into two nearly equal half circles.

In any moment of peril there is nothing so salutary as hard work with a definite object. Sitting on the deck of his crumbling craft, Bald Head the Pirate busily bored a hole in each segment of the cover large enough to admit his thumb. He had now the two sections of cover, each with a small hole in it; and these he industriously whittled until, on putting them together around his neck, he found they fitted like a tight collar. It was a delicate business, handy as he was with his cutlas, and to obtain a perfect fit consumed the better part of two hours.

"All I needs now is a trig little sail," he remarked thoughtfully; and with that he deftly sharpened his weapon on the sole of his leathery foot and cut down his mast. At the end of another hour a miniature mast and two small spars had been neatly whittled, and on them it took him only a jiffy to bend his handkerchief.

It was now about nine o'clock by the sun, and hardly more than a dozen casks supported the raft. But the endangered seaman was not to be hurried. He made a quick but substantial breakfast and drank long and deep from the water barrel. Another cask bobbed away from under him, and he raised his little sail by stepping the mast between his neck and his coat collar and climbed nimbly into the hogshead. There he fitted the cover tightly to his neck and waited for the inevitable. It was a strange and terrifying spectacle, for he looked exactly like a head on a barrel with the thumbs of its former owner carefully placed on either side of it; but as he had taken the precaution to fill and light his pipe, this grisly impression was somewhat softened by an aspect of philosophical resignation. One by one he felt the remaining casks drop away from him, and despite the stanchness of his heart (and his confidence in his hogshead) his expression became less and less philosophical. Presently he felt that there were only two casks under him; the hogshead trembled in a sickening fashion; with a shuddering lurch to starboard it slid reluctantly into the cool, translucent water, turned a succession of clumsy somersaults, and then slowly righted. But the wind caught his sail, and in a few moments he was again merrily traveling westward.

It is one thing to put to sea on a raft and quite another to attempt the same desperate expedient in even the most seaworthy and well-ballasted hogshead. The wind freshened, backed up to the northwest, and covered the ocean with dancing little devils of blue water, which now spun the hogshead round and round like a top, or again turned it completely over, as if impertinently curious to find out whether there was another head on the bottom. Thought is difficult under such circumstances, and the adventurous pirate soon abandoned himself to profanity, which is always easy and requires little mental activity. He invented new forms and combinations; and, like an author struggling over a manuscript, sought in vain for exactly the right word with which to express himself. The afternoon, so to speak, dragged on his thumbs, and by six o'clock despair perched on his little mast and an occasional salt tear flew off in a horizontal direction as an unusually active wave spun him round like a top.

The ghost and his slayer are annoyed by seven murderous pirates squirming down the hatchway

It was about an hour before sunset when the exhausted pirate, spinning merrily on the top of a wave, sighted in turn a small island just rising to leeward and a small vessel just rising on his larboard quarter.

"A sail! A sail!" he cried joyously; and then the sea turned him promptly over, and the joyful shout was extinguished in a succession of angry bubbles.

But despite these annoying and involuntary gymnastics, the wind carried him steadily toward the island. It loomed nearer and nearer, while at the same time each successive spin of the hogshead showed the vessel rapidly overhauling him. He caught only a passing glimpse of her, but at each revolution he shouted: "Ship ahoy!" and bobbed his head anxiously to attract her attention. It waved his little sail, but otherwise it was apparently a wasted effort; and now he could see the island so clearly that the setting sun lighted a small fort just back of the beach. The solitary seaman stared at it in bewilderment, and a look of melancholy disgust settled over his features.

"Blamed if it ain't our own little old fort!" he exclaimed bitterly; and at that moment another spin of the hogshead brought him almost face to face with the oncoming vessel. She was a small, rakish-looking schooner, carrying all sail and taking full advantage of weather and tide to make the island before sunset.

"Bless my peepers!" cried the solitary seaman again, even more bitterly than before, "if she ain't the *Polly!*" And with that he made a frantic effort to dive under the surface. The hogshead shook with it, but, frequently as he had already dived without wishing to, nothing could now upset him. All he could do was to twist his neck so sharply that he shook the wind out of his little sail; the hogshead came to, her speed diminished, and the unresponsive schooner bore quickly past her.

And now the Face of Horror Flattens its Nose on the Midnight Window-pane

THE rakish schooner soon made the island and came to anchor in a small bay not far from the fort. Twilight fell rapidly, but not so rapidly as eight stalwart seamen fell over her starboard quarter and pulled toward the beach. There they formed in single file, and, each putting his hands on the shoulders of his immediate predecessor, they marched in a lively but not ungraceful lock-step to the door of the fort. It was a mode of progress to which, however eccentric, they were apparently well accustomed, their eight wide hat brims flapped in unison with the rise and fall of their heavy sea boots; and the thick red beard of their leader, had it not been neatly plaited into a number of spiky cues, would have waved in front of them like an auctioneer's oriflamme.

"That there fisherman," said the red-bearded man viciously as the line stopped and marked time while he felt in his pocket for the key to the fort, "sold us a rotten dory. An' it's what comes o' buyin' of things honest-like, as some folks calls it. You pays your money for a ole dory cos you've lost your own pooty little tender, an' the fust time you uses of her you wets your feet soppin'. Bah! says I." With this disgusted utterance, he led his companions to a small house inside the enclosure and lighted a large ship's lantern swinging from the rough oak ceiling.

Seeing the eight men thus clearly, their profession was evident. There was something at once gay, furtive, and somber in their several expressions, and their eyes had the hard, opaque glitter that comes only to those whose lives are a continuous performance of daring deeds and reckless revelry, although at the moment they all looked worried. One after another they hastily kicked off their heavy sea boots, and, each sitting down in one of the several red rocking-chairs with which the room was generously provided, they rubbed their bare feet earnestly with the nice white tidies that in those days ordinarily adorned the back of this graceful and comfortable piece of furniture. This exercise finished, they looked more hopeful, but it was only after each had swallowed two quinine pills and a large glass of whisky from the corner cupboard that they appeared comfortably certain of their immediate future. Then the red-bearded man lighted his pipe, drew up his chair, and luxuriously elevated his feet to the cool level of a marble-topped table.

"Dog tired I be," he said in a deep voice. "An' now which of us jolly rovers is a-goin' to cook supper? That's the conundrum I'm a-askin'."

One after another the rest of the wicked company followed his example, but none attempted to solve his conundrum. They lit their pipes; they drew up their rocking-chairs; and they rested the heels of their carpet slippers on the marble-topped table, taking due care not to upset the graceful bunch of wax roses under a glass case which adorned its center. Each had made up his mind not to establish a dangerous precedent by offering to cook the supper, and each endeavored to smoke his pipe with the air of a man really not in the least hungry.

It was a cozy enough room, rather incongruously furnished, that seemed at first glance to combine the salient features of a ship's cabin, a New England parlor, and a modern antique shop. Living in a period of rather decadent culture, and having no culture, even of this decadent kind, of their own, these eight desperate men had furnished their dwelling with such things as took their fancy in the natural course of business. Fortunately, they had secured a fairly good architect (whom they had afterward economically utilized to bury with some of their treasure), but the load of lumber taken on the same wild foray had of necessity been eked out with the remains of the brig that carried it; and the room had therefore that dark and aged look so eagerly sought after by those who to-day tire of the conventions of our strenuous cities. But it was homelike (which is the main thing in domestic architecture), even to the trim melodion standing under a religious print called "Susanna and the Elders," which the eight pirates, not knowing the story, unanimously regarded as the *tour de force* of a fevered but delightful imagination.

"Now if ole Bald Head was here," said one of them presently, carefully holding a large brass nose-ring out of the way with one hand while he relighted his pipe with the other, "he'd be a-cookin' of *that* supper, he would. Allus loved to be a-messin' in th' kitchen. 'Tain't like home somehow without ole Bald Head." And he stretched out his legs and gazed mournfully at a cardboard motto hanging over the mantel. "Home, Sweet Home," was marked on it in pink, green, blue, yellow, red, purple, and cinnamon-colored worsteds; and the pirates had all considered it very beautiful and appropriate when they found it among the belongings of a maiden lady who had sailed from Bos-

THE LADY WITH WINGS

The Midsummer Idyl of a Radiant Visitor and the "Head Clerk"

By JENNETTE LEE

Illustrated by J. SCOTT WILLIAMS

He stood among the crowd on the dock looking at the boat as she steamed in. She was a round, clumsy craft, riding high in the water

THE steamer was late. The "head clerk" looked critically at the chandelier. Then he went out to fetch the dust-cloth and a piece of chamois. He took down the glass lamps and wiped each one carefully and put it back in its place in the chandelier, blowing bits of dust from the fixtures and running the dust-cloth carefully in and out along the brass filigree of grapes and vines.

It had been a busy day in the office—and upstairs and downstairs and in my lady's chamber—for to-day the rush season began. They always came the first of August—shoals of them—and by the middle of the month the house would overflow. There would be cots in the parlor and the "head clerk" would retire to the woodshed to sleep—such sleep as he could get—a few winks between midnight and dawn—and dawn began with cockcrow. The "head clerk's" back had a busy, contemplative air as he regarded the chandelier, alert for any smudge of dust. It was not strictly his business to dust the chandelier, perhaps, or to fill the lamps, or bring in eggs, or set the table. His chief business in life was to make the boarders comfortable. Incidentally he did things that no one else found time for: He met the boat twice a day—carried up bags and trunks and golf sticks—brought the mail and distributed it from the piazza steps—with jokes for the boarders—he ran errands and filled water-pitchers and fed the hens and brought vegetables from the garden when the rest were too busy, and superintended the dining-room when things went hard—visiting with the guests and gathering up cups and plates and omelets, coffee, and fish hash, with his long arms that reached skilfully among them while he talked.

He had finished the chandelier and he returned the dust-cloth to its place and went to the window to scan the horizon. . . . Far to the west a little blur appeared on the sky. He looked at it again and then at the clock—twenty minutes before she would be in. He glanced again around the room, running a quick, thoughtful hand along his black hair—every chair and pen and blotter and toothpick in place. Some one passed the office door and he looked up.

"Oh, Annie!"

She turned back a little. "Yes, Joseph—?" She hesitated, and came in, smoothing her apron. She was a dark little figure, with clear, straight eyes.

Joseph looked, and his glance deepened approvingly. "First rate, Annie! Don't wear the gingham one again—not afternoons—will you?"

She smiled—a demure, shy smile—and turned away, as one might from the sun when it shines too bright. "Mother likes it better—this one," she said, smoothing the starched surface again.

"Of course she does." Joseph was hearty. "And the boarders will. You through work?"

"All but some flowers. Mother said petunias." She had started to go.

"That's right." He nodded again, his eyes on the dark, clear face. "We'll have a lot of people to-night."

"Yes." She lingered over the word and turned to go, and waited—a breath—

The clerk's eyes were on her kindly. . . . A whistle sounded—a long, low note that broke the quiet and echoed a little and sounded again—low and hoarse.

She started. "It's the boat!" She had slipped through the door and down the long hall toward the garden.

The clerk's face wore a puzzled look. It was almost dreamy as he went down the piazza steps. The day had a kind of radiance. He had not known that it was like this. He looked across the stretch of road that led to the water. There were flowers everywhere and tall grasses that swung on light stems, and dandelions fluffing and butterflies, yellow and white. Joseph's eyes took it in with slow content. It was the quiet air that made it so beautiful—there had been no wind all day. They would have had a good passage and would eat, he thought. He quickened his steps a little. The boat was off the Head now; there was no hurry, but he liked to be at the dock as she came in. He liked the bustle and the calling, as he liked to be first on board to gather up hand-bags and luggage and start the boarders right. There were no other hotels on the island—only a couple of boarding-houses that did not boast a head clerk between them—but it was safer for Joseph to be there—and he liked it.

He stood among the crowd on the dock looking at the boat as she steamed in. She was a round, clumsy craft, riding high in the water. A little group of people gathered in the bow waved gaily as she came. Parasols—bits of color, red and deep blue—twirled in the light. The crowd on the wharf waved back and called out foolish things. Summer was alive, pulsing between the great boat and the island.

Then Joseph saw her first—standing on the deck of the steamer, her eyes scanning eagerly this new island she had come to. Her parasol was not blue or red, but a kind of creamy light that circled about her and shut her off from the sky.

The tide was high and the landing was made from the upper deck. So she came down the gangplank, her light skirts held daintily away and the creamy parasol atilt to shade her face. Behind her followed Joseph, laden to the chin with booty, and before and behind them came various youths who carried the surplus. She was accustomed to little swarms of men waiting on her. Since her earliest babyhood she had had them; they had danced at her feet, and she would not have known how to travel without them. She did not need them so much for the wraps and bags and parasols and flowers, perhaps, as for a kind of moral support—to applaud softly when she spoke, and to remain dumb.

II

IT WAS a pretty picture she made, coming down the steamer plank—with her attendants before and behind. But no one would have guessed, from the curve of her pretty mouth or the tilt of her chin, that she was aware how pretty she was, or that she had taken in the whole long wharf, the radiant island, and Joseph in his black coat and tie with one sweep of her lashes before the eyes fell. It was such an absent, preoccupied prettiness—not self-conscious or put on for the wharf, but genuinely preoccupied—as if she had retired for a while to the citadel—to commune with herself—perhaps to plan a campaign of happy laughter—a slaughter of hearts. It was not easy to know what was going on under the filmy hat—behind the absent eyes, and so everybody guessed.

If she had been an inch taller she would have been majestic—and her admirers would have known why they ran helter-skelter to do her bidding—or if an inch had been taken off, she would have been fragile—needing protection. She was neither tall nor short—only straight as a flame, from the little slender feet; and she was neither witty nor wise—but all the men who knew her waited on her lightest wish—because such is the way of men.

To Joseph, lumbering behind, with the luggage, these things were a sealed book. He knew woman nature—through many summers and much tribulation he had learned that some women are to be placated and some are to be commanded, and as "head clerk" he had done his duty by them all. No one could say that he had a favorite among them—fishballs and flowers and towels were dealt out with impartial hand—for Joseph's ideal in life was to be a faithful "head clerk."

But the clerk's head reeled to-day, as he followed the happy cortège up the road, between the flowery fields. The flowers nodded as before and the long grass waved and butterflies were everywhere—but the radiance of the day was not in them. It had gathered in a straight, slight figure that went before him—like a cloud.

Poor Joseph!—as he turned the register on the desk and dipped the pen in its ink and placed his finger on the black line where the first guest was to sign—he knew that his world had tumbled upside down and that things were falling out.

But when she came to the desk and took the pen in her fingers and looked at it a moment, dubiously, and then at Joseph, before she signed, his trouble went away. He saw things clear again and he knew. Whatever she might wish him to do it would be done.

"Mrs. Gregory Blair, Garyville, Kentucky, and Miss Anita Blair," with ditto marks, ran its fresh blackness across the page and the pen was in his fingers again—with the lightest smile for thanks. He laid the blotter, almost tenderly, upon the page—as if it guarded a secret for him, while he assigned guests and rooms and played his part as mere "head clerk."

They had never had a guest from Kentucky . . . and Joseph might have known, had he not been a very ignorant "head clerk," that there is a charmed land, and its daughters have the smile of the sun, and he upon whom that smile falls has tasted wine that will linger with him till old age—a smile of charm and gladness and the purity of heart that little children have, yet somehow faintly troubled with the downcast look and listening eyes of Mother Eve while the serpent coiled his shining length and bent his weaving head to whisper wisdom in her shell-pink ear. So when she had smiled her thanks and handed back the pen, Joseph's head swam with the draft the gods had brewed for the sons of men since the first light fell upon the earth. Alas, Joseph!

III

SHE was not a coquette—but, like the lady of Ferrara, she "liked whate'er she looked on—and her looks went everywhere." The hotel woke up. There were riding parties and driving parties and boating and golf and tennis—only bridge, in the parlors, seemed to languish a little, and the old ladies, gathered in sheltered corners of the piazzas, were no longer safe over their bits of news and scallops and wool—for the piazzas chattered and hummed. Chairs rocked with gay little ruffles and creaked and whispered when the ruffles had fled. If one would keep up with the pace, he must rise early and sit up late, and even then he could not be sure that something delightful going past, some charming little guess at life, had not escaped him. As for Joseph, devoted to kitchen and office and hens, he lived in one long, glorious dream that knew no waking—and no sleep. Never had life pressed so hard and never had he been so happy.

It could not be said that she flirted with Joseph, but neither could it be denied that Joseph was singled out. If she was the center of the group and dispensed favors, it was Joseph who stood at her side and placed the favors in her hand.

She was planning this morning for a driving party to Southern Head and back. They would take luncheon and drive back by moonlight—everybody—old ladies and all. She was very determined about the old ladies. *Why* she wished this would be a secret between herself and heaven—since the old ladies did not wish to go—and there were not horses enough on the island to carry so many old ladies to Southern Head and back in a day. Joseph had pointed this out to her carefully, sitting on the piazza railing, one long, black leg swinging back and forth as he talked.

And she had listened—with her pretty head bent—and she had nodded and raised her eyes, and continued her plans, which included *all* the old ladies and luncheon for everybody.

And Joseph had gone away and created horses out of dust and air and had changed a roast dinner, with vege-

They went in little groups, laughing and talking. . . . Like a child he cradled her

tables and soup and ice-cream, into a cold boiled luncheon, with sandwiches and relishes and a delicate, spicy drink that she liked. These were not easy days for Joseph, but his countenance shone with joy.

He had not known what living meant before. He recalled now—how far away it all seemed—the first night she came, when the hotel was about to settle down to its placid, accustomed sleep, and she had appeared in the dining-room, with her court about her and a chafing-dish borne aloft—and had demanded cheese and butter and eggs and paprika and beer! That it was a prohibition island Joseph had explained with his most courteous gravity, and that you *must* have beer for a Welsh rabbit, she had explained with her sweetest, gravest air, and while their two souls wrestled together, a feather-brained youth, who had no principles, had scoured the place and produced the beer—just one bottle—and it was Joseph himself who stood at her right hand and poured it in—a little at a time, as she commanded, while some one at her left did the paprika, and some one else the cheese, and her wooden spoon was everywhere, a kind of baton that kept order and beat the time—and the air was full of laughter and gay little sounds that tinkled and sweet, high-pitched commands that sent Joseph on useless errands and called him back and praised and scolded him in a breath till it seemed too good to be true. So, in heaven, the angels might call to each other, from bench to bench—but surely earth never brimmed so before.

Joseph smiled now, the long, slow smile that always rested on his face when he thought of her—Joseph was always thinking of her. Did he go to gather the eggs—it was to select the freshest and daintiest and slip it into his black coat pocket, to be boiled later, with his own careful eye on the clock, and borne in triumph to place before her. The day was a blaze of glory for him if she said: "Thank you!" and if she only raised her lids a little and looked at it, half-curiously, half-indifferently, still Joseph's heart sang within him, and when her fingers swung the knife that broke the shell with even cut, Joseph's heart went crack, too—just a little. For Joseph had seen a great light upon the way, and—like the rest of us—he would never be the same again.

IV

THE Southern Head was bathed in sunshine. The great cliffs that circled back from the sea were red at heart—like vast orchestral stalls that waited, silent and empty, for the accustomed gods—perchance they were asleep or gone upon a journey. So the day slept; and over the quiet sea, gulls wheeled on slow, outspread wings.

Now and then a face peered above the edge of the cliff, and was withdrawn, or a stone dropped from the top and fell into space—giving back no sound. The guests went warily along the path that edged the cliff. The path was well back from the sea, but there were ugly rumors—enough to make one cautious. A misstep and one might not see the sunshine again, or breathe the air. They went in little groups, laughing and talking, the bowl of sky above them and the great cliffs at the left that dropped to the sea.

It was not a day to linger indoors. Even the old ladies, wrapped in shawls, but without the knitting, had ventured a little way. They would not go far—they would be within call of the bell when it rang. Already, before they left the house, the smell of coffee had met the nostrils, and Joseph was here and there and everywhere, his black coat awry and the wisp of necktie standing under one ear, giving orders, bringing in baskets, unpacking cups and glasses and plates. The old ladies walked slowly past the stables where the horses could be heard through thin boards blowing softly and crunching their hay and oats. The way from the stable to the cliffs ran through an open field and the old ladies went with leisurely foot. One of them, who carried a black parasol, raised it to shield her eyes from the light. And it was as if heaven mocked her—for a little black cloud, like a parasol gone aloft, sailed between her and the sun and rested there. She looked up with blinking eyes and lowered the parasol, smiling. The other old ladies looked up—the cloud was on the sun and other clouds were coming—from the east and from the west. There had been no warning—but the sky was overcast. Great masses were rolling up, hurrying to blot out the heavens, from the four corners of the earth. The old ladies turned in their places with swift thought. They gathered up their skirts—as if the rain were already descending—and ran, their wide soles gleaming in the light as they went. Before they reached the house, the first drops fell, splashing big.

Joseph on the steps of the rough shelter house greeted them, smiling and helping them up the steps. They laughed and twittered and shook their wraps and peered through the windows, and watched the rest of the party hurrying now across the open field, fleeing from the wrath of the rain. They came flying—skirts drawn protectingly over bent heads—hats under arms—blown by the wind, hurrying, drifting to shelter, half-amused and half-angry at the power that drove them on.

It was Joseph who met them on the steps, scanning each group as it came—his quick eye running beyond it to search the field in the distance. She was not come—No, they did not see her—but she must be here. She started with them—yes, of course. It was so sudden—they had to run, single file—no one could tell. But Joseph had not listened, he was gone—across the field—hatless, in the rain.

They watched him, from the piazza, down the path. He would find her. She was surely safe—waiting under some rock, probably—wiser and safer than all of them. The other young men were searching the house hastily. Then they turned back into the rain. The last bevy of girls drifted into the house, shaking the wet from their garments, crowding about the blazing fire.

The wind had risen with the storm. They heard it whirling outside. The sky had grown black. They could scarcely see each other, except by the lightning flare. . . . The man who ran by the cliff called as he ran, lifting his face to listen. The ran had drenched him, but the wind that sailed past lifted the soaked coat and whipped it about him, slapping his face. He fought it down, peering ahead. He darted to the edge of the cliff and threw himself flat—far below an angry, muffled sound came up out of darkness. He rose to his feet and ran—stumbling, calling: "Anita! Anita!" The wind lulled a little and he made a hollow of his hands, calling to her: "Anita! Anita!" . . . Then louder, as the wind grew . . . and louder again and again: "Anita! An-i-ta!"—dying away pitifully like a sob. It was only the wind that heard him and hissed across the headlands. He stumbled and fell, and the wind echoed it again while he lay, beaten upon by the rain. When he rose a little three-cornered cut was in his forehead and a red streak trickled down his face as he fought the wind for foothold. He had reached the end of the path now, where it dips to the sea and curves back toward the great procession of cliffs. . . If he should not find her. He went cautiously, feeling the treacherous rock with his hands, slipping, sliding, catching at brambles, and waiting while huge pebbles, loosened from their place, rattled and fell, striking against the side of the cliff once—and again—and were lost to sound. He strained his eyes to pierce the dimness. The lightning flared high—and gleamed white on the sky and the cliff—and on something lodged below. He caught fast hold of the cliff and held himself against the beating of his heart that would thrust him

off. Swiftly he had stripped himself of the black coat and was tearing it in slits, testing each link with set lip. He gripped the strong cloth fiercely, as if he swore it to service. The tense fingers had found a cervice where a huge root thrust out and made fast the ribboned coat. It might not hold—God knew. . . . There was not time to go back. . . . She lay with the rain falling on her face, and below her the darkness fell away— If she awoke. . . . He put his foot cautiously down. . . . The rope held fast and he swung himself faster—and faster—careless now. . . . He would reach her. . . . The rain blinded him . . . but he held her, strained to his breast. . . . He had lifted her up the great cliff. . . . "Anita!" He sobbed it, bending to her, and the eyes opened and smiled wistfully and closed in the night. He stumbled and ran—hatless and coatless—babbling with joy—for he carried her safe. . . . Like a child, he cradled her, shielding the face from the rain. . . . The gods were jealous. . . . He held them at bay . . . he thrust them back. . . .

So he met the others, coming toward him through the storm, and gave her to them. But she had struggled to her feet and went along among them, laughing a little as her feet stumbled and they held her up on every side.

At the stables Joseph left them. He went in among the wagons and sobbed like a child.

And when he came to the house, the coffee was made, and Anita, sitting by the fire, held a steaming cup to her lips. When she saw him she put it down and looked at him with gentle eyes—and the gentleness in her eyes mocked him.

V

THE day lay like a pearl upon the sea. The world was new-washed by the storm—all the flowers and the grass and the little leaves.

Under the trees in the orchard Joseph waited for her. She had said she would come—with a little nod of her head and laughing eyes she said it. . . . She would come. . . . She was coming—with light feet—there on the grass. . . . He could see her. . . . Out of some other world. . . . She was coming. . . . She had paused for a moment to speak to the group by the path, then she came slowly on. Her eyes were on the ground, a little smile on her lips.

When she looked up, her glance rested on Joseph in his black clothes—waiting—and the smile faded, and she came more quickly and stood beside him. "I didn't mean to keep you waiting," she said. The light through the green leaves filtered and fell on the tilted face. It nodded to him kindly. "I meant to come right off, but it takes so long to pack, you know—to find your things and say good-by . . . and I *always* forget *something*." . . . The candid eyes appealed to him for sympathy.

But Joseph did not give it. He had started forward a step, his hand half-clenched at his side—words struggling on his lips. . . . But it was the "head clerk" that spoke. . . .

"You took your rooms—till the first—" The voice was harsh.

"Yes, I know. But we must go. . . I just *can't* stay—"

"Sit down," said Joseph. He motioned to the bench. "I want to say something."

She sat down obediently, her light skirt trailing a little and the slender foot peeping from among its ruffles.

Joseph stood before her humbly. His dark head was bent and the light traced lines of silver on it. . . . She looked at them curiously. "I haven't thanked you—" she said gently.

His hand put it aside with a gesture. "Wait . . . I didn't know you were going . . . I can't let you go—" He spoke fast—breathless—and dropped to one knee beside her—half resting on the bench. . . .

She did not move away—a grave look had crossed the childish petulance of her face. "I wish you wouldn't say things like that to me," she said. She was speaking very low. . . . "It makes me quite unhappy—" She spread her little hands.

Joseph looked at them. "I would not make you unhappy, or hurt you—for the world—"

"No . . . no—" Her lips half parted with a little smile—"I know you wouldn't. . . . You're such a kind good man—and I love you. Everybody does, you know—They just can't help it . . ." She was looking strange

[illegible] into his face—as if all the mirth and all [illegible] of the world dwelt in her eyes.

"I want you to love me," said Joseph. "I want you to marry me." But his face was unutterably sad. . . . "I can not live without you—" he added simply.

She looked down at him with swift eyes. . . . "I wish you wouldn't. . . . I couldn't marry you." She shook her head. "I just couldn't marry you—I'd be glad if I could—"

There was silence in the orchard all about, and the golden day brimmed with it. . . . He had not stirred from his place.

She half put out her little hand toward him and drew it back. . . . "You see, I don't expect to marry anybody—not anybody—" She shook her head gravely. . . . Then her eyes laughed. "I'd like to, real well—but I don't ever expect to."

The toe of her slipper found a little pebble and pushed it about. "You wouldn't like it—to live with me—" she said; "I'm as hard as hard to live with."

He looked up and smiled—a slow smile, that was full of tenderness and gentleness. "Don't — Anita — I understand—now—" He stood up, his hands behind him, looking down at her.

"I'm sorry I ever came to this island," she said. . . . The quick eyes brimmed and ran over. . . . She was searching among the flimsy ruffles for a bit of handkerchief. When she found it she dabbed them fiercely. . . . Then she stood up, both hands outstretched. "You'll just have to forgive me," she said. A little smile struggled up among the tears.

He took the hands, holding them fast, looking into the face of Eve—mother of men. Then he dropped them slowly. "I am glad I have loved you," he said.

"Oh—dear! Please don't—I'm going to cry *again!*" She searched for the handkerchief frantically. Then the laugh bubbled up. The day was filled with it and the orchard light and all the great world, and the smell of salt crept up from the sea. "Good-by." She turned away, but the eyes had brimmed again.

So he watched her move away, under the trees—out into the light, where the sunshine caught her and the flowers made a path for her, and the butterflies, on either side, rose and circled and fell as she went.

VI

THE ticking of the office clock on the wall behind him was like the echo of his thought. . . . She was gone—but the sun was shining out on the water and the sky was blue. He turned away from the window and crossed the empty room and sat down. The season was done now. There would be a few more days, then the last guests would go and the house would be closed. His hand in his pocket felt for something and drew it out—a fragile bit of lace and lightness. . . . He held it in his hand, gazing at it stupidly. It was so frail and gossamer and useless. . . . The clock ticked past the hour . . . but he had not stirred.

Some one in the hall passed the door and looked in and passed on with light foot. By and by the step came again, pausing a little by the door. Then he looked up. . . . "Did you want something—Annie?" The girl's face held its clear light steadily.

"I thought you might want me, Joseph—to do something—"

"No—there is nothing to do—now. Things are about over."

"Yes—" But she waited. She did not look at the closed hand that held something in it, but only at his face.

"The cut in your forehead is worse," she said. She had come nearer, looking at it.

"Is it? I don't know—" He raised a stupid hand. "Never mind," he said.

But she was looking at it—with clear eyes. "I have something—" Her gaze lightened. "One of the boarders left it—for me. When you put it on, it heals. You wait—"

She was gone and he dreamed again. The clenched hand opened and the bit of lace fell to the table beside him.

When she returned, she pushed it a little aside, making a place for the dish of water she had brought, and the scissors and a tiny bottle of fluid.

"I wash it first—in carbolic—" She drew the dish toward her. Then she reached out. "This will do—nicely—" she said. "I forgot the cotton." She had gathered up the little handkerchief and dipped it lightly in the water.

"Bend down, Joseph—just a little, please—"

The dark head, with its silver streaks, was bent obediently. . . .

The little hand that dabbed the water was very firm, but she gave an anxious look. "Does it hurt?"

"No—" He smiled a little.

"There—" She drew a quick breath. "It's clean—now." She lifted the bottle. "I put some of this on. It makes a kind of new skin, you know, and cures it—" She stood on tiptoe . . . reaching up. "It will hurt—a little—at first, but you won't mind—?"

"I shall not mind," said Joseph.

The cool finger-tips worked quickly. "There!" She stood off, looking at him.

A smile crossed the sad, quiet face. "Thank you, child," said [illegible]

"You're [illegible] welcome." She lifted the bit of handkerchief from the water and squeezed it with careful fingers and laid it on the table—a little wet ball.

But her eyes were on the cut. "It will be better to-morrow," she said.

Joseph's hand had reached out to the table. It returned to his pocket. "I think it is better now," he said.

Her face glowed with happiness. "You have to be careful of hurts like that." She nodded gravely. "Sometimes they stay and get worse and make a lot of trouble—if you don't take care." She gathered up the things she had brought—the dish of water and the scissors and the little bottle of fluid. Then she turned away, her face full of happiness and a kind of childlike courage.

When she had gone the room was still again. Joseph sat motionless, staring before him. Only the tick of the clock on the wall . . . and the sun shining outside. He drew his hand from the pocket and looked down at it—a little ball of filmy wetness, in the great palm. . . . The ticking of the clock on the wall echoed his thought.

To Liberty

A Toast

By OLIVER HERFORD

HERE'S *to our Goddess, Liberty,*
Idol of bronze and stone!
May she come to life some day
And let her charms be known.

THE HANT

(Continued from page 19)

Christmas with a nephew in India and had never been heard of afterward.

Nose Ring's ill-considered remark cast a damper over the whole company. A tall man with yellow mustaches rose nervously and sat down at the melodion where he struck a few notes at random, but the familiar sound of the homelike instrument only deepened the general sadness, and one after another the seven pirates turned their heads and fixed their eyes on him with a brooding and almost vindictive melancholy. No one, except an occasional minor poet, likes to be stared at, and Yellow Mustaches was no minor poet. He twisted slowly about on his music stool, and there was something in this combined and unwinking gaze of his seven savage companions that visibly disconcerted him.

"I'll cook the confounded supper," he remarked briskly; and a moment later they heard him busy with the pans and kettles.

Yellow Mustaches cooked a good supper, but he was slow about it. The cuckoo clock in the parlor had long ago chirped nine cuckoos when the last pannikin was emptied of rum and the last belly fairly well filled with it. They rolled pleasantly in their chairs, and Red Whisker, getting to his feet at the head of the table, voiced a general sentiment.

"A good cook ye be, Yaller Mustaches," he said dogmatically, "but a better songster. A song, says I, an' then to bed, as it's most bedtime already."

None more willing than Yellow Mustaches. He might have doubts about his ability to cook, and even a modest disinclination to practise that accomplishment, but as a musician he took a back seat for nobody; and he now led them to the parlor all a-twitter with gratified vanity. Not that he *was* a musician; but the type survives in every neighborhood, and the only difference is that, whereas the usual victim of his obsession has taken *some* lessons, Yellow Mustaches had never taken any. He gave a gallant curl to his mustaches and another to the music stool; then he sat down and hit several of the keys in succession with his strong forefinger, for he had once seen the melodion played, and learned that the real secret is to hit with your finger and pump with your toes at the same moment. And seven delighted smiles of happy anticipation spread softly over the faces of the listening pirates as they resumed their rocking-chairs.

Yellow Mustaches sang in a sweet, unnatural voice. He had known life, had Yellow Mustaches; and when it came to sweet and simple ballads he could interpret them with all the pensive understanding of one who has also loved and suffered. Now he drew a long, sobbing breath and was off as follows:

"There was a gentle faarmer's boy
As loved a paarson's daughter.
A bunch of pinks with honest jooy
He daaily picked and broought her.
But, aaah! one daay,
I'm grieved to saay,
He found his dream was oover.
So he cut the hay,
And skipped away
To be a jolly roover."

Here the singer paused significantly; and the entire company, which had been waiting impatiently, roared a rollicking chorus:

"'Adoo to innercence,' he cried,
'Adoo to fond deluuuusion.
I go to hide
My busted pride
And salve its sore conluuuusion.
No siren's art
Shall breuk my heart
Agin, or booowl me ooover.'
So he cut the hay,
And skipped away
To be a jolly rooover."

Like so many other singers, Yellow Mustache's eyes roved as he sang, and now they turned wistfully to the parlor window. The nights were often mildly chilly on Nonesuch Island; the window was closed and dirty, but the stars shone through it. When the chorus ended, the musical pirate drew another long, sobbing breath, slapped the melodion coquettishly, and was away on his next stanza:

"It happened at a soooshibul
When all was pullin' caaandy.
This same young man, he—"

It was a fine start, but got no further. The singer's voice quavered, stopped, and the song flickered out into a sudden terrifying silence, broken by a simultaneous scraping of seven pairs of rockers as the pirates turned to look at him. His mouth was still open to emit its music. But no sound came from the round black aperture; and on either side of it his yellow mustaches bristled so stiff with terror that his expression was like the little o of the typewriter when the ingenious typist puts four hyphens on either side to indicate a break in the narrative.

He glared straight at the window, and as the seven pirates followed the direction of his glare the cozy room quivered with their simultaneous shudder. Pressed against the pane, where it made a round, wet spot about the size of a dime, was a round, fat nose under a shining cranium which the light of the room illuminated with a ghastly radiance. And from the face beneath, which dimly suggested a large, water-soaked potato, a pair of blue eyes gazed into the room with a mingled look of hope and apprehension. Yellow Mustaches staggered to his feet wildly. His teeth rattled together, and each individual hair on his head stood on tiptoe as if trying to see what was the matter.

"It's him!" he stuttered. "It's pore, ole Bald Head, as I m-m-murdered by a-p-p-pushin' of him overboard all in f-f-fun like! It's his hant, an' he's a-comin' after me! Oh! Oh!" And with a terrified wail the anguished musician staggered against the melodion, which wailed in unison. It was the first time that the instrument had ever given out a note in harmony with his own voice, and the dismal, unexpected sound completed the univer-

sal panic. Instinctively the seven pirates had drawn their cutlases, but at the horrified scream of the melodeon the useless weapons fell with a clatter from their nervous fingers.

"A hant! hant!" they stuttered, too; and with one desperate thought in common they rushed tumultuously upstairs to their bedroom, where they undressed hastily, tumbled into bed, and pulled the covers over their ashen faces. No ghost has ever been known to turn down a bedcover, but even in this security they still shook and shuddered.

In the deserted parlor the light of the ship's lantern illuminated seven overturned rocking-chairs (with white tidies), one overturned piano stool, seven cutlases, and sixteen scattered carpet slippers. On the wall over the melodeon the elders (for nothing could stop them) still peeped at Susanna. And outside the silent stars looked down at the unaccustomed spectacle of a baldheaded man running as fast as his legs could carry him toward the *Sacred Sarah*.

Wherein the Wicked Company Tiptoes from the Sleeping-Chamber, leaving Yellow Mustaches in Perilous Plight in His Nightie

PIRATES at home usually slept late, but it was only nine o'clock the next morning when Red Whisker cautiously projected his fierce and serious countenance from under his bedclothes. Framed in the white counterpane, he was a sorry, and even comical, looking pirate, for he had neglected to comb out his beard before retiring, and restless slumber had tied several of the ends together in a hard knot that pulled his cheeks forward and gave him the pensive, pouting expression of a plump, innocent young girl just learning to whistle. The seven other pirates still had their heads under the bedclothes.

"If so happened as I hopped into th' wrong bed last night, careless like," he muttered, "'t stands to reason as somebody else has been a-hoppin' into the wrong bed. An' how's a fellow goin' to know which of his merry companions is which? That's the conundrum I'm a-askin' of myself." Then his face lighted, and he smiled so broadly that he hurt himself and was compelled to pause and untie his ends. Snores emanated from each pirate coverlet, but from under one of them came a sound like the thin whistle of a peanut roaster.

"That's him," muttered Red Whisker. "That's pore ole Yaller Mustaches a-snorin' like a human tea kettle."

And with that he hopped silently out of bed and went softly from one sleeping figure to another. He woke them gently, and six fierce men got cautiously out of bed and followed Red Whisker downstairs to the parlor. From the seventh bed the whistling sound continued louder than ever; but hardly had the last nightgown rustled down the narrow stairway when a pair of long yellow mustaches appeared warily from under the coverlet and the owner carefully tiptoed after them.

Once in the parlor, the seven desperate men responded to force of habit. They drew up their rockers, lit their pipes, put on their carpet slippers, and elevated their feet to the surface of the marble-topped table.

"Now this 'ere hant," said Red Whisker, coming directly to the point. "I loved ole Bald Head, so to speak, as much as any. Praised his cookin' I allus did. Made a pet of him in more ways than one, as ye'll all bear me out in it. But a hant's different. Not as I'm feared of 'em, mind ye, but I don't like 'em, an' that's a fact, gentlemen."

He had struck the right note, and a murmur of agreement ran around the table. It was the unanimous opinion of the seven pirates that while none of them were afraid of ghosts there was unquestionably something undesirable about them as steady companions. The man with the nose-ring offered an explanation while he absently polished that admirable ornament with the hem of his nightgown.

"It's their cussed onexpectedness, Whisker."

"So 'tis," said another. "Allus a-bobbin' of theirselves up when they ain't wanted."

"An' a-listenin', too," added a third. "Mebbe you has a leetle secret an' you tells it to a comrade confidential-like, an' then you looks round an' there's the cussed hant a-lookin' at you. Never a smile on him either. That's what I hates about 'em. They're so —— —— —— —— —— —— sad."

"An' who do a hant hant?" continued Red Whisker in a tone of argument. "Hants the pussun who's been a murderin' of him if so be he don't live too far off for a hant to reach him. Made a good many hants we have, fust an' last," he added, with a touch of professional pride; "but the pore things don't come a-hantin' of us cos we allus murders 'em away from home, businesslike. But now here's ole Yaller Mustaches, he goes a-murderin' of ole Bald Head right here on the island. An' here's ole Bald Head, he comes a-hantin' of ole Yaller Mustaches an' a-hantin' of us incidental. It's a sittywation, says I, as must be handled without no silly sentiment. Practical men we be, an' there ain't but one way to lay a hant."

He paused significantly; and with a simultaneous movement the seven companions took their feet off the table and replaced them with their elbows, thus bringing their scowling faces close together over the wax flowers. It was their favorite attitude when plotting. Their voices sunk to a hoarse whisper in which the words 'trial" and "execution" were delightedly audible. Then they disputed, and for a few minutes it looked as if their peaceful garments might soon be blushing with the blood of unseemly conflict, but Red Whisker put an end to it. He strode to the corner cupboard and returned with a dice-box in one hand and a pistol in the other.

"Judge I'm a-goin' to be, gentlemen all," he remarked grimly, "'n there's an end on it. An' what's the use o' quarrelin' over the jury an' th' opposin' counsel when we've got to have the trial immejit after pore ole Yaller Mustaches have washed up the breakfast dishes? Shake for it, says I, an' then all hands together to rig th' gallus."

The dice shook in the box, and Yellow Mustaches shook in his nightgown as he listened at the head of the stairway; then, as he heard them rise from the table, he sped back to bed and again tucked his head under the bedclothes. Never had life seemed sweeter to him, and his brain whirled under his pillow as he sought some way of prolonging it.

Fortunately, it whirled to some purpose. He got out of bed grimly, took several pillows, and arranged them cunningly under his own coverlet until they looked like a tall and unawakened sleeper. It was a ghostly business, recalling as it did the operation of burial, but soon finished, and he contemplated the dummy with satisfaction as he picked up his trousers and started to dress himself. But the legs of the doomed pirate trembled in spite of him; he found it difficult to project them into the proper apertures; and even as he was for the third time withdrawing his right foot from the left leg of these ordinarily friendly garments, the fatal step of a carpet slipper sounded ominously at the foot of the stairway. With a muttered exclamation he threw his trousers from him and sped to the window, which commanded a pleasant view of the ocean that in happier moments he had often paused to appreciate. But the carpet slipper was now half-way up the staircase; and with a bitter oath he leaped from the window to the roof of the kitchen ell and in another moment was speeding out of the door of the fort.

Nothing would have more keenly distressed Yellow Mustaches, under ordinary circumstances, than to be abroad by day with nothing on but his nightgown. But now his sole thought was to put as much ground as possible between himself and his once congenial companions, and he remembered instinctively that the island was widest from west to east. Lack of breath compelled him after a time to stop running, but he still pushed earnestly eastward, and at the end of an hour, such was the speed lent him by his well-founded terror, reached the long beach at the extreme easterly end of the island. The ocean forbade further progress, and the wreck of the *Sacred Sarah* offered the only visible shelter.

The *Sacred Sarah* had had a good-sized cabin, and Yellow Mustaches entered well into it before he realized that it was already occupied. At the table in the center sat a man wearing a green hat ingeniously contrived of palm leaves. He was back to the entrance, and sat in the cramped and rigidly easy attitude of a careful penman, muttering to himself a succession of apparently meaningless letters. The fugitive's bare feet made no sound on the floor of the ancient cabin, and the discovery of its busy occupant startled him into temporary forgetfulness of his own troubles. Afraid of no single man was Yellow Mustaches.

"How now, my jolly buck!" he exclaimed in a round voice. And he twirled his mustaches, swaggered to the table, and gave the mysterious penman a jovial whack on his rigid shoulder.

The effect was magical. "M," said the man suddenly; and his hat, disintegrated by the force of the blow, fell in a shower of green leaves over his shoulders and revealed his bald, yellow head wrinkled with surprise, vexation, and apprehension. He half rose from the table and turned sharply to see what had hit him.

"The hant!" cried Yellow Mustaches. "The hant!" He tried to flee, but his legs failed him (as would have been natural enough even had he not been seized by that awful paralysis which, thank Heaven, afflicts most of us only in nightmares), and he stood swaying like a paper soldier that has been left on guard in front of the nursery register. The other wondered at him. He looked quickly toward the cabin hatchway, and, seeing that his visitor was alone, his expression softened to a look of combined indignation and curiosity.

"Who's a hant?" he demanded. "An' what be you a-doin' of runnin' round in your nightie, Yaller Mustaches?"

Hardly could he have found a question better calculated to shock the other into common sense. The thought flashed over Yellow Mustaches that no real ghost is ever visible by daylight.

"I—I've just got up," he remarked weakly; and with a painful blush he sat down hastily at the further side of the table. As in the familiar case of two old friends meeting unexpectedly on a street corner, silence fell between the two pirates and each regarded the other across the table with a dumb, determined expression of cordiality. Each was full of questions which the unexpectedness of the meeting had rudely jarred into a hopeless chaos.

"It's a warm day," said Yellow Mustaches, after several efforts to begin a natural-sounding conversation.

"Hot," said Bald Head, after a considerable interval. "Where you been a-keepin' of yourself, ole feller?"

"Oh, just a-cruisin'," returned the other, indifferently. "Same ole story. What *you* been a-doin'?"

"Writin'," said Bald Head, with a proud glance at his manuscript. "Letters an' sentances, an'—an' a sort of tale," he added, suddenly yielding to a natural temptation. "Now just you listen to this, ole feller, an' tell me honest-like what you think of it."

And with that, after the manner of young and determined authors, he fixed his victim with a proud, hesitating eye and began to read his manuscript. Yellow Mustaches stirred uneasily in his nightgown, but the modest author still had his cutlas, and there was nothing to do but sit tight and listen. And in spite of himself Yellow Mustaches found it interesting.

"Now i am back on the isle. My raft did not work"—so Bald Head finished. And with what must have been an instinctive affectation of modesty (for he was neither an affected pirate nor an indifferent author) he crossed the cabin to where he kept his sweet fern and tremulously busied himself filling his pipe.

Yellow Mustaches meditated. His eyes roved the cabin, climbed the ladder, and suddenly expanded as they encountered two others gazing greedily at him over a bushy red beard. Red Whisker himself peered cautiously down the hatchway; his eyes glowed like a cat's; and behind him, although Yellow Mustaches could not see them, six ferocious pirates, armed to the very teeth, in which they gripped their naked cutlases, lay on their bellies and squirmed, snake-like, toward the cabin of the *Sacred Sarah*.

"Come out, you murderer!" roared Red Whisker. Great was his satisfaction that he was at last going to kill some one without committing an act of palpable injustice, and his voice showed it.

But nothing so annoys an author as this kind of an interruption to critical discussion. In the bitterness of his spirit, Bald Head forgot his former terrors and stepped boldly under the hatchway.

"Who's he been a-murderin' of now?" he demanded tartly; and his tone was so human that Red Whisker, even as he recoiled in horror from the bald head shining below him, could not but realize its unghostlike quality.

"Y—Y—You," he explained doubtfully.

"*Him* kill *me!*" echoed Bald Head indignantly; but the thought recalled his own dangerous position. Caught he was. There was no way out of the cabin. But when he again spoke it was with the dignity of a brave man at his last extremity. "Mebbe ye can all do it together," he said simply. "An' now as the end is come, Whisker, all I'm a-askin' of ye is the temporrery use o' a pint o' rum."

The request was plain enough, although the words puzzled the hearer. Behind him his six companions wriggled venomously nearer and nearer, pausing now and then to get a better grip on their cutlases with their tired teeth. They saw Red Whisker take a flask from his pocket and hand it cautiously down the hatchway. Nearer they crept; when all at once the broad back of their leader straightened so suddenly that six mouths opened and six cutlases fell with a single thud on the white sand. There they lay untouched and unheeded. Red Whisker stood with one hand on his hip; the index finger of the other pointed into the cabin; and his dishonest face glowed with satisfied conviction.

"It weren't no hant," he shouted joyously. "It were ole Bald Head himself. An' here he is down in this very cabin, alive—an' drinkin'."

Here Endeth the Memorable and Extraordinarily Remarkable Four-Part Narrative of Eight Melodious Pirates and the Terrible Pallid Face at the Window.

¶ MEHITABEL, *a narrative in four parts, being the Startling Piratical Adventures of a Virtuous New England Schoolmistress in the Hands of These Unlettered and Ferocious Freebooters, appeared in the Thanksgiving Issue, Dated November 21, 190*

Reminiscences of a
Dancing Man

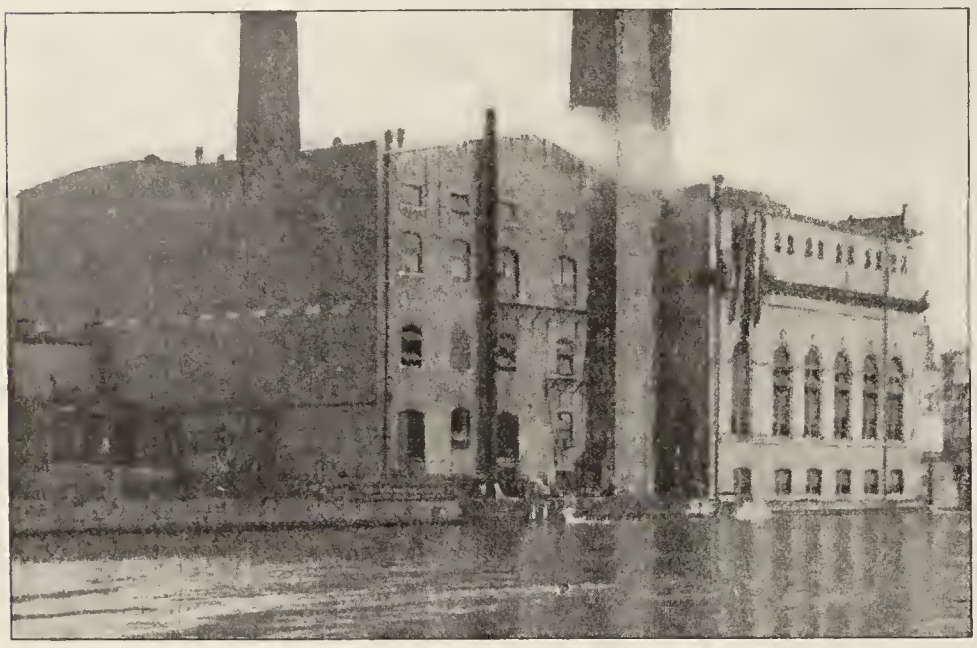
By THOMAS HARDY

I

WHO now remembers Almack's balls
Willis's sometimes named—
In those two smooth-floored upper halls
For faded ones so famed?
Where as we trod to trilling sound
The fancied phantoms stood around,
Or joined us in the maze,
Of the powdered Dears from Georgian years,
Whose dust lay in eighteen sealed-up biers;
The fairest of former days.

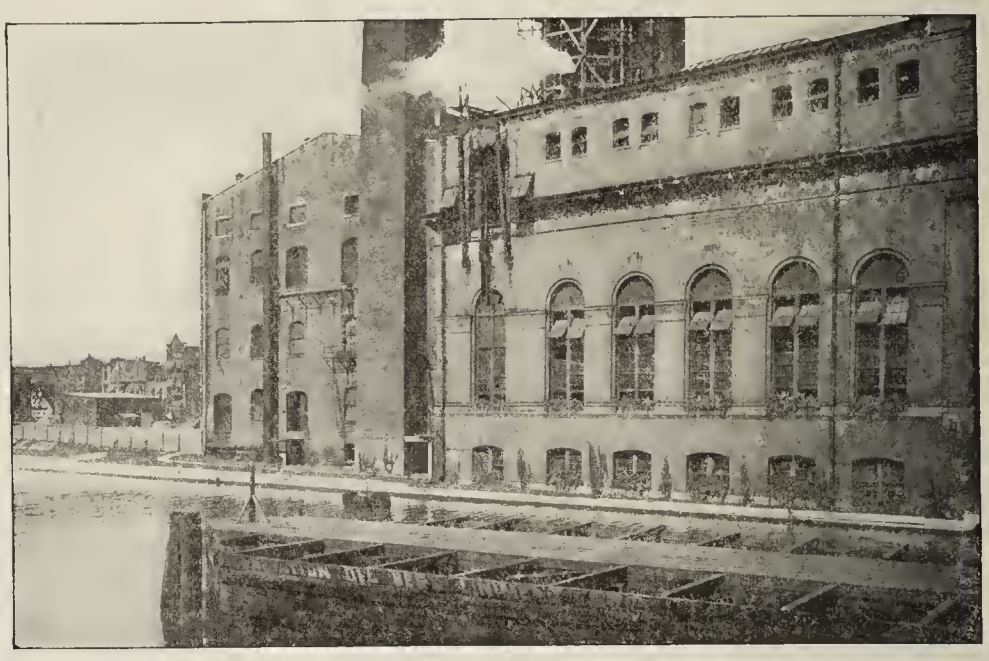
II

WHO now remembers gay Cremorne
And all its jaunty jills,
And those wild whirling figures born
Of Jullien's grand quadrilles?
With hats on head and morning coats
Then footed to his prancing notes
Our partner-girls and we;
And the gas-jets winked, and the lusters clinked,
And the platform throbbed as with arms enlinked,
We moved to the minstrelsy.



III

WHO now recalls those crowded rooms
Of old yclept "The Argyll,"
Where to the deep Drum-polka's booms
We hopped in boisterous style?
Whither have danced those damsels now!
Is Death the partner who doth mow
Their wormy chaps and bare?
Do their spectres spin like sparks within
The smoky halls of the Prince of Sin
To a thunderous Jullien air?

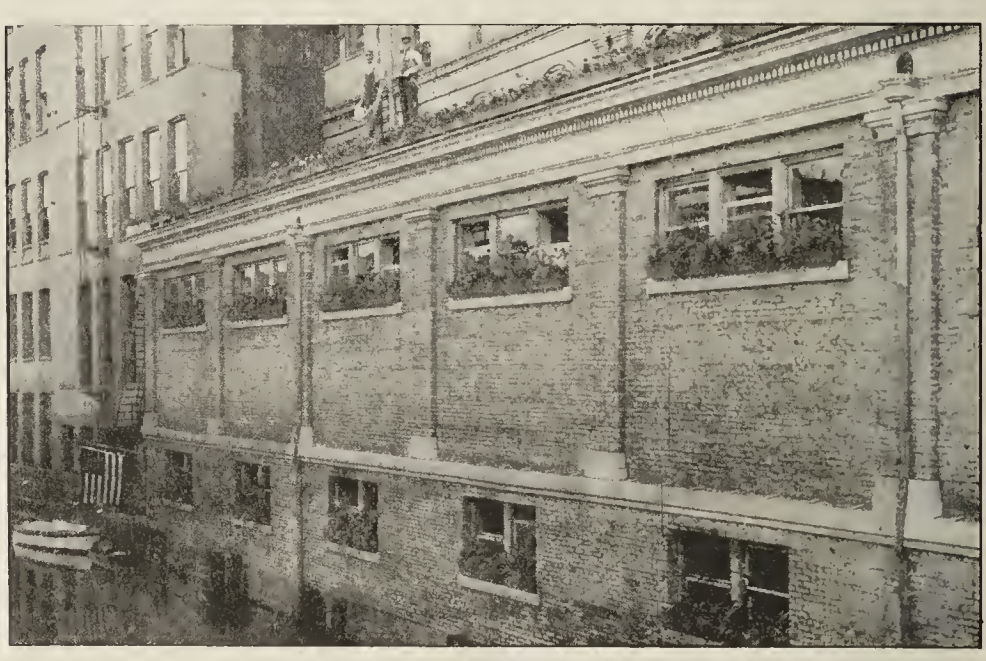


1895.

These were the conditions as they existed in a block just north of the Wisconsin Street Bridge, a point viewed by more people than any other spot in the city

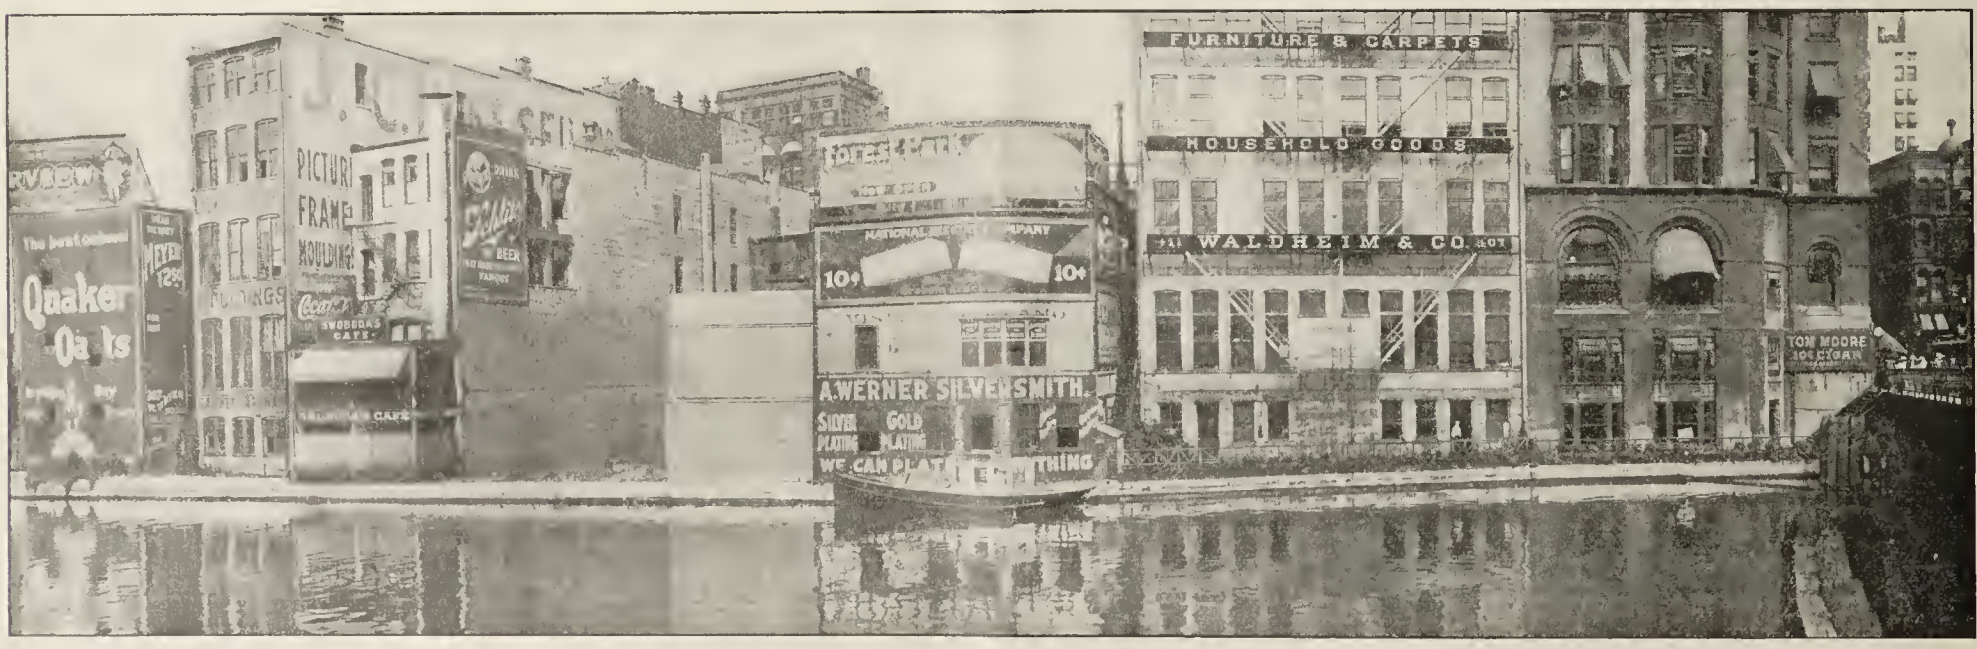
A view of one of the power-houses of the Milwaukee Electric Railway and Lighting Company before the river-front improvements were begun

This picture shows the transformation in the appearance of the power-house after the officials of the company had become imbued with the improvement spirit



Milwaukee's River-Front

By J. HORACE McFARLAND



THE pictorial story here shown is most suggestive. It means that one American city, live, vigorous, and wealthy, is beginning to care for its appearance, to reach out toward the city beautiful. Bad as are the best of the conditions shown, they are better than the best in Chicago, in Detroit, or in Cincinnati, or any other American city with a "business" water-front. With knowledge of the way in which Amsterdam and Hamburg, Paris and London, Stockholm and Copenhagen, treat their commercial waterways, Milwaukee will never be satisfied until she has what her wealth and energy entitle her to—a completely pleasing and completely efficient water-front. She will get double value from this water-front, in its effect on her own people and in its drawing power on "beauty travel."

As but one mile in fifteen of America's possible waterways has been developed for commerce, there is both opportunity and danger at present—opportunity to have these waterways both pleasing to the eye and useful to commerce, and danger that they will be "improved" into the ugliness of the Erie Canal or of the Allegheny or Schuylkill River. With consideration of the value of public beauty, these waterways, through city and country, will be more than ugly trenches and open sewers. Winona, Minnesota, has made her Mississippi River levee-front a beautiful park and a safe landing-place. In Grand Rapids, Wisconsin, some public-spirited men and women bought the banks of the Wisconsin River, then leased them as public property to the city for the city's good, and chased off bill-boards.

Hundreds of American communities are now using the rivers which border or bisect them as dumps and sewers. If we are fit to have what Europe has, we will begin to clean up and beautify our water-fronts.

Flower boxes in the windows and on the roof of the store of Gimbel Brothers, illustrating one of the attractive forms which the river-front work has assumed

Contrast this picture with the one at the top of the page. It shows the same situation after improvement work had been commenced

Who Prefers Van Camp's?

Madam, you should raise your hand. All of your people like Van Camp's better than home-baked beans. Yet this ready-baked dish means less to them than to you.

Serve a dish of home-baked beans with a dish of Van Camp's. Then take a vote of your table.

The result is always the same. All, save the housewife, will vote for Van Camp's. The housewife, of course, can't decry her own dish.

Yet, Mrs. Housewife, think what Van Camp's mean to you. Think of the time and the fuel you'll save when you once vote with the rest.

Think of what it will mean to have a dozen meals in the house, ready for instant serving.

All people like their beans nutty, mealy and whole. Yet you can't get them that way without a steam oven.

People want their beans to digest, so they won't ferment and form gas. No home oven can make them digestible.

People like the tomato sauce baked into the beans.

Your folks will eat more beans, by five times over, when you serve Van Camp's. And beans are 84% nutriment.

They contain more food than meat or eggs or cheese. Yet they cost but a fraction as much.

See what a saving it makes on your meat bills to serve beans that people like.

Here are the reasons why Van Camp's excel beans baked at home. Note that the fault does not lie with you, but solely with your lack of facilities.

Our ovens are heated to 245 degrees. And we bake in small parcels so the full heat goes through. Thus we break up the particles so the digestive juices can get to them.

The beans in the center of your baking dish rarely get more than 100 degrees. That's not half heat enough. That's why your beans ferment and form gas.

We bake in live steam—not in dry heat. Thus we bake our beans until they are mealy, yet not a bean is crisped or broken.

Your top beans are crisped. The rest of your beans are mushy and broken. That is all due to dry heat.

Then we bake the beans, the tomato sauce and the pork all together, and get our delicious blend. Those are the reasons why people prefer Van Camp's.

Van Camp's PORK AND BEANS

BAKED WITH TOMATO SAUCE

We pay $2.25 per bushel to get the best beans grown. We pay for tomato sauce five times what it need cost. There's no other dish like this.

We buy only the choicest Michigan beans. Then we pick out by hand the whitest, the plumpest, the fullest-grown. All but the best are discarded.

Some beans sell as low as 30 cents per bushel. We pay $2.25 for ours.

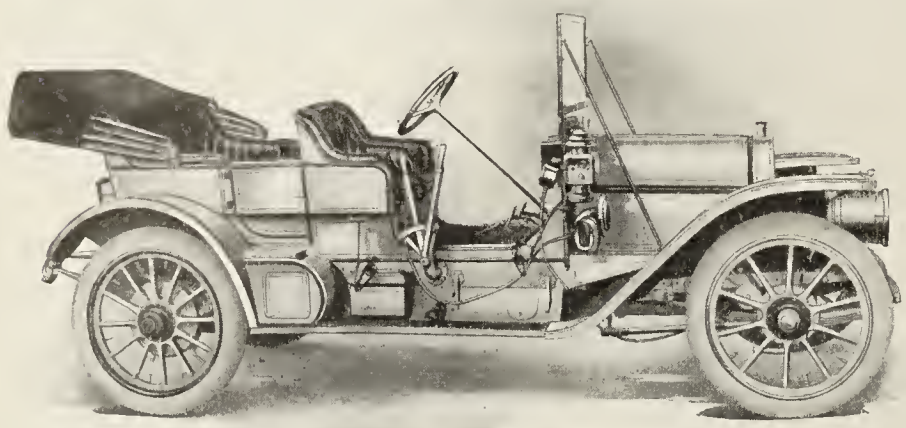
We could buy tomato sauce ready-made for exactly one-fifth what we spend to make ours. But ours is made solely from whole ripe tomatoes—ripened on the vines—picked when the juice fairly sparkles.

That's how we get our superlative zest.

Please bear in mind this difference in beans and tomato sauce. You will find, if you compare them, that no other brand is half so good as Van Camp's.

Be sure that you get what you want.

Three sizes: 10, 15 and 20 cents per can.



Van Camp Packing Company, *Established 1861* Indianapolis, Indiana

Little Foxes

(*Continued from page 17*)

"And how did they do before they died?" said the Inspector.

"They ran about in the sun and slavered at the mouth till they died."

"Wherefore?"

"God knows. He sent the madness. It was no fault of mine."

"Thy mouth hath answered thee," the Inspector laughed. "It is with men as it is with dogs. God afflicts some with a madness. It is no fault of ours if such men run about in the sun and froth at the mouth. The man who is coming will emit spray from his mouth in speaking, and will always edge and push in towards his hearers. When ye see and hear him ye will understand that he is an afflicted of God: being mad. He is in God's hands."

"But our titles—are our titles to our lands good?" the crowd repeated.

"Your titles are in my hands—they are good," said the Governor.

"And he who wrote the writings is an afflicted of God?" said Farag's uncle.

"The Inspector hath said it," cried the Governor. "Ye will see when the man comes. O sheikhs and men, have we ridden together and walked puppies together, and bought and sold barley for the horses—that after these years we should run riot on the seent of a madman—an afflicted of God?"

"But the hunt pays us to kill mad jackals," said Farag's uncle. "And he who questions my titles to my land—"

"Aahh! 'Ware riot!" The Governor's hunting crop cracked like a three-pounder. "By Allah," he thundered, "if the afflicted of God comes to any harm at your hands, I myself will shoot every hound and every puppy, and the hunt shall ride no more, On your heads be it. Go in peace, and tell the others."

"The hunt shall ride no more," said Farag's uncle. "Then how can the land be governed? No—no, O Exeellency our Governor, we will not harm a hair on the head of the afflicted of God. He shall be to us as is Abu Hussein's wife in the breeding season."

When they were gone the Governor mopped his forehead.

"We must put a few soldiers in every village this Groombride visits, Baker. Tell 'em to keep out of sight, but keep an eye on the villagers. He's trying 'em rather high."

"O Excellency," said the smooth voice of Farag, laying the "Field" and "Country Life" square on the table, "is the afflicted of God who resembles Biggle-bai one with the man whom the Bimbashi met in the great house in England, to whom he told the tale of the Mudir's cranes?"

"The one same man, Farag," said the Inspector.

"I have often heard the Inspector tell the tale to our Excellency at feeding time in the kennels; but since I am in the Government service I have never told it to my people. May I loose that tale among the villages?"

The Governor nodded. "No harm," said he.

THE details of Mr. Groombride's arrival with his interpreter, who he proposed should eat with him at the Governor's table, his allocution to the Governor on the New Movement, and the sins of Imperialism, I purposely omit. At three in the afternoon Mr. Groombride said: "I will go out now and address your victims in this village."

"Won't you find it rather hot?" said the Governor. "They generally take a nap till sunset at this time of year."

Mr. Groombride's large, loose lips set. "*That,*" he replied pointedly, "would be enough to decide me. I fear you have not quite mastered your instruetions. May I ask you to send for my interpreter? I hope he has not been tampered with by some snbordinates."

He was a yellowish boy called Abdul, who had well eaten and drunk with Farag. The Inspeetor, by the way, was not present at the meal.

"At whatever risk, I shall go unattended," said Mr. Groombride. "Your presence would cow them from giving evidence. Abdul, my good friend, would you very kindly open the umbrella?"

He passed up the gangplank to the village, and with no more prelude than a Salvation Army picket in a Portsmouth slum, eried: "Oh, my brothers!"

He did not guess how his path had been prepared. The village was widely awake. Farag, in loose, flowing garments, quite unlike a kennel huntsman's khaki and puttees, leaned against the wall of his

The first Derby made in America was a

C & K

Hats for Men

An interesting feature of Knapp-Felt manufacture is the fact that each Knapp-Felt hat is made separately. It is therefore highly important to note that in every one of the thirty-seven processes through which the hat passes it receives the individual attention of a well paid, contented workman carefully chosen for his skill and experience—and especially his ability to measure up to the C & K standard.

The noticeable elegance of style which characterizes Knapp-Felt hats is the result of expert handwork guided by the most capable superintendence under the strictest sanitary conditions and with the pleasantest surroundings. If the best is desired it is worth while to insist that the hat shall be a Knapp-Felt.

Hatters who sell Knapp-Felts base their claim to patronage on the intrinsic value of the merchandise.

Knapp-Felt DeLuxe Derbies and Soft Hats are Six Dollars. Knapp-Felts are Four Dollars—everywhere.

Your newspaper probably has the advertisement of a hatter who sells Knapp-Felts.

MATERNITY SKIRT

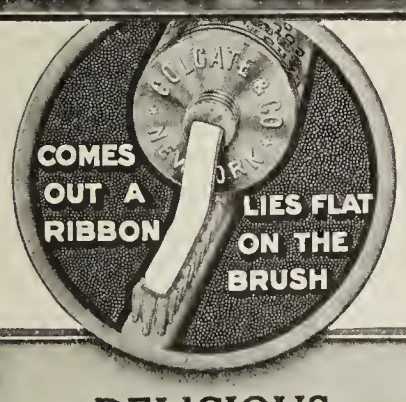
Registered in U.S. Pat. Office

of great interest to

Every Prospective Mother.

Something new — only scientific garment of the kind ever invented. Combines solid comfort and ease with "fine form" and elegant appearance in the home, on the street, and in society. — **Always drapes evenly in front and back** — no bulkiness — no draw-strings — no lacing — no ripping or basting. — **Can be worn the year round.**

Made in several styles, and at prices lower than you can buy the material and have them made at home.



FREE Send for our **Fine Illustrated Book — "Fine-Form Maternity Skirt"** — It's FREE to every woman writing for it. Tells all about these skirts, their advantages, styles, material, and cost. Gives opinions of physicians, dressmakers, and users. **10 Days Free Trial.** When you get our book, if your dealer has not yet been supplied with Fine-Form Maternity Skirts, make your selection of material and style, and we will make the garment to your order. When you get it, **wear it ten days,** and **if you don't find it exactly as represented,** send it back and we will cheerfully **refund every cent** paid. **Other Skirts** — If not in need of a maternity skirt, remember our famous B & W dress and walking skirts will positively please you — **same guarantee** — Illustrated book free. Which book shall we send? Write to-day to

Beyer & Williams Co., Dept. 51, Buffalo, N. Y.

WARNING

To protect you against disappointment we caution you that the **Fine-Form Maternity Skirt** is the only "Maternity Skirt" on the market, as it is the only skirt which can always be made to drape evenly, front and back—all substitutes offered will rise in front during development—a fault so repulsive to every woman of refined tastes. No pattern can be purchased anywhere for this garment. Its special features are protected by patents.

uncle's house. "Come and see the afflicted of God," he cried musically, "whose face truly resembles that of Biggle-bai."

The village came, and decided that on the whole Farag was right.

"I can't quite catch what they are saying," said Mr. Groombride.

"They saying they very much pleased to see you, sar," Abdul interpreted.

"Then I do think they might have sent a deputation to the steamer, but I suppose they were frightened of the officials. Tell them not to be frightened, Abdul."

"He says you are not to be frightened," Abdul explained. A child here sputtered with laughter. "Refrain from mirth!" Farag cried. "The afflicted of God is the guest of the Excellency our Governor. We are responsible for every hair of his head."

"He has none," a voice spoke. "He has the white and the shining mange."

"Now tell them what I have come for, Abdul, and please keep the umbrella well up. I think I shall reserve myself for my little Arabic speech at the end."

"Approach! Look! Listen!" Abdul chanted. "The afflicted of God will not make sport. Presently he will speak in your tongue, and will consume you with mirth. I have been his servant for three weeks. I will tell you about his undergarments and his perfume for his head."

He told them at length.

"And didst thou take any of his perfume bottles?" said Farag at the end.

"I am his servant. I took two," Abdul replied.

"Ask him," said Farag's uncle, "what he knows about our land-titles. Ye young men are all alike." He waved a pamphlet. Mr. Groombride smiled to see how the good seed sown in London has borne fruit by Gihon. Lo! All the seniors held copies of the pamphlet.

"He knows less than any buffalo. He told me on the steamer that he was driven out of his own land by Demah-Kerazi, which is a devil inhabiting crowds and assemblies," said Abdul.

"Allah between us and evil," a woman cackled from the darkness of a hut. "Come in, children, he may have the Evil Eye."

"No, my aunt," said Farag. "No afflicted of God has an evil eye. Wait till ye hear his mirth-provoking speech which he will deliver. I have heard it twice from Abdul."

"They seem very quick to grasp the point. How far have you got, Abdul?"

"All about the beatings, sar. They are highly interested."

"Don't forget the local self-government, and please hold the umbrella over me. It is hopeless to destroy unless one first builds up."

"He may not have the Evil Eye," Farag's uncle grunted, "but his devil led him too certainly to question my land-title. Ask him whether he still doubts my land-title?"

"Or mine, or mine?" cried the elders.

"What odds? He is an afflicted of God," Farag called. "Remember the tale I told you."

"Yes, but he is an Englishman, and doubtless of influence, or our Excellency would not entertain him. Bid the down-country jackass ask him."

"Sar," said Abdul, "these people, much fearing they may be turned out of their land in consequence of your remarks. Therefore they ask you to make promise no bad consequences following your visit."

Mr. Groombride held his breath and turned purple. Then he stamped his foot.

"Tell them," he cried, "that if a hair of any one of their heads is touched by any official on any account whatever, all England shall ring with it. Good God! What callous oppression! The dark places of the earth are full of cruelty." He wiped his face, and throwing out his arms cried: "Tell them, oh! tell the poor serfs not to be afraid of me. Tell them I come to redress their wrongs—not, Heaven knows, to add to their burden."

The long-drawn gurgle of the practised public speaker pleased them much.

"That is how the new water-tap runs out in the kennel," said Farag. "The Excellency our Governor entertains him that he may make sport. Make him say the mirth-moving speech."

"What did he say about my land-titles?" Farag's uncle was not to be turned.

"He says," Farag interpreted, "that he desires nothing better than that you should live on your lands in peace. He talks as though he believed himself to be Governor."

"Well. We here are all witnesses to what he has said. Now go forward with the sport." Farag's uncle smoothed his garments. "How diversely hath Allah made His creatures! On one He bestows strength to slay Emirs; another He causes

2c a Week Does Washing!

We Prove it at OUR EXPENSE

Forget all you know about washing machines—for there never was one like this. It's the 1900 MOTOR WASHER—*absolutely self-working!* It *does it all.* It does it *right.* It does it for *2 cents a week.* And does it so *quick* that it shortens the time to MINUTES instead of HOURS.

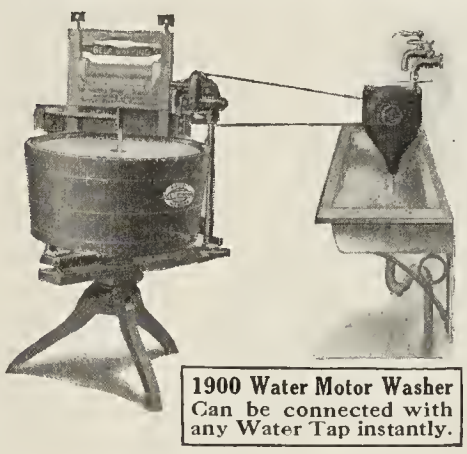
Washes in Six Minutes!

We mean it. Seeing is believing! It seldom takes longer than *two* minutes. *Never* longer than *six!* And the *clock* will verify our claim. You can read or sew or play with the baby while the machine is doing the washing.

1900 Electric Motor Washer Can be connected with any ordinary Electric Light Fixture.

Does Both the Washing and Wringing
Self-Working Wringer Furnished Free

The Motor Washer operates the Wringer, too. No crank to turn—no handle. The Wringer works itself, just as the Washer does. Cog wheels cased in steel to prevent danger of soiling clothes or mashing the fingers.



The Wringer comes FREE with every 1900 Motor Washer.

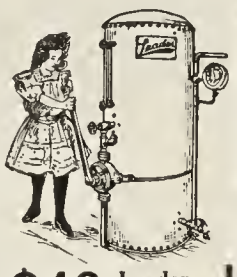
The 1900 Motor Washer

Sent Anywhere on 30 DAYS' FREE TRIAL!

Surely you are willing to be *convinced* that this Washer will do all we claim. We offer to send a 1900 Motor Washer on absolute FREE TRIAL for an entire *month* to any responsible person. Not a cent of *security*—nor a promise to *buy*. Just your word that you will give it a test. We even agree to *pay the freight*, and will take it back if it fails.

Machine Can be Run by Electricity, Water-Power or Gasoline Engine

1900 Water Motor Washer Can be connected with any Water Tap instantly.



The outfit consists of the famous 1900 Washer with either Electric Motor or Water Motor. You turn on the power as easily as you turn on the light, and back and forth goes the tub, washing the clothes for dear life. And it's all so simple and easy that overseeing the work is mere child's play.

Which Free Book Shall We Send?

We publish an "Electric" Book and a "Water-Power" Book. Tell us *which one* to send you. Learn how to make electricity or water-power do all the washing and wringing at a cost of only 2 cents a week. Why not get one of these wonderful machines and snap your fingers at the bugbear of Washday? Send a postal NOW for one of the FREE BOOKS.

Address, The 1900 Washer Co., 3327 Henry St., Binghamton, N. Y. Or, if you live in Canada, write to the Canadian 1900 Washer Co., 355 Yonge St., Toronto, Can.

Why Have Punctures?

ATLAS NON-PUNCTURE INNER CASES
ARE
Absolutely Puncture Proof

EVERYONE WHO USES AUTOMOBILE TIRES NEEDS HELP
We offer in our "NON-PUNCTURE INNER CASE" positive relief from all punctures, and in addition reinforce the whole fabric structure of the Tire

MITCHELL AUTO CO.
310 So. 4th Street, St. Joseph, Mo.
ATLAS RUBBER CO., Buffalo, N. Y. Feb. 23rd, 1909.

GENTLEMEN:—I have used a set of your Inner Cases in my car for over 9 months driving over 6000 miles, and only one stop on the road on account of tire trouble. Have the original casings on and never had them retreaded, and while the rear ones look mighty bad, expect to get 1500 more miles out of them before they go to the junk pile. They will save a man more money and trouble, and give more satisfaction and comfort than anything else he can use. We cannot say too much for them.

Respectfully yours,
MITCHELL AUTO CO., Per A. B. WEAKLEY.

to go mad and wander in the sun, like the afflicted sons of Melik-meid."

"Yes, and to emit spray from the mouth, as the Inspector told us. All will happen as the Inspector foretold," said Farag. "I have never seen the Inspector thrown out during any run."

"I think," Abdul plucked at Mr. Groombride's sleeves, "I think perhaps it is better now, sar, if you give your fine Arabic speech. They not understanding English, but much pleased to your condescensions."

"Condescensions?" Mr. Groombride spun round. "If they only knew how I felt towards them in my heart! If I could express a tithe of my feelings! I must stay here and learn the language. Hold up the umbrella, Abdul! I think my little speech will show them I know something of their *vie intime*."

It was a short, simple, carefully-learned address, and the accent, supervised by Abdul, on the steamer, allowed the hearers to guess its meaning, which was a request to see one of the Mudir's cranes—since the desire of the speaker's life, the object to which he would consecrate his days, was to improve the condition of the Mudir's cranes. But first he must behold them with his own eyes. Would, then, his brethren, whom he loved, show him a Mudir's crane?

Once, twice, and again in his peroration he repeated his demand, using always—that they might see he was acquainted with their local argot—using always, I say, the word which the Inspector had given him in England long ago—the short adhesive word which, by itself, surprises even unblushing Ethiopia.

There are limits to the sublime politeness of an ancient people. A bulky, blue-chinned man in white clothes, his name red-lettered across his lower shirt front, spluttering from under a green-lined umbrella almost tearful appeals to be introduced to the unintroducible; naming loudly the unnamable; dancing, as it seemed, in perverse joy at mere mention of the unmentionable—found those limits. There was a moment's hush, and then such mirth as Gihon through his centuries had never heard—a roar like to the roar of his own cataracts in flood. Children cast themselves on the ground, and rolled back and forth cheering and whooping; strong men, their faces hidden in their clothes, swayed in silence, till the agony became insupportable, and they threw up their heads and bayed at the sun; women, mothers and virgins, shrilled shrick upon mounting shriek, and slapped their thighs as it might have been the roll of musketry. When they tried to draw breath, some half-strangled voice would quack out the word, and the riot began afresh. Last to fall was the city-trained Abdul. He held on to the edge of apoplexy, then collapsed, throwing the umbrella from him.

Mr. Groombride should not be judged too harshly. Exercise and strong emotion under a hot sun, the shock of public ingratitude, for the moment ruffled his spirit. He furled the umbrella, and with it beat the prostrate Abdul, crying that he had been betrayed.

In which posture the Inspector, on horseback, followed by the Governor, suddenly found him.

"THAT'S all very well," said the Inspector, when he had taken Abdul's dramatically dying depositions on the steamer, "but you can't hammer a native merely because he laughs at you. I see nothing for it but the law to take its course."

"You might reduce the charge to—er—tampering with an interpreter," said the Governor. Mr. Groombride was too far gone to be comforted.

"It's the publicity that I fear," he wailed. "Is there no possible means of hushing up the affair? You don't know what a question—a single question in the House means to a man of my position—the ruin of my political career, I assure you."

"I shouldn't have imagined it," said the Governor thoughtfully.

"And, though perhaps I ought not to say it, I am not without honor in my own country—or influence. A word in season, as you know, Your Excellency. It might carry an official far."

The Governor shuddered.

"Yes, that had to come too," he said to himself. "Well, look here. If I tell this man of yours to withdraw the charge against you, you can go to Gehenna for aught I care. The only condition I make is, that if you write—I suppose that's part of your business—about your travels, you don't praise *me!*"

So far, Mr. Groombride has loyally adhered to this understanding.

"RAW" Cheerful Clothes

Good Clothes--Good Judgment

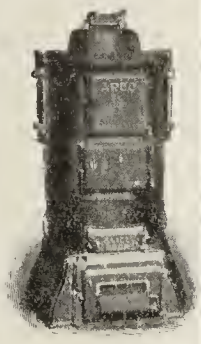
Heat that makes complete

There are thousands of houses that need only to be furnished with the *home-making* comfort of Steam, Hot-Water, or Vacuum heating to secure good tenants or ready purchasers. No one will long live in a poorly heated house, and the vacant house goes to pieces much faster than one which is occupied.

AMERICAN RADIATORS & IDEAL BOILERS will attract and hold tenants at 10% to 15% higher rentals; property sells quicker, and owner gets back the full cost of the heating outfit. IDEAL Boilers and AMERICAN Radiators are annually replacing thousands of old-fashioned heating equipments that have been found wasteful and wanting in OLD cottages, houses, stores, churches, schools, etc. Ever hear of any one going back to other forms of heating once they have tried our way? Any argument in that to you?



A No. 3015 IDEAL Boiler and 175 ft. of 38-in. AMERICAN Radiators, costing the owner **$118**, were used to Steam heat this cottage.

A No. 3-22 IDEAL Boiler and 400 ft. of 38-in. AMERICAN Radiators, costing the owner **$205**, were used to Hot-Water heat this cottage.

At these prices the goods can be bought of any reputable, competent fitter. This did not include cost of labor, pipe, valves, freight, etc., which installation is extra and varies according to climatic and other conditions.

Don't delay investigating this well-paying, permanent investment with its marked fuel, labor, and repair savings, besides the greater comfort, health protection, cleanliness, safety, and durability. Just the season to get the services of the most skillful fitters. *Prices are now most favorable.*

Write to-day for free, valuable book, telling how to save heating dollars and the way to save buildings from emptiness and decay. Our definite information and booklets put you under no obligation whatsoever to buy.

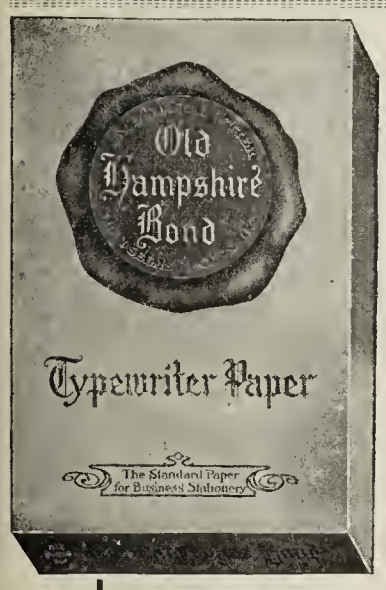
O'Sullivan's Heels of Live Rubber

Listen! *Have Your Feet Lost Their Spring?*

Do you sit down where you used to stand? Do you ride where you used to walk? Are you disinclined to walk? Do you wear the soles of your shoes on the inside? Look to your shoes; look to the heels of your shoes particularly. These symptoms and many others arise from improper attitudes in walking, bringing disproportionate weight on the inner or weaker side of the feet.

See to your shoes; see to the heels of your shoes; see that the heels are low and long enough to receive a perpendicular line passing down through the center of the ankle on the inside of your foot; see that your boots are fitted with heels of Live Rubber for just one reason, though there are many others which physicians, nurses, teachers, housekeepers, and in fact all sensible people, will offer; and the great reason why you should wear Heels of Live Rubber is that they encourage walking, which is universally conceded to be the simplest and best exercise, and enable you to walk more briskly and farther with the same effort. They do more than that; they help you to walk normally and gracefully.

If all people wore Heels of Live Rubber and had them put on by shoemakers who understood their work, they would be wearing heels one inch high and long enough to receive that portion of the weight which ought to be supported by the breast of the heel and to relieve the strain upon the instep arch.



The resiliency of the Live Rubber Heel induces you to walk normally; that is, to carry your feet parallel in walking. Leather heels are inclined to make you toe out; that is abnormal, ungainly, and tiresome, and results in the afflictions for which instep supports are worn on the inside of the shoes.

Provided Heels of Live Rubber encourage walking and induce normal attitudes in walking, then it follows that they cause you to use the ball of your foot as the fulcrum, and the muscles of your leg to lift your body in walking.

If Heels of Live Rubber are helpful along these lines, isn't 50c. a low price for them? Isn't it almost a shame to substitute ash-barrel rubber stuffed with rags when *Live Rubber* is the only article that will fill the mission of the rubber heel? But that is the situation; if you want *Live Rubber* you must demand O'Sullivan's. The few cents more profit that the substitute leaves the dealer explains why he makes his little speech as to why they are "just as good."

When you encounter such a condition send diagram of your boot heel and 35c. to Lowell and get your Live Rubber Heels direct from the makers. A free booklet on the proper walk and proper walking shoes, written by Humphrey O'Sullivan, expert foot fitter, for the asking.

O'SULLIVAN RUBBER CO., Lowell, Mass.

Buy Your Typewriter Paper in the Same Way You Buy Your Cigars

You buy your cigars by brand when you want to get the same unvarying quality every time and avoid the constant trouble of judging the tobacco.

Why not buy your typewriter paper in the same way—by brand—with the same convenience and certainty?

OLD HAMPSHIRE BOND Typewriter Paper is now sold in boxes, at most stationers.

Suit Made to Measure $15

EXPRESS PREPAID

SUIT CASE —FREE—

Fine tailor made cashmere or worsted suit. Your choice of our large variety of 1909 patterns in all the newest colorings and weaves just received from the woolen mills.

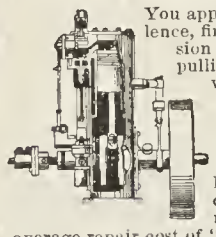
Don't be satisfied with an ordinary ready-made half wool suit that neither fits well nor holds its shape. Buy a suit that's **made especially for you,** of thoroughly shrunken, specially close woven material, by high class workmen, who incorporate into the suit just those little advanced differences in style, and those small characteristic improvements in fit which mean so much in the finished garment.

The suit is lined with "Bullis" serge, and sleeve linings are of the celebrated "Fowler" silesia. Buttonholes are hand finished, sboulders are well padded, and all trimmings are such as can be secured only in the high grade merchant tailor article. Our measure and order blauks will enable you to take your own measurement accnrately, and a perfect fit is **guaranteed.** We are manufacturers, importers and custom tailors, and guarantee our $15 suits to be equal in wear to the best suits you can obtain from your local dealer at any price, while in style and fit our garments are incomparably superior to any but the product of high-priced city tailors.

We Pay All Express Charges

Once a customer of ours—always a customer. We can afford to lose a little to get your first order. We'll ship your first suit, express prepaid, in a handsome, durable suit case (worth from $3 to $5 in any local store) and let you keep the suit case.

You take no risk when ordering from us, as we guarantee satisfaction. We even pay all express charges, and in case the suit isn't satisfactory in fabric, finish or fit, you can return it at our expense.



The above illustration is photographed from life and shows one of our most popular advanced spring styles. The price is $15. Notice the perfect fit. We can fit you just as well. Samples of cloth that make up nicely in this style are shown in our new catalog, which contains styles and samples varying in price from $15 to $25. Our catalog and

Samples of Cloth Free

will be sent the same day your request reaches us. We have no agents, no branch stores, and no connection with any other clothing concern. Our business has been established 53 years. Write today for free samples. Address

For the Reader of Books

What We Think of Recent Authors and Their Efforts

Social Studies

NEW universities in this country are so close to the problems of the time as the University of Wisconsin. A group of men, including Richard T. Ely, John R. Commons, and Edward A. Ross, are applying intelligence to the social movement. These men realize that questions of labor and capital, the treatment of the criminal, the liquor problem, and so on, are within academic jurisdiction quite as surely as Euclid and civil engineering. A man in that university, Richard Henry Edwards, is publishing a series of ten-cent pamphlets, called "Studies in American Social Conditions," dealing with Immigration, the Negro Problem, the Labor Problem, Poverty, Excessive and Concentrated Wealth, the Divorce Problem, the Boy Problem, the Increase of Crime, the Administration of Criminal Justice, and the other present-day vital questions.

It would hasten much-needed solutions if every voting citizen would take out a subscription to these trenchant, accurate studies. They are so many cross-sections of our national life. Mr. Edwards has no panacea. He believes that already enough trustworthy and amazing information on social conditions is in hand to stir the public to action. He further believes that enough lines of solution are in working order to diminish ignorance, poverty, and disease. What is needed, then, is to relate the accumulated knowledge—both of conditions and of preventive measures—to wise public action. These pamphlet studies give that point of contact. They state each problem, they outline the solutions on which experts are agreed, and they publish a bibliography both of popular articles and of scholarly volumes on the particular subject under discussion. A. H. G.

A Book of Predjudices

IF YOU are familiar with Mr. Swinburne's mental processes, it is enlivening to read a prose book of his, and what he states and overstates may perhaps carry few ill effects in the devastating trail of his dislikes. But for an innocent soul to blunder in on the field of Mars of this old war horse would mean to be trampled under foot. Such prancings of one whose neck is clothed in thunder are not for the unwary. He grows lyrical at every mention of Charles Lamb, because Lamb was good to his sister. Carlyle he detests, because Carlyle once wrote a searching paragraph on Saint Charles and too much gin. For Shelley he has little but bitterness. Mark Twain wrote a book about a Down Easterner appearing in the days of Lancelot. Swinburne disapproved of the treatise, and takes out his revenge in classing Twain with Martin Tupper as apostle of dulness. In "The Age of Shakespeare" he has tuned him a chorus from many an old-time battle-cry.

You wish he would quit pulling out all the stops and pedaling with both feet. His feelings are always being aroused, and then there is nothing for it but a roar of wind and a rush of sound. Up goes his voice, and he clutches out for the superlatives. It is good fun, but the truth is nowhere in the hurly-burly.

It is a little of a pity that a man of genius, with the resources of language at his command—when the man himself is under control—with a reading in several literatures, the greatest of living English poets, should find the truth inadequate.

In spite of his over-emphasis and his anger, he does a service in his book in brightening up the fame of those who have become obscured by time, and in showing a race of indiscriminate hero-worshipers that their Titan was only a head taller than the giants of those days. A. H. G.

"What the White Race May Learn From the Indian"

TWENTY-EIGHT CHAPTERS of sane comment on the Indian's theory of living and dying are something to be grateful for. They have been written by a vigorous, bearded scientist of fifty, George Wharton James, a member of various British Royal Societies, the California Academy of Science, and the Havasupai tribe of Indians. He is frank and lucid. For instance:

"In our treatment of the Indian we have been liars, thieves, corrupters of the morals of their women, debauchers of

Masters in Art
A Series of Illustrated Monographs

"Allow me to say that I have the highest admiration for your series of monographs which appear to me to be altogether the best things which have ever been done in this direction."

The above is the opinion of Wm. H. Goodyear, Curator of Fine Arts, Brooklyn Institute of Arts and Sciences.

When such an extremely conservative and well-known critic gives such unqualified praise, is it not worth while for every art lover to know about this work?

Consists of 108 parts, each part dealing with great painter or sculptor and complete in itself. Includes reproductions of artists, biographies and quotations of the world's greatest critics, also analysis of the pictures. The 108 parts bound in nine volumes, half morocco or cloth. Special prices and terms for complete set on application. Issued monthly, $2.00 per year. Send 20c for the copy treating with your favorite artist.

BATES & GUILD, Pub., 42 Chauncey St., Boston, Mass.

The EDISON PHONOGRAPH

"A Useful Ally"

Imagine an entertainment where every performer is a star and every number a selection of your own

THAT describes the entertainment of an Edison Phonograph. You need not dress for it, go out after it, arrange your time for it or pay for admission to it. It takes place in your home, at your convenience, as often as you like.

You listen—that is the extent of your effort. You hear Manuel Romain sing just as you would if he stood before you. You hear Maurice Levi's band play under his spirited direction and forget the medium by which his artistic efforts are brought to you.

Or you enjoy the talents of such clever entertainers as Ada Jones, Cal Stewart, Byron G. Harlan, Billy Murray and Steve Porter.

Do you doubt this excellence in the Edison Phonograph? Then hear it. Go to an Edison store; select the Record of a singer you have heard and a song you know. This test has placed the Edison Phonograph in a million homes.

Ask particularly to hear an Amberol Record, Mr. Edison's latest contribution to Phonographic entertainment; a Record that preserves the sweet, clear tones of the Standard Edison Records, yet plays or sings twice as long and costs but a trifle more.

Edison Phonographs are sold at the same prices everywhere in the United States, $12.50 to $125.00. Amberol Records, 50c.; regular Edison Records, 35c.; Grand Opera Records, 75c.

Ask your dealer or write to us for catalogues of Edison Phonographs and Records.

With the Edison Business Phonograph you dictate at your convenience and the typewriting department does the rest

Booklovers Dickens

CLEAN-UP SALE—BIG CUT IN PRICES

Subsequent to our holiday and midwinter campaigns, we have been taking a general account of stock and planning new business. We find that we have on hand, among other things, a limited number of slightly rubbed sets of the **BOOKLOVERS DICKENS**—first placed before the public in the autumn of 1908 and the latest attempt to realize the ideal edition of Dickens. In order to make way for new stock, we propose to close out these books, while they last, at a sweeping reduction from the regular prices. The gloss is gone a little from some of them; a few of the details are such as to forbid us to ship them as A 1 in every respect. But the imperfections are more than offset by the slaughtering of rates. This is a great chance.

2,000 NEW PAGES OF TEXT—NEW ILLUSTRATIONS

One volume of the **BOOKLOVERS** is devoted to a unique composite life of Dickens, in which the author's remarkable personality is for the first time adequately portrayed. (*New.*) Another collects 500 pages of miscellaneous tales, sketches, etc., revealing Dickens's characteristics in new and interesting ways. (*Not in the ordinary editions.*) Still another includes the best of Dickens's letters, speeches, and plays, and all of his poetry. (*Not in the ordinary editions.*) Introductions place the reader fully in touch with each novel. Critical Comments give the best that eminent writers have said regarding each, and each is summarized in a concise Argument. Notes explain contemporary allusions and illuminate particular passages. In addition to all this, Suggestions for Study enable the reader to test his knowledge and supply material for study-circles. (*New.*)

No Other Edition Has These Combined Features:

1. A Composite Life of Dickens. One volume of the Booklovers is devoted to a composite life of Dickens by F. T. Marzials, Mamie Dickens, John Forster, and A. W. Ward; with Critical Essays by Swinburne, Taine, J. L. Hughes, and others.

2. Full Introductions by Andrew Lang, Charles Dickens the Younger, H. W. Mahie, and Edward Everett Hale.

3. Essays, Critical Comments, Arguments, and Notes, selected from the writings of F. G. Kitton, J. T. Fields, F. R. Stockton, W. Teignmouth Shore, Walter Jerrold, George Gissing, G. K. Chesterton, and many others.

4. Miscellaneous Papers, consisting of short stories, sketches, and articles, largely from the files of "Household Words" and "All the Year Round." One entire volume of Dickens's characteristic work is thus preserved.

5. Letters, Speeches, Plays, and Poems. The best of Dickens's remarkable correspondence; the most typical of his eloquent public utterances; three of his plays; and all of his writings in verse.

THE THIRTY VOLUMES FOR $1.00—NO DEPOSIT

If you will fill out and promptly return the coupon below, an entire 30-volume set of the BOOKLOVERS DICKENS will be sent, all charges paid, for your examination. *No money need accompany the coupon.* If, after a leisurely, careful inspection and comparison of the books, you are not satisfied, you may return them at our expense. If you are convinced of their value, you may retain them by sending us $1.00 only. The balance may be paid at the rate of $2.00 per month.

BUT YOU WILL HAVE TO ACT NOW

The BOOKLOVERS is the first adequate edition of Dickens prepared for general distribution to American readers. Best because it gives hundreds of pages of the author's characteristic work not found in the ordinary editions—because it possesses remarkable special features not in any other edition whatsoever. The subscription price is $60.00. You can get a set now for $22.50 in the art-cloth binding and for $29.50 in the luxurious half-leather. You may pay for it a little at a time. Write at once.

THE UNIVERSITY SOCIETY, 44-60 East 23d Street, New York

MAIL THIS COUPON TODAY

The University Society, 44-60 East 23d Street, New York:—Please forward prepaid for examination a slightly damaged set of the Booklovers Dickens in half-leather. If the books are satisfactory, I shall pay you $1.00 within five days after receipt, and $2.00 each month thereafter until the full amount, $29.50, has been paid. If not, I shall notify you and hold them subject to your order.

RUBBER NECK COAT

The only absolutely Waterproof Coat ever made in the World

A broad statement—yet only the simple truth. **No Rubber Coat that is put on like the ordinary Coat must be put on, can be waterproof.**

Driving against the wind in rainy weather, what's there to prevent the water from beating in all the way down the front of coat, at the neck, at the sleeves, through the button-holes, and even through the **very seams.**

If you want a Rubber Coat that **is** waterproof—as waterproof as a diving suit—get the **Patented Rubber-Neck Coat.** It costs no more than any other, but is worth a great deal more.

It's made with a **one-piece yoke of pure gum rubber** that fits around your neck as snugly as a glove—not a drop of water can ever get in.

From this yoke hangs the Coat of high grade black rubber, **all made in one piece**—without a clasp, or a button, without any opening either in front or back—**so how could the water get in?**

You put the Coat on like you put on a sweater—pull it over your head—and that's all there is to it. The sleeves are protected by waterproof wristlets, so no moisture can reach you there.

The Coats are from 48 to 56 inches long—tell us your chest measure—**and we'll guarantee the fit absolutely.**

The entire Coat comes neatly put up in a small bag measuring only 3x8 inches, just a handy size for your overcoat pocket.

Price, including express charges to any part of the United States **$6.50**

Send us your order today—and if you do not find it the best Rubber Coat you ever saw, return it and have your money refunded.

their maidens, degraders of their young manhood, perjurers, and murderers."

Just as trenchant are the comments on the obverse of Indian life:

"There are scores of things about the Indian that are reprehensible and to be avoided. . . . They often wear filthy clothes. They are often coarse in their acts, words, and humor. Some of their habits are repulsive. I have seen Indian boys and men maltreat helpless animals until my blood has boiled with an indignation I could not suppress. . . . They are generally vindictive."

Having placed himself, Mr. James marches back and forth across the deserts and plains, pointing out something here that we whites might learn to our advantage, and shaping a positive "don't do that any longer" there. There is deep breathing, as an example—the breathing exercises prescribed at one of our best-known sanitaria are what many tribes of Indians have practised for generations. And the real outdoors life—sleeping out of doors, working, so far as possible, in the open, going out of doors always to play, splashing out at the height of a storm to find out, as John Muir put it, that "nature has always something rare to show us." Like the birds, the Indian "doesn't know enough to go in when it rains." Unfortunately, Mr. James reflects, we whites have acquired this useless knowledge.

Respect for physical labor Mr. James finds in various tribes of Indians. "What labor he has to do, the Indian does gladly, cheerfully, openly. He is not ashamed to have soiled hands." Nor are his wife and daughter.

Hints also of a wide philosophy are contained in the chapters on the Indian's conception of social usage, his frankness, his theory of the nude, his attitude toward the superfluities of life, his self-restraint, his uncomplicated belief in immortality, and his calm meeting of death. At the last, says Mr. James, the Indian echoes Browning:

"I would hate that death bandaged my eyes,
And forbore, and bade me creep past.
No! let me taste the whole of it; fare like my peers,
The heroes of old!"

Not very smoothly written, intemperate in places, overenthusiastic at times, these chapters, nevertheless, help us to set up the Indian as a human being, rather than a capering, feather-duster-topped savage, a man with tried race habits and traditions, wise enough to work out a well-adapted plan of living and stick to it remarkably well. J. M. O.

On Certain Tendencies

TIMES change. Who would have expected to find the "Ladies' Home Journal" heading a campaign for greater frankness toward children about the relation of morality to hygiene? No periodical has a clientele more sensitive to the proprieties—more likely to be prudish. If Mr. Bok and Mr. Curtis had not had the courage of intelligence they never would have undertaken the present series of talks. This performance of the "Ladies' Home Journal" was recalled to my mind by a little medical book at which I have just been glancing. It is written by Dr. Follen Cabot, published by E. R. Treat & Co., New York, and called "Diseases of the Bladder"; but the reason for mentioning it at all in a magazine of general circulation such as COLLIER'S is that any one who wishes to read a few pages, beginning at page 23, will learn some very important facts, put here with a medical brevity and precision which was not possible to the "Ladies' Home Journal." Wives, husbands, parents, and all intending to enter any of these groups, will be better equipped for proper living after this information is acquired.

The medical profession changes, like all others. It realizes more than ever before that its work can be helped forward in no way more than by increased knowledge among the people. Dr. Cabot's book reaches a few. The "Ladies' Home Journal" reaches millions. The technical expert and the popularizing medium can work together for the best future advantage of the people.

The general public, like every other division of the human race, has its shortcomings as well as its inspirations. It has the power to make a harmful fool of itself, as shown in the victories which it has won against science in vivisection laws abroad. In scientific matters the voice of the people has frequently small resemblance to the voice of God. The ideas passed from mouth to mouth about the morality connected with sex are equally inadequate. It is a case where the public needs instruction from the doctors and where the average physician also needs information from those members of his profession who have gathered special knowledge of the subject. The New, Compact, Portable, Standard, Visible-Writing Typewriter $15

Does Work Equal to Best $100 Machines

YOU have never had a chance like this before. The Junior Typewriter is the first practical, portable, standard keyboard, serviceable typewriter ever sold at a price within the reach of all.

For only $15 you can get this Junior Typewriter which does everything you would want the most expensive machines to do, as easily, quickly and neatly as you desire. So compact that it may be carried about in pocket or suitcase or slipped into desk drawer—yet big enough for every use.

Standard Keyboard
with 28 keys operated with both hands, printing 84 characters—same as $100 machines.

Same Size and Style of Type
and any language you want. Writes single or double space. Takes all sizes of paper up to 9 inches wide.

Speed 80 Words a Minute
which is much faster than the average person operates any typewriter. Writing always in sight.

Built Entirely of Hardened Steel
Durable, made to stand severe usage. Every part thoroughly tested before leaving factory. Guaranteed for one year. Could not be better made at any price.

LET US SEND YOU ONE ON APPROVAL

Send your order for a Junior to-day, with money order or draft for $15, and it will be shipped you express prepaid. Money back if you do not find it everything we claim for it. If you'd like to know more about the Junior before ordering WRITE TO-DAY FOR OUR FREE BOOKLET.

In the World's Workshop

Devoted to Facts, Observations, and Thoughts Concerning Common Industrial Methods, Products, and Influences

By WALDO P. WARREN

THE BUYER'S TASK

WHOEVER has had difficulty in deciding which of two or more articles on a counter he will purchase may be able to appreciate the task which confronts the buyer of a stock of merchandise. The numbers of varieties offered for selection are almost beyond belief. In the toy department of a large wholesale house, the following figures were obtained in regard to the goods actually being shown at one time in the sample rooms:

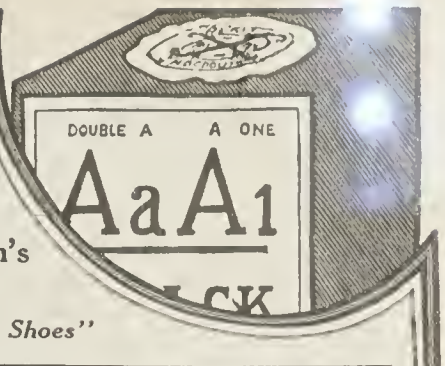
Magic lanterns, 250 varieties.
Boats, 300 varieties.
Engines, 500 varieties.
Horns, 1,000 varieties.
Christmas tree ornaments, 2,000 varieties.
Dolls, 12,000 varieties.

Even these large numbers do not represent all the possible varieties the general market affords. They merely represent the numbers which one wholesaler selected for his customers out of perhaps ten times those numbers in the samples shown by manufacturers.

In gathering this assortment of Christmas tree ornaments, which are now being ordered for next Christmas, it was necessary to deal with 750 manufacturers throughout Europe, and the selection of 2,000 samples represents only a fraction of the samples submitted by manufacturers.

When it is considered that almost every person uses dishes at three meals a day, and that the prices of plates may range from a few cents each to a thousand dollars or more a set, it is not surprising to learn that the same wholesaler would display in his sample rooms over 250,000 varieties of articles in china.

The buyer has, within such ranges of variety, opportunity to "make or break" the patronage of a store by the wisdom and taste he uses in making his selections.



PART OF THE PRICE

IT IS interesting to observe that a great deal of the expense of doing business is made necessary to prevent dishonesty. There are many overseers whose chief business is to see that others keep at work. There are elaborate systems of bookkeeping and checking which are designed primarily to prevent misdealing. From the time a piece of raw material is taken from its original source, until the goods are made and delivered and receipted for, there is this constantly accumulating expense for protection. The public at last pays for it. Every high price, and every low bank account, every skimped luxury or necessity, and every unsatisfied need is, in some degree, a reminder that one is helping to pay the price of insincerity and dishonesty. It ought to make the opposite virtues much admired by those who prefer to enjoy the full fruits of their labor.

SPECIFICATIONS

AN IDEA of the influence of American standards on foreign manufacture may be gained from considering one of the definite ways in which this influence is manifested. The time was when American wholesalers and importers were largely content to buy such things as they could in foreign countries and offer them for sale in this. If the articles were made according to German taste or French taste or Dutch taste, they came over about as they were made, and the homes of America were fitted out with a heterogeneous assortment of foreign-made articles. Gradually the importer began to learn that it was easier to sell the things that approximated the American standards, and his orders to foreign manufacturers included specifications as to style and design, such as would be acceptable to the more particular classes of his customers. When we consider that one large importer in America may deal with as many as five thousand foreign manufacturers, and in many cases give them the largest orders they receive, every item of every order having passed under the critical eye of men skilled in knowing what American taste requires, it is evident that this influence

Bixby's "Double A-A One"

The Ideal Shoe Dressing for Women's and Children's Use

Write for free booklet — "Care of Shoes"

Because— Bixby's "Double A-A One" Polish is cleaner than any other. It will not rub off on the clothing nor fly about the room while being rubbed down to a brilliant shine.

Because— It requires less time and less labor to make the shoes look their best; and it contains no acid, shellac or varnish to spoil the leather:—Therefore easiest and best for women to use.

Because— Being a liquid it is easily applied. Bixby's "Double A-A One" Polish is made of *Oil*, to soften and nourish the leather, *wax*, to take a high polish with only three or four rubs of a soft cloth and a little dye that restores color and finish of scarred spots.

Brighton FLAT CLASP GARTER

Is There a Reason for Wearing Any Other Garter?

This is the only garter that does not press on the leg at any point. It has the smallest but strongest metal parts ever put on a garter; the smoothest, flattest clasp; a grip that tightens with every movement; a clinging, stretchy silk web, elastic as the skin itself—that never chafes or binds. It keeps the leg comfortable, the sock smooth, the temper even. 25 cents—*at your dealers, or we mail a pair on receipt of price.*

Pioneer Suspenders are supreme in fit, service and beauty. 50 cents at your dealers or prepaid from factory.

is very great. It would be odd, indeed, if this culling out of undesirable samples and altering and substituting designs did not have a marked effect on the other products of those manufacturers, wherever they might be marketed. Of course a similar influence, in some degree, is going on through the requirements of other countries, the net result of which is that each nation is bringing its best ideas forward and dropping those which other nations veto by refusing to buy. Judging from the number of specifications which American importers find necessary to require of foreign makers, the influence of American ideas is by no means least in this symposium of national taste. But any pride we might have in this fact is more than offset by the things we are still obliged to learn from the older countries, and the things we have, so far, neglected to learn.

ODD PRICES

A FEW weeks ago we referred in this column to the matter of marking goods 49 cents, 99 cents, $19.98, and so on, and voiced the popular thought that this method was used with the intention of making the customer think the price was cheaper. An advocate of the system comes forward and claims that this method was begun for the purpose of preventing salespeople from pocketing even change, and that in some establishments it is continued for that purpose. It is safe to say, however, that neither the public nor the majority of store managers ever thought of this as the underlying reason. As the average reduction would amount to several cents on the dollar, and therefore a handsome percentage of the gross receipts, it is fitting that many store managers should know why they follow the custom, and consider whether or not the insurance thus paid for is worth the percentage it costs.

A NEW MATERIAL

THE origin of some of the materials used in common manufacture is often very far removed from the nature and use of the finished product. This is well illustrated in the new substitute for ivory and celluloid, called "galalith," which is made of sour milk. It has an advantage over celluloid in that it is not so inflammable, and over ivory in that it is not so expensive, and may be made in any color. It is at present used chiefly in making combs, but will doubtless come to be used in a large variety of articles that are now made of the other two substances.

PAYING WOMEN LESS

IN DEPLORING the fact that women are usually paid less than men for the same work, many writers overlook certain points which are necessary to a just consideration of the question. As no one individual or corporation, more than another, is to blame, it is the world in general that must be blamed or justified. With many notable exceptions, the world tends to frame its customs so as to work out the greatest good to the greatest number. The individual must be forever secondary to the common good. The question may then be stated thus: Can we blame the world for not encouraging women to give up the proper feminine ideals of home-making by making them even-handed competitors with men and independent of them? The world especially needs two things, more and better homes and more and better people. Is it to be blamed for not framing its customs to attain those ends? If it be denied that this general result is good, then it may be denied that the means to gain it are good. But if it be admitted that the general result is the right one, then the world is justified in not encouraging too great a divergence from whatever will conduce to that end. The world is justified in saying to woman: "For you business is but a preparatory school, a stepping-stone, a partial service. Your real work is to be wife and mother. Be employed at any useful work so long as that seems best for you individually, but remember that you are endowed with a higher capacity for service, and there is need for your work in the home." To give emphasis to this dictum, and to keep it hourly fresh in mind, the world, perhaps wisely and kindly, declines to encourage woman overmuch to prefer an independent life.

It is difficult, if not impossible, to speak in general terms of the problem of women in business without seeming to countenance many flagrant wrongs. In presenting this view it is not to justify any known injustice the reader may have in mind, but to afford a perspective which may enable us to consider universal tendencies.

A PLEASING DESSERT

always wins favor for the housekeeper. The many possibilities of Borden's Peerless Brand Evaporated Milk (unsweetened) make it a boon to the woman who wishes to provide these delicacies for her family with convenience and economy. Dilute Peerless Milk to desired richness and use same as fresh milk or cream.—*Adv.*

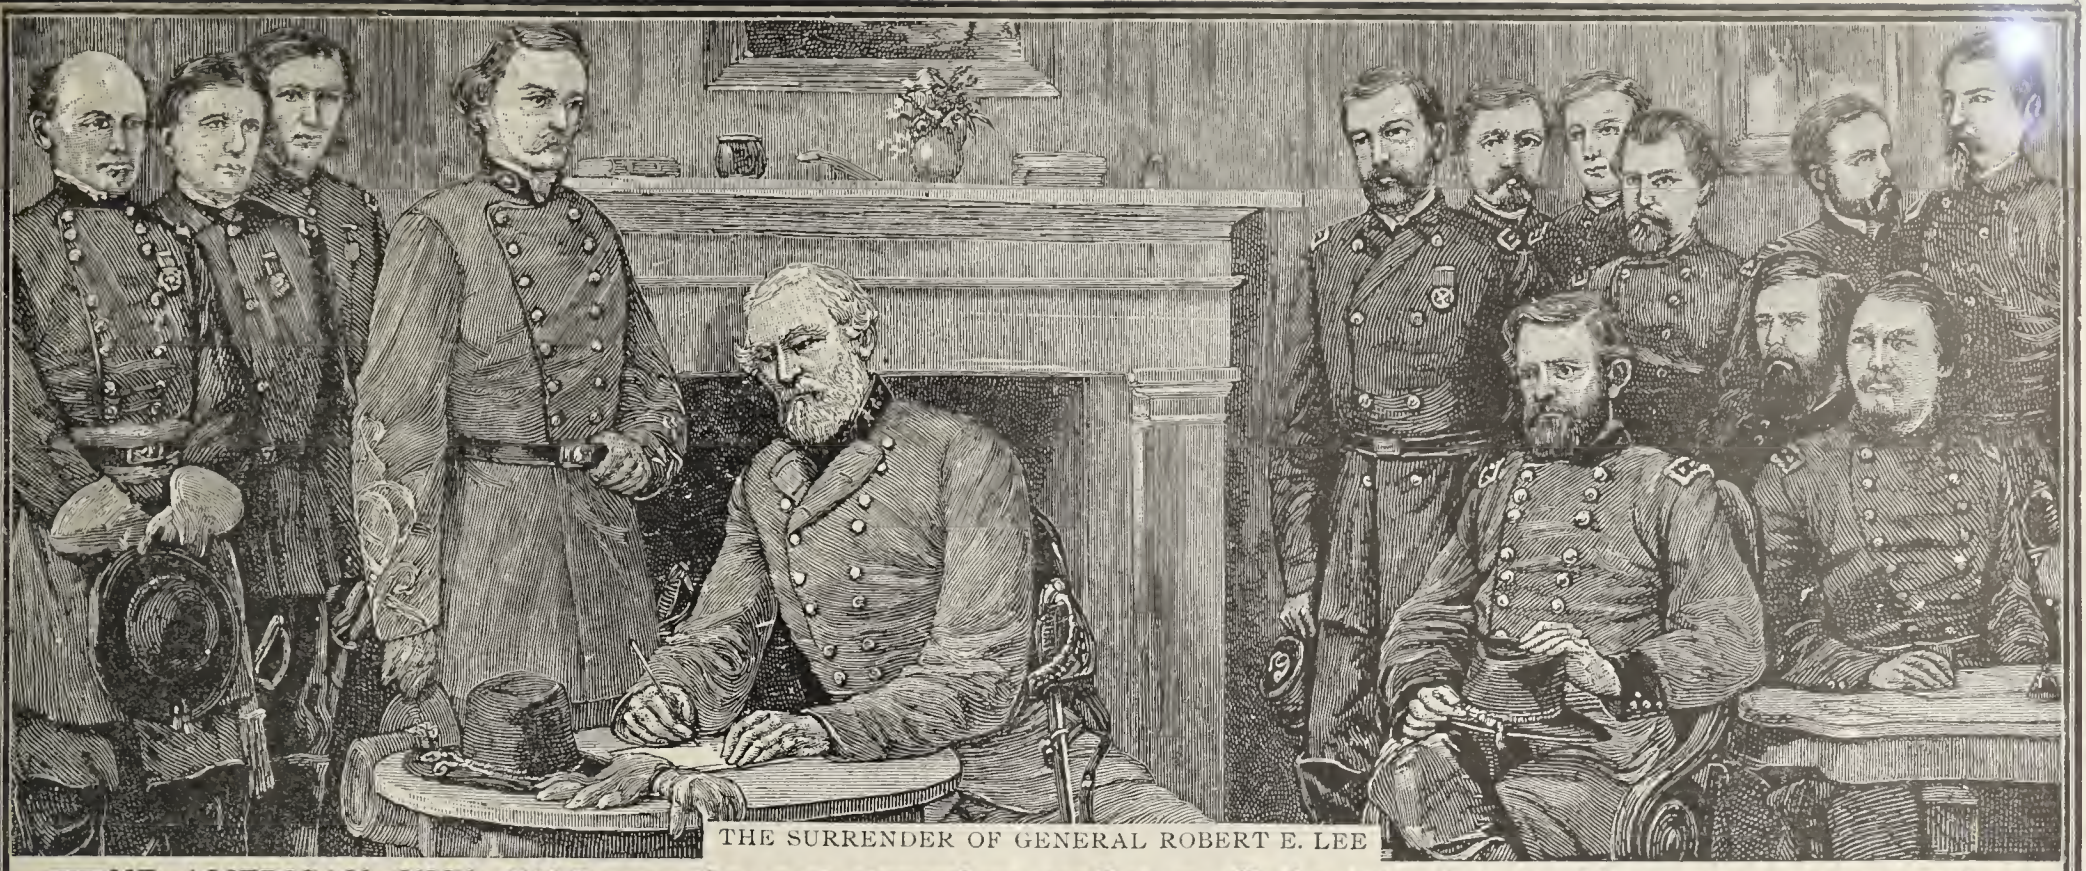
A complete course of technical training for library work. Entrance examination to be held in June. For catalog apply to Julia T. Rankin, Director, Carnegie Library of Atlanta, Ga.



FIRED!
There's no sentiment in business. The untrained man can never be sure of his job. He is always the last to be hired and the first to be "fired."
But the International Correspondence Schools of Scranton offer a *sure*, quick, easy way by which *you* can qualify for a good position in your natural line of work, *in your spare time*—regardless of who, what or where you are. *No books to buy.* Course is suited to your individual needs—to whatever spare time you have—and to your means.
Mark the attached coupon and learn *how* the I. C. S. can help you. Doing this costs you only the postage. Mark it NOW. On an average, 300 men every month VOLUNTARILY report salary increases won through I. C. S. help. In January the number was 287. You, too, can be helped.
MARK THE COUPON NOW.

INTERNATIONAL CORRESPONDENCE SCHOOLS
Box 1198, Scranton, Pa.
Please explain, without further obligation on my part, how I can qualify for employment or advancement in the position before which I have marked X

THE SURRENDER OF GENERAL ROBERT E. LEE

THE AMERICAN CIVIL WAR was the most stupendous conflict in all the tide of time. More men were engaged on each side than in any other conflict of ancient or modern history. The surrender of General Lee to General Grant at Appomattox is the climax of important events in this mighty struggle. Dr. Ridpath is the only historian who has written an absolutely impartial account of this war and whose work is cordially endorsed by the leaders on both sides. We may rejoice in having lived to see the day when the sons of those brave soldiers have marched shoulder to shoulder in the Spanish-American War, in defence of one flag—one common country. The picture shown here from Ridpath's History is but ONE of TWO THOUSAND in the complete work, and serves to illustrate but ONE EVENT out of all the THOUSANDS which make up the history of every empire, kingdom, principality and nation, all accurately and entertainingly told in the world-famed publication

Ridpath's History of the World

THE PUBLISHER'S FAILURE placed in our hands the entire unsold edition of this monumental work. BRAND NEW, down to date, beautifully bound in Half-Morocco, which we must sell immediately. We are offering the remaining sets

AT LESS THAN EVEN DAMAGED SETS WERE EVER SOLD

We will **name our price** only in **direct letters** to those **sending the Coupon** below. **Tear off the Coupon,** write **name** and **address** plainly and **mail now before you forget it.** Dr. Ridpath is dead, his work is done but his family derive their income from his History, and **to print our price broadcast** for the sake of selling these few sets would cause **great injury to future sales. Here is your opportunity** to secure Ridpath's History of the World at the **lowest price ever offered**—and on easy terms. It will cost you nothing to inspect the beautiful specimen pages and let us give you full particulars of our offer. **Send Coupon Today. The sample pages are free.**

William McKinley said: "I am familiar with the merits of Ridpath's History of the World, and cordially commend it to the scholar as well as to the plain people generally."

Jefferson Davis said: "I esteem Ridpath's History of the World of very great value, and hope it will find a place generally in the libraries of our schools, as well as upon the shelves of readers in every walk of life."

Grover Cleveland said: "I unhesitatingly commend Ridpath's History of the World as a work of great merit and believe that it should have a prominent place in every library."

Benjamin Harrison said: "The author's labors are deserving of the highest praise. The printing and binding are first class and the illustrations are numerous and of a high order. I most heartily recommend this great work for study and convenient reference."

Lew Wallace said: "I have not words to sufficiently recommend Professor Ridpath's 'History of the World.' The author has done his work in the most thorough and interesting manner. No library is complete without it."

Nine Royal Volumes
4000 Pages
2000 Illustrations

RIDPATH takes you back to the dawn of history, long before the pyramids of Egypt were built; down through the romantic, troubled times of Chaldea's grandeur and Assyria's magnificence; of Babylonia's wealth and luxury; of Grecian and Roman splendour; of Mohammedan culture and refinement; of French elegance and British power; of American patriotism and religious freedom, to the dawn of yesterday. He covers **every race, every nation, every time,** and holds you spellbound by his wonderful eloquence. Nothing more interesting, absorbing and inspiring was ever written by man.

RIDPATH throws the mantle of personality over the old heroes of history. Alexander is there; patriot, warrior, statesman, diplomat, crowning the glory of Grecian history. Xerxes, from his mountain platform, sees Themistocles with three hundred and fifty Greek ships smash his Persian fleet of over a thousand sail, and help to mould the language in which this paragraph is written. Rome perches Nero on the greatest throne on earth, and so sets up a poor madman's name to stand for centuries as the synonym of savage cruelty; Napoleon fights Waterloo again under your very eyes, and reels before the iron fact that at last the end of his gilded dream has come. Bismarck is there, gruff, overbearing, a giant pugilist in the diplomatic ring; laughing with grim disdain at France, which says, "You shall not." Washington is there, "four-square to all the winds," grave, thoughtful, proof against the wiles of British strategy and the poisoned darts of false friends; clear-seeing over the heads of his fellow-countrymen, and on into another Century, the most colossal world-figure of his time.

200,000 Americans Own and Love Ridpath

WESTERN NEWSPAPER ASSOCIATION, CHICAGO, ILL.

The Reason for Dr. Ridpath's great reputation as an historian is his wonderfully beautiful style, a style no other historian has ever equalled. He pictures the great historical events as though they were happening before your eyes; he carries you with him to see the battles of old; to meet kings and queens and warriors; to march against Saladin and his dark-skinned followers; to sail the southern seas with Drake; to circumnavigate the globe with Magellan; to know Napoleon as you know Roosevelt. In concluding the History of the United States Ridpath says:

"The Republic has passed through stormy times but has at last entered her second century of Nationality in safety and peace. The clouds that were recently so black above her have sunk behind the horizon. The Union of the States has been consecrated anew by the blood of patriots and the tears of the lowly. The temple of Freedom reared by the fathers still stands in undiminished glory. **The past has taught its lesson, the present has its duty, and the future its hope."** Would you not enjoy reading the four thousand pages of the world's history of which the above paragraph is a sample? Ridpath's History has been purchased and strongly endorsed by William McKinley, Pres't of the United States; Gen. Stephen D. Lee, Commander Confederate Veterans; General Lew Wallace, Commander and noted author; Henry M. Teller, Senator from Colorado; Charles Curtis, Senator from Kansas; and by the Presidents of all American Colleges and Universities. To read this History is to increase your store of knowledge, which is power, and add to the richness of your life.

A Special Price Offer

Collier's New Encyclopedic Atlas and Gazetteer

A big book, 348 pages the size of Collier's

The Most Complete, Up-to-date Popular Atlas

3 times as much text matter as any other Atlas

1909 edition — **The latest and clearest maps** — 150,000 sold

Over 100 points of Superiority

The Best Value We Have Ever Offered

Our ability to Print, Bind and Sell over 4,000,000 books a year enables us to offer this Atlas, which would ordinarily retail at $5.00, under a most liberal arrangement.

200 of the latest and best maps, most of them beautifully engraved in colors.

100 handsomely colored maps, a separate map for each State, showing all counties, railroads, cities, and all the nations, all continents, the United States Insular possessions, etc.

58 recent reliable street maps of the chief cities of America and Europe,—New York, London, Paris, Chicago, San Francisco, Boston, Buffalo, Cincinnati, Cleveland, Denver, Detroit, Washington, Kansas City, etc.

35 authorized railroad system maps, showing all stations and branches.

12 valuable maps showing the Forest Reserves, irrigation projects, etc.

12 important agricultural maps.

240 pages of the most carefully compiled valuable descriptive and statistical matter ever published in an Atlas.

92 pages of general data on over 135,000 cities, the equivalent of about 190 newspaper columns, giving later population and other statistics than are to be found in any other Atlas.

86 pages devoted to The Physical and Commercial Analysis of the United States and Canada, the productions, resources, population, manufactures, religions, etc.

36 pages devoted to the Physical and Commercial analysis of the world.

25 pages of statistical and descriptive matter, trackage, points of interest, etc.

Map and Exhaustive Analysis of the Panama Canal **FREE**

Also a 34-page Analysis and comparison of contents of Collier's New Encyclopedic Atlas and Gazetteer with other popular Atlases and particulars as to how you may take advantage of our offer.

Paints and Finishes For Spring Housecleaning

SPRING housecleaning time suggests a freshening up of everything about the home—a touch of paint or enamel here, a little stain or varnish there—and what a difference it makes. For instance, what could be prettier or more inviting than a dainty bedroom with walls, furniture and woodwork all enameled in white or some delicate tint to harmonize nicely with draperies and furnishings.

ACME QUALITY

ENAMEL (Neal's)

gives that smooth, beautiful, genuine enamel surface so sanitary and easy to keep bright and attractive. Anyone can apply it by following the simple directions on the can

ACME QUALITY VARNISH—Gives a durable, lustrous finish to door frames, window-sills, scuffed stairs, etc. Inexpensive and easily applied.

ACME QUALITY NEW LIFE—Cleans, polishes, and renews the finish of all kinds of wood, metal and polished surfaces.

ACME QUALITY FLOOR WAX—Ready for use. Gives a handsome, lustrous, satin-like surface easily cared for and very durable. Equally adapted for the wax finish so popular for furniture and woodwork.

If it's a surface to be painted, enameled, stained, varnished or finished in any way, there's an ACME QUALITY Kind to fit the purpose.

The Acme Quality Textbook on Paints and Finishes tells you just what paint, enamel, stain or varnish to buy for any kind of work *and the best way to apply it.* Everyone should keep a copy handy. Gives you just the information you want, *when you want it.* Write for a complimentary copy.

ACME WHITE LEAD AND COLOR WORKS
Dept. P., Detroit, Mich.

The 1909 Catalogue of

Collier Art Prints

Contains 175 Illustrations

15 cents each

COPYRIGHT 1904 BY COLLIER'S WEEKLY

Nancy

Would you like a copy of the new 1909 Catalogue of the Collier art prints containing 175 illustrations in half-tone of the works of Maxfield Parrish, Jessie Willcox Smith, Frederic Remington, A. B. Frost, Charles Dana Gibson and many other leading American artists?

The engravings are made from the originals which were drawn exclusively for Collier's. They are exact reproductions in miniature and show the entire line with sizes, prices and descriptions. A feature of the book this year is a series of full-page pictures and intimate sketches of the artists themselves.

The catalogue is a thing of beauty and of educational value—too valuable to send free—but if you will send us 15 cents in stamps to cover charges, we will mail you a copy and will

Rebate the 15 cents

with your first purchase of $1.00 or more.

Write your name and address plainly on the order form and send with 15 cents in stamps. Address Print Dept. P. F. Collier & Son, 410 West 13th St., New York City.

Business

PAST IS THE DAY when in commercial dealings the Yankee was only "smart." Courage and progress are frequent among business men. Let us examine for a moment the stand being taken by certain manufacturers. The food traffic has a double importance, since in it we have to consider not only good faith but the vigor of a nation. More than half the illness in the United States is preventable. The average physical force of Americans could be indefinitely improved. Fifteen years could be added to life. The economic gain has been estimated at $1,500,000,000, but this calculation includes only the most literal saving, not the incalculable gain of increased strength. In this great subject a large consideration is purity of food. Not long ago a group of manufacturers formed the American Association for the Promotion of Purity in Food Products, and resolved:

"That the members of this association will severally and jointly give their moral and financial support and undivided influence toward upholding the proper and legitimate efforts of the regularly constituted officials charged with the administration of all laws looking to the elevation of the standards of the food-producing interests of the country."

Among the members of this association are:

The Shredded Wheat Company,	J. Hungerford-Smith Company,
Merrell-Soule Company,	Beech-Nut Packing Company,
H. J. Heinz Company,	E. C. Hazard & Company,
Columbia Conserve Company,	Price Flavoring Extract Company,
The Franco-American Food Company,	J. W. Beardsley's Sons,
Richardson & Robbins,	The Belle Mead Sweetsmakers.

This association takes the position that to whatever degree the Department of Agriculture may choose to enforce or not to enforce the pure-food laws, it will do its own progressive work. On the most sharply controverted food question of the moment, the association, representing packers of meat, fish, fruit, vegetables, confectionery, condiments, and canned goods, takes the position that on the actual harmfulness in itself of this benzoate of soda, even since the decision of the referee board, there is difference of expert opinion, but this point is not their main reliance. What they ultimately rely upon is the allegation that the best methods need no chemical preservative, and that the use of one is desired usually to make possible bad material and inferior processes. Their words are these:

"The principal commercial use of benzoate of soda is to permit the employment of ill-cared-for waste raw material, unfit for human food; the maintenance of unsanitary factory premises; the employment of careless, slovenly work-people; inexactness and mistakes in preparation and cooking and the reduction of food value by permitting the presence of a high percentage of water in displacement of the usual and reasonable percentage of actual food solids. In short, it encourages the production of foods that no one would care to eat who could see them made and know what they are made of."

Other manufacturers deny these statements. We are not at the present moment going into the facts about packing methods. That task may or may not be laid upon our shoulders later. What we are endeavoring to point out is that an interesting spectacle is presented when a group of packers get together and declare that whatever may be done by Mr. WILSON's department they will abide by their principles, however much it cost. One of them remarked in conversation that he would stand by his convictions if it cost him a million dollars in a single year.

Push It Farther

THE PRESIDENT'S POLICY in regard to appointing office-holders in the Southern States is to be heartily approved. The North, from reconstruction days, has done enough to harass the South and to make more arduous its struggles with the manifold difficulties bequeathed by slavery and war. Also it is true, as urged by Mr. TAFT, that there would be advantage to the South in ceasing to be solid; but why should not our large-minded President seize a pliant week to travel about New England or Pennsylvania and preach a sermon of similar import? If party stubbornness is injurious in one part of the country, it should be stupid also in another; and the South at least has more excuse for her solidity. South Carolina has her reasons, right or wrong, for remaining immovably of one party, but what reason has Vermont? The South distrusts the effect of Republican victory on her hardest problem. Mr. TAFT is wise in working to remove that distrust. To considerably more than one Northern State, however, we would suggest some of the same political independence that the President has so justly recommended to the South. Living with the characteristics of a flock of sheep is not stimulating to a community anywhere.

Good for Tennessee

THE CONVICTION OF THE COOPERS helps to put one State on record against the license of the individual to criticize a fellow being by shooting him to death. There have been some distressing performances by juries within the memory of man. Let us instance the Hains acquittal. When a Governor does his duty, as Governor PATTERSON in the night-rider case did his, and when a jury is secured which uses its intellect, the community has reason to be proud, as Tennessee has cause for pride and satisfaction now. A new South is being born—one in which the brilliancy and ardor of the old régime may be combined with the steadiness, industry, and impartiality which mean leadership in civilization as it is to-day. The gifts for which the South was conspicuous, from JEFFERSON to CALHOUN, and from WASHINGTON to LEE, are presumably still alive, and it needs only a correct approach to current facts to bring them out again. Times change, circumstances vary, but we can still pick out of history truths which hold good always, especially, perhaps, when they come from the history of a time when the human intellect reached its highest flight. THUCYDIDES puts into the mouth of PERICLES these reasons for the love which her citizens bore to Athens: "She wishes all to be equal before the law, she gives liberty, keeps open to everybody the path to distinction, maintains public order and judicial authority, protects the weak, and gives to all her citizens entertainments which educate the soul." One choice between principle and passion, one successful example, in a case so conspicuous as the Carmack trial, is of serious value to the State in which it is rendered, for its influence spreads into all fields—social, political, and economic. In a free country, where juries represent local opinion, prison is unfashionable. Acts which send men to prison tend to become unfashionable also.

Psychology

IF WE EVER START an Ananias Club, the first crowd elected, after the patent-medicine gentry, will be the antivivisectionists. It would keep us busy merely to enumerate the lies they tell. Apparently they have no reliance whatever on the truth. Most of them, however, are well-meaning. They don't lie for the pleasure of it, but from something akin to hysteria—what doctors call psychasthenia. Their sentiment, though sickly, is sincere. A certain type of neurotic mind may be honest and at the same time entirely false. The leaders in the movement, apart from the few with a money motive, are usually either childless or without strong affections for children, or, indeed, for human beings. RAYMOND and JANET, studying the disease, tell of a woman who had melancholia over a cat, but lost a child without regret. Morbid anxiety about animals, morbid love of them, they found frequent among degenerate patients. An extreme case is told by MOREL, of a patient who would faint at sight of a sick animal, but always went to executions. Dr. CHARLES L. DANA says that morbid sensitiveness about animals is not infrequent in defective children. He finds it likely to be associated with weak and selfish natures—kindly, perhaps, but without intelligence, and lazy.

"It is much *easier* to pet a dog or nurse a kitten than to tell the exact truth . . . or provide thoughtfully for the poor; or keep watch over the temper and make a household comfortable."

Therefore the kindly feelings of the indolent and unintelligent take this direction. To those who are afflicted with zoophilism, the diseased love of animals developed by "mutual encouragement among the unstable and by self-indulgence," we recommend that they send fifteen cents to the "Medical Record," New York, for the issue of March 6. Can anybody read the summary of what superb results vivisection has accomplished, given by Dr. W. W. KEEN in the current number of "Harper's Magazine," and then wish to allow a bunch of useless women, and their foolish male allies, to busy themselves with a science of which their ignorance is abysmal? In candor it must be conceded that the backbone of the antivivisection crusade is formed by women, and that no other activity of theirs has been so strong an argument against increased feminine influence. We submit to a certain brand of Suffragette that an effective policy in the long run would be [illegible] in

[illegible] of Great Britain and more hard work. Some groups of women are securing the suffrage by quiet, patient labor, and any strong request made upon such a foundation will be granted in the United States. Others are more noticeable for the vivacity of their claims. One among many useful exercises for them would be to study vivisection carefully, and then endeavor to quiet their hysterical and untutored sisters.

Americanism of Omar

THE HUNDREDTH ANNIVERSARY of the birth of EDWARD FITZGERALD, who came into the world on the 31st of March, 1809, brought into relief the vogue enjoyed in the United States by the verses of OMAR, the Tent-Maker. Neither their own intrinsic merit nor the fact that FITZGERALD translated those quatrains so superbly explains entirely why the little book entitled "The Rubaiyat of Omar Khayyam" is published in a far greater number of editions here than any other single poetical work, whether of native or of foreign origin. Even "Evangeline" lags a long way behind. OMAR'S popularity—in no other country is he so widely read—no doubt derives mainly from the circumstance that the thought of this Persian of the eleventh century has considerable affinity with twentieth century American habits of mind. OMAR was quite un-Oriental in his derision of mysticism; and he was not only a thorough skeptic, but he possessed a broad religious tolerance not general outside of America even to-day. He had small reverence for historical traditions, or for "saints and sages" whose "mouths are stopped with dust."

"Waste not your hour, nor in this vain pursuit
Of this and that endeavor and dispute."

He reminds us that "this life flies," cautions us lest we foolishly "after some to-morrow stare," and advises us to "take the cash and let the credit go," all of which is practical and American. And when the old Persian opines that we ought to

"—make the most of what we yet may spend
Before we too into the dust descend,"

he comes to exact coincidence with the spirit of a people who express the same idea in one of their most frequent phrases: "Let's enjoy ourselves while we can, we'll be a long time dead." Let us hope also that OMAR KHAYYAM'S sturdy self-reliance and independence are American, and his fondness for direct thinking and plain living.

Payment

NOT ALWAYS does merit triumph with the certainty of melodrama. It is, in part, a world of chance. Corns stepped on also may change history. Let us give an illustration since it is fermenting in our memory. One GEORGE L. SHELDON of Nebraska, in his day, has fought many fights. He was Governor of Nebraska once, and now he isn't. Why? Because he did his governing well. He was beaten for reelection by brewers, railroads, patent-medicine venders, and associated artists. Some were innocent, like the lovers of Sunday baseball, but most were trying to get more out of the pail than was assigned to them. The pure-food bill signed by him was too drastic to suit the taste of certain artists. What hurt him most was the Gibson bill, prohibiting any brewer from operating a bill as licensee. The enforcement of that bill brought the ax to the Governor's jugular vein. Mr. SHELDON is now enjoying private life in Mississippi. When he returns to Nebraska in June he will have the vast satisfaction of seeing the rain fall from heaven impartially upon the just and upon the unjust. In justice to Nebraska, it is but fair to add that people usually vote in lumps, with ballots expressly designed to aid this brilliant tendency, and therefore SHELDON suffered much from the desire of his neighbors to assist the Peerless One.

Rats

CALIFORNIA DISTINGUISHED HERSELF the other day when the Rush bill became law, putting on private owners drastic duties regarding the extermination of rats, and ordering the State and local boards of health to act when private owners fail. If the State is compelled to act, the owner pays the cost. If he refuses, his property will be sold. This looks considerably as if an enlightened attitude toward the rodent had settled upon the beautiful Golden State. In the city of Oakland, California, a few weeks ago, the Republican Party adopted a platform which included emphatic pledges to keep up all work heretofore done against bubonic plague, and to take all possible steps toward improving the general sanitation of the city.

Slyness

WILLIAM F. MAINES, president of the Rhode Island Liquor Dealers' Association, has sent a circular to the saloon-keepers of New England in which he announces that "the anti-saloon agitation is largely artificial and is financed by JOHN D. ROCKEFELLER for the purpose of giving the public something to think about that will take its mind off the anti-trust agitation." That was intended to be subtle. Can Mr. MAINES be trying to take the public mind off the anti-saloon agitation by pointing again to the ever-convenient Mr. ROCKEFELLER? BISMARCK provoked a war with France to take the mind of Germany off internal dissensions. Is Mr. MAINES a humorist?

Sunday Opening

THE VICE AND LIQUOR SITUATION in New York City is poorly handled to-day. A large proportion of the saloons, except in the business district, sell drinks all day Sunday. Entrance is made through the side-door. The saloon-keepers pay for this illegal privilege $5 to $6.25 a month, some of them direct to the plain-clothes man of their police precinct (the money passes through one to three pair of hands, so as to obscure the trail), but most of the liquor dealers belong to the Retail Liquor Dealers' Association, and pay the president of their "local," coterminous with the police precinct, who pays the plain-clothes man. Thus the present system creates police blackmail. The Committee of Fourteen has petitioned for legalized opening. Three courses are open to Governor HUGHES. He can act on the charges of the Society for the Prevention of Crime, which proved that the present excise law is not enforced. He can aid the bill of the Committee of Fourteen, which amends that law. He can appoint a saloon commission to collect more facts and suggest the appropriate remedies. He is thoroughly informed of the present situation, and is desirous of bettering it. What faces him is one of the hardest problems which now confront mankind.

Politics

HOW FAR can skill in manipulating votes succeed as a substitute for the more inclusive statesmanship that is coming more and more to be demanded of public servants? For craft in getting votes, Senator REED SMOOT is a recognized expert in his own country. One way to do it is to have willing servitors in an allied pulpit preach from end to end of your State that the forces of evil are allied against you, threatening your overthrow, and that all who are pious, regardless of political views, should rush to your defense. And then another way is to have J. U. ELDREDGE, Jr., Federal office-holder and Salt Lake County boss, send word through all the saloons that the fanaticism of the pious will smother them in dry legislation unless they get "on the band-wagon." Both of these methods Senator SMOOT employed in 1908; the forces of evil and of pious good teamed it together for a Smoot triumph. Now the ecclesiasts have discovered in what manner of game they played. Once before they rushed to SMOOT'S aid for fear an assault on him covered a real attack on them. Now, with this fear removed, some of them are speaking out. Senator SMOOT, in Washington, confidently explains to the Federal office-holders, comprising the active council of his party, that long before another election this hysteria of opposition will blow away. Politicians learn to figure so, in the security of their power to manipulate. In the mean time, what steps are being taken, to make their cause effective in practical politics, by those who have become aware of the relationship between SMOOT and his church and SMOOT and the brewers?

In the Wake of Togo

A JAPANESE SCHOOLBOY in the University of Seattle declares that if he were Mikado, Hashimura Togo should have a medal. He thinks Togo has done more service to Japan than any number of diplomats could do. Very different is the view of Mr. ADZU KAONAMI, who thinks the result of Togo is to belittle the Japanese, which, naturally, seems to him of great importance, since he believes the future of his country will be determined largely by international opinion.

"We are a serious people and a reading people. We recognize and appreciate high-class literature. Possibly the average reader of COLLIER'S would be surprised to know the extent to which standard historical and philosophical works, in English, are circulated and read in Japan. Also it may not be so generally known that the works of DARWIN, HUXLEY, SPENCER, and such scientific writers are more read among the common people of Japan than among the same class in this country."

Our friend celebrates eloquently and justly the Japanese virtues, and then calls upon us to treat international questions in the pure light of the Golden Rule. Alas, no easy feat is that. The Golden Rule is the greatest single ethical dogma in existence, but no single dogma suffices for the conduct and complexity of life. Besides, interpretations of that rule differ. An American might favor exclusion and hold himself within the rule because he justified Japan in taking steps which she deemed necessary to her peace and welfare. The spirit, strength, and taste of the Japanese have often aroused our admiration, yet it surely *may* be true that a certain people is excellent, and a certain other people also excellent, and yet those two peoples better separate than together.

Cyrano and Sarah

SO BERNHARDT plans to enact the title rôle in "Cyrano de Bergerae" and also Mephistopheles in "Faust." There is very little on this earth that Madame SARAH overlooks by way of experiment and experience. Men's rôles are an old story for her. She played the Duke of Reichstadt well, and if her Hamlet was unsatisfactory the reason lay principally in her nationality. She has played Romeo, but not in this country. Lorenzacchio is one of her famous rôles. Boys' rôles are frequently played by women with success. Nobody would cast a man for Peter Pan or Puck. Cyrano, however, is another story. The many-sided BERNHARDT may well be interesting as Mephistopheles, but if she does any justice whatever to ROSTAND'S swashbuckling poet, score one erroneous guess for COLLIER'S.

Comment About Congress

The Two Committees That Are Actually Responsible for the Tariff Bill—The Most Active Influence at Work in Washington

By MARK SULLIVAN

A TARIFF BILL must be born in the Lower House of Congress. This was provided by the men who made the Constitution, because a tariff bill is a bill to tax the people, and they believed that it should originate only with that part of Congress which is closest to the people, which is elected by the people directly, and which must return to the people for approval or disapproval every two years. Within the Lower House it is the Ways and Means Committee which has final charge, for the complete title of that committee would be "The Committee on Ways and Means of Raising Revenue to Run the Government." The members of that committee, which stands finally responsible for the bill in its present form, are:

Sereno E. Payne, *Chairman, New York*
John Dalzell, *Pennsylvania*
Samuel W. McCall, *Massachusetts*
Ebenezer J. Hill, *Connecticut*
Henry S. Boutell, *Illinois*
James C. Needham, *California*
William A. Calderhead, *Kansas*
Joseph W. Fordney, *Michigan*
Joseph H. Gaines, *West Virginia*
Nicholas Longworth, *Ohio*
Edgar D. Crumpacker, *Indiana*
Champ Clark, *Missouri*
F. Burton Harrison, *New York*
Oscar W. Underwood, *Alabama*
Robert F. Broussard, *Louisiana*
James M. Griggs, *Georgia*
Edward W. Pou, *North Carolina*
Choice B. Randell, *Texas*
Francis W. Cushman, *Washington*

When the bill was formally introduced by this committee to the House as a whole, it took, as a matter of custom, the name of the chairman, and, for purposes of history, became known as the Payne bill. In the House there will be three or four weeks of debate. Then the bill will go to the Finance Committee of the Senate, which consists of these men:

Nelson W. Aldrich, *Chairman, Rhode Island*
Julius C. Burrows, *Michigan*
Boies Penrose, *Pennsylvania*
Eugene Hale, *Maine*
Henry Cabot Lodge, *Massachusetts*
Frank P. Flint, *California*
Reed Smoot, *Utah*
Shelby M. Cullom, *Illinois*
John W. Daniel, *Virgina*
Hernando D. Money, *Mississippi*
Joseph W. Bailey, *Texas*
James P. Taliaferro, *Florida*
F. M. Simmons, *North Carolina*

This committee of the Senate will make such changes as it sees fit and report the bill to the floor of the Senate. There it will undergo the most thorough debate. Finally, to come to agreement on those points where the House and the Senate disagree, there will be a committee of conferees, not yet named, of three from each chamber. When these finally reach their compromises, and the compromises are endorsed by both bodies, the bill goes to the President.

Such is the machinery for making a tariff. Happily the issue is not clouded by any other pending legislation (the census bill is the only other measure to be considered at this session). There is nothing to divert the spot-light from the Payne bill; the responsibility is clearly placed. As to those responsible up to date, it is fair to say that, with millions of hostile eyes focused upon it, there has been little condemnation that goes to the heart of the bill as a whole. It is conceded to have been framed in the spirit in which the people demanded it—the spirit of a substantial revision downward.

The Office-Boy on the Job

THE American Protective Tariff League is the organization of those who profit by the protective tariff. Its members contribute large subsidies to publish the "American Economist" (save the mark!); to "accelerate" public opinion by means of plate service for small newspapers; and to maintain "representatives" at Washington and elsewhere. Something more than a year and a half ago the chief official of the League gave forth this public utterance:

"As a Judge of the Supreme [?] Bench, Mr. Taft was one of the greatest jurists that ever graced that body. As Governor of the Philippines, Mr. Taft was a splendid Governor. But his policy, both at the Philippines and at the Isthmus of Panama, was for free trade and not for protection of American industries. . . . *That is why Mr. Taft will not bear the standard of the Republican Party next year.*"

Not all that has happened since this was said has been wholly pleasing to the organization that fathered it. One is certain that Mr. Taft feels no obligation to the American Protective Tariff League such as would fetter his actions in any matter of administration policy. But the Tariff League breast is not without hope. It is out with another official hurry-call:

"Recently one of our prominent members said: *'Let your office-boy run the factory until tariff matters are settled,' and the gentleman who made this remark is in Washington and will stay there until tariff conditions are determined.* . . . Please go to Washington and stay there until tariff legislation is disposed of."

The consumers, who would be benefited by a lower tariff, haven't got office-boys, as a rule; and they can't afford to spend the next three months at Washington. But they can do much with two-cent stamps.

One First Principle

JUST so far as the Payne bill is a measure to raise taxes, it belongs in the most complex and disputed field of politics or economics, and one man's guess is as good as another's. *Just so far as it is a measure to protect some industries, it raises a moral question.* It affirms the justice of taking money from the pockets of one group of men to put it in the pockets of another. It confuses the vision of a whole nation as to the sharp lines between meum and tuum, accustoms people to the sight, under sanction of law and the acceptance of custom, of special privileges for some at the cost of others, and makes them tolerant of all the allied forms of acquisition that go by the name of graft.

Strategy

ON THIS page from time to time appear a good many quotations from the official Congressional Record. This one is from another source—the weekly stock-market letter of Hayden, Stone & Company, members of the New York and Boston Stock Exchanges:

"As the tariff bill becomes the all-absorbing topic of the day, all eyes are turned to Washington. . . . Of one thing in this connection we can be reasonably sure. *With a deficit of $140,000,000 in Government receipts during the last sixteen months, there can not well be any radical reduction.* Congress is confronted with the embarrassing problem of trying to meet the wishes of the Administration, and—at the same time—of providing the Government with a maximum revenue during the lean times. While other auxiliary measures may be provided, the tariff must remain the backbone of the Government's revenue resources, and the people must pay the piper through continued high tariff rates.

"*It might be an interesting question to discuss whether the 'orgy of extravagance' had not been entered upon for the express purpose of providing this very situation.* At any rate, it seems fairly certain that the stock market has nothing to fear from the invasion of the rights of any protected interest."

One need not take the source as authoritative. It is accepted in other quarters than Wall Street that those who dominate the Senate and the House were not without cognizance of the strategic value of confronting Mr. Taft, at the very moment he asked for drastic tariff revision, with the wholly regrettable necessity of providing for a $140,000,000 deficit.

The Senate as a Soft Pedal

THE Hon. Boies Penrose of Pennsylvania is chairman of the Senate Committee on Post-Offices and Post-Roads. In that official capacity Mr. Penrose, toward the end of the last session, reported the General Post-Office Appropriation bill. That measure provided for a total expenditure of $238,000,000. Somewhere on the twenty-eighth page of the bill was this:

"*Provided further*, That the Postmaster-General, for the purpose of ascertaining the practicability of establishing a local parcels-post system on the rural delivery routes . . . is hereby authorized to experiment . . . *in two counties of the United States* . . . and the sum of $5,000, *or so much thereof as may be necessary*, be and the same is hereby appropriated . . . for the purpose of carrying out these provisions."

Five thousand dollars out of 238 millions, and two counties out of 2,500, *for an experiment only*, is a small mouse to come from the mountain of advocacy through the country for a parcels-post system. The Senate, as a check on popular clamor for rash experiments in government, justifies itself.

"Keeping Down the Demand of the People"

CONGRESSMAN DAVID J. FOSTER of Vermont was arguing for a very small beginning of the Parcels-Post—enough to allow a farmer in the vicinity of any rural post-office to send packages *to and from his own village only* by his rural route carrier. He did not propose a general parcels-post system, no use of the railroads, no competition with the express companies. But the idea of an opening wedge was considered dangerous. There ensued this colloquy:

"CONGRESSMAN SYLVESTER C. SMITH OF CALIFORNIA—Then let me ask another question. How are you going to keep down the demand of the people for some uniformity in the postal service?

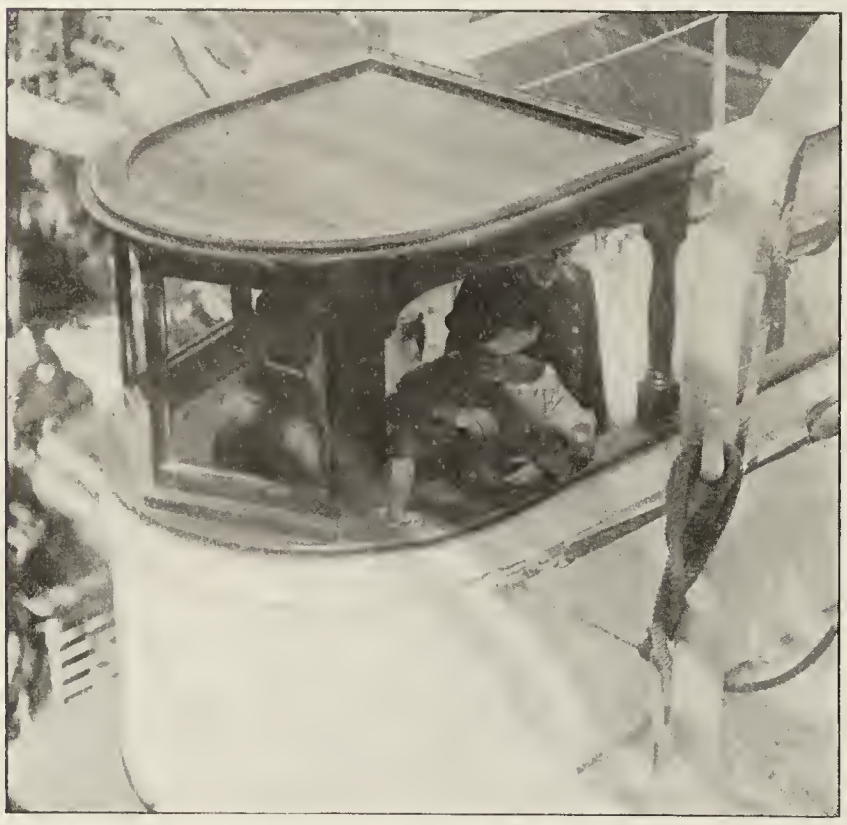
"CONGRESSMAN FOSTER—I shall never undertake to keep down any demand of the people that is just and reasonable."

Apparently Congressman Smith and Congressman Foster differ as to point of view.

"Disgusted Citizens"

THIS letter to COLLIER'S comes from a man who lives at 9 Mulford Street, East Orange, New Jersey. He writes "M. E." after his name, and is, therefore, presumably a man of college education and standing in his community:

"What can one thoroughly disgusted citizen do? Write to my Congressman, you say? Be kind enough to tell me his name, will you? . . . Kindly reply at your convenience. YOURS FOR PURE POLITICAL METHODS."



If "Disgusted Citizen" will ask his barber, or his bartender, if he patronizes one, he will doubtless learn his Congressman's name. Most assuredly he can learn from that holder of a political office who calls for his garbage-can in the morning. If "Disgusted Citizen" doesn't know his Congressman's name, presumably he didn't vote either for him or against him. Said a Massachusetts Congressman when the fight against Cannon was at its height:

"Oh, yes, I'm getting those letters and telegrams—hundreds of them; but I don't care. I've had my secretary look all those fellows up, and not one of them ever attends a caucus."

Congressmen measure the weight of their constituents by votes, not by degree of "disgusted citizenship" nor by the ardency of abstract desire for Pure Political Methods. The earliest political essays that Theodore Roosevelt wrote, more than twenty-five years ago, dealt with that type of business or professional man who looks on election day as a chance to get away for a little golf, and isn't ashamed to see his coachman wield more political influence than himself.

New York's last sight of Theodore Roosevelt—the liner "Hamburg" steaming past the Battery

"Off!"—the "Hamburg" just clear of the pier—Mr. Roosevelt on the bridge

Mr. Roosevelt shipping his rifles and the rest of his twenty pieces of baggage

Mr. Roosevelt and his son Kermit on the bridge with Captain Burmeister at 11.15, on March 23, as the "Hamburg" left her pier

Off for Africa

Freight Tariffs

Suppressing Water Commerce on the Pacific by Control of the Water Frontage, and by the Unhampered Control of Transcontinental Freight Rates—Johannesburg, South Africa, Closer to San Francisco than Goldfield, Nevada—The Longest Way Round the Cheapest Way for Freight

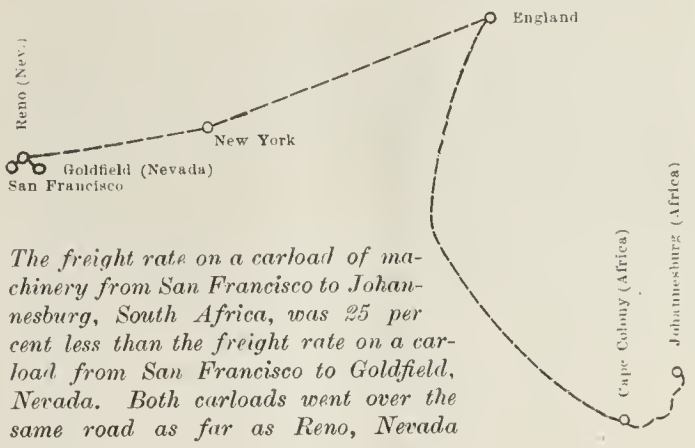
By C. P. CONNOLLY

When the fleet under Rear-Admiral Evans steamed into San Pedro Harbor, in southern California, there was no landing-place for its sailors and no embarking-point for its supplies that the Southern Pacific did not control

CALIFORNIA is once more beating the air in a struggle against the Southern Pacific. She has rarely, if ever, succeeded in concentrating her forces successfully against her ancient enemy. Every now and then she organizes a Wat Tyler rebellion, which usually ends in unconditional surrender. The present protest is against a ten-million-dollar increase of coast freight rates.

The Interstate Commerce Act prohibits discrimination between points, and forbids charging more for a long haul than a short one over the same line under similar conditions; but when the railroads undertook to establish terminal rates the courts held they had the right to meet water competition. So San Francisco, Los Angeles, San Diego, Portland, Seattle, and Tacoma, like New York, Boston, Philadelphia, Baltimore, and other Atlantic Coast cities, got terminal rates, and Chicago and the other lacustrine ports which connect by water with the sea were given the same preference. The Missouri River, being navigable, was given terminal rates. That took in Omaha, Kansas City, St. Louis, St. Paul, and Minneapolis. The fixed rates between all Eastern and Western terminals, generally speaking, were the same: that is to say, the rate from Chicago or Omaha to the Pacific Coast was the same as the rate from New York to the Pacific Coast.

To get out from the lakes, our water freight all goes through the Welland Canal and through British territory. The railroads fought any extension of the Erie Canal that might make for larger water commerce. That struggle is trite history. Chicago and the Mississippi Valley have sought for years to secure legislation from Congress that would extend the Chicago Drainage Canal to the Mississippi River; but because it would give the upper Mississippi Valley communication by water with the Gulf the railroad influence has successfully fought its extension, just as it fought the Panama Canal, which will cut the water route between San Francisco and New York more than half.



The Railroads as Rate-Makers

ON THE passage of the Interstate Commerce Act of March 3, 1887, the transcontinental railroads set about securing mutual agreements covering transcontinental traffic. That act prohibited railroads from rebating or secretly cutting rates; it also prohibited combinations of railroads for the purpose of pooling earnings. The Sherman act, passed three years later, prohibited, under penalty of imprisonment, any combination between persons or corporations to monopolize commerce or to restrain trade. The Government has never enforced the penal provisions of the Interstate Commerce Act or of the Sherman act against railroad combinations formed to fix tariffs between competing lines. The result has been that the railroads have regularly fixed rates, and have advanced them from time to time until their net earnings have increased enormously. To do this successfully it was necessary to control the harbors which fed the commerce of the seas.

With their entrenched political power it was not difficult to influence State legislation in the Pacific Coast States in such a way as to enable the railroads to secure possession of the water fronts. Laws were passed creating for the larger Pacific Coast cities State harbor boards. The titles to the water frontage were transferred to these harbor boards. These boards extinguished by condemnation proceedings all private holdings upon the water. They constructed sea-walls and filled in ground. As fast as any part of these water fronts was reclaimed and made available, the harbor boards were authorized to lease the frontage. The railroads, controlling the appointments of the harbor boards—**the Southern Pacific controls practically every appointment in California**—secured leases in the name of the State for the improved frontage. The State's power of eminent domain was thus turned over to the railroads, and **the public funds used to improve harbors, which were taken over by the railroads as soon as they were ready to receive them.**

The territory lying north of the Columbia, which river disembogues in the region near Portland, is largely dominated by the Hill-Morgan interests, though the Standard Oil interests have recently entered that territory. The Hill-Morgan interests look to the control of the water frontage north of the Columbia River as far as the Canadian line. The Supreme Court of the United States, following the English precedent, early declared that the several States owned all the tide-lands below the line of high-water mark, in trust for public uses. Based upon this decision, the State of Washington, ignoring the public trust, passed a law providing for the sale of its tide-lands by auction, and tide-lands along the shores of all navigable rivers were sold at a nominal price. Later it was discovered that the Hill-Morgan interests owned or controlled many of these. This same policy was pursued on the lower coast, from the Columbia River to the Mexican border, with the result that a hard and fast monopoly of the coastwise commerce, both by land and sea, passed into the hands of the Southern Pacific. **When the fleet under Rear-Admiral Evans steamed into San Pedro Harbor, in southern California, there was no landing-place for its sailors and no embarking-point for its supplies that the Southern Pacific did not control.**

There was a key to these locked harbors. The Southern Pacific and its allied lines were formerly in the hands of Collis P. Huntington. When he died, about

The freight rate on a carload of machinery from San Francisco to Johannesburg, South Africa, was 25 per cent less than the freight rate on a carload from San Francisco to Goldfield, Nevada. Both carloads went over the same road as far as Reno, Nevada

1903, the control of the entire system passed over to E. H. Harriman and his associates, members of the Standard Oil group of financiers. Earlier than this the Union Pacific was made the pivot of a great railroad system which was to spread over the continent and connect with every port between Portland and the Mexican border, where vessels loaded. A policy was projected which was to absorb the Hill interests north of Portland, bringing the northern harbors also under Standard Oil tribute. This policy was foiled by a decision of the Supreme Court of the United States.

The directors of the Union Pacific, the parent of the Standard Oil Western system, delegated their power to manage and direct the affairs of the company to an executive committee of five members. In turn this committee relinquished its functions to Mr. Harriman, who exercised absolute control—a distinctive Standard Oil policy which combines corporate immunity with individual power and secrecy.

The Standard Oil Group in Action

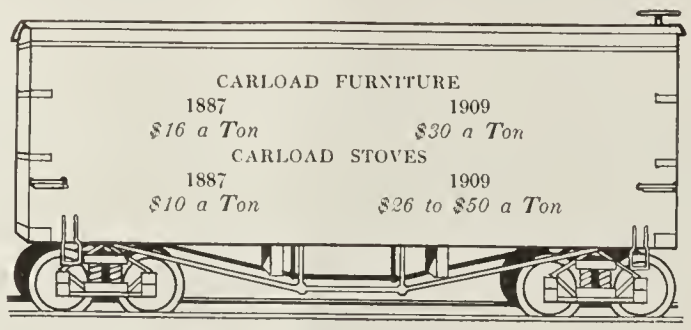
THE Southern Pacific and the Central Pacific, both subsidized by enormous land grants from the Government, were consolidated by the formation of a corporation called the Southern Pacific Company, created by a special act of the Kentucky Legislature. A majority of the stock of these two competing lines was turned over to the Kentucky corporation, and leases of their properties for ninety-nine years were made to the Kentucky company by each of these corporations. In this and like ways the Standard Oil group acquired the Southern Pacific, the Central Pacific, the Oregon Railway and Navigation Company, and the Oregon Short Line, as well as every American line of trans-Pacific steamboats operating south of Puget Sound and every coast-going steamboat line south of Portland, with the Union Pacific as the holding company. The Standard Oil group acquired, as connecting lines, the Illinois Central, the Chicago, Milwaukee and St. Paul, the Baltimore and Ohio, and the Chicago and Alton. The Atchison, Topeka and Santa Fe, in which the Standard Oil interests have already large stock holdings, alone of all the Western roads south of Portland, remains unabsorbed. The possession of this Western territory by this group is undisputed. Its freight toll is arbitrary. Into its field no rival may venture. Former United States Senator W. A. Clark of Montana sought to build a railroad from Salt Lake City to Los Angeles and the San Pedro Harbor. **With as much assurance as if Clark were laying tracks across a private domain, Harriman stopped him, first by physical force and then by a show of hands. He made Clark capitulate and turn over to the Standard Oil interests the control of his road.**

Dexterity of the Southern Pacific

AT ONE time the Panama Railroad chartered a ship and put on an independent service between New Orleans and Colon, which was to compete for Pacific Coast freight with rail and water lines owned by the Southern Pacific. The Southern Pacific immediately cut rates on products which could be successfully transported by way of Panama. After the Panama ship had made one round trip, the New Orleans merchants withdrew their patronage and took advantage of the reduced Southern Pacific rate. **The Panama Railroad then withdrew its ship for lack of patronage. The Southern Pacific immediately put its tariff back to the old rate and has kept it there ever since.**

The representatives of this Standard Oil group of railroads, representatives of the Hill-Morgan group, and the representatives of such other railroads as are not controlled by either group, meet annually to fix freight rates throughout the United States. There is no law of Congress which authorizes the Interstate Commerce Commission to supervise these rates or to make any general orders reducing them. That body has the power, upon complaint being filed and pleadings and arguments had, to determine a particular rate as to any particular commodity over any particular line. A hearing on one of these complaints may last from one month to two or three years. Some cases have been under investigation by the commission for nearly five years. The railroads meanwhile, unhobbled by restriction, go on advancing rates at will. **The results of this policy of suppressing water commerce on the Pacific by control of the water frontage and by the unhampered control of transcontinental freight rates are startling. Freight rates have steadily advanced until they have in many cases doubled, and in some cases trebled, since the passage of the Interstate Commerce Act of March 3, 1887.** The rates on dry-goods, furniture, stoves, glassware, crockery, nails, agricultural implements, and scores of other necessary commodities have been raised excessively. **At the time of the passage of the Interstate Commerce Act, for instance, the transcontinental rate on furniture was $16 per ton in carload lots; it is now $30 a ton. On stoves the rate was $10 a ton in carload lots; the present rate varies from $26 to $50 a ton, depending on the character of the shipment.** The list might be continued at length. Of course, it will be contended that many other considerations have entered into these advances, yet the stubborn fact remains that competition by rail and water then involved an inevitable fluctuation in rates which does not now exist.

One of the chief factors entering into the adjustment of transcontinental rates by the railroads has been the competition from abroad. It has been comparatively easy for the railroad pool to gather in the ship lines engaged in coastwise trade, but it has not been possible to force foreign ships into the pool. The coastwise trade act of Congress, which has been in force for fifty years, prohibits foreign ships from carrying freight or passengers from one American port to another. That act was passed ostensibly to encourage American shipbuilding. It has had the opposite effect. The combination of railroads and coastwise water lines—the Standard Oil interests, for example, own the Morgan line of steamships plying between New York and New Orleans and Galveston—has stifled the coastwise water traffic and has forced transcontinental rail transportation. If the Californians desire to ship freight from New York by water, they can not engage a foreign ship; that is prohibited by law; they can not mend the situation by patronizing American coastwise vessels; these are under railroad dominion and their freight rates are regulated by the railroad pool. They might patronize tramp steamers on the Atlantic seaboard, but they would be made to pay the regular toll, either by rail or water, before reaching the Pacific Coast. **If you ship canned goods, a heavy California export, by rail from San Francisco to Galveston and then to New York, the** [illegible] **from**



Galveston to New York is the same as the rate by rail from San Francisco to Galveston; but you pay the full rate from San Francisco to New York, whether you patronize the steamship line from Galveston to New York owned by the railroad or not. This arrangement cuts off the rivalry of any steamship line not in the railroad pool. This bratticing of the ocean highways has not been without its effect. The tonnage from San Francisco to New York by way of Panama decreased from 30,409 tons in 1904 to 15,285 tons in 1907, a period during which the railroads were so congested with traffic that it took from sixty to ninety days for freight to cross the continent.

Dingley Plus the Water Rates

IT IS claimed that in the transportation of many of the necessities of the Western coast, the railroads base their rates upon the cost of transportation by water from foreign countries to the Pacific Coast, plus the American customs duties; in other words, that their terminal freight rates for the Pacific Coast are based, not on the length of the haul, or the value of the service, but on the custom rates of the Dingley bill, plus the water transportation from abroad. Whether this claim is based in every instance on a comparison of the railroad rates with the Dingley bill, it is true that the rates on various commodities bear out the contention clearly. Not only is this true of West-bound freight, but it is true also of East-bound freight. California ships East, for instance, 30,000 carloads of oranges each year. Oranges are carried from Mediterranean ports to New York for $3 a ton; the import duty is $20, making the total cost to New York $23 a ton. The freight rate from California to the Atlantic seaboard is exactly the same.

A Spokane merchant wanted to ship two carloads of linoleum from Chicago to Spokane. The railroad rate to Spokane was the terminal rate from Chicago to Seattle, plus the local rate back to Spokane. The linoleum had to pass through Spokane to get to Seattle. The rate being exorbitant, the Spokane merchant purchased his linoleum in Liverpool, to which point it had originally been shipped from the manufacturing plant near Chicago. He shipped it from Liverpool through the Suez Canal to Seattle, paying the import duty and the local freight rate from Seattle to Spokane, and beat the railroad rate from Chicago to Spokane by a considerable discount.

The proprietor of a San Francisco ironworks shipped

Twenty two years ago, you could send just short of twice as much furniture—desks, bureaus, chairs—as now, for the same money. You could send anywhere from two to five stoves where to-day you can send one. Of course, the person who pays the freight is the purchaser, the consumer—the "general public"

on the same day two carloads of machinery of the same kind and bulk. **One went to Goldfield, Nevada, a distance of about three hundred miles from San Francisco, and the other went to Johannesburg, South Africa. Both carloads went over the same road to Reno, Nevada, the Goldfield shipment going south and the other keeping on its way to New York, whence it was shipped by water to an English port, transferred to another vessel bound for Cape Colony, South Africa, and from Cape Colony was shipped three hundred miles by rail to Johannesburg. The freight rate on the carload from San Francisco to Johannesburg was 25 per cent less than the freight rate on the carload from San Francisco to Goldfield.**

From Bakersfield, California, to Los Angeles is 168 miles. Bakersfield formerly shipped large quantities of tallow to the soap manufacturers of Los Angeles. The rate on tallow from Bakersfield to Los Angeles was $9.60 a ton in carload lots. Later Galveston got a rate on tallow from Bakersfield, a distance of over nineteen hundred miles, of $10.40 per ton, only eighty cents a ton more than the rate from Bakersfield to Los Angeles. Bakersfield's tallow went to foreign markets, and Los Angeles was compelled to look elsewhere for its grease. Its soap manufacturers went to China for their tallow, and the freight on a ton of tallow from Chinese ports is only $6, $3.60 less than Los Angeles used to pay for the 168 miles from Bakersfield.

The Enemies of Tariff Reform

A SHIPMENT of goods from Antwerp, intended for a Los Angeles merchant, went by mistake to San Francisco. The Los Angeles merchant was compelled to have the consignment reshipped from San Francisco to Los Angeles, a distance of 480 miles. The cost of the freight from San Francisco to Los Angeles, 480 miles, was the same as the cost of the 16,000 miles of water transportation from Antwerp.

There is one consideration that operates to the advantage of the Pacific Coast manufacturer. By reason of the greater cost of labor and of raw material, he can not manufacture his goods within, say, 10 or 15 per cent of the Eastern manufacturer. A freight rate which is 40 per cent of the cost of the article in the East affords him a liberal margin of protection.

It will eventually be found that the railroads are the real power behind the opposition that has prevented reforms of the tariff. If the Dingley tariff rates were uniformly reduced, it would result in a reduction of freight rates on many commodities. Local rates would inevitably follow a reduction of terminal rates.

The Panama Canal will be useless to California unless, like New Orleans, she can have municipal docks and open up her harbors to free competition. Los Angeles is straining every nerve to secure a part of San Pedro Harbor for municipal docks. So important to all nations has been the question of free harbors that the English people protected themselves against this form of monopoly by several provisions in Magna Charta. It may be argued that the State has the legal right to condemn harbor frontage by eminent domain, but the railroads have the same right, and **the Southern Pacific is as powerful politically on the Pacific Coast as it is commercially. It is the real government of California.**

In the Revolution Belt

Being the Ingenuous Impressions of a First-Time Traveler Concerning Caracas and Its Cinematograph Methods of Government

By

SAMUEL HOPKINS ADAMS

Illustrated by C. J. POST

SOME TIME and somehow somebody will write a veracious Guide-Book to Venezuela. Heading the list of Principal Products in that future and valuable tome will be the entry: "Trouble." Under this head it will be noted that Venezuela produces more trouble than any other country in the world, both for home and foreign consumption. The brand designed for the outer world is labeled "International Complications," and is highly disesteemed by polished diplomats, whose exequaturs are presented to them on the toe of the Presidential boot. The home variety is revolution. If you will look up the word in any respectable dictionary you will note that its derivative meaning is "a going around." There is always enough revolution to go around in Venezuela. Any earnest applicant with a desire to reconstruct the Government and write his name in imperishable gold-flake upon a tinware statue in the Plaza Bolivar can be accommodated at market rates. Only by revolution does the ruling power ever change.

Theoretically there are elections at stated intervals; but going to the polls is dangerous, because if you're suspected of voting for the other fellow, the incumbent of office puts you in jail. Much better start a popular uprising, and shun the unnecessary peril of the suffrage. If the cause is defeated you can flee like a bird to the mountain, there to lead a highly non-combative and arboreal existence until the worst is over. If it is successful you can pick out the swaggerest title not already preempted, preferably ending in d-o-r, and ensconce yourself under the plum tree until somebody else's revolution dislodges you.

"Can phut prevail against bang?"

Almost anything is a sufficient incentive to one of these little rotary disturbances. It may begin because a man has been put in jail or because a man has been let out of jail, or because the President wears pointed boots, or because a man has a new gun and an experimental trend of mind, or because somebody did or didn't get decorated with the Sublime Order of the Pink Mackerel, or because the price of maize is too low or the price of drinks too high, or because the wrong number came out in the Government lottery; or the coiled springs of action may be loosed merely by such simple and sequential logic as obtains in the convincing and historical case of—

He rallies the downtrodden peon

"The languid young man from Fort Blaney,
Who married his typist, named Janie.
When his friends said: 'Oh, dear!
She's so old, and so queer!'
He said: 'Yes; but the day was so rainy.'"

Framing up a Martyrdom

TO QUOTE from the poet Jones, known to fame as the Chaste Chortler of Caracas:

"Ill fares the land, to hastening ills a prey,
Which can't produce one uprising per day."

The country of his poetic pride pretty nearly maintains this average. It's such a simple process, revolutionizing. The local correspondence schools give a course in it. "How to Overturn the Government by Mail; Two Dollars, Postage Paid." All that is required is a leader and a motto. The leader, upon being thoroughly equipped, with twelve rounds of ammunition and a furlong of gold lace, to alter the destiny of nations, provides himself, as a finishing touch, with a *nom de guerre*. This must be allusive, inspiring, and straight from the heart of nature. As, for instance, "The Cloudburst" or "The Flyspeck." Next he issues a *pronunciamento* full of the grandest adjectives in the Spanish tongue, heavily capitalized, proclaiming himself the Implacable Foe of Enthroned Tyranny and the Strong Refuge of the Oppressed. After which he rallies the downtrodden peon to the standard of deliverance and freedom with the flat side of a *machete*, and, at the head of his augmented army, swoops down upon some unconsidered cross-roads a day's march from the capital, where he declares himself dictator and serves a copy of his official document upon the local mayor. Probably the mayor can't read. But he can ride, at least, and the clatter of his jackass's hoofs in full retreat marks the first glorious victory of the cause. The conqueror, wasted with his strenuous efforts, sits down to administer the district and exchange rhetoric for taxes with the surprised and gratified inhabitants. In the course of time, however, a few Government troops, armed with cigarettes, appear in the roadway, trying their best to make a mark-time resemble an impetuous advance. Thereupon the Human Earthquake makes three leaps to the revolution's man-of-war, the *Crawfish*, which has been held in readiness for this unexpected dénouement, and steams away with snorts of defiance and the revolutionary bar'l. Some weeks later the Moulin Rouge and other Parisian resorts for the study of sociology are enlivened by the advent of a brunette gentleman handsomely framed in gilt and with money to spend. Another lost cause is entered upon the scroll of martyrdom, and Venezuela continues to be ground under the iron heel of tyranny.

Revoluting per Program

THERE obtains a popular superstition that all South American revolutions are inspired by gentlemen claiming, in strange accents, the United States as their fatherland, who passionately desire to sell at high rates non-explosive cartridges and rifles which antedate the invention of gunpowder. This is a mistake. The revolutionary spirit is indigenous to the country, and follows fixed rules of procedure, which are susceptible of being accurately formulated. First come the *bolas*. A bola is a rumor which your friend whispers to you confidentially with the assurance that he knows it to be authentic—in other words, a lie. The early *bolas* state, with a wealth of detail, that the insurgent leader, El Burro, has escaped from the *cuartel*, where an oppressive Government had incarcerated him for stealing salt without a license, and is advancing upon Caracas to revenge his wrongs. The program then proceeds as follows:

Exchanging the bolas *of the day*

(1) Reports by telegraph, heliograph, wig-wag, telephone, gramophone, and saxophone that El Burro has raised a force of five thousand intrepid patriots and is marching on Caracas. (Later reports, just received, correct "intrepid" to "intoxicated.")

(2) Retirement of the Minister of War and the commander of the barracks because of ill-health.

(3) *Bola* that a fleet of fishing boats from Trinidad has joined the insurgent forces.

(4) Resignation of the admiral of the navy, on account of a pressing engagement.

(5) Stealthy night attack on Barracks No. 23, resulting in the nervous prostration of the entire force, after exhausting their ammunition. Two badly perforated

cats discovered next morning at the spot from which the advance was projected.

(6) Seventeen proclamations issued from unidentifiable sources, in prose, poetry, and profanity, appear on the streets, prescribing "Death to the Tyrant" in sundry unpleasant forms.

(7) President departs for the country on advice of his physician.

(8) Arrest of all persons found on the streets after dark without a numbered collar and a certificate of good conduct.

(9) *Bola* that El Burro with 50,000 men, armed to the teeth, is within a day's march of the capital; in consequence of which—

(*a*) Manager Cherry of the Ferrocarril Central formally warns the revolution that all armies trespassing on his right-of-way will be first kicked and then prosecuted by his general counsel. (Irish and quick in action.)

(*b*) Manager Almond of the Ferrocarril La Guayra notifies the Government that demurrage will be charged upon all officers below the rank of colonel taking refuge in his freight-cars.

(10) Outburst of assorted *bolas*, followed by emigration of Caracas's bravest and best on mules.

(11) Departure of the Army of the Republic in tears.

(12) Twenty-seven badly scattered gunshots heard in the distance.

(12*a*) *Bola* of utter rout of Government forces.

(12*b*) *Bola* of total destruction of insurgent army.

(13) Receipt of message from El Burro by his secret representative: "Defeated and dishonored, but not discouraged. Send cash."

(14) Return of patriotic defenders, heroes, bulwarks of nation's safety, etc. Total loss, one; cause, butted off cliff by goat.

(15) P e a c e, prosperity, and pyrotechnics, lasting till next time.

Developing a concession

Outside the Rules

NOT invariably does the affair go off as per program. There was once a minor turn-up in which the infraction of the recognized rules brought about lamentable consequences. The insurrectionists had picked up somewhere a man from the lowlands who was accustomed to shoot the large, handsome, and highly efficient jaguar of that region. As it was incumbent upon him either to shoot straight or to become an entrée for Mrs. Jaguar and the little Jaguars, he had improved upon the national method of marksmanship, which is to shut the eyes and fire with a shrill, unearthly yell into the air. Consequently, when the battle was joined, on opposite sides of a small stream, and the shrill, unearthly yells began to mount heavenward, together with the bullets of the contestants, the lowlander deployed himself upon his stomach and perforated a particularly vociferous officer on the other bank. The officer, with an expression of blank surprise, lapsed into the brook and proceeded to drift. His companions, naturally supposing that he had been sunstruck, hastened to fish him out, whereupon the jaguar hunter pinked three more of them. While both parties were still petrified with horror at this unheard-of catastrophe, the marksman ran his score up to nine. The regular army then burrowed into the jungle, and the revolution was about to declare its champion Liberador, or Restaurador, or something of the high-sounding sort, when he resigned in profound disgust, declaring that he had never had poorer sport in his life, and returned to his jaguar-haunted valley, leaving the Cause to disband behind him.

Machetes and Marksmanship

ADVANTAGE is to the regular army, on the whole, in the matter of gunnery. For, though the soldier of the republic never gets any target practise, he is at least taught to bring his rifle to his shoulder before shooting. The revolutionary method is to fire from the waist line, with the eyes firmly closed against the flash. If the butt kicks the marksman in the stomach, he has a welcome excuse for retiring from action. If not, he shoots again. Now, were it the custom of the Government forces to arrive in airships, or to advance, simian-wise, through the tree-tops, their mortality would be dreadful to contemplate. As it is, the chief damage is to foliage. Before a battle all the buzzards in the vicinity sagaciously emigrate, chiefly for self-preservation, but partly, as well, from a pessimistic and experienced conviction that there will be nothing in their line of interest, anyway; while, for days after the action, the awed tree-frogs mourn their dead in whispers. Usually, after filling the skies with lead and smoke, the forces part with mutual sentiments of esteem and alarm. But once in a long time some accident of geographical conformation brings them close enough together to stop shooting and begin fighting. Then the thing is grim enough earnest. For they fight with *machetes*, and a Venezolano with a *machete* is far, far from being a white-winged dove of peace. Imagine a razor, three feet and a half in length, eight pounds in weight, and balanced to the wrist with the delicacy of a tennis racket, and you have some idea of the trusty blade of the country. But no one other than an eye-witness can imagine the deftness and power with which a native handles this formidable weapon. One stroke of it will shear through a tree-trunk as big around as your knee. Yet the expert, holding a banana in his fingers, slices the peel off with three precise and elegant passes. Upon the human frame this glorified knife has a distinctly dispersive effect, and with this weapon of their choice Andino and Orientale alike fight like demons or dervishes. After a *machete* battle, the ground looks like a bargain counter in second-hand limbs. Is it strange that the Venezuelan prefers to arbitrate his little difficulties with the humane and harmless rifle?

Where Silence is Not Golden

NOISE-PRODUCTION is a highly esteemed quality in firearms hereabout. This important truth was acquired, at some cost, by a professional inciter of insurrections, who arrived, some years since, with what he was pleased to call a noiseless carbine, and sought to make a contract for it with a revolutionary general. In enthusiastic language he explained the advantages of his weapon. The general shook his head dubiously.

"No bang-noise?" he inquired.

"No bang-noise at all."

"Only 'phut'?"

"Only 'phut'!"

"Señor," said the leader, "take your phut-gun to some elsewhere. If I equip with it my Army of the Revolt of the Oppressed, what then? My heroes and the paid hirelings of the tyrant make a battle. My heroes hear the other army shoot— Bang! My heroes shoot. What do they obtain? Phut! Phut only! Señor, can phut prevail against bang? Alas! No. Good-by."

Poorer by his expenses, but the richer by a new insight into Venezolanan psychology, the professional promoter of trouble took the next ship home.

Venezuela's (Palmer) Cox-y Army

BETWEEN revolution and stability stands an army of a few thousand integers. Mr. Palmer Cox ought to come down here and visit it. He's responsible for these soldiers: he created them, and they stepped right out of the pages of his books into Venezuelan military service at the wage of thirty cents a day and find yourself. These props of Government have broad, brown faces, and wear funny brown helmets, funnier brown coats, and trousers from the comic supplements; and on their feet are brown alpargatas. An alpargata is a glorified bath slipper with a hole in front, wherethrough one and sometimes two toes coyly peep. Outside of its esthetic merit, the hole has, I believe, no reason for being. Thus clad, they patter about the city, and the stranger takes them for the street-cleaning department—until he has observed the condition of the streets. I injured the feelings of my local mentor by asking him where their brooms were.

"They are not sweepers," he said peevishly. "They are the Army of the Republic."

"Not at all," I retorted. "I've seen the army. It stands on the corner, wearing a carbine and a blue suit made by the Seven Little Tailors for somebody else, and smokes a cigarette."

"That is the police force," he explained. "When trouble comes the police usually take one side and the soldiers the other."

Now there's a system for you! It insures action. As a matter of profit I should bet on the police. They are a well set-up and businesslike appearing lot. But my sympathies would be with the Cox-y army. They look so droll and gnomelike and wise and good-natured. There are always plenty of them around the city barracks. They lounge and smoke on the queer old bastions, and exchange the *bolas* of the day with friends in the street, or, curled up in silent little heaps, pray for a row so that they can go and get some loot. In troublous times they do sentry duty in the street, and shout "*Otro lado!*" to the casual night-farer, after which they shoot at him. One of them shot at a newly arrived American consular official, who hadn't learned that "*Otro lado!*" means, "Cross the street, and do it *now*," and who was so indignant that he marched up to the well-meaning, hard-working little private and was about to mistreat him shamefully, when an officer happened along and explained. In the door of the barracks is a square peep-hole which, at all hours of the night, frames a watchful and comical brownie face. That peep-hole represents the eternal vigilance which is the price of continuity for the established Government. It is the Unsleeping Eye of Venezuela.

He resigned in disgust

The Etiquette of Warfare

ABOVE all else, your Venezolano is a formalist. Even when revoluting he must revolute in a given orbit. This ineluctable instinct for party regularity is all that prevented one uprising from being successful. A certain commandante had been won over to the insurgent side, and with him some three companies of soldiers who, unsuspected of disloyalty, were kept on duty in Caracas barracks. Unfortunately the official had taken to heart the Venezuelan version, whatever it may be, of:

"When Freedom from her mountain height
Unfurled her banner to the air. . . ."

The first principle of revolutionary procedure in his mind was that freedom and banners and similar poetic emoluments of war flourish only on mountain heights. Therefore, when the time came to uprise, he led his gallant band hastily up the nearest slope, giving lusty

Rifle practise à la mode

cheers for liberty—also giving the alarm. President Castro was at the opera. To have surrounded the place and taken him prisoner would have been simple and final. It would have meant the complete success of the revolution. But it wasn't frilly enough. So the President, upon the alarm, hurried out, got together his troops, and by and by chased the banner-unfurlers from their mountain heights and closed that incident. The commandante, who might now be Governor of Caracas, is instead living in a cave somewhere and studying the art of war from the Household Book of Etiquette.

The Convertible Concession Game

THE great drawback to revolutions is that they're bad for business. For example, you get a concession from the Government giving you the exclusive right to extract knot-holes from the nitt tree in the Province of Chilzanague. To obtain this concession you have paid whoever is President at the moment a round sum. You are taxed an enormous import duty on all machinery and supplies, a stupendous export duty on every knot-hole that you ship, and incredible octroi, internal revenue, traffic, impost, liquor license, and sewer taxes. All this you cheerfully figure into the cost of doing business. Then, one day, when everything seems to be going well, along come twenty or thirty gentlemen with proud Spanish names and no socks, headed by a general with a sword. Says the General:

"Señor Americano, the revolution it is me. Vive la Libertad! Fare, please."

Then you have to pay an extra assessment of taxes, all through the list, to him, besides setting up the drinks for his forces, because, while the Government army was occupied in chasing butterflies off the Executive lawn, he has possessed himself of the official machinery of the Province of Chilzanague. This also you figure into the cost of doing business. In the course of time the Government army mobilizes, the revolutionary leader goes to jail or to Paris and a presidential decree declares the country pacified. Also the chief magistrate despatches to you an envoy extraordinary, plenipotentiary, and supernumerary bearing a heart-to-heart message, as follows:

"You have aided and abetted mine enemies, with taxes and strong drink. Caramba! Flee the country in twenty-four hours."

This is the only Venezuelan formula that has no mañana attachment or codicil. You flee, as per instructions. The cost of doing business devolves upon the President. Also the business. The duty on knot-holes is abrogated; the octroi is remitted, and the other imposts forgotten. The power that is proceeds to extract knot-holes from the nitt tree in peace and profit to his own pocket. Thus by the statesmanship of the patriotic President the nation has been saved again from the strangle-hold of the interloping foreign monopolist. Any one who considers this a flight of imagination is referred to United States Senate Document No. Four-million-four-hundred-and-forty-four-thousand of the famous asphalt controversy.

A Matinée War

WHILE I was in the act of communicating to paper the foregoing philosophical profundities, one of them went off under my window and disturbed me. A revolution, I mean. The process seemed to me rather confusing and obscure; but two features of it shone clearly amid the murk of action; it began with a shower of pronunciamentos, and culminated in a speech by the Minister of Foreign Affairs, who rashly committed himself to the theory that, no matter what happened, every true and loyal son of Venezuela would stand by his principles, be those what they might. (Loud and surprised cheers.) The actual performance was in two parts; a matinée and an evening production—standing room only. The matinée consisted in an attack on the plant of the

The Wicked City

PART I.—*The First Visit to New York—Where All Are in a Hurry, But Good-Hearted—How It Feels to Be "Just One Young Fellow" More Who Has Drifted in from God's Country*

By EUGENE WOOD

Illustrated by ARTHUR WILLIAM BROWN

As you walked up Broadway for the first time, tilting your head back to count the rows of windows in the tall buildings

JUST one young fellow disembarking from the ferryboat or train, at once tickled and terrified by what he's dreamed of so long now actually before him; just one young fellow from the uncharted, negligible darkness that settles down upon the country just beyond commuting distance from New York, who, if he has not oats in his pockets, has what will as certainly betray him as also a Galilean—I do not mean his speech, but his silver dollars; just one young fellow, dropping his jaw and wrinkling his nose, and tilting his head back while he counts the stories of the tall buildings, his gripsack jostled against his legs by so many people, all in such a hurry, all seeming to belong in town and not merely come in to do their trading; just one young fellow— Why, what is that, even if the young fellow be you or I? Who cares? Who cares that a mother bore us, held us in her arms, reached out her hands for us to stagger into when first we walked alone, tucked us into our bed, and heard us say our "Now I lay me," watched us to the schoolhouse with ineffable yearning, uttered those prayers for us that God Himself stoops over a little from His throne to harken to the better? Who cares that a father toiled for us and stinted for us and hoped to see in us his own thwarted hopes brought to fruition, who took such pride in us, whose very heart stood still to think what perils waited for us at every step? Who cares that teachers tried so patiently and honestly to make us better and wiser men? Who cares what struggles of the soul we underwent, the evil in us fighting with the good for mastery? Just one young fellow, more or less, alive or dead, hoping or despairing, redeemed or ruined. Don't you care. There's plenty more.

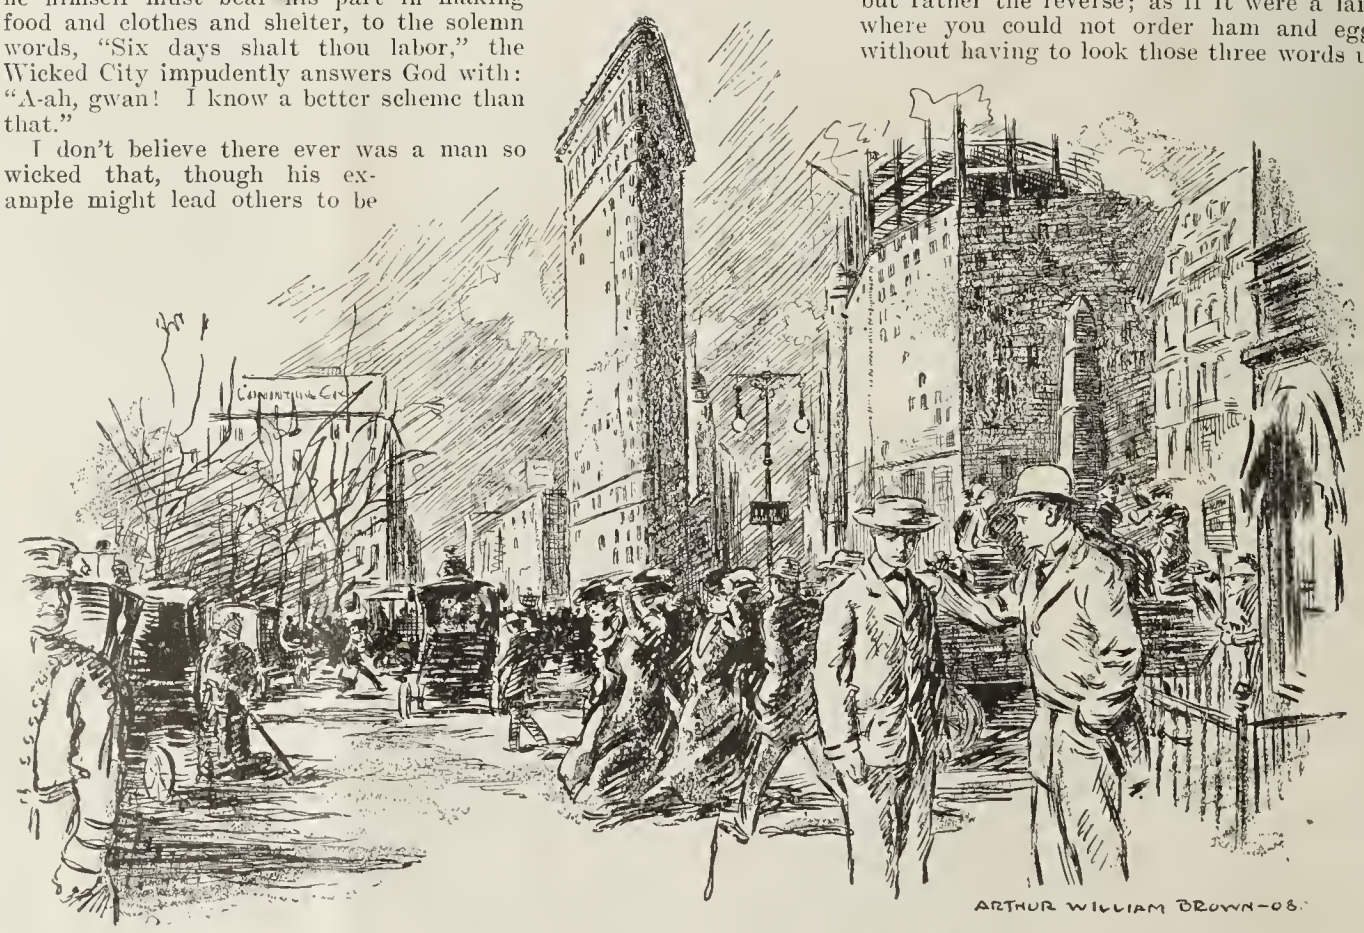
But multiply this one young fellow by the uncounted thousands of the sons whom mothers bore in deathly agony, whom fathers toiled for, and for whom the noblest part of who shall say how many lives has been poured with ungrudging hand; these living embodiments of the age to come, whose every thread of flesh and grain of bone are so much clotted prayers and hopes and fears, ambitions and aspirations; these heirs of all the past, begetters of all the future. Multiply them thus, and their daily march upon the Wicked City, which no more regards them than the dust that the wind whirls, becomes a terrible thing, a tragic thing. Something sinister and menacing is in it. It's got to be a mighty thoughtless young fellow that doesn't sense this on his first visit to New York, that doesn't kind of gasp when the cold feeling splashes on him that if he should drop down dead on the sidewalk the people would step over him and go right ahead.

You know now that it isn't quite so bad as all that. I've often thought that if the worst should come to us, if we died and went to hell itself, we'd find some one there from our part of the country that would try to make us as comfortable as possible under the circumstances for old sakes' sake, or just out of pure kindness of heart. I knew a woman once that lived as near to hell as we can make it for a woman on this earth, and in her spare time she sewed and made up little dresses and things for the daughters of the stepfather that had "turned her out," as the phrase goes. He had been a strong, hearty, upstanding sort of fellow, but a tree fell on him and crippled him for life, and as she could spare the money she sent it home to keep a roof over the family and bread before them. "Tainted money," but—

And just so in the Wicked City, there's always somebody that you knew back home, or somebody who went to college with your brother, or has some sort of common ground with you. And they can put you in the way of getting a job, or they can talk over old times with you and tell you to keep a stiff upper lip, because, you know, the darkest hour is just before the dawn of day, and if they find it's kind of—you know—with you, and you hate to let on before them that you're in that fix, why, they ask you if you don't need a little money to tide you over. So they do without something they meant to get so as to lend you money they never expect to see again. That's what makes me think that if we died and went to the hell that they used to have "in the airly days," we'd find somebody there to show us how to fix ourselves so we could make out to stand it. I dare say you've read about those old notions of how heaven meant being with the noblest and best of all ages, and hell with the selfish and the "on'ry." Heaven nowadays is to live in New York and have so much money coming in that you can't possibly spend it all, and hell is to work on and on without ever getting ahead or having any more than will just keep you going, provided you don't get sick or lose your job. I get kind o' lonesome for the old faith once in a while.

However, what takes the curse off the Wicked City is that hardly anybody in it was born and brought up there. They all came from God's country at one time, and they haven't forgotten how to act, but, of course, you didn't know that on your first visit to the Wicked City.

We see plainly now that the essential wickedness of the Wicked City lies not in the transgressions of its inhabitants. Sin for sin, and man for man, matching every group of human habitations with another clear to the backwoods where they still plow with oxen, one is every bit and grain as wicked as another. They may not be so frank about it, but whether there is much to choose between open and secret devilment I'm not prepared to say. The essential wickedness of the Wicked City we perceive to be that it exists at all; that it is a place not to make the things that support life, but to make prices on the things of life; that it denies that he is worthy to be had in honor that has caused two blades of grass to grow where but one grew before, for such a man it contemns, and honors him who can shrewdly get two blades of grass and give the worth of only one in exchange, so that the overalls burn like Nessus's shirt, and only a white collar can hold a man's head up eye to eye with his fellows; that to the plain command of the Almighty that man should eat his bread in his brow's sweat, that if he lives by food and clothing and shelter he himself must bear his part in making food and clothes and shelter, to the solemn words, "Six days shalt thou labor," the Wicked City impudently answers God with: "A-ah, gwan! I know a better scheme than that."



I don't believe there ever was a man so wicked that, though his example might lead others to be like him, he did not counsel others *not* to be like him. What smoker, for an instance, does not say: "Young fellow, you're better off without it"? And so, though the Wicked City lures us to it by its mere being, yet, spite of itself, it drives us off; it says: "Young fellow, you're better off without it," by that sinister and menacing disregard for us that daunted us so in the beginning.

The Hidden Sky-Rim

AS YOU walked up Broadway for the first time, tilting your head back to count the rows of windows in the tall buildings, shouldered this way and that by the hurrying, heedless crowd, that sinister menace somehow got to you. Though you were delighted, you were also a little daunted. It was a bully place to be in for a while, but you wouldn't want to live there. You fingered over the silver dollars that were to betray you as a wandering star from the outer, negligible, even contemptible, darkness of one-night stands; you fingered the equally perfidious wad of limp and smouchy paper money (in New York the paper money is clean and crackling, right off the vines, as you might say), and you figured out you'd have enough to get back home on if you didn't pamper your stomach too much. Said the Vermont farmer to his summer boarder: "I sh'd think you'd hate to live to New York. It's so fur away." And, though you were right there in New York that moment, it did seem "fur away" to you, remote and inaccessible, tight-shut, locked up against you, a high sheer cliff with not a crevice you could hook your fingers into to climb up by. Out in the country, out in God's country that the Wicked City mocks at and despises, it isn't so hard to believe that you are worth more than many sparrows, for look! the bending sky-rim is everywhere equidistant from you. Surely you are the center of all things. People that you meet along the road that don't know you from Adam say "How de do?" to you as if you were somebody. But on Broadway they don't even notice that you are alive, and all proof of your centricity is gone because the lofty buildings hide the sky-rim.

There are many advantages, I'm told, attaching to a trip abroad. Personally I've never enjoyed them, unless you can call Canada "abroad." At that, I was only on the southern edge of it. How it may be, away back in the interior beyond the enlightening and refining influence of the United States, I do not know, but so far as my experience enables me to judge, the natives of that foreign shore are peaceably disposed, they speak our language fluently, and even have the same sort of money that we have. Of course it isn't as good money as ours is. What imitation ever is quite equal to the real thing? But, strange to relate, in Canada you can buy with it about as much as the same named money will buy in our own dear land.

Though their system of government is benightedly monarchical and their flag ridiculously different, the educational advantages of a trip to Canada can not be as great as if it took you a whole week to get there on a steamboat, drawing no pay-envelope of a Saturday, but rather the reverse; as if it were a land where you could not order ham and eggs without having to look those three words up

And tell you to keep a stiff upper lip, because, you know, the darkest hour is just before the dawn

in a dictionary, and where they could short-change you and you not find it out till afterward.

However, it was not the mental discipline I had so much in view as the large peace of mind with which you can describe the things you saw when you first visited London or Paris or any of those "abroad" towns. There the centuries kind of jog along, and the few changes in the looks of things appear so imperceptibly that they're dateless. But in the Great City of America, par excellence, the changes are profound, deracinating, and of revolutionary violence. They are epoch-marking, so that if you say: "The first time I came to New York as a young fellow such-and-such an institution was still in existence," your hearers do a swift sum in mental arithmetic: "Eight and two's ten, and four's fourteen, and— Gee! Is he that old?" And that's your guilty secret. Or if it isn't now, it soon will be. But no regrets. Brazen it out. Let 'em even look it up and find out when Jake Sharp got the franchise to lay tracks on Broadway if it does 'em so much good to know how old we are. Only— No! No "only" about it. We mustn't let it spoil our satisfaction at the thought that less discerning minds than ours, even if we were immature, would not have seized that picture and preserved it against the time when we should be able to comprehend that, trivial and temporary as the Broadway stages might seem to be, they embodied a principle of deep significance and as eternal as the Wicked City can be.

In your heart you're just as young as ever; just as green and inexperienced; just as credulous of what people tell you; just as eager to undertake what only youth should undertake. It is true, I know, that the little girl who only yesterday—or was it last week? I forget—was jumping rope and chanting:

"One, two, three,
And a bumblebee;
All in together,
Pigs in the meadow,"

walks in to-day with her frock to her shoe-tops and her hair done up high, but what does that signify? Nothing at all. And that hair in your mustache; is it white or just a shade more blond than common? Never mind. It is true that they print the newspapers very badly nowadays, but your eyesight is still good; folks mumble their words a lot more than they used to do, but your hearing is first-rate; it would be nice if some one could be found to cook as well as mother used to, but you relish your food as well as ever: you

They all came from God's country sometime

waken in the morning refreshed by your night's rest and surer than ever that along about sun-up is the prettiest part of the whole day. Into each life some rain must fall; you know that right well, but, thank God, the sun comes out again pretty soon and the dark storm-clouds roll away. Young? Why, certainly.

Only, when you sit out on your front porch of a summer Sunday evening, and the hushed twilight deepens into dark, and they start up the sweet, old-fashioned [illegible] they used to sing when you were little, a [illegible] silence follows that one which begins:

"My days are gliding swiftly by,
And I, a pilgrim stranger,
Would not detain them as they fly,
Those hours of toil and danger."

Yes, they are gliding swiftly by, there's no two ways about it. We sigh to think that we are growing old, sadly, inevitably growing old; that the evil days draw nigh when thou shalt say: "I have no pleasure in them"; when the summer shower of disappointment and of grief shall not pass as once it did, and the sun come out again pretty soon as once it did, but the clouds return after the rain, the bleak November sky of old age when the clouds return after the rain. Let them be "hours of toil and danger," if they must be, but, oh, how gladly would we detain them! There is so much for us to do or ever the evil days shall come. We are like Lear that held his dead daughter in his arms and cried aloud: "Cordelia, Cordelia! stay a little!"

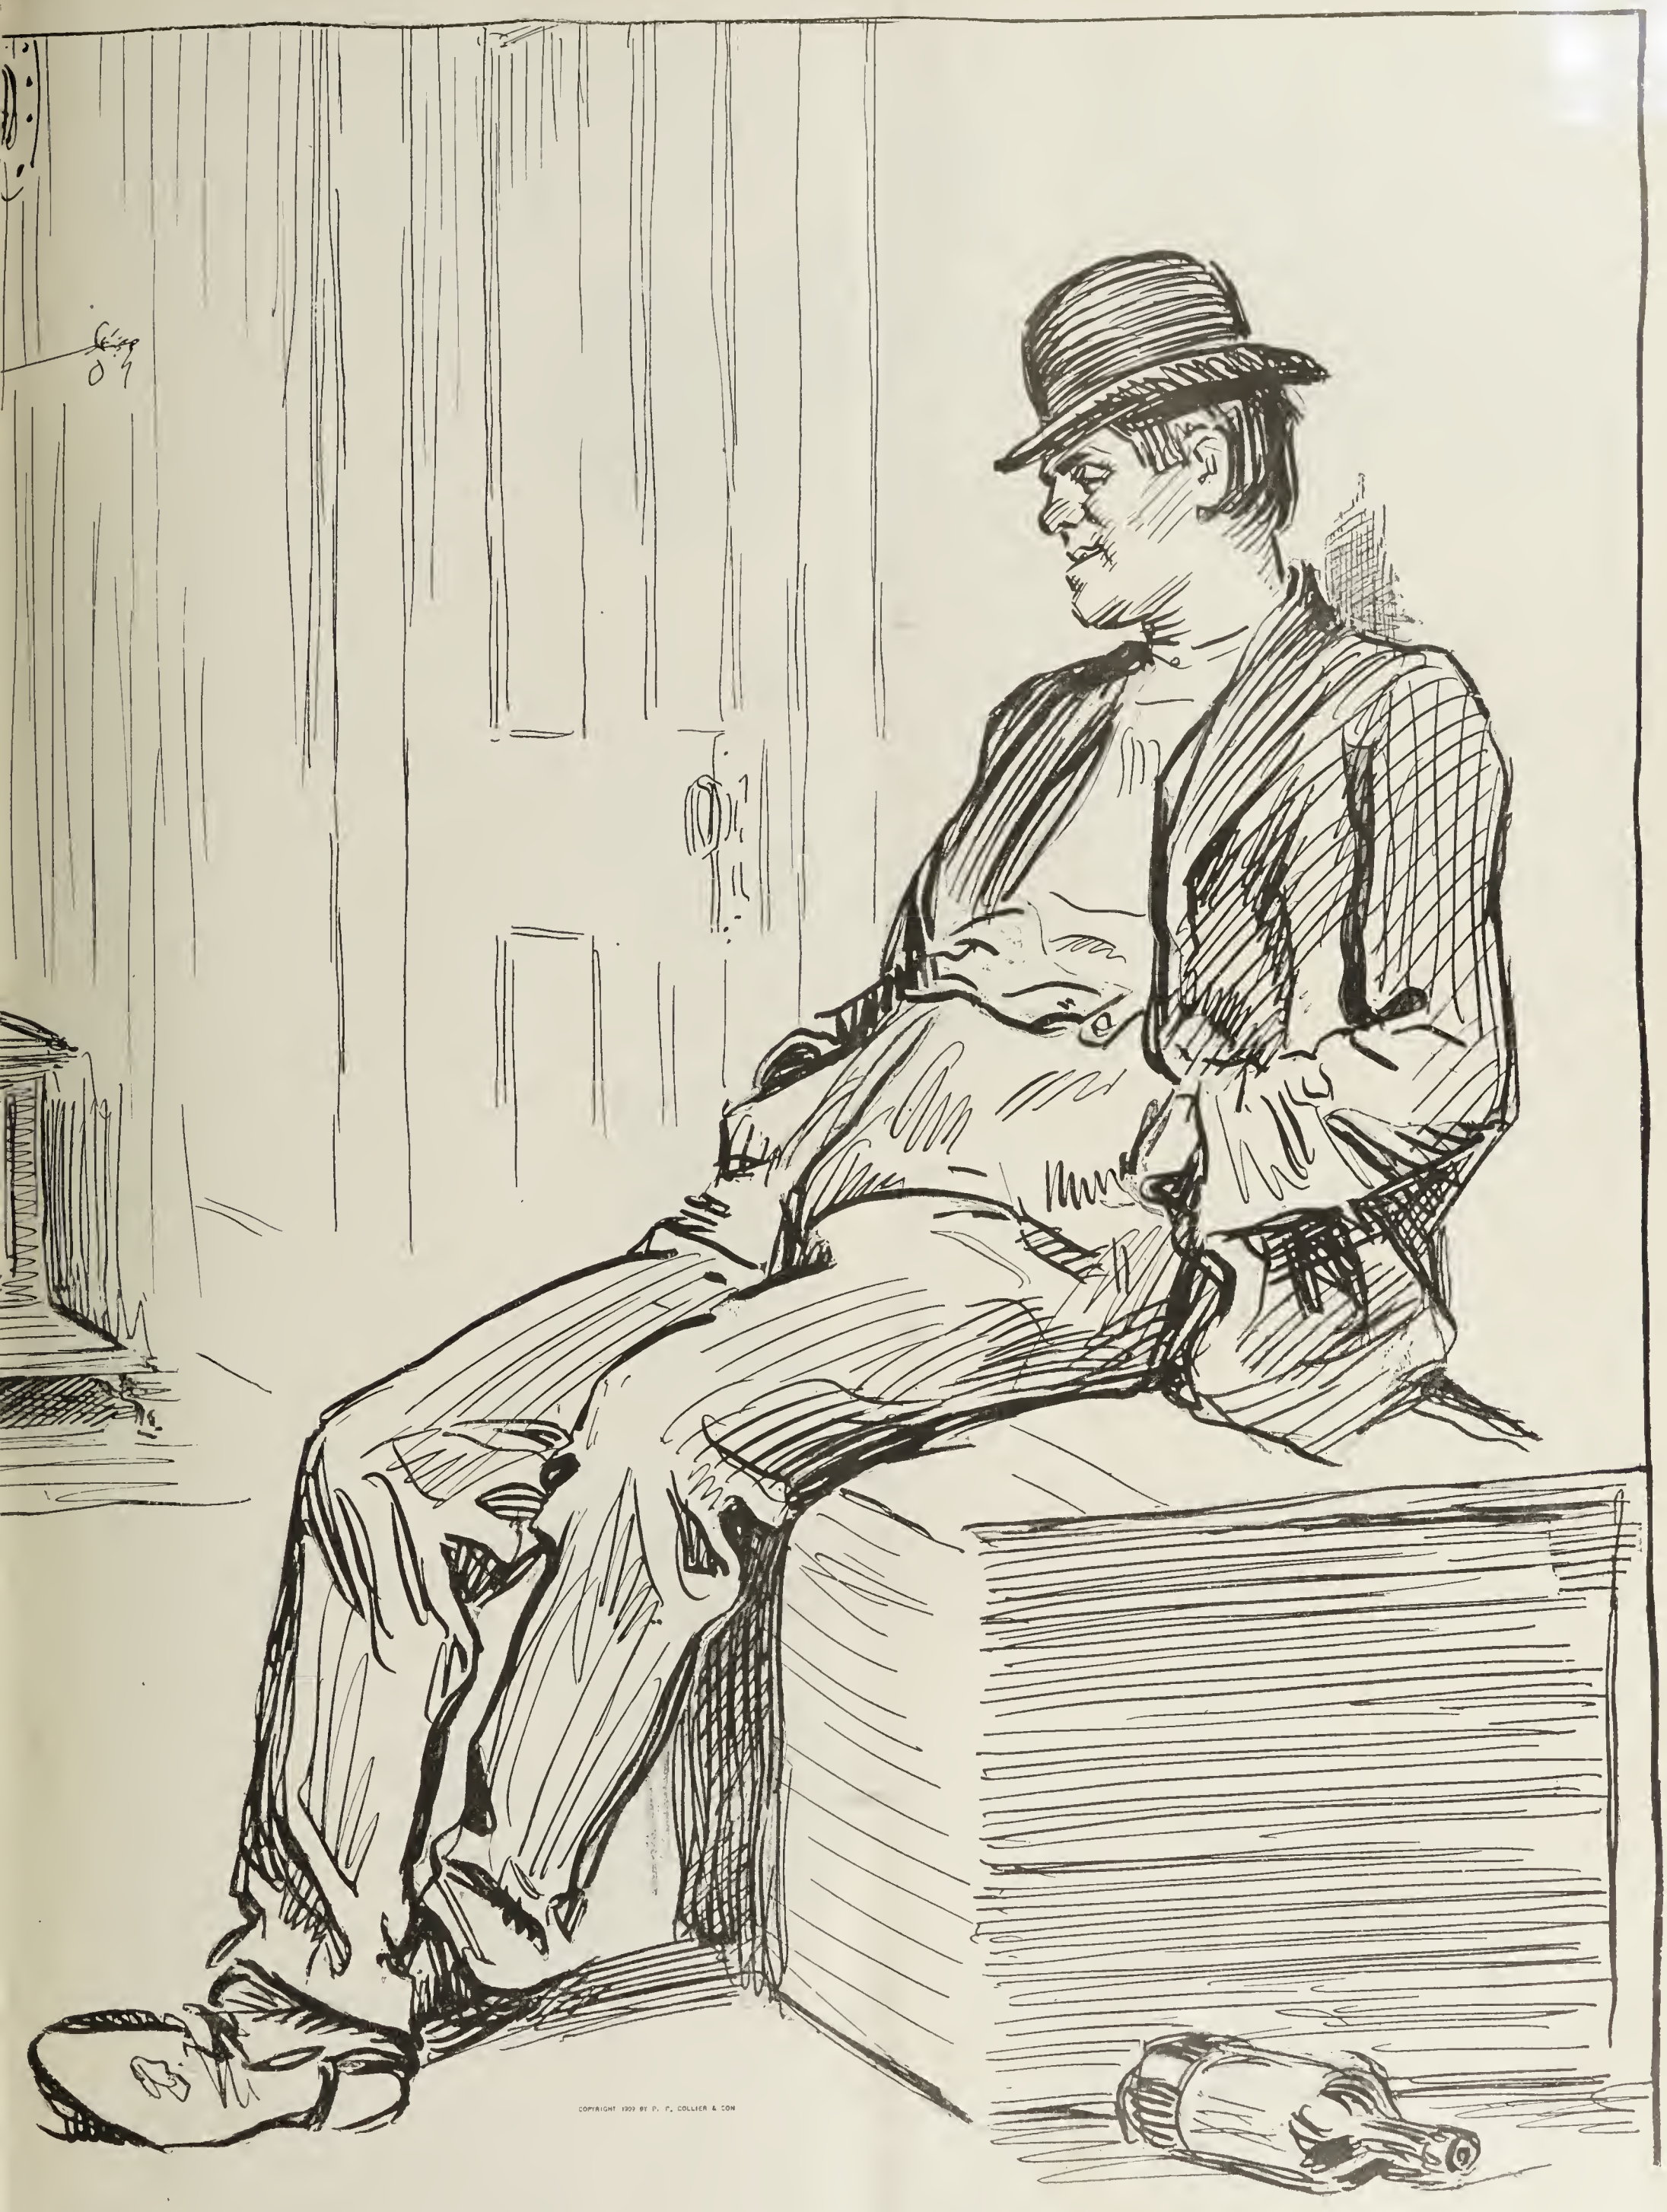
Oh, well, what's the use of fretting? It's got to be that way; let's make the best of it. Maybe it won't be so hard for us as we imagine. Maybe the fountain of eternal youth will still bubble up within us just the same as now; maybe, though the almond tree shall flourish and our heads be white, we shall keep on being as green and inexperienced as ever; just as ready to believe what people tell us, just as eager to undertake what only youth should undertake. And maybe even when the whistle blows at last, and the long day is ended, we shall be glad to take off our overalls and go home to rest. And anyhow we've lived. And seen things. And if, of all the sights that our bright, eager eyes took in the first time we walked up Broadway, the picture that is vividest in the remembered summer sunshine is that of stages tacking and slewing from curb to curb to pick up passengers, why, what difference does it make if some curious person with a head for dates and figures begins to cast up: "Eight and two's ten, and four's fourteen, and— Gee! Is he that old?"

"To the Publisher" and "To the Editor"

Two Toasts

By OLIVER HERFORD

OH, EDITOR, EDITOR, *awful and grand,*
Who holdest our fate in the palm of thy hand,
Dost ever reflect how one day thy ghost
To an Editor awf'ler and grander will post?
Before him a great golden scroll is spread wide,
And a bottomless waste-basket yawns at his side.
With a swift, searching glance he reads right through thy soul
Then he looks at the basket and looks at the scroll;
He purses his lips and nibbles his pen,
And frowns for one long awful moment—and then—
Oh, Editor!—think! if thy poor crumpled soul
Should fall in the basket and not in the scroll!



TO THE *Publisher!—Drink!*
Let his virtue be shown
In the Good Works *of others*
If not in his own.

An Exchange of Currency

The Restaurant Romance of

Aimee

the Pretty Cashier

By HULBERT FOOTNER

Illustrated by M. LEONE BRACKER

THE shape of Garat's restaurant is that of a square bottle. The entrance is in the customary place—the neck of the bottle—and as one goes back the establishment opens out on either side to a wideness unpromised by the modest street front. Opposite to the wine counter in the neck of the bottle, there are three little tables one after another, which albeit nearest the door are yet the last to be occupied. What is the reason? For one thing they are removed from the main body of the restaurant with its cheerful clatter of plates and noisy conversation; and man is a gregarious animal; but the prime cause lies undoubtedly in the forbidding dressiness of their aspect. These tables alone wear long-tailed white cloths, on which the newest silver is set forth every day by Aspasie Gaspard with a nice precision. They give the place an air, it is true, but the worn, polished oak of the tables in the rear is much dearer to the habitués of Garat's.

Nevertheless there was one customer who chose the table nearest the door; and sat down at noon every day with his back to the street. His reason was plain; he brought a book which he desired to study while he ate; and in this one spot was there daylight sufficient to read by. His seat brought him directly under the eyes of Aimée Larose, the pretty cashier; and how in this situation could she have been expected not to watch him day after day? Aimée was interested in the book: it was like her beloved Paris to see a young man intent upon a book; certainly nothing could be less typical of the noisy crowd of newspaper men and clerks that made Garat's its headquarters at noon. Aimée hoped it was a book of poems. Later she learned that it was Hodgdon's "Steam Engineering"; and filled with fatiguing diagrams and formulas. It was a disappointment: but the book was not the young man's only claim on a maiden's fancy: he had beautiful brown hair, almost red, which curled loosely all over his head; he was broad-shouldered and thin, a combination Aimée approved of; and his gaze was at once resolute and modest, with a charming quality of wistfulness which spoke direct to Aimée's maternal instinct. He was always busy with his book, thrusting his food sidewise into his mouth; and when he rose to pay Aimée his score, his eyes were still full of his problems. He never saw her—that is, not at first.

For many months previous to the advent of the young man Aimée's life had been a dreary desert pilgrimage. Her instinct to smile and be agreeable was so strong no one had suspected she hated America—but she did; and very thoroughly. She had no one in whom to confide any private feelings; her aunt, the worthy Aspasie Gaspard, not being sympathetic with the concerns of youth; and her fiancé, Antoine Garat—certainly one would not confide in him! These were all Aimée knew in America. She had come out to her aunt upon the death of her parents in France. Aspasie was *maîtresse-d'hôtel* at Garat's—only one does not use such a high-sounding title; and the moment Antoine Garat caught sight of her niece he recognized in Aimée the pearl of cashiers—she was so amiable! So she was promptly installed in the little desk by the door, and her success was instantaneous. From satisfaction Antoine presently graduated to anxiety lest he should lose her. Antoine was a widower, fat, fifty, and hugely bearded. What more natural than that he should propose to Aspasie to marry her niece? Aspasie shrugged her shoulders: one suspects it may have interfered with a plan of her own; but it was manifestly such a suitable arrangement she could find no excuse for opposing it. Aspasie gave her consent; as for Aimée, dazed with homesickness, she was like wax in their hands. So Antoine and Aimée were betrothed; and, pending the date of the ceremony, Aspasie and her niece were sharing Antoine's house at Williamsbridge; a most prudent and fortunate joining of forces.

Aimée—how shall I describe her! From behind the little glass window of her desk she smiled on Garat's customers—old or young, blatant or obsequious, shabby or flashy—as sweetly and as graciously as a lady on her guests. Aimée was as pretty as a flower, an anemone: and one must add to this that it was her religion to please. Yet her charm, her coquetry if you will, was entirely guileless and impersonal: the warning of dignity was never absent. Privately Aimée was of an angelic tenderness and as easily pleased as a child; yet she was no fool; she pondered a good deal in her simple way, and held conclusions of her own.

In appearance Aimée was of a type unusual among her countrywomen, though never for an instant could you have mistaken her for the product of any land save France. Her face was shaped like a slender heart, broadest under the alluring quirks and curls of her heavy hair, and tapering to a bewitching pointed chin. Her eyes were of the deepest blue of the sky; and her skin very fair, with the faintest freckles, which, far from being blemishes, were tributes to her delicacy and rareness. Aimée's freckles were adorable. As for her clothes—they were herself! She nearly always wore black; her wardrobe was far from extensive; yet she managed never to look quite the same two days running. Her simple adornments lost whatever character of their own they might have possessed away from her; one never looked at what she had on; it only served to set off Aimée.

And all this loveliness was betrothed to old Antoine Garat, fat of body and fat of wits! Antoine served the wine counter himself; and so stood immediately next to Aimée all day, where he could watch her every movement. It was not the girl he was jealous of, but the incomparable cashier. Aimée's loveliness represented to him no more than a valuable business asset. It made him writhe to think of the sums a street-level restaurant-keeper could afford to pay for such a cashier. It was to forestall any such offer that he had determined to marry her.

With the help of a bit of money coming to Aspasie he hoped to contrive it

Antoine was greedy enough by nature, God knows!—but certain circumstances had combined even to increase his natural propensity. Three dollars of the profits of the establishment had to be sent to a retired partner in France for every dollar Antoine kept for himself. The injustice of it, since he, Antoine, did all the work, was ever present in his soul. He could not rejoice over a good day's receipts for bitterly counting what must be sent away. Under an old agreement the entire establishment was to become Antoine's property upon the payment of a sum of money the coming spring. If he could raise it, all right; if not, the price was to be advanced—greatly advanced. It was a very large sum: and Antoine had scraped for years to get it together, groaning miserably as the price of provisions rose and utterly prostrated each time his rent was put up. It was an open question now whether he could complete the sum in time or not; but with the help of a bit of money coming to Aspasie on a mortgage about that time, he hoped to contrive it. It had long been tacitly understood that Aspasie was to purchase a small share in the business with this money of hers.

Aspasie's station is in the rear of the establishment, where, standing in her amplitude behind the serving-counter, she may shrill with equal facility at the cooks within and the waiters without. Garat's at lunch-time is undoubtedly the noisiest restaurant in either hemisphere; the din of that gas-lit, smoky basement is truly deafening; the diners needs must shriek at each other. Yet one may believe they love it for that very reason—also the food is excellent; such snails *à la bourguignonne!* such omelets with chicken livers! such tarts *Sainte-Honoré!*—after a lapse of years the mouth waters at the remembrance! The good wines, too, so cheap; that was the French of it. Another duty of Aspasie's was to watch the bottles, ostentatiously cobwebbed and dusty, which were stored in bins all around the walls.

Antoine's sly surveillance of Aimée bore no fruit. The untidy, clever-looking, slangy reporters attracted her no more than the natty, complacent haberdashers' clerks. The youths were smitten hard enough, every man jack of them; but there was that in Aimée's sweetness which discouraged pleasantries; besides, there was a pane of glass in front of her; you had to bend almost double in order to speak into the hole through which she passed your change, with your head turned on one side if you wished to see how she was receiving your remarks—on the whole, a disconcerting attitude. Aimée looked at no man twice, until the young man with the poetic hair and the book of engineering problems began to come to Garat's; then her covert glances would have escaped sharper eyes than Antoine's; so his watchfulness was still unavailing. Anyway, the young man came twenty times without noticing Aimée; surely there was nothing here to alarm old Garat—but spring was coming on.

The next time he came, say it was the twenty-first, it was a warm day in April; what one could see of the sky above the cañons of streets was of a heavenly tender blue; and the air was of a softness to cause even lower Manhattan to relax its face and slacken its pace a little. He sat down at his usual table—but facing the sunlight this time; and pushed his book to one side with an impatient hand. His eyes fell upon Aimée and stayed there. She was making change, her graceful head bent flower-like over the cash drawer; the sunlight was behind her. She raised her head; her eyes met those of the young man and hung there an instant; then her lashes fell; and a slow, delicate pink crept under her fair skin. More customers paid their scores; Aimée mechanically made change, her eyes ever and anon flying back to the steady gaze of the young man. She was like a snared bird; her heart beat against her breast; her hands fluttered ceaselessly over the silver and bills; the color flew in and out of her cheeks. Yet it was a delicious imprisonment; there was nothing offensive or degrading in this young man's stare: on the contrary, something grave and wondering: something delighted beyond measure; and something stricken, too. Aimée darted an anxious look at Garat standing beside her; but Garat cared little how a young man stared so he perceived no answering smile in Aimée.

That was all that happened then. Alas for Romance! that I should have to say it—he ate his lunch with an unimpaired appetite; his meat graced, as it were, by the sight of Aimée's new-found loveliness. When he came to pay his check they were both painfully embarrassed. The following day it was much the same; also the day after that. He brought his book; but it lay unheeded on the table, while he devoured Aimée with his wistful, hungry eyes. It was sweet torture for the girl; on the second night Garat made a terrible scene when her cash came to be balanced; but the third day she was ahead and he said nothing. On the fourth day the light of a new resolution gleamed in the young man's eyes when he got up to leave. He actually bent down to speak to Aimée through the hole in the glass. She became very pale. What he meant to say will never be known; for Garat, on the alert for such a demonstration, leaned across the wine counter and touched the young man's shoulder.

"What can I do for you, M'sieu'?" said he, in his thick voice. "Mademoiselle is unfortunately deaf."

The young man looked at Garat an instant, stupidly it seemed, then turned and left the restaurant without replying to his question.

Aimée had a dreadful fear lest he might not come any more; but he showed up the next day at his usual time; nor was his gaze a whit the less ardent for the rebuke he had received.

When it came time for him to go, he tendered Aimée a dollar bill in payment of his check. He did not look at her at this moment; nor she at him; it was as if such close proximity was more than either could bear. She passed back the right change; and followed it with another dollar bill. The young man looked at her inquiringly; she avoided his eyes. He gently pushed the bill back; she returned it to him with an appealing glance. But he did not understand. He stood undecided in front of her desk.

Garat leaned forward. "What is it?" he asked suspiciously.

"M'sieu' gave me a two-dollar bill," said Aimée, instantly exhibiting a greenback of that denomination.

The young man started to disclaim it politely. He took up the bill to offer it again to Aimée—when suddenly his fingers felt something beneath it. A great light broke upon him; and his face changed. He hastily muttered something about being mistaken; and, thrusting the bill in his pocket, hurried out of the restaurant. Aimée's face cleared, and she took Garat's scolding for her overscrupulousness with perfect equanimity. As for the young man, he tore around the corner, and, snatching the bill from his pocket, scrutinized it with burning eyes. Underneath, affixed with a tiny drop of mucilage, was a folded white square; and this was written on it:

"I am not def. But you mos not try to spek with me, nevar! Pardon me such spellin. My Angliss, she is by the ear, not of the bok. What is your name? Me, I am

"AIMÉE LAROSE."

At night he sat down in his room to answer it. The ordinary place was transfigured with the sense of her sweet presence; wherever he turned his eyes he saw her. As he bent his head to write, her hair seemed to brush his cheek; and as for the precious little square of white paper, it breathed forth the very essence of her. But it is one thing to feel and another thing to write. Out of this tremendous rapture was evolved with infinite labor this:

"MISS LAROSE—DEAR MISS:

"Yours of to-day received and contents noted. I knew the old guy was lying about your being deaf. Miss Larose, I will hand you a two-dollar bill every day with my check and a letter pinned underneath; and you have a dollar bill all ready to hand me with your note. My name is Robert Wrenn. So no more at present.

"Yours truly, ROBERT WRENN."

On his way to lunch next day he secured a two-dollar bill in a cigar store in exchange for silver, and affixed his note to it with a large pin. All through his lunch they eyed each other blushingly, each wondering what the other was thinking of. Robert watched Aimée's graceful, darting hands, and dimly pictured seizing them in his own, while they struggled to escape. He was not very imaginative. Aimée was: she thanked God her lover's eyes were good and true. In his agitation Robert almost presented the two-dollar bill note side up. Aimée whisked it into the cash drawer. He was most unreasonably disappointed that there was nothing from her. Life seemed scarcely worth living until the next day. That night he wrote to her again.

The Second Exchange

"DEAR ROBERT WRENN:

"That is a good name. One of the garçons has Robert, but he is not worth it. From him I no how to say it a l'Anglaise. I have sed it mene times to-day. If it is that you would write to me each day do not use a pin I beg. It may be seen in the bill and of broken bills Garat is ever susp—I can not spel that strange word! Do you live in family? What is your work?

"AIMÉE LAROSE."

"MISS LAROSE—DEAR MISS:

"These few lines are to let you know that I clean forgot it cost you a dollar to write to me yesterday. I herewith return it folded small inside this. Dear Miss, if you will stop at Haven's candy store to-night and ask of the cashier she will have something for you. Hoping you will not think me fresh and hoping to hear from you soon. Yours truly, ROBERT WRENN."

The Third Exchange

"DEAR ROBERT:

"*Mon Dieu!* but those bonbons were delicieuse! Me, I adore bonbons! But you mos not scatar your monay, *mon petit*. *Ma foi!* What a time I had to come by myself to get them! I go home with my aunt. I had to eet quick and hide some in my bodice for that I could not show the bocs. And I feared they would melt! I have eet too moch of bonbons, behold, to-day I am pale and ogly. So do not buy me any more, *cher* Robert.

"AIMEE."

"MISS LAROSE—DEAR FRIEND:

"Answering yours, would say I was mighty glad to get it. I work in Henderson's machine shop on Gold Street. At present I am a machinist's helper at $2.50 per day, but I am studying to be a mechanical engineer. The mathematics is something fierce to puzzle out by yourself, but I guess I have a turn that way. As to the family I live with, it's only a furnished-room house, 321 West Twenty-fourth Street. I have a mother and sister out in Ohio. My sister is out of sight! I wish you knew her, Miss Larose. With this I will close.

"Yours truly, ROBERT WRENN.

"P.S.—Where do you live?"

The Fourth Exchange

"DEAR ROBERT:

"I burn to learn more of your sister. What is her name? Is she blond or brunette? How mene years has she? Who is her friend intimate? Undoubtedly you are in love with that one. Are the girls of Ohio pretty? What do you consider pretty in a woman? I will not tell you where I live because you must not come there. You had on a pretty tie to-day. Dark blue is your color. I will crochet you a silk tie in the dark of the nights when I am in bed with my aunt. You may call me Aimée.

"AIMEE.

"P.S.—I have a little dictionnaire English."

"MISS LAROSE—DEAR FRIEND:

"Yours to hand. What does *mon petit* mean?—and *cher?* Is it anything like cheer in English? Miss Larose, you did not look ugly to-day. Not having the pen of a ready writer, I will say no more on this subject. I got the job of assembling the parts of a new patent pin-making machine to-day. There were a hundred and seventy-two parts. This afternoon I started her going. She worked beautiful. No more at present. Yours truly.

"ROBERT WRENN."

After another period of painful hesitation he ventured to open it

The Fifth Exchange

"DEAR ROBERT:

"I know you think I am ugly, but you are kind and do not wish to hurt me. I am happy that you found the patent pin-making machine beautiful. *Mon petit* means foolish one; *cher* is what you are, but I shall not tell you what that is. You were pale to-day. Where do you get your other meals? Is it food of the best? I fear you sit too late at night with those silly mathematics. But no, it is that you are writing to the girls of Ohio!

"AIMEE."

"FRIEND AIMÉE:

"Yours to hand. Why won't you tell me where you live? What is the reason I can't come to see you? Is it because some other fellow calls every night? If so tell me right away and I'll take it the best I can. If it's some other reason let me know some place where I can meet you outside, day after to-morrow night. I couldn't do a thing at the shop to-day. Broke four good drills. It makes me sore on myself to be so careless. Awaiting your kind reply, Yours truly,

"ROBERT WRENN."

The Sixth Exchange

"DEAR ROBERT:

"You make me very unhappy! Why will you be so impatient? Why can't we go on writing nice letters every day and but seeing each other? You would break it in pieces. You may not come to see me—but do not fear, no one else comes. I can not meet you to-night. Do not ask me why. It is not because I do not trust you, *cher ami*.

AIMÉE."

"FRIEND AIMÉE:

"I trust you will excuse the hasty lines I penned you yesterday. I was excited. As I have said already, I do not think you ugly. I am no judge of girls, but you certainly suit me. Not being highly educated, I can not say more, but I feel it. Common words and slang is all I know, and that doesn't suit you. That's why I want to meet you so much. I could tell you by word of mouth. When I take my pen in hand it seems to paralyze all my ideas. Anxiously awaiting your reply to mine of yesterday, Yours truly,

"ROBERT WRENN.

"P.S.—I don't know any girls in Ohio except my sister. I never had anything to do with girls."

The Seventh Exchange

"DEAR ROBERT:

"That was a sweet letter you wrote me yesterday, and I am happy of it— Ah! but I dread what you are going to say to me to-day. Men are so violent! I have prayed all night that you will not be unkind. If you make your brows a straight line and look at me with hard eyes, how shall I endure the hour that you are here? Believe me, dear friend, I have much to bear—be kind to me.

AIMÉE."

"FRIEND AIMÉE:

"Yours to hand. At first I was crazy with disappointment, but I thought it all out and decided I was a fool to expect you to meet me, not knowing the customs of your country. I don't understand it, but I know you are all right, Aimée. You couldn't make me mad any more. I want you too badly, Aimée. I am thinking of you day and night. My wits are clean gone out of my head. I am that absent-minded, to-day I put a brass rule in my mouth and tried to light it, thinking it was my pipe. I won't ask you any more questions but one. Do you love me as they say? Tell me how to set about getting you. I'll do anything in the world. If I could only do something I wouldn't feel so near like going out of my head. I wish I could tell you about this feeling, but I only strangle with it and I can't get anything out. I write like a fool. Dear Aimée, I love you. You are the prettiest and the cleverest and the wonderfulest girl in the whole world. I never get tired of watching you. Every day you are different. I want to hear you speak. If only you liked me, too, how fine it would be. I would be able to look and look at you all the days of my life. I won't write again till I get your answer.

"ROBERT.

"P.S.—Excuse this crazy scrawl. I couldn't stop to think out a proper letter."

On the day after this bulky note was delivered by means of its two-dollar bill, Robert's prized hour at Garat's was a sorry affair. He came in all glowing and tremulous, his eager eyes seeking Aimée's face for his answer. It was written there plain enough; and it instantly killed his hopes. Aimée was perfectly white; her eyelids heavy and swollen. She did not look at Robert all the time he was there, except once, when, in his desperation, he made as if to speak to her. Nothing but her look of agonized appeal could have restrained him from that. He made the merest pretense of eating, and hurried away with the dollar bill and Aimée's answer clutched tightly in his hand. When he opened it—it delivered even a crueler blow than he had braced himself to receive:

"I am affianced to Antoine Garat. Try to think kindly of me.

AIMÉE."

That was all.

GRIEVOUS is the suffering of a whole-souled, ardent youth. For many days poor Robert was unconscious of the world outside his own little hemisphere of pain. He neither saw nor heard nor tasted that he knew; though, of course, he did all three, quite in his usual manner. At first he raged and stormed—even cursed her—but all in silence; then a softer fit overtaking him, he sorrowed for her—and for himself—this in silence, too. Outwardly he showed little: day after day he went to his work as usual; and while his objective mind whirled dizzyingly in its orbit of torture, the subjective Robert deftly and industriously effected nice adjustments of machinery. He could even talk and laugh with his mates; and they, unobservant males, perceived nothing ghastly in his mirth.

At the end of two weeks he could endure the pain no longer. He dragged himself back to Garat's, determined to have speech with her, though the heavens should fall. Here a blow still shrewder awaited the unhappy young man. The restaurant was closed; and on the door was pinned a card reading thus:

"Closed in consequence of the marriage of M. Garat. Open to-morrow as usual."

A sad representation of the whilom well-favored and self-respecting young mechanic lay outstretched on the untidy bed of a hallroom in the furnished-room house on Twenty-fourth Street. He lay on his back with an arm flung over his face; his chin was unshaven; the hidden eyes were not good to see. In such a coil an older man would have taken to drink; but Robert was not familiar with this means of achieving forgetfulness. It had not occurred to him. He had come straight home, staggering a little maybe from the impact of the blow he had received at the door of Garat's, and since then he had neither moved nor spoken, except to rebuff the well-meant inquiries of his landlady, who, poor soul, was of two minds which to send for, the patrol-wagon or the ambulance.

She was knocking at his door now. Robert angrily ordered her away, but she stayed. He sprang out of bed and moved the bureau and his trunk in front of the door for a barricade. In the noise this made, the explanations she offered were lost. When Robert flung himself on the bed again she started anew; but he wrapped his head in the pillow and heard her not. Then she gave up: something white fluttered through the transom, and, falling on the pillow, slid to the counterpane, thence to the floor. Robert, conscious only of a feeling of relief that his tormentor was on her way downstairs, did not heed it.

Some time in the course of the afternoon he rolled over on the bed and saw the white object lying on the floor. He blinked his eyes rapidly, then he smiled and looked at it a long time. He had forgotten how it came there, and he did not believe it was real. It looked like an envelope with a stamp in the corner and his own name written across it in the poignantly-remembered hand of Aimée. Slowly it filtered through his dazed and wandering consciousness—he had not eaten in two days—that Aimée had never written to him [illegible] mail

A Matinée Party in the "Royal" Box of the Manila Hippodrome

In February, on Wallace Field of the Luneta, at the edge of the city of Manila, was held the second Philippine carnival. Urged by the Americans in the Islands, the natives helped to make the celebration notable. Beside its picturesque features, the carnival was regarded by business men, from Tokyo to Melbourne, as a fine show window

Statues of Taft (in the foreground) and José Rizal, the Filipino martyr Moro exhibit and Mosque (at the right)

The big auditorium erected for the Manila carnival this year was capable of holding fifteen thousand people

The Queen of the Orient

COPYRIGHT 1909 BY E. M. LEDYARD

SINCE the carnival is a celebration indulged in by the two races—Americans and Filipinos—there are two queens. The Queen of the Orient this year was a native Filipino girl, and in choosing her it is asserted that her father's financial standing was not considered. "Court" functions were elaborate, carefully carried out, and the grand ball in the Auditorium was, literally, a crush. No one was able to dance.

The Late Moral Wave

With Especial Reference to "The Easiest Way" and Two Other Plays

By ARTHUR RUHL

Miss Frances Starr in "The Easiest Way"

THERE has been a great deal of talk lately about the malign influence of the theaters on the morals of New York. Scarcely a day passes that something isn't "denounced." The inhabitants of this huge, heterogeneous, rather raucous Babel are represented as in great danger from something assumed to be in no wise a reflection of themselves, but mysteriously and wickedly imposed from without. And some Assemblyman undertakes to frame a bill which will prevent vulgarity.

The actors, on their side, trim their sails as best they may. One climbs into a pulpit and mourns that the theater doors are open six days in the week, while church doors are only open once. Another, whose plays are known to be witty, hastens to assure the public by means of the bill-boards that although he may be entertaining he is nevertheless good. Managers who are wont to drive honest reporters from their jobs for writing frank and intelligent criticism, grab at the skirts of the agitation by announcing that they are "in accord with the sincere clergymen and newspaper men" and that they will refuse to book any play that has been "denounced." And all these things add to the quaintness of existence, as one strolls down our great white way of an evening, past the crowded musical shows, the honk-honking mob, and the flashing whisky signs.

As usual, the accent is put on unexpected places. The serious discussion of some unpleasant social question is condemned; jocular ribaldry about it passes unnoticed. Mr. Shaw's play is stopped by the police; a Ziegfeld show runs on forever.

Shouts are heard from as far West as Kansas against Salome dancers. Few, certainly, wish to defend the subject-matter of the original opera. It is interesting. And if the emotions of a lot of African cannibals were ingeniously expressed in modern music, and we should see them on the stage gnawing the ribs of their enemies and chanting their native lays in diminished sevenths or submerged tenths, or whatever be the name for such subtleties, that, too, would be interesting. But it would scarcely be desirable.

Mere dancing itself, however, is another matter, and although it would be a cruel hand which would stay Miss Mary Garden from endeavoring to make two heads grow where one grew before, yet one can not help thinking that her humbler sisters of the music-halls have been condemned unjustly. Among the various rôles in which these ladies have previously appeared, there were surely few in which they were not more dangerously alluring than when, stripped of words and all the sartorial aphrodisiacs which modern dressmakers can devise, they are forced to caper madly about the stage to noisy and unpleasant music.

As a matter of fact, the appetite of the eye is so sated a[illegible] spoiled [illegible] the exaggerations and artificialities of dress that mere nature is tame and disappointing. How many confident sirens, if forced to throw aside the immoral support of clothes, would not excite ridicule or even pity! As for undermining moral foundations, the lady you take out to dinner to-night, although covered with clothes up to her ears, can do more in a couple of sentences of not too scrupulous repartee. To be sure, the young women who venture to impersonate Salome are architecturally not at all ordinary. And yet, measured by what is called suggestiveness, how infinitely less potent is Miss Gertrude Hoffman, for instance, galloping impersonally about the stage to the swishing of a few beads than the same young woman standing over the footlights in a strapless bodice giving an imitation of Anna Held!

Especially lacking in perception have been most of the objections to Mr. Eugene Walter's play "The Easiest Way"—a work just about as immoral as the greenish-yellow are-lamps which illuminate parts of Broadway, although just about as raucous and unlovely.

The same sincerity and reportorial truth which Mr. Walter showed in "Paid in Full" is put into this play. The reason it seems so raw is that in the first he was treating a problem comparatively simple and objective, while in "The Easiest Way" he undertakes to set forth the complex psychology of a woman's mind and heart. In other words, photography may be suitable to depict the robbery of a cash drawer, but it is a crude and unsatisfactory device to record a woman's struggle between her instinct for physical ease and luxury and her desire to be loved and do right.

A young actress who owes her position on the stage to a rich New York broker, whose mistress she has been, meets a young Westerner while on a summer vacation in the mountains of Colorado. Both fall in love for the first time. They are convinced that they are experiencing something deeper and more important than has ever come to them before, and, as the man has lived a variegated enough life himself not to object to the woman's past, they decide to marry.

As he is getting only thirty dollars a week as a reporter on a Denver paper, he decides to go to Goldfield for a year in the hope of making a big strike, while she is to return to New York for another year on the stage. Why the woman, who is assumed to be in a highly exalted frame of mind, should subject herself to the tremendous temptations involved in this course instead of marrying her reporter at once—certainly for a man only twenty-six years old, in Colorado, thirty dollars a week is comparatively princely—is not clear except that otherwise, as is so often the case, "there wouldn't be any play."

Miss Eleanor Robson in "The Dawn of a To-morrow"

The broker—an admirably realistic metropolitan type, wholly immoral in his dealings with women, brutally cynical, yet always what is known as a "good sport" and true to his own curious code of square dealing—warns them both. He points out with relentless sense that the young woman has too long lived as a spoiled butterfly to settle down to the humdrum difficulties of married life on nothing a year; that she spends more for her cabs than the reporter earns in a week, and he finally goes East without her with the understanding that whenever she wishes to come back to him she may, but she must let the other man know.

She also returns, and after a few months' respectable and desperate existence, during which she can get no work, and no contributions come from the miner, the man-with-the automobile appears at the psychological instant and she gives up the struggle. Unwilling to surrender "her one chance of happiness," however, she burns the letter which the broker dictates instead of sending it to the other man. Then the miner strikes it rich and hurries East. For a little while she fights desperately to keep her sinking ship afloat, but in the end both men discover her double-dealing and cast her off. As the curtain falls, she is pinning on a big plumed hat with the feverish excitement which unhappy heroines assume in such crises and announcing that she is going to Rector's—and, evidently, completely to the bad.

The realism of this unpleasant picture is complete and one can not but admire the lack of sentimentality with which Mr. Walter has set it forth. The objections to the play are purely those of taste. It is a photographic reproduction of the externals of a side of life which after all is vital to but very few people and which has little legitimate interest, transferred to the stage, except to that extremely small audience which takes a flâneur's interest in all the types of their town. The language is wholly commonplace, no insight or imagination lifts these brutal, material facts into any region of universal truth. The play is merely a reproduction of surfaces and of unpleasant, unimportant surfaces.

Mr. Walter's assertion that he is teaching a great moral lesson does not recommend itself. The play does not show that if you do so-and-so you will be sorry. It merely states that if you have been doing so-and-so for a good many years you are quite likely to keep it up. Very disagreeable people are shown, and one doesn't get the notion—which to be felt need not be put into words—that the author is acquainted with more agreeable people.

Miss Frances Starr, who plays the leading rôle, looks and dresses prettily and moves about and uses her arms, face, etc., with a great deal of smooth and accurate technique. Occasionally she reads the lines properly, but most of the time her voice is so artificial and affected that nothing rings true. The rest of the company are, in the main, satisfactory, especially Mr. James Kilgour as the broker.

Ladies to the Rescue

IN REFRESHING contrast is Mrs. Frances Hodgson Burnett's "The Dawn of a To-morrow" and Miss Edith Ellis's unhappily named but really admirable "Mary Jane's Pa." While neither of these plays has the mannish vividness and sharp vigor of Mr. Walter's transcription of Broadway life, both possess qualities which his most lacks—an intelligently hopeful philosophy and the revelation of fine and gracious intelligence behind the lines.

In "The Dawn of a To-morrow" Mrs. Burnett preaches the forgetting of one's own troubles by escaping from the isolation of one's own personality to share the lives of others. She believes in the theory now so fashionable—that if you don't feel the way you want to, act as if you do, and pretty soon you will.

We are first introduced to a well-to-do London gentleman suffering from nervous breakdown. Doctors practically give him up, and the curtain falls as he is contemplating suicide. The second act takes place on a foggy night in , the East End, whither Sir Oliver has come disguised as a working man to dispose of himself without attracting attention. After a picturesque exposition of the miseries enjoyed by the inhabitants of Apple-Blossom Court, it is learned that a murder has been committed, and the supposed culprit appears and is hidden from the police.

The neurasthenic gentleman views all this from a shady corner, and is apparently about to use his revolver when Glad, the sweetheart of the supposed murderer, sees it and takes it away from him. Out of her own bitter experience she gives him practical advice. When your own troubles seem overpowering, get interested in somebody else's and forget your own. The rest of the play is concerned with this plucky young woman's efforts—assisted by the now convalescent Sir Oliver—to save her lover's life.

The only man who can prove an alibi for him is Sir Oliver's degenerate nephew, who—as the accomplished playgoer will not be surprised to hear—has secret designs on Glad herself. She goes to his rooms, finally, to get him to swear to the alibi, and after a stirring and capitally unconventional scene, in which this clear-headed, vigorous young person tramps all over the playwright's moss-grown convention that a woman who happens to find herself alone in a locked room with a man is necessarily compromised and unable to defend herself, the police and the uncle rush in, the suspect is cleared, and everything ends happily.

The play has a literary finish to be expected from Mrs. Burnett, and its unhackneyed philosophy is as rare on the stage as it is delightful. A great deal of the play's distinction and sane vigor is due, of course, to the personality and acting of Miss Eleanor Robson.

"Mary Jane's Pa" tells the story of a sort of Peer

(*Concluded on page 30*)

A Floor Finish

That Smoothes Out Over Night

The heel prints left in a floor finished with the wonderful new *Elastica*—will be gone in the morning.

The castors on a heavy table, will make but a temporary print—the varnish will smooth itself back into shape.

Any pressure that does not break into the wood of the floor will not break this floor finish.

It is a floor finish so tough and so flexible that it will not crumble or crystallize

So waterproof that it will not turn white.

We Age Our Oils

The secret of this new *Elastica* lies in our exclusive process of ageing our oils.

By this process of manipulation, we overcome the "deviltry" in oils.

It is this "deviltry" in oils which makes common varnish too brittle for floors.

It is this "deviltry" in oils which makes common varnish turn white under water.

Try mixing different oils in the palm of your hand, and you will know what old varnish makers mean when they talk of the "deviltry" in oils.

It is the mastery of the special oils we use, that has enabled us, after thirty-nine years of patient experiment, to make a varnish still tough and elastic, when it is dry on the floor.

The common varnishes which you have seen on floors are unfit for the purpose.

They are not tough like *Elastica*. They are not flexible like *Elastica*. They are not waterproof like *Elastica*.

Where *Elastica* stretches, these common varnishes break.

Where *Elastica* gives, they puncture.

After a month or so of use, they present a whitened, cracked, uneven surface.

While *Elastica*, to the end, is smooth, beautiful, unbroken.

No Care—No Attention

A floor finished with *Elastica* needs no care, no attention.

It stretches back into smoothness.

Elastica

Floor Finish

Once on, it looks well always.

It is easier to apply than common varnishes—and it is as nearly permanent as a floor finish can be.

Think of this, you who have preferred the slavery of wax.

Think of this, you who know the disgust which scratchy, crumbling varnishes bring.

Wax a Makeshift

You, who have used wax and wax preparations, have done so only because you have not known of a perfect varnish.

For wax is but a temporary finish—a makeshift.

Two weeks—a month—or perhaps to-morrow, and a wax finished floor must be done over.

For a waxed surface is perfect only *before* it is used.

The first footstep leaves its heel mark. The shuffling of chairs leaves zig-zags. The movements of a table are recorded in the paths which castors leave.

Wax is costly. Wax is an endless nuisance.

And now, with *Elastica*, wax is needless.

Beware the Wrong Varnish

In choosing a varnish for floors, beware of the substitute for *Elastica*. For there are a thousand common varnishes, but only one *Elastica*.

Before deciding how to finish *any* floor, learn the facts about all kinds of floor finishes.

Learn why some floor finishes last only a week—and are gone—while others, costing no more, last a year.

Get This Free Book

Simply send for our free book, "*The Right and Wrong Finish for Floors.*"

This book is brimful of practical points on finishing all kinds of floors.

It tells not only about the wonderful new *Elastica*, but about other kinds of floor finishes—and gives the right treatment for each kind of floor.

In asking for this book, please address Department 4, 29 Broadway, New York, 2620 Armour Ave., Chicago, or International Varnish Company, Ltd., Toronto, Canada.

Elastica Floor Finish is made only by the

Standard Varnish Works

Sold by dealers everywhere

Wherever there are children,
There is need of a Camera

For always there are little expressions—little unconscious poses of graceful childhood, which make the most interesting pictures for father and mother.

PREMOGRAPH NO. 2

Makes such pictures as no ordinary camera can.

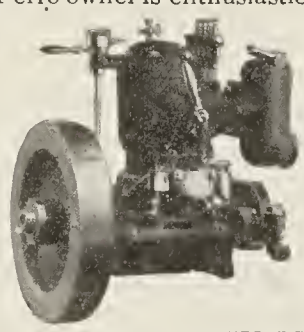
It's so constructed that you can see at all times a reflection of the subject, right side up and of the exact size which it will be in the finished picture.

You can watch through the hood every gesture of little hands, every changing expression of little faces—no need to pose them or ask them to "hold still"—but when you see just the gesture, just the expression you want, turn a key and the exposure is made.

Premograph No. 2 possesses the same advantage for street pictures, landscape and amateur photography in general. It works for time, instantaneous and retarded exposures; has rack and pinion for focusing and loads in daylight with the Premo Film Pack. It costs only twenty dollars.

Catalogue of these and fifty other styles and sizes of Premos at the dealers, or write us to send it to you, postage free.

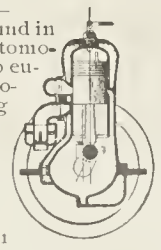
IMPORTANT—In writing, please be sure to specify Premo catalog.



ROCHESTER OPTICAL DIVISION
EASTMAN KODAK CO.
50 SOUTH ST. ROCHESTER, N. Y.

WHEN MR. G. Nazer of Soochow Road, Shanghai, China, Says—

"I made a trip to Siking Beach and back last Sunday, (a distance of 50 miles) and my Ferro never missed an explosion but behaved in its usual splendid manner. I wouldn't trade my Ferro for another make of twice the H.P." he is simply repeating what all Ferro owners say, the world over. The 15000 Ferros in use are not the result of advertising or sales methods but of the *mechanical perfection* of the engine itself. Every Ferro owner is enthusiastic over the operation of his engine.



FERRO Marine Engines

Made in 1, 2 & 3 cylinders from 3 to 25 H. P.
Jump Spark Ignition.
1 & 2 cylinders, 4 to 15 H. P. Make & Break Ignition.
Just the engine for any boat for work or pleasure.

Attractive Prices—Best Quality.

Offset Cylinder—An improvement found in the highest priced automobile motors and Ferro engines. Force of explosion exerts all turning force on Crankshaft. Gives greater power efficiency, reduces and equalizes side thrusts of piston on cylinder walls. Eliminates "knock" which loosens parts.

Ferro Engine Embodies Most Advanced Improvements

Counter Balanced Crankshaft.
Successful Cooling System for any climate.
Positive Pressure Oiling System.
Efficient Ignition—Jump Spark & Make & Break.
Accessibility of Working Parts.
All Parts Interchangeable.
And others too lengthy to mention.

SPECIAL—5000 3 H. P. FERROS AT $60 EACH. Good as money can build. All improvements of standard Ferros, quantity brings down the price. Just the thing for launch, canoe, dingey or auxilary yacht.

Leading Boat Builders use Ferro engines. They must be good. Ask any of the following: W. H. Mullins Co., Salem, O. Outing Boat Co., Kankakee, Ill. Auto Boat Co., Cleveland, O. Memphis Boat Co., Memphis, Tenn. Pope Boat Co., Fond du Lac, Wis. Weckler Boat Co., Chicago. Rippley Hdw. Co., Grafton, Ill. Inland Lakes Boat Co., Lake Geneva, Wis. W. J. Hand, New Bedford, Mass. Niagara Boat Co., N. Tonawanda, N.Y. Pioneer Boat & Pattern Co., Bay City, Mich. Packard Motor Yacht Co, Cincinnati, O.

A Practical Treatise covering design, construction, installation and operation of marine motors sold for half the cost—25 cents. 9 x 12 inches in size, 250 illustrations and diagrams, 72 pages. For the man who is not an expert mechanic. Full of helpful information for every boat owner.

Free Catalogue describing all 1909 models upon request. Write for it.

Woman's Battle for the Ballot in Chicago

"It is the Women Who Have Done Civic Work Who Have Found Out that They Need Votes"

By CAROLINE M. HILL

THAT Chicago has the largest and most influential social settlement in the United States is very well known, and that she has the best organized woman's club in the world. It is also well known in Chicago that the investigation of the packing industry and the census of women in industry were inspired by a woman; and that the juvenile court, the parental school, the vacation schools, and the improvement associations are mainly the work of women. Women's work for Chicago is famous in the city itself, and there are many women to whom the men's associations turn when they wish machinery put in motion that will accomplish certain results. The women, on the other hand, who have tried to do things have discovered that office-holders can only be effectually moved to do their duty by men of whose votes they are afraid. It is the women who have done civic work who have found out that they need votes. It is the women who have tried to do most who are the best leaders and speakers in the present movement for municipal suffrage.

Two years ago Chicago tried to get a new charter. One was framed by a steering committee of sixteen, which included representative men from different professions and kinds of business. It was drafted by a university professor of constitutional law, and then passed on to a convention of seventy-five, who revised it. In this convention a provision for woman suffrage was defeated by the casting vote of the chairman. From them the charter went on to the State Legislature, which made many changes in it to suit the demands of different political interests. It was finally defeated in a referendum in Chicago, after it had been so mutilated by the politicians that the most competent of its original framers did not wish it to be adopted.

Woman's Care Needed

THIS winter the same committee of sixteen has revised the former draft and recommended a separate bill to allow women to vote for city officers on the same terms as men. The first step is thus taken, and a committee called "The Committee for the Extension of Municipal Suffrage to Chicago Women" is organized in the attempt to crystallize public opinion and convince the Charter Convention that women do want to vote for city officers. Of this committee, Mrs. Charles Henrotin, well known as a leader since the World's Fair, Miss Jane Addams, Mrs. O. W. Stewart, the president of the State Equal Suffrage Association, and Mrs. William Hill, a representative of the Association of Collegiate Alumnæ and the wife of a university professor, are officers and leading spirits.

Subcommittees have been appointed to secure expressions of public opinion from its main organs, the churches, the press, men's clubs, educational organizations, labor organizations, associations of physicians, lawyers, bankers, and university professors. They are making known the situation in addresses before the different audiences in the city, and resolutions favoring municipal suffrage for Chicago women are being passed by all kinds of bodies. A men's association of about 150 members has been formed to help the women in the legislative campaign which is to follow.

The attention of passers-by is being attracted by yellow-printed posters saying:

"WHY DO NOT
"CHICAGO WOMEN
"HAVE MUNICIPAL SUFFRAGE?

"Women Vote on Municipal Affairs in England, Ireland, Scotland, Wales, Norway, Sweden, Finland, British America, Natal, Australia, New Zealand, Tasmania, and in the States of Kansas, Wyoming, Colorado, Utah, and Idaho.

"IT IS UP TO THE
"CHARTER CONVENTION!"

WHY buy "near-style"? It costs little to produce and is worth less than it costs. *Real* style is characteristic of

Michaels-Stern Clothes.

They set the style-pace because they're made by style creators—which means absolute correctness. Priced within reason.

The season's newest models should be on sale in your City. If not, we'll tell you where to obtain them and will also forward you one of our handsome Portfolios of styles if you'll send us your local dealer's name.

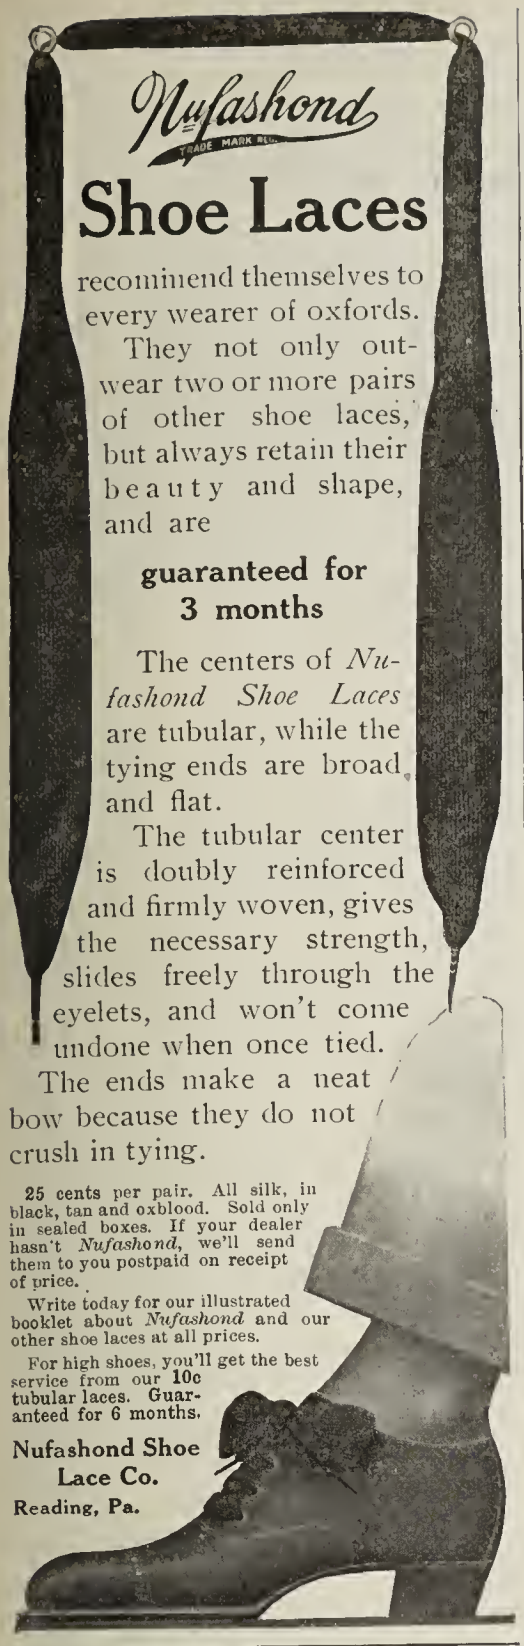
Nufashond
TRADE MARK REG.

Shoe Laces

recommend themselves to every wearer of oxfords.



They not only outwear two or more pairs of other shoe laces, but always retain their beauty and shape, and are

guaranteed for 3 months

The centers of *Nufashond Shoe Laces* are tubular, while the tying ends are broad and flat.

The tubular center is doubly reinforced and firmly woven, gives the necessary strength, slides freely through the eyelets, and won't come undone when once tied.

The ends make a neat bow because they do not crush in tying.

25 cents per pair. All silk, in black, tan and oxblood. Sold only in sealed boxes. If your dealer hasn't *Nufashond*, we'll send them to you postpaid on receipt of price.

Write today for our illustrated booklet about *Nufashond* and our other shoe laces at all prices.

For high shoes, you'll get the best service from our **10c** tubular laces. Guaranteed for 6 months.

And also:

"Municipal Suffrage
"for Chicago Women!

"For the long work day,
For the taxes we pay
And the laws we obey.
We want something to say."

Lining up the Forces

THE attitude of the Chicago papers is in the main friendly, although the "Tribune" notices only such features as it can treat sensationally, and the "American" is coming out more and more strongly in favor. The "Record-Herald" and the "Evening Post" are decidedly with the women's cause. Some of the papers always speak of the leaders as "The Suffragettes," although the methods have been in no respect like those of the English Suffragettes. Chicago women believe that such methods are by no means necessary for them, for they think that all patriotic men and women recognize this as the next logical step in the city's development. The Chicago Federation of Labor has declared strongly for it, and so have the largest bodies of ministers in the city. It is supported by the same class of people who support other reforms. The patriotic men and women of Chicago believe that neither the Charter Convention nor the State Legislature is willing to take upon itself the responsibility of refusing women's proffered aid at this crisis in the city's affairs.

When such a woman as Miss Mary McDowell tells her experiences and says, with controlled emotion in her voice, that she can no longer work in the indirect ways which she has been compelled to use and keep her self-respect, it moves the hearts of Chicago men. When the head of the Political Equality League says women have gone as far as they can in trying to accomplish their ends by means of influence—that if they go farther they will become deceitful and underhanded, and their best work will react to their own demoralization—then the lukewarm women begin to wake up. When Mayor Brand Whitlock of Toledo says that the exercise of power by means of influencing votes is illegal anyhow, the last bit of standing-ground is knocked from under the feet of the anti-suffragists, for they must either say that women must have nothing whatever to do with politics or they must be in favor of giving them a legitimate means of expression.

Combating Old Arguments

THE same ground is being thrashed over in Chicago that was gone over in England and in many of the States of the United States when universal manhood suffrage was granted. Those who were in possession then argued that working men did not care to vote, that they did not know enough to vote, and that some of them were bad anyhow.

If women do secure the right to vote for municipal officers in Chicago the men and women who believe in it think they will see renewed interest in civic affairs and a tremendous gain in the power of the forces of law and order. They think they would make short work of the First Ward Ball. The argument for municipal housekeeping, brought out two years ago, has had time to penetrate, and has been accepted by most of the disinterested voters of the town, while the response of the women is seen in the resolutions being sent in by the most influential clubs on the three sides of the city, asking to be allowed to "help in those matters of civic improvement which men have been too busy to take up."

✣ ✣ ✣

In the Revolution Belt

(Continued from page 15)

"Constitucional," Castro's personal mouthpiece. Everything was going smoothly, and a statistically minded proof-reader had already calculated that 7,853 shots had been fired without casualty, when a stray bullet smashed his inkwell and spoiled his reckoning. At this outrage he poked a revolver through the window and emptied every chamber, several of his associates following suit. Three men were fatally wounded, this being the total mortality of the revolution. Of course all three were innocent bystanders. Did any one ever hear of a street battle in which the casualties were not confined to this unfortunate class? "The Innocent Bystander collects the Lead" is the Venezuelan proverb, paralleling our apothegm about the prompt bird and the premature worm. To be sure, two out of the three

Coming Events Cast Their Shadows

Electric Vehicles

IN THEIR FIELD ARE
THE MOST ECONOMICAL & SATISFACTORY
IN
THE
WORLD

The makers of good Electric Vehicles are getting all the business they can handle this year. This advertisement is designed to tell you *why*.

It is not written in the interest of any one manufacturer, but in the interest of all of them. Not by any vehicle maker, but by the maker of

The "Exide" Battery

The "Exide" stores electric power in a "box." It is used in over 90% of all Electric Vehicles made.

The "Exide" Battery is the one greatest factor that has helped build up the demand for Electrics to its present great proportions. That's why the demand for "Exide" is so unanimous. It has made "stored electricity" the most satisfactory and economical power in the world for street vehicles.

This "stored Electricity" responds quickly, delivering just enough force to move the vehicle at a snail's pace, or instantly all its great power can be exerted. No "expert" knowledge—"Just turn the switch." Like turning on an Electric Light.

An Electric Makes You Independent

This explains why ladies, as well as men, like Electrics—they don't need a driver.

Both men and women are perfectly independent of the "expert." You stop or start at will, without troubling to think about machinery.

Electrics are not designed for high-speed, long-distance touring, but for city and suburban work, for physicians, for theatre going and for ladies driving, shopping or calling they have no competitor.

Light, staunch and true your Electric with an "Exide" does its work. In its field the simplest and most economical—satisfactory Vehicle in the world.

Specify the "Exide" Battery and order from any of the following makers or their agents:

Baker Motor Vehicle Co.
Broc Carriage & Wagon Co.
Columbus Buggy Co.
Champion Wagon Co.
Couple Gear Freight Wheel Co.
Electric Vehicle Co.
General Vehicle Co.
Rauch & Lang Carriage Co.
Studebaker Automobile Co.
The Anderson Carriage Co.
The Waverley Co.
Woods Motor Vehicle Co.

The "Exide" Battery is made by the oldest and largest manufacturer of all kinds of storage batteries, including types for the great steam and electric railways, telephone companies, The Electric Light Companies, Fire Alarm Systems, Telegraph Companies, The Marconi Wireless Telegraph Co., who now use stored electric power. Their experience is safe to follow.

The Electric Storage Battery Company

THE "Exide" SPARKING BATTERY IS THE BEST

victims had large, emphatic-looking guns about their persons. But that proves nothing against their peaceful intentions. Every Caraquenian gentleman wears a gun. His clothes don't fit without it.

These three were acclaimed as martyrs, at the evening performance, which was a mere epilogue. It filled the Plaza Bolivar with assorted oratory by gentlemen who made continuous scroll-saw patterns in the air all the time they were speaking. At the finish the courageous multitude attacked the Government band (unarmed), put the musicians to flight, captured the bass-drum, and went home to bed, proud in the consciousness of having added a page to history. When it was all over, Castro was no longer dictator. Gomez was. And the new Government had declared war against Holland in a poster that was printed like one of Barnum and Bailey's refined and restrained soliloquies on the subject of the two-headed calf.

Untimeous Advices

ONE of the American visitors, a gentleman named Coulombe, played an unlucky part in the affair of the afternoon. In the rush of retreat after the firing, he brought up, two blocks distant, with his nose jammed into the shoulder-blade of a large and husky Venezuelan. Adjacent to the shoulder he observed a small, peculiar hole. The hole seemed to go all the way through. "See here," said Mr. Coulombe to the man, "you've been shot."

The Venezuelan glanced down at his chest, saw the place where the bullet had entered, gave a loud yell, fell down, and died. Coulombe returned to the hotel, deeply remorseful.

"If I hadn't told the poor chap," he lamented, "he might be alive and happy now."

Farewell, Rivas

NO GAIN without some loss in this world of mournful compensations. "El Constitucional" is no more. It was edited by a genius, Señor Gumersindo Rivas, the possessor of so keen a nose for news that none of it ever got into the paper. It was further distinguished above its rivals of the outer darkness by an ultra-Chesterfieldian politeness. For example, the first mention of an important killing would appear in this wise:

"Valencia, Oct. —

"EL SEÑOR RIVAS, Editor 'El Constitucional,' Caracas.

"*Dear Friend*—It gives me profound pleasure to inform your magnificent journal that Señor Paramano, who was unhappily stabbed in the leg while engaged in shooting the late lamented Señor Cramonte through the heart week before last, is able to be out on crutches. Assuring you of my admiring esteem, I am,

"Yours affectionately,

"P. SCONCHAS,

"Correspondent of 'El Constitucional.'"

All events of the day were rigidly tabooed by Editor Rivas. All the time that Caracas was panic-stricken over bubonic plague, "El Constitucional" never mentioned it. It eschewed alike all reference to Castro's illness and impending departure while the capital was alive with *bolas* about it, and any mention of the dreaded Dutch blockade, although the hostile warships were patrolling the coast. However, I do not wish to be unjust. It did tell of Mr. Taft's election within a week after the fact. And when the German Minister gave a large diplomatic dinner, "El Constitucional," by a grand burst of enterprise, published the menu on the third morning thereafter. Now, alas, it is no more. Its spirited editorials comparing Castro respectively to Alexander, Cæsar, Washington, Roosevelt, Lincoln, Napoleon, and the Saviour—generally to the disadvantage of the compared ones—will never again delight the eye. Señor Rivas has unostentatiously flitted. The revolution did for him, as well as for his unique journal. *Requiescat in pace.* We ne'er shall look upon its like again.

✣ ✣ ✣

The Grass Fire

(See Frontispiece)

IN THEIR early conflict with the whites—soldiers and wagon-trains—the plains Indians used to set the rank prairie grass afire to the windward of the force they meant to attack and follow the flames, hidden from sight by the thick smoke-clouds. Usually the fire was started before daybreak. This was one of the tricks elaborated in the long warfare of the border—a particularly effective one in the open country, where the chances of surprising a watchful enemy were exceedingly small.

MY BOY!
HERE'S YOUR CHANCE

It's more than a chance—you can make it a certainty because it depends entirely upon yourself. It's your opportunity to rise to one of the countless positions open to the trained man and obtain a trained man's salary.

The man who sits in his private office and "hires and fires" and lays out your work, was no more qualified to fill that position a few years ago than you are to-day. He saw *his chance* and made the most of it. He obtained his training and knowledge by study. You can do the same—the American School will help you.

Don't be afraid to mail the coupon, you won't be bothered by agents or collectors. Like all strictly educational institutions the American School depends, for growth, upon reputation and the success of its students.

Don't let a little thing like filling in and mailing a coupon stand between you and success, congenial work and more pay. *Accept your chance to-day.*

TRADE Gillette MARK
KNOWN THE WORLD OVER

THE Gillette Company begs to announce the construction of a hundred-thousand dollar addition to its present million-dollar factory in Boston—the fourth enlargement of facilities in four years.

The present factory contains about four acres of floor space and employs seventeen hundred people. The new addition is to increase the blade equipment, which has been greatly taxed during the past three months.

Foreign demand has become so great that GILLETTE factories have been established in Canada, England, France and Germany.

The GILLETTE is literally known the world over. It is in use and on sale in every country on the globe. Wherever you go you can buy GILLETTE blades.

The GILLETTE has been granted basic patents by twenty-two foreign Governments and is protected by over a hundred Registrations of Trade Mark.

The GILLETTE is one of the world's greatest inventions. It enables a man to shave himself in from two to five minutes—a clean, satisfying shave no matter how rough the beard or tender the skin. It can be adjusted for a light or a close shave, and best of all it requires *no stropping—no honing.* Standard set, $5.00. On sale everywhere.

THE PECK-WILLIAMSON COMPANY UNDERFEED HEATING WAY is the *One Sure Way* of escaping *big* and frequent coal bills. The UNDERFEED System of Heating—applied either to warm air furnaces, steam or hot water plants—makes it possible to get from *cheapest* slack, not *burnable* in other plants, as much clean, even heat as *highest grade* anthracite will yield.

Peck-Williamson Furnaces—Warm Air
UNDERFEED Boilers—Steam and Water

Save ½ to ⅔ of Coal Bills

Coal is fed from below. All the fire is on top. Smoke and gases *must* pass thru the flames and are consumed. This UNDERFEED Coal-burning plan *solves* the smoke nuisance, insures clean homes and better health. Ashes are few and are removed by shaking the grate bar as in ordinary furnaces.

Illustration shows furnace without casing, cut away to show how coal is forced up under fire, which burns on top.

Dr. E. B. Doan, of West Carrollton, O., clearly defines what UNDERFEED economy really means. He writes:

"There was at one time a thing called a furnace in the basement of my house. It consumed from $40 to $60 worth of good coal each winter in a vain endeavor to heat the house to 65 degrees. Nearly two years ago you installed an UNDERFEED furnace and during the past two winters we have had more heat than we needed at a cost of about $25 per winter and less than half the work the old furnace required."

We've hundreds of letters just like this. We'd like to send a lot of them in fac-simile, with our Underfeed Booklet for warm air heating or our Special Catalog of Steam and Hot Water Underfeed Boilers.

Heating plans and services of our Engineering Department are yours—ALL FREE. Write to-day, giving name of local dealer with whom you prefer to deal.

This illustration shows the Steam and Hot Water Underfeed Boiler.

The Late Moral Wave

(*Concluded from page 24*)

Gynt husband who "hears the East a-callin';" finds domesticity irksome, and runs away to let his wife make her fight alone for herself and their two little children. She goes to a country village, edits the local paper, is respected and even courted, and all goes well until the village gossips begin to wonder who the children's father was and what became of him.

The mother, knowing the stimulus it would be to their pride, has always tried to make them believe that their mysterious and departed parent was all that he should be.

Just as matters are approaching a crisis, the erratic husband strolls in. He is still charming in his irresponsible and unfeeling way, has an apt literary quotation for everything that turns up, and describes with easy eloquence his adventures up and down the world as a sentimental tramp. He is about to hit the trail again when his wife, unable flatly to turn him away without money or shelter, proposes that he shall remain and work for her as a house-servant, a position which, with the same insouciance, he cheerfully accepts.

The gossip now becomes, naturally, unbearable, ending at last in bringing the whole village in a mob to the "widow's" cottage ready to tar and feather the supposed intruder. Long before this dénouement is reached, however, the man's better nature has been so aroused through his paternal instincts and a number of situations in which he has been forced to take a man's part in helping and defending his wife that the revelation of his identity and his subsequent decision to brace up and behave himself are scarcely more than the mechanical unraveling of the knot already spiritually untied.

This may seem like a play for grown-ups, and so it is. But the children are so important to the story, and their scenes with the plucky mother and the witty, irresponsible father—played gracefully, as may be imagined, by Mr. Henry E. Dixey—are done with such humor and affectionate sincerity, that, during the several months which the piece ran in New York before fortuitous circumstances forced it on the road, audiences half made up of children seemed to enjoy it quite as much as their elders.

✣ ✣ ✣

The Queensborough Bridge, New York

The Greatest Bridge in the World, with a Capacity for 200,000,000 Car Passengers

By FRANK W. SKINNER

MEASURED by the combined length and capacity of its five main spans, the Queensborough Bridge, across the East River from Fifty-ninth Street, New York, to Ravenswood, Queens, is the greatest bridge in the world. Including approaches, its total length is 8,600 feet, width 86 feet, and greatest height over 300 feet above the water. It crosses from shore to shore, 135 feet above the river, with three enormous spans of 1,182 feet, 630 feet, and 984 feet, the middle one reaching across the full width of Blackwell's Island. Besides these, there are two more great "anchor" spans, one at each end, wholly over dry land, with a length of 3,724 feet for the five, which, together, contain over 105,000,000 pounds of steel. No other spans in this country, except suspension bridges, approach the longest of these, and the only trussed span in the world which exceeds it is the Forth Bridge, which, although 1,710 feet long, has a capacity for only two railroad tracks, less than one-third of this. There are two decks, the lower one designed for a wide driveway and four electric car tracks, and the upper one for two sidewalks and two elevated railroad tracks, and having, in all, an estimated capacity for 200,000,000 car passengers and millions of vehicles and pedestrians annually.

At the New York end the long approach, rising from grade to a height sufficient to clear ship masts, is of steel, encased in stone and terra-cotta, to resemble artistic

How To Avoid TIRE TROUBLES

Today practically all automobile troubles are tire troubles. Eighty per cent of upkeep expense is tire expense. When you are tied up on a lonesome road 20 miles from nowhere—nine cases out of ten it's TIRES.

—And nine cases out of ten the punctures and blow-outs which waste money and kill pleasure were caused by *overloading*.

—Tops, Glass Fronts, Gas Tanks, Searchlights, Extra Seats (an invitation for more passengers), storage batteries, extra casings and pounds of luggage are added to large and small cars alike.

—Before you know it your tires are carrying from 200 to 300 lbs. more than they were *ever built to carry*. The result is certain, quick destruction—heavy expense—trips of trouble instead of pleasure—and a world of humiliation for the man who owns the car. Rubber, strong as it is, has its limitations.

Goodyear Automobile Tires overcome these conditions because EVERY TIRE IS OVERSIZE.

They are full 15 per cent larger than any automobile tire in the market sold for the same size. A Goodyear 4-inch tire is really almost 4¼ inches. If a set of tires of another maker will safely carry 2000 lbs., Goodyear Tires of the *same size* will with equal safety carry 2300 lbs.

But even if your tires are ample for their load—even if your car is not weighted down with accessories—think what the extra 15 per cent means to you as a "*margin of safety*."

Every bit of material in the car you drive has a "margin of safety" of 5 to 7—it must be capable of bearing a strain from 5 to 7 times greater than *it will ever be subjected to*. Tires alone are expected to work to the *limit of their resistance*. When you overload them there is no "margin of safety." It has been exceeded. You are taking chances every minute you drive.

Think carefully what this *15 per cent oversize* (to be secured only in Goodyear Tires) means to you.

To know all the good points of this wonderful tire—write for our helpful book, "How to Select an Auto Tire." Every motorist who has had tire troubles should have it.

masonry, while on the less populous Queen's shore the longer steel spans frankly admit their construction, and are attractive for their excellent proportions and the graceful Gothic arched bracing in their supporting steel towers. The entire bridge contains about 145,000,000 pounds of steel (enough to build 100 twelve-story office buildings 100 feet square) and 48,000 yards of granite masonry, and will have cost over $20,000,000 and have required more than eight years for its construction.

The locations of the bridge piers to fit the steel spans were determined not by direct measurement, but by calculations and accurate surveys, in which the principal angles were measured 100 times each, and the span lengths computed from a base-line over 1,000 feet long, measured on the ground at right angles to the bridge, with an error of only about one-fortieth inch.

The masonry piers for the main spans contain thousands of tons of concrete, making them virtually huge monoliths of artificial stone faced with great blocks of granite from Maine.

"The Rigid Monsters"

THE superstructure has two lines of steel trusses made with the largest nickel steel eyebars ever manufactured, and riveted posts, chords, and beams, some of which weigh over 120 tons each, and were built and shipped in two pieces weighing up to 60 tons each, limited by the practicability of transportation and handling. Other members, weighing 80 tons each, were built and shipped complete. The principal connections are made with steel bolts, or "pins," 16 to 18 inches in diameter and 10 feet long, weighing several thousand pounds; secondary ones are riveted at the site.

All of the members were finished at the shops in Steelton and Pittsburg, and although never fitted together until assembled in the finished structure, the calculations, drawings, and shop-work were so perfect that the rigid monsters, some of them 6 feet wide and 100 feet long, were joined, high in air, suspended from swinging ropes, and fitted like watch mechanism, within the thirty-second part of an inch, providing successfully, too, for the deflections due to the great weight and to the many more inches by which the pieces were, in the aggregate, lengthened or shortened by variations of temperature.

A battery of steam boilers, electric generators, air-compressors, and other plant was established on the island to furnish power for all erection uses; docks and railroad tracks were built, and the steelwork, received on lighters, was handled and stored in piles, 20 feet high, by two electric gauntry cranes of 85 feet span. Erection was commenced with the island span, and, to carry its 5,500 tons of steel until it was self-supporting, a 1,700-ton steel "falsework," fully equivalent to a first-class, permanent railroad bridge, was built, consisting of two rows of towers over 100 feet high on concrete foundations. Hydraulic jacks of 500 tons capacity were operated from time to time on each tower to raise the span and compensate for the settlement of the falsework.

A Two-Piece Job

THE vertical and inclined posts in the trusses were so long and heavy that all of them were made in two pieces, spliced at the center point, and the lower parts, together with both decks, were erected first by a two-derrick traveler, after which the upper parts of the trusses and the bracing between them were completed by two special Z-shaped travelers, a combination of methods never before adopted in bridge erection. The 200-ton steel boom derricks were among the largest ever used, and had a maximum radius of 85 feet and lifted as much as 80 tons. The Z-travelers were 124 feet high, with long arms projecting in front, from which were suspended nearly 40 powerful tackles operated by two hoisting engines with multiple drums and capstan heads carried in the traveler, and serving also to pull it forward as the work progressed.

After the island span was erected, the two travelers built out the cantilever arms of the two river spans simultaneously, from the piers to midstream, assembling all the members for one panel in advance, and making it self-supporting, then moving on it and building out another, and so on.

As the travelers advanced, their weight and that of the cantilever spans, acting with increasing leverage, lifted the island span from its falsework, and, as fast as the latter was thus released, it was taken down and reerected on shore, and on it both the end spans were erected in the same manner as the island span. By the time the falsework was completed the Z-travelers had reached mid-stream, were

The Howard Watch

Rhythm and regularity of stroke is one of the great points of good oarsmanship. With long training a boat's crew attains it in imperfect degree.

In the balance-wheel of a fine watch this rhythm and regularity of beat is called *isochronism*—a difficult word for a difficult thing.

The HOWARD Watch is closely and permanently adjusted to *isochronism*.

A scientific test will show that in practical everyday use the balance-wheel of a HOWARD pulsates with more perfect rhythm and regularity than that of any other watch in the world.

Every HOWARD Watch is cased at the factory and timed and adjusted in its own case by the HOWARD watchmakers.

The price of each watch—from 17-jewel in a fine gold-filled case (guaranteed for 25 years) at $35.00, to the 23-jewel in a 14-k. solid gold case at $150.00,—is fixed at the factory and a printed ticket attached.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD Jeweler in your town and talk to him. He is a good man to know.

Drop us a postal card, Dept. A, and we will send you a HOWARD book of value to the watch buyer.

E. HOWARD WATCH COMPANY
BOSTON, MASS.

taken down and reerected on the upper decks of the end spans, completed them, and then advanced beyond the shore piers to erect the remaining cantilever arms, which eventually met the first cantilevers and were connected to them with perfect accuracy, completing the critical part of one of the greatest structural engineering feats ever accomplished. The changes of stress as the work progressed made it necessary to erect the great pier posts, 185 feet high and 12 feet thick, with their tops leaning 8 inches out of plumb, and to connect the trusses these were forced back out of the vertical, like great springs, by hydraulic jacks, easily and safely.

There are in the floor-beams, splices, and other connections about 752,000 rivets driven in the field, mostly by pneumatic hammers which struck about 1,800 blows per minute and were operated by as many as 32 four-man gangs.

The comparatively short-girder approach spans at the New York end were erected by ordinary derricks, but the towers and longer truss spans on the Queen's approach were erected by a traveling wooden tower about 100 feet long, 135 feet wide, and 140 feet high, moving astride of the structure on two 30-foot surface tracks, advancing to build a tower, returning to erect the span on it, and then going forward to build the next tower, and so on.

An Exchange of Currency

(*Concluded from page 21*)

that he had not pictured her doing so; that illusions were the result of things previously seen or imagined; therefore—at this point in his painful reasoning he slowly put forth a hand to seize the envelope. It was a real envelope; it did not evaporate in his fingers. After another period of painful hesitation he ventured to open it. There was a paper inside with more of the handwriting the sight of which so nearly caused him to swoon. This was what it said:

"Come to the restaurant to-morrow. Come early, half-past eleven, that I can speak with you. You may speak to me, now. AIMÉE."

And so neither the ambulance nor the patrol-wagon was required to convey the body of Robert from the Twenty-fourth Street house!

WHEN he entered Garat's next day Aimée beamed on him. He had never seen her look so happy, and therefore so entrancingly lovely. Moreover, there was no longer a hint of fear or concealment; she nodded to him openly. Poor Robert, torn hither and thither, remembered the unworthier side of the French character; and for a moment harbored an ugly doubt of her, for which he was presently to suffer. She indicated that he was to take his usual table, and he sat down as in a dream. Wonder heaped upon wonder! She calmly came out from behind her little desk and approached him! For the first time Robert was sensible that his divinity possessed the power of locomotion. Garat spoke her name sharply; she turned her head to him with a smile of cool contempt. Garat was crushed. She sat down opposite Robert and put her elbows on the table.

"Well, w'at do you sink of it?" she asked, with a heavenly smile.

"Of wh-what?" stammered Robert.

"My voice."

"I—I do not know."

"W'at makes you look so strange? Are you not glad?" she quickly asked.

"Glad!" echoed poor Robert stupidly. "I don't understand. The card on the door—"

Aimée's face underwent a rapid change. "Oh-h!" she breathed. "You came that day! You saw it! You thought—" She broke into irrepressible smiles again—"that poor Garat! He is married fas' enough!"

"But you!—"

"I am still single, M'sieu'."

"But you said—"

"Yes, I know. Sings happen quickly. W'en Aspasie's money came in she wouldn't give it to Garat! We 'ad an understanding—that dear Aspasie! To get the restaurant Garat was oblige' to 'ave Aspasie's money; to get Aspasie's money, Garat was oblige' to take Aspasie also! *Voilà!* I'm jilt', *mon ami!*"

PURITY ESSENTIAL

In no other form of food is Purity so absolutely essential as in milk products. Richness is also necessary, as without richness, milk is of little value as a food. Purity and richness are the embodiment of Borden's Eagle Brand Condensed Milk. As a food for infants or for general household purposes it has no equal.—*Adv.*

Distance Eliminated

By The Great Western System of Measurement

In every state—wherever **you** are—there also is the Great Western System of Measurement.

Fabric—Style—Workmanship—Fit; these are the four essentials of Good Clothes. But the greatest of these is Fit.

Nature makes no duplicates. No two human forms are exactly alike. The Great Western System of Measurement is based on this fact.

It is the only exact system. It shows our cutters your every line, curve, angle, hollow, bulge and stoop. No other system does this.

We cut your fabric to fit **your** form. Your clothing becomes a very part of **you**—the clothes we fit to **you** will fit **nobody else.**

We Make To Your Exact Measure A Suit from $18 to $40.

In your town we have a dealer. We have taught him the Great Western System of Measurement. If you don't know him, ask us. With his name and address, we'll send you free handsome Style Plates.

Call on our dealer. Choose a fabric from his superb line of 400 samples. Let him measure you. Then let us make for you the best fitting suit of clothes you ever wore—a lasting credit to you and us.

Your Local Tailor Can't Fit You as Well, Yet He Charges $15 to $20 More.

We guarantee the Fabric—the Workmanship—and the Fit. If you are not satisfied, you get your money back. Our dealers are instructed to do this.

NEWSPAPER GROWTH

WE ARE accustomed to think of everything as growing bigger as time goes on. The idea that increased size means growth seems to be an accepted standard of the American people. And while in a great measure this is a wholesome tendency, and is born of the necessity that all things should advance in proportion, it is evident that too much growth in size may tend to restrict the growth in quality.

Years ago it was thought that some things had about reached the limit of size, but the giant things of a few years ago are the pigmies of to-day.

There is one direction, however, in which it now seems that the limit of size has really been reached, and that any future growth will have to be in the direction of an improvement in quality. That is, the size of the daily and Sunday newspapers. There are certain limitations which at last must be recognized. One is the fact that there is only a limited amount of time which the average reader can take each day or each Sunday to look over the paper. The publication that goes beyond that limit, and puts out a paper of which no individual can peruse more than a small fraction, is getting near the climax of its possible growth in size. The larger the circulation of a newspaper the more it must charge for its advertising space, and the less likelihood that an individual will ever see a given advertisement the less valuable the space becomes. The stopping point in mere size will be reached when the climax of advertising efficiency is reached.

Another fact with which the future newspaper will have to reckon is the fact that the public is becoming more and more aware of the inaccuracies which inevitably attend the hurried preparation of a large paper, and more and more aware of the insincerity with which a great portion of the "news" is calmly manufactured and colored. This awakening is slowly but surely bringing about a distrust of the information and opinions voiced by the daily press, and this will in turn reflect upon the drawing power of the advertising by which it subsists.

At present we do things in such a big, bold way that many of these underlying tendencies are not especially felt either in the amount of advertising received by newspapers or in the drawing power of the advertising for the advertiser. But we are moving rapidly to new conditions —at least in every other industry. It can not, in the nature of things, be many years before this tendency will make itself felt, and a reorganization of newspaper methods will necessarily follow.

With the size standard passed, the only remaining room for growth will be in quality of the reading matter, quality of the advertising matter, and quality of the circulation. While circulations will doubtless continue to increase, the time has already passed when mere quantity of circulation means anything to the intelligent advertiser. But when these points become generally admitted, and the cry for quality is set up, the newspaper will find before it room to grow for generations to come without scratching into the possibilities for wholesome development.

Is it too much to hope that we have already reached the climax of newspaper insincerity, and that future efforts for development will embody more of the spirit which seeks to improve the quality of the service rendered to the public, in contrast with the blatant clamor for domination by mere bulk?

TAXI-TYPEWRITERS

A NEW device that has begun to be installed in hotels, waiting-rooms, and other public places is called the "taxi-typewriter." By dropping a dime in the slot the mechanism is released and the typewriter may be used for half an hour. At the end of that time, according to the clock attached, a bar comes down and stops the action of the keys.

Such an enterprise would have been im-

Wouldn't you like a catalog with detachable easel-back illustrations? For the first time you can examine various styles simultaneously.

The Lyon & Healy Piano—

Worthy of Its Name

Corliss, Coon & Company, Dept. T, Troy, N. Y.

practicable a few years ago, when the use of a typewriter was largely confined to those who made a business of transcribing the dictation of others. But in recent years the popularity of the typewriter has grown until its use is a very general accomplishment, especially among those who have to do with literary, legal, and advertising work. If the tendency increases, and there is no reason to think it will not, the time may come when the ability to write on a typewriter will be the rule and not the exception.

MARKING FREIGHT

THERE seems to be a great need of some method of marking packages so as to cut down the amount of freight that goes astray. In the rough handling which freight almost necessarily receives it is not to be wondered at that many tags come off and the packages can not be sent to the proper destination. When to this condition is added the confusion resulting from old markings on second-hand boxes, insufficient marking on some portion of a shipment, and tags that have faded out in the sun—a very common thing—it causes much trouble on the part of the railroad and perhaps more on the part of the shipper or consignee. The loss is often far greater than the cost of the goods, as is the case when a single casting is needed to complete a machine, or to go on with certain work, and without it there is a deadlock or an expensive delay. Seasonable goods delayed beyond the wonted time are often worthless, in addition to the loss and inconvenience occasioned by their delay. Much of this trouble could be obviated if railroads would more carefully inspect the markings of freight received, and shippers were impressed with the importance of eliminating carelessness in the marking of goods sent out.

TELEPHONING

IT IS an interesting commentary on human nature that many business men who have been used to the telephone all their lives will forget its possibilities and make long trips to transact business that could be done in a few moments over the telephone. That thousands have become habituated to the long-distance telephone, and have been steadily increasing their use of it, only makes more apparent the fact that others are still taking unnecessary trips for no other reason than that they do not think to handle the matter by telephone.

A trip from Chicago to New York and return, allowing for one day's average expense in the city, would cost a business man about ninety dollars at a conservative estimate, and would require at least two days' time. That expense alone would cover the cost of eighteen long-distance telephone conversations at five dollars for three minutes, or for a total of about an hour's conversation at one dollar and a half per minute. In addition to this, the man would have his two days' time, and his plans would be spared the delay and interruption. The proportion is even greater for lesser distances and smaller telephone rates.

The time has passed when such a statement is to be considered merely as an advertisement for the long-distance telephone business. Such reckonings now have a place in the economic philosophy of the progressive business man, and differ in no wise from a systematic policy in the use of the mails.

A BIG TASK

THE task of an editorial writer on a metropolitan daily paper is often one that is so stupendous as to require humor for its appreciation. An instance is told of where a telephone company had engaged the services of sixty experts for four years to work out a gigantic problem in connection with the reconstruction of the system, underground wires, provision for future growth, and other such problems which call for endless investigation and study. Even the best-informed men in the telephone business would feel the necessity of hesitating and seeking further technical information before making a decision as to the wisdom of even a small move in connection with the new system. Almost every expert in the country who knew anything about telephone construction was in touch with the plan, and was giving it his best thought. Finally when the detail of the new plan was announced it became a matter of news, and the newspaper editorial writers were entrusted with the rather weighty problem of giving the public a standard opinion by which the reconstruction plan was to be judged. The following day six or eight great newspapers contained editorials which pointed out the flaws in the system and set the people right. Each one saw the matter from a different viewpoint—a viewpoint based on information that took perhaps an hour to acquire. So much for twentieth century journalism.

Schloss Baltimore Clothes are worn by the best dressed men in the business and social world. 1260 new models for Spring and Summer of 1909. New designs—new colors—suitable for every form and figure.

THE NATIONAL WEEKLY

Vol XLIII No 3

April 10 1909

Chalmers-Detroit "Forty"—$2,750
Made also as a Roadster and with Toy Tonneau

The Utmost Value For the Money

We make the statement boldly—there is no better car than this. You want the utmost value at the lowest price, and here it is, in the Chalmers-Detroit "Forty," at $2,750.

Prices have interest only in their relation to values. As between equal values, you will choose that offered at the lowest price. As between equal prices, you will decide to pay that which will buy the greatest value.

Settle for yourself by careful investigation the question of value. See the "Forty." Examine it thoroughly. Compare it with all others, first in *value;* then in *price.* This is all we ask.

What more could you want in a motor car than you get in the Chalmers-Detroit "Forty" at $2,750?

Any "Forty" will go as fast as sixty miles an hour. Of course you will probably not want to drive that fast but you will be glad to realize you have a car with that much power. For you can use the power in other ways than getting speed—on hills, on rough roads, and in the sand and mud.

The lines of the "Forty" are as beautiful as any car can show, and it is painted and upholstered as well as any car can be.

For its engine power, it's a light car. This means saving of tires—low cost of upkeep. The design of the "Forty" is one of the best proved in the world. More than any other American car, it has been standard from the start. Very few changes—minor ones—have been necessary.

Every Owner Enthusiastic

The "Forty" is sold by its friends. There are more than a thousand owners to tell you what they think of this car. Ask some of them. Let us give you their names if you don't happen to know them now. They will tell you they wouldn't own another car, having used the "Forty."

Aside from what owners say, the "Forty" has a public performance record which has probably never been surpassed.

At the Pasadena, Calif., hill climb, February 22, it won two principal events, one of them the free-for-all for stock cars, and made the fastest time of any stock car that day. A short time before this it had defeated all gasoline cars at the great Riverside, Calif., hill climb, making there also the fastest time of the day.

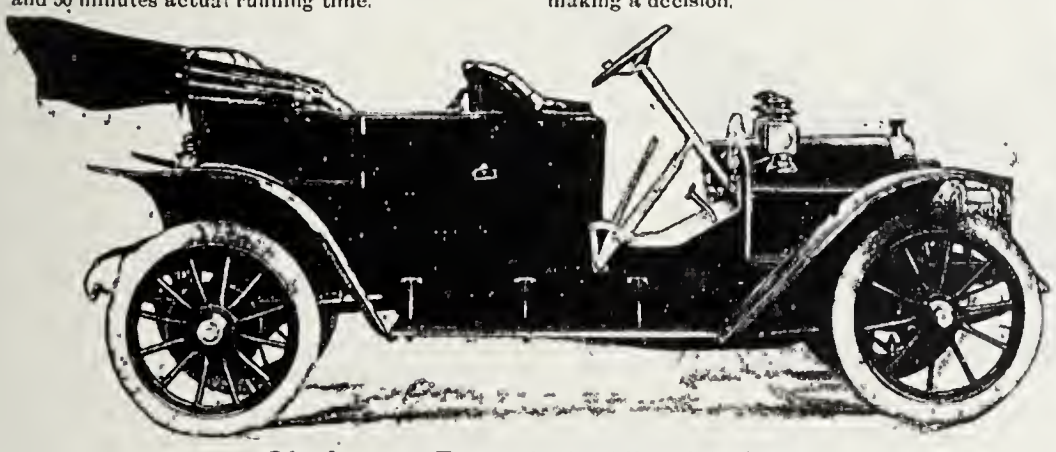
During 1908 it finished first or with a perfect score in twenty-five nationally known races, hill climbs, and endurance contests. The car which stands up under such severe strains as these is pretty sure to meet satisfactorily the lesser demands of the average owner.

Over muddy winter roads last December, Mr. J. S. Harrington drove his new "Forty" from Detroit to Providence, R. I.—856 miles—in 34 hours and 50 minutes actual running time.

Mr. Thomas D. Murphy, of Red Oak, Iowa, touring abroad writes: "In our 'Forty' we have completed 5,000 miles since leaving London, and I have not paid out a single dollar for repairs."

A New England owner says: "The car has just covered 499 miles on a trip through the White Mountains, where we used six quarts of oil and 35 gallons of gasoline, or a little over *fourteen miles travelled per gallon.*"

We have now in our factory store rooms, $33,000 worth of unused extra parts.



This stock was laid in for any repairs that might be found necessary—to guard against every emergency.

But the car has proved so good that we might as well not have reserved this supply.

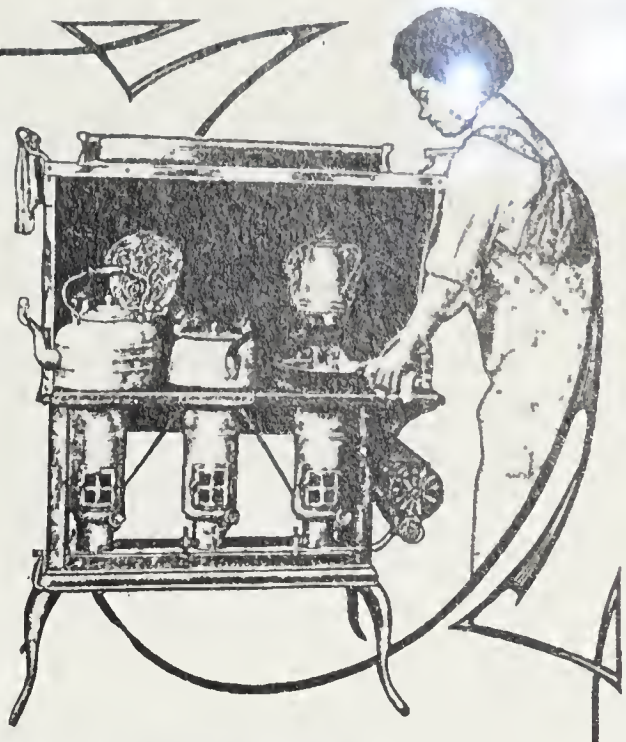
For instance, in all our experience we've not had to replace a single crank shaft.

We planned originally to build 545 of these cars this year. We have just decided to increase our schedule by 55 cars, making an even 600 in all. We do this in response to a demand which becomes ever more insistent as more and more people come to know the true quality of this car.

See one of these cars. Or write for a catalog. Learn the facts and you will not have trouble making a decision.

Chalmers-Detroit "30"—$1,500
Made also as a Tourabout and Roadster

Our "30" is the car which Mr. Coffin spent two years in designing. We are putting out 2,500 this year at a profit of nine per cent. About 1,500 are already delivered.



No car on the market gives nearly so much for the money. No car in its class can stand for a moment in actual mechanical comparison, made by unbiased engineers. No car at any price has stood more trying endurance tests than has the Chalmers-Detroit "30."

Please write for our catalog to learn all the facts, then see our nearest dealer.

Chalmers-Detroit Motor Co., Detroit, Mich.

A "Home Comfort" Stove

Have you solved the "Home Comfort" problem for this coming summer?

Are you planning to put the coal range out of commission?

Will you do the family boiling, stewing and frying in a sane and restful manner over a stove that *does not overheat the kitchen?*

You can do all this with the

NEW PERFECTION
Wick Blue Flame Oil Cook-Stove

The "New Perfection" is different from all other oil stoves. It has a substantial CABINET TOP like the modern coal range, with a commodious shelf for warming plates and keeping food hot after cooked—also drop shelves on which the coffee pot or teapot may be placed after removing from burner—every convenience, even to bars for holding towels.

Nothing adds more to the pleasure of a summer home than a "New Perfection" Oil Cook-Stove in the kitchen. Made in three sizes. Can be had either with or without Cabinet Top. If not at your dealer's, write our nearest agency.

The **Rayo Lamp** All that a lamp should be the Rayo is. Well made—ornamental—not easily tipped over—has perfect combustion—greatest volume of light for oil consumed—burns longest with one filling.

If not with your dealer write our nearest agency.

FRANKLIN AUTOMOBILES

The question of the best type of construction for an automobile is simple enough when you consider it from a thoroughly practical viewpoint.

You want comfort and safety. An automobile constructed so that it rides easily is the best automobile mechanically. Hard riding and discomfort are due to heavy-weight, rigid non-flexible construction, impractical spring suspension, small wheels and small tires—mechanical features directly the opposite of those that make easy riding.

Shock Absorbers and How They Fail

The first thing you do with the average automobile in an effort to secure easy riding is to apply shock absorbers. This is an admission that something is wrong; that the spring suspension is not good—at least you do not like it.

It is claimed for shock absorbers that they take the burden of shocks from the springs. They do. They check the flexibility and add to the stiffness. Road shocks and vibration that should be absorbed and taken up by the springs are transmitted throughout the automobile, straining and jarring it and fatiguing the passengers.

The practical, sensible way is to have a spring suspension that is complete and mechanically correct. If the springs are wrong, attachments are not likely to correct them.

Not Required on the Franklin

Shock absorbers are not required on the Franklin. They are used on automobiles having the hardened steel frame and a half-elliptic or other inadequate form of spring suspension.

The Franklin has 40-inch full-elliptic springs front and back and a laminated wood chassis frame—a construction that absorbs and neutralizes the road shocks. A half-elliptic spring to equal a Franklin spring would have to be seven feet long—an impractical length. Then wood is flexible and absorbs shocks, while a steel frame gives stiffness and hard riding. And a Franklin frame is both lighter and stronger than the steel frame. We will gladly send you a reprint of a technical article on this subject from the Horseless Age.

The Weight Question

The question of the necessary weight of an automobile seems to be a mystery to many people. But it is just a matter of practical mechanical construction—there is really no mystery about it.

Where is the need of excessive weight? An automobile is a road wagon to carry a few hundred pounds of people. Why build it heavy and rigid? The Franklin automobile truck with a guaranteed capacity of two tons has only about the weight of the average five-passenger water-cooled automobile. If your horse-drawn wagon was as heavy and rigid as a truck, you would recognize the absurdity of it at once.

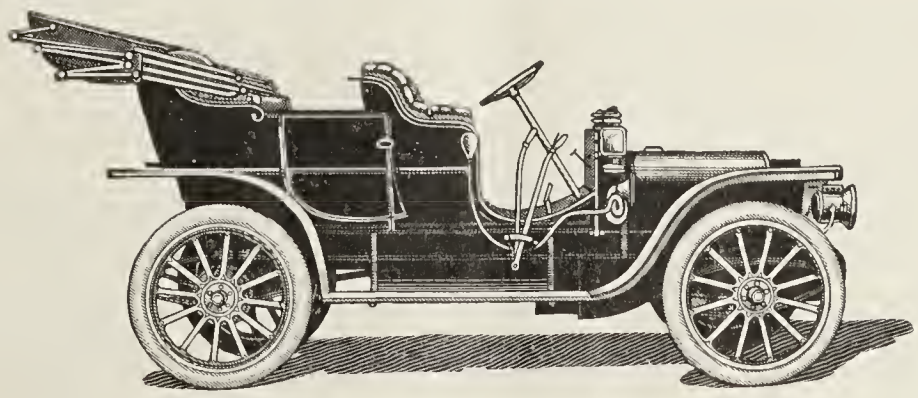
Great weight in an automobile is unnecessary. And it is a burden and expense. Not only does a light-weight automobile stand up better but it rides and controls easier under all conditions.

The Effect of Weight

Shocks result from road inequalities. The heavier the vehicle the heavier the shocks. The shocks produce strains on the whole automobile, especially on the tires. Strains are in exact proportion to the weight. Light weight then, since it reduces the force of shocks, reduces the strains and adds to the life of the vehicle. But more than that—in relieving the force of the shocks from the automobile it also relieves it from the passengers and makes easy riding. A light-weight automobile with proper frame and spring suspension gives the limit of comfort.

Further every 5 per cent increase in weight increases the wear and tear on tires 15 per cent, so that an increase of only one-third adds 100 per cent to the wear on tires.

Riding Qualities not Horse-power Determine Speed



When you want to make time your speed is not determined by the horse-power of your engine but by the way the automobile rides. This explains why it is that Franklin automobiles excel all others on American roads. Your touring-car may have 60 horse-power and its maximum speed may be 70 miles an hour, but you cannot use the power nor make the speed. The strain is too severe, both to the passengers and to the automobile. Your neighbor in his light easy-riding Franklin of less horse-power will make better speed and cover a greater distance and do it with comfort and safety. He goes along smoothly and consistently. He has less weight to handle; the passengers are not fatigued; the automobile is not racked; and he is not worn out with the strain of steering. The lighter an automobile is, especially its engine, the less weight there is on the front wheels, making it steer easily. The Franklin air-cooled engine is light and powerful. The weight of the water and water apparatus, not to mention complication, is dispensed with.

Nothing is so maddening as a fact that comes too late to be of use. Get it beforehand. Ride in a Franklin. Then ride in other automobiles over the same roads at the same speed. You will understand the meaning and value of Franklin light-weight and non-jarring, easy-riding construction.

Model D

Model D is a touring-car you can afford to own and to use every day. It is not a big expensive machine. Its sensible proportions, its ability, its handsome body, large wheels and the ease with which it handles, place it in a class by itself—an ideal touring car, not too large for city and business use, light-weight, refined and easy-riding.

In the five most severe contests in the history of automobiling a 1909 Model D won perfect scores. No other automobile won a perfect score in more than two of these contests. In the Worcester contest nearly all the contestants went through the run without road stops, but Model D was the only one to withstand the examination after the run. All others suffered penalizations due to broken, strained or loosened parts. Having half-elliptic springs and hardened steel chassis frames they suffered from strain and shocks at speed over rough roads. No other automobile has such a record. None except Franklin Model H can equal it on American roads. With its light weight and its efficient engine, Model D is more economical to maintain than many runabouts.

Model D, 2200 pounds, $2800

Model H

The average six-cylinder automobile is ponderous and heavy. The weight is increased out of proportion to the increase in power. The whole advantage of six-cylinder construction is missed. Power gained without increasing weight means increased speed and ability, and that is what you want. The six-cylinder Model H Franklin is the only light-weight large automobile. It is luxurious without the disadvantages of ponderousness and bulk. In it you can tour all day without fatigue. There is a complete absence of jarring and jolting. You feel no vibration. There is none of the burden and none of the anxiety that goes with a heavy automobile. It rides like the finest carriage.

Franklin Model H still holds the San Francisco-New York Record of 15 days and the Chicago-New York Record of 40 hours. The 1909 Model H won a perfect score in the last Glidden Tour, covering over 2000 miles without even pumping the tires. No other six-cylinder automobile has such a record and none is looked upon with such favor by owners.

Have you received our forty-page catalogue de luxe? If not please request it. No book ever treated the whole automobile question in a clearer and fairer manner. It shows why the Franklin, now in its eighth year, is the automobile for those who want the highest standard of comfort and ability. You should also read "What Franklin Owners Say," a most interesting book of facts. Get the facts beforehand.

H H FRANKLIN MANUFACTURING COMPANY Syracuse N Y

Where Health Is Concerned
Why Take Any Chances?

The great weight of scientific opinion throughout the world is hostile to the use of all artificial preservatives in food products, as being in themselves harmful and as making possible the employment of unwholesome materials and unsanitary practices.

Benzoate of Soda is a tasteless, odorless product of coal tar, medicinally used for many diseases. It is a drug, not a food.

A few scientists have announced—after brief experimentation upon healthy young men—that a limited quantity of Benzoate of Soda, administered during the experimental period, caused the subjects of the experiment no apparent injury. This but adds one more opinion on this subject.

There is no evidence anywhere that ordinary people, elderly persons, growing children and those who may have even slight impairment of health, may take indefinite quantities of this drug, or that any one may take it for an indefinite period without danger.

No manufacturer who uses good, sound, fresh raw material, maintains sanitary premises and requires neatness in his work-people, needs to use Benzoate of Soda or any other artificial preservative.

Manufacturers using Benzoate of Soda state its presence upon the labels of their products, because the Law compels them to do so—but the statements are always hidden in small type as obscurely placed as possible—a fact which, in itself, is a reflection upon the use of the substance.

The use of any drug with which to embalm the food supply of the country is unnatural, unnecessary and unjustifiable.

Heinz "57 Varieties"—like the products of many other reputable and high class establishments—are prepared without Benzoate of Soda or any other artificial preservative, and may be purchased anywhere with absolute confidence in their purity, goodness and keeping quality.

The public may choose for itself what kind of foods it will eat. If you wish to avoid prepared foods that have been drugged, read all there is printed on every food label.

Outdoor America

"A Magazine Within a Magazine"

Edited by CASPAR WHITNEY

¶ This department of Collier's has taken All Outdoors for its province. Next week's "Outdoor America" contains seventeen articles, celebrating the country-life idea. Here you become a part of the movement away from the cities and into the open-air companionships of garden and forest and water life. You are told why it pays to break away from congested city life, and what to do when you once get into the country itself—what sort of house to build, and how much it will cost; what to do with the stable and barn, lawn and garden, chicken and cow. There is much about birds, flowers and the wild things in pasture and woods. The pleasures as well as the duties of life in the open are exploited.

Snapping Big Game in Africa

¶ Our pages next week will contain the article and photographs of Darkest Africa and the Wild Beasts, just received from A. Radclyffe Dugmore, the nature photographer, whom Collier's commissioned to search the jungles and thread the forests ahead of Mr. Roosevelt—to snapshot his trail before he makes it. Remarkable photographs Mr. Dugmore has shipped us from Nairobi, British East Africa. He leads off with a "Rather Small Rhinoceros Charging My Companion." Then he casually snaps a "Passing Herd of Hartbeests." Then there is the picture of the rhinoceros which came so unpleasantly close that he had to be shot while he was being snapped. Dugmore's caravan is shown in many trying and joyous poses, tripping across rivers, dodging trouble, packing food. Again, we have a rhino, hull down on the horizon, with three tick birds on his stalwart back. Gazels keep going by the alert camera. Mt. Kilima-Njaro is photographed with the telephoto at a distance of 80 miles. Antelopes are seen, playful in their hours of ease; and, a little later, zebras, in their striped suits, visiting the Olgerei River bed, where they dig for water. Dugmore's article is headed "Snapping Afriea's Big Game."

¶ As his train puffed along, antelopes ran on the tracks in front of the engine. When they were started afoot, the Dugmore caravan nnmbered twenty-five faithful souls. "A tall giraffe accompanied us for several miles, keeping always well ahead, and occupying every available high place from which he could obtain a good view of us." Wart-hogs and fringe-eared oryxes sported around. To get an exposure on a charging bull rhinoceros required both patience and agility.

"The Woman Who Votes"

¶ Interest in Woman Suffrage has already resulted in four Western States in woman's voting for all officials, even up to the President of the United States. This interest has recently spread rapidly in the Eastern States. Most that is published on the question is strongly on one side or the other. Collier's thought its principal business was not so much to press any opinion of its own as to furnish the facts on which opinions could be based; to give a real, first-hand, unbiased account of how the suffrage works and where it is now being practised. Miss Sarah Comstock, therefore, spent a long time in the suffrage States. Her report is not an argument, but a series of close, personal observations. She takes up the effect on political life, and on family life, as she has seen it in a multitude of instances. She went out with her mind open, but her instincts conservative, and rather inclined against innovation. To what extent her opinions have been affected by her closer study of the subject can be learned from the series of three articles which begins next week with "Campaign Days in Denver."

A Genuine Red Cedar

Window Seat Chest

This chest is a beautiful dull-red natural finish, heavily bound with wide copper bands, and old-fashion flat-headed copper rivets. It is the highest perfection of ornament and utility ever attained in artistic household furniture. A tasteful, elegant treasure, and a certain protection for furs and woolens against dust, moths and dampness. Precisely the proper thing as a wedding or birthday gift. We prepay freight from factory to home, returning price and paying return freight if unsatisfactory. Send for catalog of different styles and prices. Sold DIRECT from factory.

PIEDMONT RED CEDAR CHEST CO., Dept. 16 Statesville, N. C.

TSCHAIKOVSKY
Pianist
plays on
The Knabe

"—it combines with great volume of tone, rare sympathetic and noble tone color and perfect action"

THE artistic supremacy of THE KNABE PIANO is born of its capacity for interpreting the musical ideals of great composers and players with rare subtlety.

This artistic supremacy may be traced through three generations to the creative genius of the founder of The House of Knabe, whose lofty conception of worthy musical expression continues an impetus to the maintenance of that standard of perfection which makes THE KNABE THE WORLD'S BEST PIANO.

Style J. *"upright"* Grand $500. -- Mignon *"horizontal"* Grand $750. -- Knabe-Angelus $1050.

Knabe Pianos may be bought of any Knabe representative at New York prices with added cost of freight and delivery.

Something New in Films!

Chromatic Balance

—a feature of

The "ANSCO" Film

Notice the deep tone of the hair (brown), the lighter tone of the carnation (red), the green fern and up through each tone to the white of the lilacs.

To this **Chromatic Balance** in the Ansco Film is due the faithful portrayal of the "color ratio" as found in nature and which is for the first time possible without special apparatus for orthochromatic work.

Latitude, another distinguishing feature of the Ansco Film, permits an unusually wide range of exposure, and at the same time minimizes unsuccessful results.

This film is of the highest type possible—so easily manipulated, so universal in its application, so free from defects and imperfections that it is fast becoming the choice of the knowing amateur. They fit any camera; exposure numbers always register; non-curling.

YOURS FOR THE ASKING

A complete photographic library, in two volumes, teaching the art of making prize-winning pictures. Write for it.

Independent dealers everywhere carry a full line of Ansco Film, Cyco Paper, and pure, carefully prepared photographic chemicals. If other dealers will not supply you, do not blame them. An agreement with their manufacturer forbids them. Look for the Ansco sign.

Ansco Company

My Three Stages of Life

By Count Leo Tolstoy

I FEEL very clearly the beginning of a loss of interest not only in my own personality, my joys, and sorrows—all that happily lies far behind me and is long ago buried—but in the welfare of humanity and the happiness of the world.

No longer with my former keenness can I stand forward to defend such things as self-education, temperance, and thrift. I find that I have even become indifferent to human welfare, to the great question, will the Kingdom of Heaven come or not?

Having experienced this change and reflected on its cause, I have come to the following conclusion: Every man lives through three stages of development, and at present I am in the last of these stages.

In the first stage a man lives only for himself, for his passions and impulses; for eating and drinking; for passing the time merrily; for hunting and for female society; for ambition and for vanity. His life is rich and full. So it was with me up to my thirtieth year, until my first gray hair. Other men part with this period of their lives much more rapidly.

When I had traversed this stage, I began to think of the welfare of others, of all men, of all humanity. This stage was marked by energetic work in founding elementary schools, although I should say that the wish to do that showed itself in me earlier. These interests vanished with the first years of my married life, and were reborn with terrible force when I first began to realize the vanity and emptiness of our earthly life. All my religious sentiments became concentrated on the happiness of others and on the accomplishment of the Kingdom of Heaven on earth. This aspiration was as strong as, and filled my life as completely as, my first aspiration to personal happiness.

But now I feel that this last aspiration is, in turn, dead. It has ceased to fill my life, it no longer carries me away; and I have been obliged to pose to myself the question: Was there really anything good in work directed toward helping men in their struggle against drunkenness and against superstition?

I felt that within me was being born yet a new phase of life, a new foundation of life, which must replace all the others, because it contains an aspiration to the happiness of humanity, which, in turn, contains an aspiration to personal happiness. This new foundation is work in the service of God, and the fulfilment of His commandments and His will. This is not the perfecting of one's self. No, it is something else. It is an aspiration to divine purity.

This new foundation of life consists in keeping clean the good entrusted to us by God, in the beginning of a new life, in the aspiration to a better, higher life, and in being ready always for this better life. This aspiration begins to seize me more and more strongly. I feel that it fills me entirely, supplants all other desires, and makes life as rich as it was in the former periods.

It may be that I have not made myself perfectly plain. But I feel it plainly. At the time when I had lost all interest in my personal, individual life, but had not yet acquired a religious interest (an aspiration to the general good of humanity), I was horrified by my position. But I found peace the moment I had found a religious sentiment impelling me to think of the good of humanity. In this thought, at the same time, I found full satisfaction of my desire for personal happiness.

The same thing is going on now, although my former passionate desire to make mankind happier has weakened. I am overcome sometimes by a certain terror as if I stood before an immense abyss.

But the aspiration to, and the preparation for, a new life replace the former conditions which they were born out of; and in them there is happiness both for the individual and for all humanity. Preparing for the new life, I attain at the same time my former aim, the good of humanity, more surely than when this was my only aim. Aspiring to attain God, aspiring to a purity of divine Being in myself and in my new life, I find more assuredly both happiness for humanity and for myself.

And this is entirely without haste and without exhaustion, but with the joyful consciousness of a tranquil conscience.

May God help me!

Editorials

Books

THE PRESIDENT OF HARVARD has always been a man to stir and clear the neighboring atmosphere. The United States has focused its ideas of how an American ambassador should consistently be chosen—by considering him. It has been led to remember BENJAMIN FRANKLIN and CHARLES FRANCIS ADAMS, and to reflect a little upon some recent standards. Also Dr. ELIOT has set us all again at the permanently stimulating device of choosing books. The newspapers revive lasting principles of training every time they raise this question. We too shall be pleased to hear from those of our readers who brim with preference or conviction. Three lists should not be confused, since they may well have but a small amount in common:

1. The Greatest Books.
2. Books most requisite in this day to a liberal education.
3. The writer's individual preference.

One who is ignorant of Greek might perhaps choose FITZGERALD'S "Rubaiyat" before any translation from the Greek, but he would be unwise, therefore, to put OMAR above HOMER. It is easy to conceive a mind to which the parodies of CALVERLEY or the fancies of Carroll should be indispensable, but no sound judgment could name them great, or recommend them before DANTE or GOETHE for expanding power. One of the most troublesome problems in Dr. ELIOT'S building of his five-foot shelf must lie in the space-grabbing proclivities of fiction. How many plays of SHAKESPEARE, how many essays of BACON, EMERSON, or MONTAIGNE, would occupy the space of "Tom Jones" or "War and Peace"; how many poems by HUGO, WORDSWORTH, SCHILLER? Go it, friends. Those problems to which no exact answer can be found often are of highest recompense to the devoted student.

Eloquence

"ROTTEN," declared the Republican leader of the New York Senate. "A ghastly job," said the Republican Speaker of the Assembly. "This proposal," said Boss BARNES, "reminds me of a general who, before going into battle, commanded his forces to be divided into rival camps and batter each other to pieces for a couple of days." BARNES wishes no arguments among his soldiers—the Republican voters. They are to obey. Half the commonwealths in the Union have come to direct primaries, but the bosses hope the noble Empire State may be last to sink. No State which has tried direct nominations has abandoned them, so what hope is there ultimately for New York? It is in his moderation that the viciousness of HUGHES is most apparent. The law which he favors is easy to amend, and it would probably be amended in a few years toward further eliminating the organization. If New York voters liked the sensation of having something to do with party control, they might proceed to take away that element of the proposed Hughes law which, in effect, says: "An organization committee, elected by the whole party, may make nominations, but only if the names proposed seem good to the party members as a whole." This recognition of the party system enraged the bosses even more than did the direct-primary idea in its Western form, which, according to Senator RAINES, is "socialistic, un-American," and a few other horrific things which for the moment have escaped our recollection.

Reflections on a Dinner

LEND YOURSELF to the mood of another, and you come home again refreshed and with new ideas. Fight him as unworthy or sinful or dull, and you have wasted all the time spent in his company. His work may be sound and fine, his heart kindly—but if he is *different*, we are apt to keep our eye on his limitations. The churchman is sure to penetrate to the artist's one weakness and be worried by that. The "first-nighter" marks the rigidity and overearnestness and defective humor of the preacher-type, and ends where he began—in dislike. A distinguished Italian of international fame was "entertained" at dinner the other evening by a party of young Americans. Nearly all the men present were clever performers. There were gathered a millionaire Socialist, a sporting millionaire, a famous humorist, a novelist, an artist in black and white, and a few editors. Of personal charm they had much. The scholar was visibly misplaced in such a gathering, where good fellowship and quick talk were the rule with the majority. His heavy and labored theories, uttered in a high throaty voice, annoyed the diners. To several of them he was an object of mirth, and even of scorn. He was, naturally, disappointed in American conversation, and yet one thing was obvious. The infelicitous scholar was paying the dinner the compliment of taking it seriously and giving the assembled gentlemen his best thoughts. Two sets of values were at odds there at the table, and the possessors of one set refused to see any dignity or worth in the other. Now listen to the other side. The latest Irish celebrant of conversation declares that Americans do not know how to talk, but his reason contradicts the Italian's. They are too afflicted, he says, with moral purpose. They bubble with undigested ideas. Their earnestness clogs the lightsome flow of talk. It becomes a sermon, an essay, an ethical monologue, but never a rapid performance, touching the tops of things, and now and again floating off into blue space. Between these two criticisms the reader may take his choice.

Paderewski

IN THE PERFECTION of his gift he lives in a world remote. In the rest of us the touch is heavy, the product of toil is ragged. He works in ultimate things. Doubtless, in the early days, he must have known the patience and toil of gray, unmelodious hours, the five-finger exercises that labored up and down the stubborn keys. There must have been an eternal beleaguering of the piano. He must have clamored at the unresponsive octaves and the recalcitrant tones. All these forgotten labors are woven into the texture of his cloth of gold. To our duller ears he seems in easy control of the thunders. At the crown and summit of his fame, as the world is listening to his music, he is gentle, reticent, and scornful of ease. There is no arrogance. To his inner sight the heights and depths of his art lie all unconquered. In his mind forever ring choruses that will never emerge on the keyboard. Unseen, far-heard, the music that never was in mortal reach drifts in upon him. Unrendered, it echoes through the heart of the artist, and torments him, waking and dreaming. He is kept humble by profundities which he feels but can never fathom.

Bait for Babies

OUR READERS ARE WARNED that a preposterous fake-reform organization is out gathering in shekels in a foolish appeal to vanity, using as bait a list of well-known names. Indeed, so crude are the devices of "the American Civic Alliance" that one who reads its circulars, and then becomes a member, deserves almost any fate he meets.

"The Alliance aims to be the *most exclusive* civic organization in the country."

Angels in heaven! Let us hope it will soon exclude everybody. This exclusive party is to represent "the *aggregate* intellect and conscience of the entire nation." It uses names without authority and even after express prohibition. It has chosen a title so much like that of the Civic Association that it may gather in a few careless suckers through the similarity. Anybody who sends good money to it is better parted from his wealth.

Peace Insurance

JOHN STUART MILL, in his essay "On Liberty," made the remark that half the errors of mankind were due to their tendency to leave off thinking about accepted theories. To-day, for instance, there is still life in the ancient adage, *Si vis pacem, para bellum*—if you desire peace, prepare for war—regularly quoted by advocates of massive armament, and readily finding public, journalistic, and legislative support the world over. Two colonels of the American army having recently written articles demanding increase of our national forces of "defense" (as though they were not also meant for attack), and having taken the aforesaid time-honored principle as their theme, one should be permitted to ask whether these and foreign military experts have considered what has actually been happening since the close of the Franco-German campaign in 1871, when the nations inaugurated their system of special prevention of war through the general maintenance of large standing armies. During the period in question the following states engaged in warfare once or oftener: Abyssinia, Afghanistan, Austria, Belgium, Bulgaria, Chile, China, Colombia, France, Germany, Great Britain, Greece, Guatemala, Italy, Japan, Montenegro, Orange Free State, Peru, Portugal, Russia, Salvador, Servia, Spain, Transvaal, Turkey, United States of America, Venezuela. The climax of this system of special effort to avert war by training a great many people to fight came in 1904. Then Russia, who was theoretically invincible because she had the largest army ever known, whom therefore theoretically every one feared to assail, and whose peace was theoretically hence firmly assured—well, what actually happened to Russia? This paragraph may be taken as an incomplete comment on "An Englishman's Home," which was the first play in history to run in two London theaters simultaneously, and which has now been produced in the land of liberty.

The Retired Farmer's Widow

(Golf Clubs and Country Papers Please Copy)

FARMERS WHO RETIRE and move to town are more reckless in their neglect of fresh air and exercise than city men. City men, with their golf and other forms of outdoor amusement, manage to make their play help their bodies. They are constantly the recipients of free advice. What city man has not been warned of the advantages of cold baths, of suitable clothing, of sleeping with the window open, of temperate eating, and of exercise in the open air? But the poor retired farmer, with a fat bank account and nothing to do, is often a victim of the prosperity which takes him away from his work and places him in a community where he has nothing to do. He sits around the house, plays cards with his cronies, and eats more than he can stand without the physical labor to which he has been accustomed. The general truth of this statement holds in thousands of small towns throughout the great Middle West especially. The "women-folks"—particularly the wives—are not so often victims of the easier life of the town after the rough work of the farm. This is because they usually continue to do their own housework, thus keeping up a wholesome amount of exercise. A Wisconsin farmer, sixty-four years of age, told us the other day how he retired from the farm twenty years ago, and how he came to continue the physical exercise which keeps him in good condition. It was a country editor in Iowa who happened to give him the right advice at the right time. He had just moved into town, and turned the farm over to his son-in-law, when he chanced to visit the editor, who was an old friend. Here is what the editor said to him:

"You are forty-five now, CHARLEY, and you have moved into town to take it easy and have a good time. Well, I'll give you from two to four years to live. I have lived in this one place for thirty-five years, and I have seen a perfect string of prosperous farmers retire, move to town, and then die—quickly. Their average life after they leave off work is about three years. This is not guesswork. It is a calculation I have made from facts which I have collected."

This scared CHARLEY. So he kept at the woodpile and the garden and the pump. It isn't easy to do work you don't have to do, especially in bad weather. After the generalizations already indicated, we called for more specific information about CHARLEY'S own town (a beautiful little place of two thousand population located in the center of a rich farming district in Wisconsin). "All right," he said, "let's have a pencil and a sheet of paper." Then he took the main street of his town, which is inhabited chiefly by well-to-do retired farmers, and began to make a list of the widows. The significance of this enumeration was somewhat startling. There were twenty-seven, or, in other words, over half of the houses on that street were occupied by the widows of retired farmers!

Portrait of a Woman

BEAUTIFULLY SAINTE-BEUVE speaks of a certain woman as wearing a star upon her forehead. Of course, what he means is that above her moral zeal and tact, wit of words, and tenderness of heart, she had the final consecration of genius—that sublimation of personality which catches up all the pedestrian qualities into a white light, and conquers with effortless immediacy. You meet a thousand people (all day and for many days you meet them) in the dreary office appointments, in clubs, on the street, in the haunts of the semi-civilized. Then comes one, shedding soft light, a beautiful stranger in the workaday turbulence, and straightway you forget what manner of men and women were all the rest. Such were the form and address of SHELLEY. Such was the youth of TENNYSON. In that choice company of high intelligences our own JANE ADDAMS moves. She is not as one of us ordinary people, nor yet as one of the average doers of good. They, too, have earnestness. They, too, live close to suffering. They move toward the cure. Long and accurately they write on the ills of our modern life. With her these things exist, but with a difference. She writes hardly a paragraph but is shot through with poetry. She ministers to her generation in daily act and large vision and in the pensive loveliness of her face, the ardent and prevailing spirit surmounting frailty. She is not Methodist or Socialist; no cult owns her; no panacea dominates her. To her the races come for interpretation. She opens her life to the life of the world. The tides of her spirit are one with the hopes and fears of millions. The head is bowed and the eyes downcast because that intense personality has lost itself in the lives of the human family. She has seen the work of her hands surpass her dreams, but she carries behind it all the knowledge of futility. In her weariness and loneliness she works, even as her peers in every land and time.

What Is She Worth?

A TEACHER is writing on the blackboard. As she looks over the panels covered with close script, the thought crosses her mind, what is she hired to do? Several hours had been spent the evening before in planning, arranging, considering, proportioning, and weighing her material—in diagramming, outlining, analyzing. The power to do this did not come without some degree of special training. To produce these figures in visible form on her blackboard is, assuredly, not the end. There remains, first, the work of supervising the copying into the note-books of, perhaps, two hundred pupils. These books must then come under her inspection. To keep the records involves a system of bookkeeping more or less complex. Of the two hundred pupils, one hundred and fifty may be relied upon to be good, average, reasonably earnest students, who perform their tasks without undue urging or compulsion. The remaining fifty may be classified as weaklings, shirks, incompetents, defectives, absentees. A certain amount of energy is expended in seeking these out, tracking them down, bringing them before her tribunal to answer for their faults. Herewith follow hearings, given to listen to excuses and reasons for delinquencies, which must then be duly weighed and considered. She must enter into and administer the offices of the lawyer in weighing this testimony; of the doctor because, frequently, questions of health are involved; and it becomes her province to bring to the notice of proper authorities cases of deafness, eye trouble, catarrhal adenoids, and other ills, possibly misunderstood and neglected, but which incapacitate the pupil for the required work. There enter also the duties of the minister in preaching a higher regard for duty, in developing a finer moral sense, in urging to a more worthy effort these specimens of frail humanity. She feels called upon to exercise the patience of the saint, to pour out the full measure of his faith, his hope, and his charity. Having encountered here "this more or less stubborn spirit of resistance," her next office is to exercise the functions of the judge. She understands that her decision must not vary, in the estimation of a hair, in the nice adjustment between censure and pity; but this decision having been rendered, in justice, tempered with mercy, her office changes to that of executor of her own decree, and she may not rest until she has performed with a sure hand the fulfilment of the law.

Why?

MAN DISCUSSES WOMAN persistently and with a never-ending supply of the interrogation point. Take fashion, for example, which is always brought to the front by this cheerful Easter season. Why do women dress as elaborately as they can? It is not to attract men, for they are more readily charmed by astute simplicity. We yield the floor for an instant to ROBERT BURTON—not for one of his most ferocious allegations about women, but for the following:

"Why do they adorn themselves with so many colours of herbs, fictitious flowers, curious needleworks, quaint devices, sweet-smelling odours, with those inestimable riches of precious stones, pearls, rubies, diamonds, emeralds, etc.? Why do they crown themselves with gold and silver, use coronets and tires of several fashions, deck themselves with pendants, bracelets, ear-rings, chains, girdles, rings, pins, spangles, embroideries, shadows, rabatoes, versicoloured ribbands? Why do they make such glorious shews with their scarfs, feathers, fans, masks, furs, laces, tiffanies, ruffs, falls, cauls, cuffs, damasks, velvets, tinsels, cloth of gold, silver, tissue? with colours of heavens, stars, planets? the strength of metals, stones, odours, flowers, birds, beasts, fishes, and whatsoever Africa, Asia, America, sea, land, art, and industry of man can afford?"

Nay, BURTON, ask us not. Among all the numerous readers of this didactic sheet, you shall find not one who can inform you. We have many reasons in our head, some favorable to women, some not, but none of these is convincing enough to be worth printing as an answer to old BURTON'S queries.

Easter

THIS IS THE SEASON when all things rise from the dead. It is nature's resurrection. The good green things lift up their heads and salute the world. Every quick and living creature feels beatified by the clear procession of purple-and-golden hours. Tenderly each day fills its blue urn with fire. Silently, but with somewhat of pomp, the immense night leads out her bright squadrons, radiant galaxies, and sidereal fire, swift planets and steady stars, the gently throbbing moon. From winter, which pens us in offices with persons for whom we do or do not greatly care, which binds us to routine, we break forth to open spring days and wide country, to freedom when the heart swells and life seems for a brief season as if it might be lived in the great stride and manner that glorify our dreams. We leap out, trailing clouds of glory as we go. For most of our days we have been living under a cloud. Never ceasing in the deep wells of the subconscious is a sense of insecurity, the dread of a sharp blow or diffused misfortune impending, that rides life like an Old Man of the Sea. How to drown out the sense of pain and sadness that inheres in the days as they pass is, however unconsciously, the attempt of all men. "What shall we do to be saved?" is the age-long cry of the race—saved from ourselves, cramping routine, futility of striving, success that breaks in the fingers—saved from foreknowledge of death. Sweet are even the uses of adversity, if not too prolonged and sharp. Easter, and the like emancipating days, help us to escape from consciousness of failure and peril and sorrow. There are granted us good hours, golden weather in choice havens, before we beat back to open sea again—to the groaning of cordage, smell of bilge-water, and heaving of the weary ship.

A region of wild natural beauty, out of the reach of tourist-touchers and scenic highbinders

The New Olympic National Park

CONGRESS has set aside the heart of one of the great mountain ranges of the Pacific Northwest for the enjoyment of the people for all time. It is a region of wild natural beauty, out of the reach of tourist-touchers and scenic highbinders. It has just been made a Government reservation, where the stage drivers, the guides, and the innkeepers must live up to Government regulations or get off the reservation.

This new national park comprises the enormous area of 460,000 acres—10,000 good-sized farms. And yet in all of it there is not room for a single homestead that could grow enough grain or even raise enough eggs to supply a small family. It is, almost literally, "a place where the world stands edgewise."

Seattle is unique as being the only city in the country which has a national park within sight of its front yard. In this instance, the Olympic Park is the first thing which practically every resident of Seattle sees when he arises in the morning, when its peaks catch the first light of the sun upon their eastern slopes of snow, and the last thing he sees in the evening when even the snow peaks stand out dark and jagged against the crimson of the sinking sun.

There is a great mass of these peaks, clustered about Mount Olympus—practically in the center of the great park—but all of them are nearly of the same height—from 7,000 to 8,300 feet. It is as though the master mason who built them had laid a rule along the top and his subordinate workmen had done their best to fill in the line to a carefully saw-toothed level.

It has only been within the last twenty years that the Olympics have been explored and mapped, and the necessity for setting the space aside as a reserve for the protection of its undefiled natural beauties and the protection of its game realized. As far as game is concerned, it is one of the earthly paradises. It is estimated that there are at present within the borders of the great park at least five thousand elk, browsing in great herds upon the snow slopes of the mountains. There are about an equal number of deer, and roaming over the peaks are thousands of bears, cougars, wildcats, and other varmints so numerous that the Government officials are already considering a hunting expedition for their extinction.

At the present time, strangely enough, the park contains no mountain goats or sheep, although they do exist in the Cascade Range, only a few miles away. It is planned to import goats into the park and afford them there a refuge from the hunters, who are rapidly killing them off.

The park is readily accessible both from the north and south. On the north, one enters from Port Angeles, a little town on the Strait of San Juan de Fuca, and from the south from Hoods Canal, an arm of Puget Sound, which penetrates the great peninsula in which the park is located. Its ease of access was one of the reasons which led the Government to the step of preserving it from the inroads of the pioneer fortune-hunter and leaving it free for the enjoyment and benefit of all.

This new national park comprises the enormous area of 460,000 acres—10,000 good-sized farms

Easter Eve

By Bliss Carman

IF I should tell you I saw Pan lately down by the shallows of Silvermine,
Blowing an air on his pipe of willow, just as the moon began to shine;
Or say that, coming from town on Wednesday, I met Christ walking in Ponus Street;
You might remark: "Our friend is flighty! Visions, for want of enough red meat!"

THEN let me ask you. Last December, when there was skating on Wampanaw,
Among the weeds and sticks and grasses under the hard black ice I saw
An old mud-turtle poking about, as if he were putting his house to rights,
Stiff with the cold perhaps, yet knowing enough to prepare for the winter nights.

AND here he is on a log this morning, sunning himself as calm as you please.
But I want to know, when the lock of winter was sprung of a sudden, who kept the keys?
Who told old nibbler to go to sleep safe and sound with the lily roots,
And then in the first warm days of April—out to the sun with the greening shoots?

BY night a flock of geese went over, honking north on the trails of air,
The spring express—but who despatched it, equipped with speed and cunning care?
Hark to our bluebird down in the orchard trolling his chant of the happy heart,
As full of light as a theme of Mozart's—but where did he learn that more than art?

WHERE the river winds through grassy meadows, as sure as the south wind brings the rain,
Sounding his reedy note in the alders, the starling comes back to his nest again.
Are these not miracles? Prompt you answer: "Merely the prose of natural fact;
Nothing but instinct plain and patent, born in the creatures, that bids them act."

WELL, I have an instinct as fine and valid, surely, as that of the beasts and birds,
Concerning death and the life immortal, too deep for logic, too vague for words.
No trace of beauty can pass or perish, but other beauty is somewhere born;
No seed of truth or good be planted, but the yield must grow as the growing corn.

THEREFORE this ardent mind and spirit I give to the glowing days of earth,
To be wrought by the Lord of life to something of lasting import and lovely worth.
If the toil I give be without self-seeking, bestowed to the limit of will and power,
To fashion after some form ideal the instant task and the waiting hour,

IT matters not though defeat undo me, though faults betray me and sorrows scar,
Already I share the life eternal with the April buds and the evening star.
Our minister here, entrenched in doctrine, may know no doubt upon Easter Eve.
And when it comes to the crucial question, Doctor, you skeptic, you too believe!

A Moonlight Fable

The Little Man and His Gleaming Suit

By H. G. Wells

COPYRIGHT 1909 BY H. G. WELLS

THERE was once a little man whose mother made him a beautiful suit of clothes. It was green and gold and woven so that I can not describe how delicate and fine it was, and there was a tie of orange fluffiness that tied up under his chin. And the buttons in their newness shone like stars. He was proud and pleased by his suit beyond measure, and stood before the long looking-glass when first he put it on, so astonished and delighted with it that he could hardly turn himself away.

He wanted to wear it everywhere and show it to all sorts of people. He thought over all the places he had ever visited and all the scenes he had ever heard described, and tried to imagine what the feel of it would be if he were to go now to those scenes and places wearing his shining suit, and he wanted to go out forthwith into the long grass and the hot sunshine of the meadow wearing it. Just to wear it! But his mother told him, "No." She told him he must take great care of his suit, for never would he have another nearly so fine; he must save it and save it and only wear it on rare and great occasions. It was his wedding suit, she said. And she took his buttons and twisted them up with tissue paper for fear their bright newness should be tarnished, and she tacked little guards over the cuffs and elbows and wherever the suit was most likely to come to harm. He hated and resisted these things, but what could he do? And at last her warnings and persuasions had effect, and he consented to take off his beautiful suit and fold it into its proper creases and put it away. It was almost as though he gave it up again. But he was always thinking of wearing it and of the supreme occasion when some day it might be worn without the guards, without the tissue paper on the buttons, utterly and delightfully, never caring, beautiful beyond measure.

ONE night when he was dreaming of it, after his habit, he dreamed he took the tissue paper from one of the buttons and found its brightness a little faded, and that distressed him mightily in his dream. He polished the poor faded button and polished it, and if anything it grew duller. He woke up and lay awake thinking of the brightness a little dulled and wondering how he would feel if perhaps when the great occasion (whatever it might be) should arrive, one button should chance to be ever so little short of its first glittering freshness, and for days and days that thought remained with him, distressingly. And when next his mother let him wear his suit, he was tempted and nearly gave way to the temptation just to fumble off one little bit of tissue paper and see if indeed the buttons were keeping as bright as ever.

He went trimly along on his way to church full of this wild desire. For you must know his mother did, with repeated and careful warnings, let him wear his suit at times, on Sundays, for example, to and fro from church, when there was no threatening of rain, no dust blowing nor anything to injure it, with its buttons covered and its protections tacked upon it and a sunshade in his hand to shadow it if there seemed too strong a sunlight for its colors. And always, after such occasions, he brushed it over and folded it exquisitely as she had taught him, and put it away again.

NOW all these restrictions his mother set to the wearing of his suit he obeyed, always he obeyed them, until one strange night he woke up and saw the moonlight shining outside his window. It seemed to him the moonlight was not common moonlight, nor the night a common night, and for a while he lay quite drowsily with this odd persuasion in his mind. Thought joined on to thought like things that whisper warmly in the shadows. Then he sat up in his little bed suddenly, very alert, with his heart beating very fast and a quiver in his body from top to toe. He had made up his mind. He knew that now he was going to wear his suit as it should be worn. He had no doubt in the matter. He was afraid, terribly afraid, but glad, glad.

HE GOT out of his bed and stood for a moment by the window looking at the moonshine-flooded garden and trembling at the thing he meant to do. The air was full of a minute clamor of crickets and murmurings, of the infinitesimal shouting of little living things. He went very gently across the creaking boards, for fear that he might wake the sleeping house, to the big dark clothes-press wherein his beautiful suit lay folded, and he took it out garment by garment and softly and very eagerly tore off its tissue-paper covering and its tacked protections, until there it was, perfect and delightful as he had seen it when first his mother had given it to him—a long time it seemed ago. Not a button had tarnished, not a thread had faded on this dear suit of his; he was glad enough for weeping as in a noiseless hurry he put it on. And then back he went, soft and quick, to the window and looked out upon the garden and stood there for a minute, shining in the moonlight, with his buttons twinkling like stars, before he got out on the sill and, making as little of a rustling as he could, clambered down to the garden path below. He stood before his mother's house, and it was white and nearly as plain as by day, with every window-blind but his own shut like an eye that sleeps. The trees cast still shadows like intricate black lace upon the wall.

The garden in the moonlight was very different from the garden by day; moonshine was tangled in the hedges and stretched in phantom cobwebs from spray to spray. Every flower was gleaming white or crimson black, and the air was aquiver with the thridding of small crickets and nightingales singing unseen in the depths of the trees.

There was no darkness in the world, but only warm, mysterious shadows, and all the leaves and spikes were edged and lined with iridescent jewels of dew. The night was warmer than any night had ever been, the heavens by some miracle at once vaster and nearer, and spite of the great ivory-tinted moon that ruled the world, the sky was full of stars.

The little man did not shout nor sing for all his infinite gladness. He stood for a time like one awe-stricken, and then, with a queer small cry and holding out his arms, he ran out as if he would embrace at once the whole warm round immensity of the world. He did not follow the neat set paths that cut the garden squarely, but thrust across the beds and through the wet, tall, scented herbs, through the night stock and the nicotine and the clusters of phantom white mallow flowers and through the thickets of southern-wood and lavender, and knee-deep across a wide space of mignonette. He came to the great hedge and he thrust his way through it, and though the thorns of the brambles seored him deeply and tore threads from his wonderful suit, and though burs and goosegrass and havers caught and clung to him, he did not care. He did not care, for he knew it was all part of the wearing for which he had longed. "I am glad I put on my suit," he said; "I am glad I wore my suit."

BEYOND the hedge he came to the duck-pond, or at least to what was the duck-pond by day. But by night it was a great bowl of silver moonshine all noisy with singing frogs, of wonderful silver moonshine twisted and clotted with strange patternings, and the little man ran down into its waters between the thin black rushes, knee-deep and waist-deep and to his shoulders, smiting the water to black and shining wavelets with either hand, swaying and shivering wavelets, amid which the stars were netted in the tangled reflections of the brooding trees upon the bank. He waded until he swam, and so he crossed the pond and came out upon the other side, trailing, as it seemed to him, not duckweed, but very silver in long, clinging, dripping masses. And up he went through the transfigured tangles of the willow-herb and the uncut seeding grasses of the farther bank. And so he came glad and breathless into the high-road. "I am glad," he said, "beyond measure, that I had clothes that fitted this occasion."

THE highroad ran straight as an arrow flies, straight into the deep blue pit of sky beneath the moon, a white and shining road between the singing nightingales, and along it he went, running now and leaping, and now walking and rejoicing, in the clothes his mother had made for him with tireless, loving hands. The road was deep in dust, but that for him was only soft whiteness, and as he went a great dim moth came fluttering round his wet and shimmering and hastening figure. At first he did not heed the moth, and then he waved his hands at it and made a sort of dance with it as it circled round his head. "Soft moth!" he cried, "dear moth! And wonderful night, wonderful night of the world! Do you think my clothes are beautiful, dear moth? As beautiful as your scales and all this silver vesture of the earth and sky?"

And the moth circled closer and closer until at last its velvet wings just brushed his lips. . . .

And next morning they found him dead with his neck broken in the bottom of the stone pit, with his beautiful clothes a little bloody and foul and stained with the duckweed from the pond. But his face was a face of such happiness that, had you seen it, you would have understood indeed how that he had died happy, never knowing that cool and streaming silver for the duckweed in the pond.

"We'd stop at a flower stand at the corner of Walnut and Third, and I'd get her a bunch of flowers"

The Private Detective

The Romance of the Never-Failing Bouquet

By Arthur Stanwood Pier

Illustrated by George Brehm

"AND that the defendant did unquestionably sound his horn and that he was proceeding with due caution on the right side of the road is unquestionably established by the testimony of these witnesses." Broxton Bryce, pacing back and forth in the law office, delivered the words ponderously to the pretty young stenographer, whose pencil made quick jottings in her note-book. "Wait a minute, Miss Kelly; how many times have I said 'unquestionably'?"

"Five times in the last three sentences," reported the stenographer.

"Funny how positive we get about all these things," Broxton muttered. "Well, never mind now; I'll change that later." He paced in silence while the stenographer's eyes followed him with a certain doleful attentiveness. Suddenly he turned to her. "Look here, Miss Kelly, where are your flowers to-day?"

She looked startled; a flush overspread her face; then she dropped her eyes without making any answer.

"I can't dictate to you unless you have flowers to play with—to take your mind off me when I'm stuck," Broxton continued. "I've felt there was something wrong in this office all day; now I know what the trouble is.—John!" He summoned the office boy and slipped a coin into his hand. "Go down to the flower shop on the corner and get me a dozen pink carnations; bring them to me as quick as you can. After they come, we'll go on with the dictation, Miss Kelly."

With a wistful little smile the young stenographer rose and returned to her desk in the outer room. Broxton seated himself at his own desk, meaning to straighten out his thoughts. But Miss Kelly intruded upon his mind. In the six months that Broxton had been in the office of Starr and Parsons, Miss Kelly had displayed daily a bouquet of some sort; and Broxton's dictation had often been facilitated by her habit of burying her nose in her flowers and seeming perfectly restful and contented while she waited for his words. She had always radiated gaiety and cheerfulness—until this morning, when she had made Broxton aware first of her listless melancholy and next of her lack of floral adornment.

Soon the office boy returned with the carnations, and Broxton called:

"Now, Miss Kelly, I'm ready."

She came to him with a shy, reluctant smile; he put the bouquet into her hand.

"That makes you look more natural," he said. "Now we'll begin. 'That the plaintiff's contention is wholly at variance with the facts—'" Broxton resumed, pacing back and forth. There were frequent interruptions, during which Miss Kelly held the carnations to her nose and sniffed them appreciatively. But her eyes retained their disturbing expression of gloomy attentiveness.

Afterward when she had returned to the outer room and was seated at her typewriter transcribing her notes, Broxton could see her through the open door. And soon, glancing up from his law book, he observed that she was holding her handkerchief to her eyes; although she was turned three-quarters away from him, she was unquestionably—as Broxton would have said—crying.

He watched her with anxiety. It was quite unlike the gay, merry little girl to cry. He felt relieved when she put down her handkerchief and, after passing a tidy little hand over her tidy brown hair, resumed her swift clatter on the keys. But just as Broxton was beginning to think that her troubles could not have been very deep, the clicking of the typewriter ceased; she had reached for her handkerchief again. She did not, as before, indulge in a prolonged swabbing of wet eyes; it was a brisk, irritated dab that she gave them, and might have been accompanied with advice to herself to sit up and be sensible. Then she pounded away once more upon the keys. But twice after that from his ambush of piled-up law books Broxton saw her resort to the handkerchief—as if, do what she would, her eyes would fill with tears. The flowers that he had given her stood forgotten in the glass on her desk; she did not consult them for comfort. Yet Broxton had a dim impression that on every day before this she had paused in her work every few moments to regale herself with a breath of her flowers and to indulge in a smile. Being himself sympathetic by age and experience, he had connected her daily bouquets with romance. But if romance did indeed exist, she had never allowed more than the symbols of it to cross the office threshold with her; Broxton could not remember that he had ever seen Miss Kelly engaged in conversation with any young man.

Her private grief, whatever it was, ceased to bother him when he left the office. He took a train to a station ten miles out of town; a young lady in a broad-brimmed straw hat and a white muslin dress met him and drove him to a large house with terraced lawns and a sunken garden; and on the piazza overlooking the garden Broxton Bryce achieved that evening the happiness which for two years he had been pursuing. Why it should have taken him two years was something which the young woman—the moment after it had happened—confessed herself now unable to understand; and why he should ever have achieved it at all was something which the young man—in the same wonderful moment—confessed himself wholly at a loss to explain. Having thus acknowledged a complete reversal of the positions which each had stubbornly maintained during that long period—but we must not become involved in the trivial intricacies of these young people's minds.

It was nearly midnight when Broxton took the last train to the city. He had resisted the invitation to spend the night; it was imperative that he should interview a witness at seven o'clock the next morning.

At one o'clock, just as it was beginning to rain, Broxton arrived at the door of his temporary home. This was a small apartment house in which he had for the past month been sharing Francis Shreve's apartment. His own house was closed and boarded up, during his family's absence in Europe.

The outer door of the apartment house was locked. Broxton felt in his pocket and found his key not there. He had had them during the day, for he had unlocked the drawer in his desk where he kept certain private papers; he must have left the keys hanging in the drawer. He pressed the bell and waited; he held his finger on it until the finger was numb; but the janitor never came. Evidently the bell was out of order.

The janitor's windows below the street were so protected by iron gratings that Broxton's efforts to pound on them were futile. The rain came down harder. He had less than fifty cents in his pockets; it occurred to him that he might be unsuccessful in negotiating at any hotel for a night's lodging. He thrust his hands into his coat pockets and stood pondering; his right hand closed upon a large key. He drew it out and looked at it; and then at the mirthful thought which it suggested he smiled.

When his family had gone abroad, he had first taken lodgings in a boarding-house not far from Shreve's apartments. He had been there less than two weeks when Shreve had rescued him. By some oversight on the part of the landlady as well as of himself Broxton had escaped without giving up his key to the house, and only a few days before, being pricked by a dilatory conscience, he had removed that key from his key-ring, thinking that when he next passed the house he would stop and return it. Then he had forgotten to carry out that honest purpose. Now he thought: "There's a chance that nobody's occupying my old room. If that's so, they'll think in the morning they've been entertaining ghosts."

So, highly amused at the thought, he turned up his coat collar and ran through the rain two blocks west. He came into a narrow street, dark, quiet, and empty, tiptoed up a flight of steps with an iron railing, and inserted the key in the lock. For a moment he hesi-

tated; there was something burglarious about this entrance which chilled his blithe spirit: then, secure in the reflection that he was doing no wrong, and that the landlady actually owed him two weeks' lodging, he turned the key and entered. The door groaned and rattled when he closed it, and he stood for a moment apprehensive. Then he thought to himself: "How absurd! As if they weren't used to having boarders come in late!" and he proceeded boldly up the stairs.

His room had been up two flights at the back. The door was open—an encouraging circumstance. He entered softly. Through the dark he felt his way to the bed and touched it with a gently inquisitive hand. No one was inhabiting it.

Elated, Broxton fumbled round on the mantelpiece for matches, but finding none proceeded to undress in the dark. He opened the windows and raised the blinds so that the morning light should awaken him at an early hour, and then in his underclothes crawled into bed. In a few moments he was asleep.

It was not the morning light which awakened him. He opened his eyes to blink at the flare of the three naked gas-jets of the chandelier. A young man with a straw hat tilted on the back of his head sat on a trunk smoking a cigar and stared at him in silence.

"Hello," said Broxton from the pillow. "Is this your bed?"

"Be shot if I know," returned the stranger gloomily. "So many things that I thought were mine seem not to be. I've lost my girl and my job to-day; keep the bed."

"Say," said Broxton, putting his feet out on the floor, "I'm sorry. I'll tell you just how it happened." And while he dressed, he explained the circumstances to the somber young man on the trunk.

"That's all right," said the young man. "But what are you going to do now?"

"I don't know. You might give me a piece of your floor."

"Sure; I wouldn't turn you out. We can match to see who'll take the bed and who'll take the floor."

"No, we won't. The bed's yours."

"After you, Alphonse. All right. Have a cigar?"

"Yes, thank you."

"My name's Perch," said the host. "What's yours?"

"Bryce," returned Broxton.

They sat quietly smoking. "Sure you don't mind sitting up a little while?" asked Perch.

"I'll sit up as long as any man if I have something to smoke," Broxton answered.

"And drink." Perch produced glasses and a bottle of whisky from a cupboard. "Pour out your drink, and then I'll take it into the bathroom and fill it."

"Full up," said Broxton, and a moment later through the open door he heard Perch letting the water run.

"I've been sitting in a poker game to-night," Perch said when he returned. "Here's looking at you. Seemed as if I ought to hold wonderful cards after what had been dealt me through the day. Say, you never saw anything like it. Along about one o'clock I held four jacks against four kings. That put me out all right. I guess I have about thirty-one cents left in the bank."

Broxton glanced at him, wondering if he was preparing to ask for a loan. He must have betrayed his questioning thought, for instantly Perch said:

"But that doesn't worry me. My credit's good, and I can get a job to-morrow—if I want it. The thing is, do I want it?"

He meditated so gloomily that Broxton was impelled to ask: "Why not?"

"I don't know whether to stay round here any more or not. Maybe I'd better light out for the West or Mexico or the Klondike—I don't much care." He paused, and after a moment he added, as if talking to himself, unconscious of another's presence: "Well, I don't want to stay round where I'll keep running into *her!*"

"Maybe you're quitting too soon. Maybe she doesn't know yet what she does want."

This sympathetic suggestion seemed to win Perch's confidence.

"It's not my fault if she doesn't," he said. "I used to walk downtown with her every morning. We'd stop at a flower stand at the corner of Walnut and Third, and I'd get her a bunch of flowers; the kid that kept the stand always had one ready for us at half-past eight every morning. Well, it went along that way, and I'd keep asking her every few days and at last every few hours if she wouldn't marry me. And every time she'd say no, certainly not, but with a laugh and a look that I thought meant not yet, but soon. That's all a man can tell about a girl's laugh and look." Again he relapsed into moody meditation, and again Broxton prompted him with the suggestion:

"Maybe you're quitting too soon."

"Wait till I tell you. I made up my mind I was giving her too good a time; she'd have to realize this sort of thing couldn't go on. She knew me as well as she'd be likely to short of marrying me. So last night I put it to her straight. I said this was the last call and if it didn't connect I was going out of business for good. She said she was sorry to hear it and she would try to get along. Then I asked her if she felt sure she could never marry me, and she said that perhaps she might if I grew a foot taller and developed a sympathetic voice like the man's in the office where she worked."

"I'd have asked her right off about that man," said Broxton.

"You bet I did. 'He has a voice like Bryan, and a mind like Daniel Webster,' she said. 'When he sits and talks his speeches to me, all about torts and habeas corpus and things like that, how can you expect me to think of a man who writes advertisements for a breakfast food?' 'Well,' I said, 'I should think that would be just the time when you could think of me—when you don't understand a word he's saying.' 'Oh, no,' she answered, 'I get hypnotized by him. I feel I can look up to his intellect. The only man I could ever marry would be one that knows more than I do. And he knows such a lot more than either you or me.' There's where I got mad and made a bad break."

He shook his head dolefully and took a drink. "How was that?" asked Broxton.

"I said: 'That may all be, but you can't marry those that don't ask you.' Then the real trouble began; we handed each other hot ones, for she was mad, and I wasn't going to back down. 'All right,' I said at last. 'Either you've been just amusing yourself at my expense or you haven't, and I'm going to know to-night which it is. Here I've been seeing you day in, day out, giving you flowers every day—look here,' I said, 'haven't you ever had any sentiment at all about those flowers? Has it just been all a grab for personal adornment?' I put it a shade softer than that to her, but that was the idea."

"And what did she say?"

"She said she didn't know what I meant by sentiment, but she had found my flowers useful. I asked her how, and then—oh, gee!" Perch poured himself another drink of whisky and withdrew to fill the tumbler in the bathroom.

"If she found the flowers useful," prompted Broxton, and at once Perch exploded.

"What do you think she had the nerve—! She said that sometimes What's-his-name, the tall high brow in the office that hands her the long talk, gets held up for a word. And then, she says, she remembers my flowers and buries her nose in them, so as not to seem impatient and make him nervous. Yes, she said, my

The Mandan Priest

By Edward W. Thomson

Illustrated by Maynard Dixon

THEY *call me now The* Indian *Priest,*
Their fathers' fathers did not so,
The very Mandan name hath ceased
From speech since fifty years ago.
I am so old my fingers fail
My trembling rosary beads to tell,
Yet all my years do not avail
My Mandan memories to quell.

THE *whole flat world I've seen how changed*
Within my lifetime's hundred years;
O'er plains where herding buffalo ranged
Came strange new grass with white men's steers,
The lowing cattle passed as dreams,
Their pastures reared a farmer race;
Now city windows flash their gleams
Nigh our old Monastery's place.

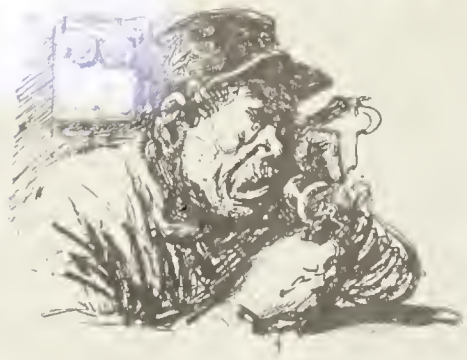
THE *Prior gives to me no more*
Even a task of inward praise,
The Brethren bear me through our door
To bask me here on summer days;
I am so old I can not kneel,
I can not hear, I can not see,
Often I wonder if I feel
The very sunbeams warming me.

YET *do I watch the Mandan dogs*
And Mandan ponies slain for meat
That year the squaws chewed snakes and frogs
That babes might tug a living teat,
And Mandan braves in daylight dance
Gashed side and arm and painted breast,
Praying The Manitou might trance
No more the buffalo from their quest.

A CIRCLED *plain all horse-high grassed*
Our mounting scouts beheld at dawn,
They found naught else, though far they passed
Apart before the sun was gone;
Each night ride back through starlit lanes
They saw the tepee sparks ascend,
And hoped, and sniffed, and knew their pains
Of famine had not yet an end.

ALONE *within his magic tent*
The new-made Midi wrought the spell
That soothed Life's Master to relent
In years the Old remembered well.
He cried: "The Mission Priests have wreaked
Some curse that balks the Ancient Art!"
"Thou useless Fool," the War-chief shrieked,
And sped the knife-thrust to his heart.

WITH *that "What comes?" my mother screamed.*
How quick the squatted braves arose!
Far in the south the tallest deemed
He saw the up-seared flight of crows;
Above the horse-high grass came slow
The lifted Cross, a tonsured head,
And what the meaning none could know
Until the black-robed rider said:—



"MANDANS, *I bear our Mission's word—*
Your children, brought to us, shall eat."—
Scarce had the fierce young War-chief heard
Ere fell the Black-robe from his seat;
The Chief held high the reeking knife,
He frowned about the Woman's Ring,
And yet my mother's face took life
Anew in pondering the thing.

SHE *stole at night the dead Priest's scrip,*
His meager wallet's hard-baked food,
His Crucifix, his waist-rope strip
All blackened with his martyr blood;
Through dark, day-hiding, hand in hand,
We traced his trail for ninety mile,
She starved herself that I might stand,
She spoke me comfort all the while:—

SO shalt thou live, my little son,
The white man's magic shalt thou learn,
And when the hungry moons are run
Be sure thy mother will return;
Oh sweet my joy when, come again,
I find thy Mandan heart untamed
As fits a warrior of the plain,
That I, thy mother, be not shamed."

SHE *left me while the black-robed men*
Blest and beseeched her sore to stay,—
No voice hath told my heart since then
How fared my mother's backward way.
Years, years within the Mission School,
By love, by prayer they gained my heart,
It held me to our Order's rule,
From all the Mandan life apart.

FROM *tribe to tribe, through sixty years,*
The Mandan Priest for Christ he wrought,
And many an Indian heart to tears,
And many a soul to God he brought,
Yet do I hear my mother's voice
Soft lingering round her little son,—
And, O dear Lord, dost Thou rejoice
In all my mother's child hath done?

Hats Is Hats

The Calf, the Crate, and the Millinery

By Ellis Parker Butler

Illustrated by Boardman Robinson

FOR five minutes the telephone bell had been ringing as hard as it could ring in the office of the Interurban Express Company at Westcote, and every minute Mike Flannery was getting madder. He glared at the telephone, and he was so mad that for two cents he would have taken down the receiver and said something.

"Number 76 don't answer," said the telephone girl sweetly to the party on the other end of the wire. "Shall I ring 'em again?"

Mrs. Madden straightened up and her face hardened. She glared at her telephone.

"You ring until he does answer!" she snapped. "If that man hasn't time to attend to bus—"

When the bell again began its irritating, maddening jingle, Mike Flannery was not in. He was out on the platform welcoming the 4.08 train from the city, and the expressman in the car was dumping packages on to the big truck. He shoved two trunks and a laundry hamper off the car and chucked a coil of lead pipe after them, and handed Mike Flannery carefully a cylindrical pasteboard box with six "Handle With Great Care" labels on it. Then he passed out three crates of lettuce and a bicycle wheel, two automobile tires, and a chair.

"Got a calf here for you, Mike," he said.

Calves may be sent in two ways, and this one had been sent in the uncrated way. It costs more to send a calf uncrated, but some folks are fond of sending them that way. It is less trouble; no bother of making a crate; no worry of getting the calf into the crate. All the shipper has to do is to take the calf to the express office, pay $1.52 charges, take a receipt, and go home. And it is fine for the consignee. No bother peeling the crate off the calf; consignee sits at home; up comes the expressman and hands the end of the rope to the consignee. "Here's yer calf," he says; and all the consignee has to do is to turn the calf loose in the back yard, and there you are! It saves the shipper and the consignee all trouble. The expressman has that.

"Shove th' crate awnto th' truck," said Flannery.

"It ain't crated," said the expressman; "it's loose. Climb in and give a hand to him."

When they put hand to him the calf yelled for mother and braced his feet, and the conductor came to the car door and urged haste. It is a bad job, getting a good-sized calf to step out of a side door on to a truck, and a truck is a bad thing for a calf to stand on, anyway, so when the calf refused to go out of the side door they thought it would be better to lead him out of the back door and down the steps. It was that kind of a car, half smoking-car and half express-car, and so, after the expressman and Flannery and the conductor could not lead the calf down the back steps, the smokers came out of the smoking-car and helped. They led him down by pushing from behind, and he landed on the platform with a sawed-off wail that sounded like "Ma-a-a-wawk!"

It was—it had been—a tall hat, a fashionable hat

And all the time the telephone bell was ringing.

Flannery tied the calf's halter to the rear end of the truck, and went to the front end and took hold of the iron tongue, and pulled. Back of him was the full passenger list of the 4.08, grinning; and ahead of him was the telephone bell, ringing. Was he mad? He was so mad that when he gave the truck a jerk the calf made the trip across the platform into the express office in two leaps! Two leaps, and then stood dazed and astonished. He was so dazed he didn't even know the halter had broken. He just stood there like a silly calf. But Flannery didn't!

Flannery did not even look at the calf. He slammed the way-bills on his desk and made one jump for the telephone. It was then that the calf looked down to see what was the matter with his feet. He was hopped. Through the lid of the cylindrical box that bore the labels, "Handle With Great Care," both fore-feet of the calf had gone.

"Handle With Great Care"

"Mother! Mother! Mother!" called the calf, in its soul-stirring voice.

"Hello!" yelled Flannery into the telephone. "An' phwat th' divil be ye mekkin' sich a— Shure Oi know 'tis Saturday afthernoon, an' did ye call up Mike Flannery fer t' tell him th' day av th' week? 'Is they a package come fer Missus Mary Maria Madden?'" he mimicked angrily. "Well, if ye w'u'd be givin' me a minute t' look t'roo th' way-bills— How th' divil kin Oi look is they a package, ma'm, whin ye kape me here wid me eye fastened awnto th' tellyphone?—Git away from there, ye big beast, ye!"

Mike Flannery slammed the receiver on the hook and made one jump for the calf. He put his shoulder under the chest of the calf and encircled its legs with one arm, and hefted up. With the other hand he pushed the hatbox off the calf's feet. The telephone bell was ringing, but Flannery paid no more attention to it than if it had been a swarm of bees. He was used to telephones, and he had never known one to get down off the wall and bite him. He set his teeth and pushed the twine off the crushed pasteboard box and took off the lid. There were two holes in the lid, where the calf's feet had gone through.

IT WAS a hat. Flannery took it carefully from the box and laid it on the end of the truck, and stood back and looked at it.

"An' to-morry—an' to-morry—" he said with compressed anger—"to-morry do be Sunday! Shut up!" he said to the telephone bell. "An' you shut up, too!" he said to the calf. "An' look at ut! Look at th' hat now, will ye?"

It was—it had been—a tall hat, a fashionable hat, built on the general plan of an inverted coal-hod. It was a pale, molasses-candy yellow, of dreamy soft straw, the plaits of which began at the ground floor and went up and up in graceful spirals until they reached the plateau at the top. Turned upside down it looked like an esoteric waste-paper basket. I have never seen an esoteric waste-paper basket, and neither had Flannery, but neither had he ever seen a hat like this. It was a new hat, and a spring hat, of the season of 1909. For a minute Flannery could not believe it *was* a hat, he had become so used to the low, turtle-shell shape, and then, just as he had decided that it *was* a hat, he realized that it was a hat no longer. A calf has dainty feet, with two toes on each foot, but they are out of place standing on top of a new style three-story-and-basement hat. The hat was badly dished. The bunches of *spirea multiflora* and *astilbe japonica* were jammed into the moire, and telescoped with the yellow haircloth belly-band. There were three punctures and a compound fracture and a whole crowd of contusions in that hat. It looked sick. It was a mighty sick-looking hat. No one ever saw a sicker-looking hat than that one.

Flannery, very soberly, bent over and picked up the box. The hat had been expressed by "Ernestine, Artistic Millinery," but as Flannery read the address of the consignee he straightened up and gazed at the telephone with anger. The consignee was Mrs. Martha Mary Madden. And the telephone bell was still ringing.

"Hello!" he said, when he had taken the receiver down, and his voice was gentle. "Hello! Are you there, Missus—?"

"W'u'd ye mind sayin' th' worrds a bit slower, mum?" said Flannery. "Well, ain't Oi just tellin' ye—? If ye'll but give me wan worrd, mum— Shure Oi know me business! Well, th' same t' ye! Hat! Ain't Oi been tellin' ye fer th' last half-hour thot th' hat has came? *Oi say th' hat has came!* CAME! TH'—HAT—HAS—CAME!"

Flannery slapped up the receiver. He was mad now.

"Phwy don't Oi bring th' hat up?" he snapped. "Will Oi mek haste, fer they may be a few changes in th' trimmin' she'll be wantin' t' mek? They'll be changes, all roight! Mebby th' leddy'll be disappointed whin she gits th' hat!"

He looked at the telephone doubtfully. It was his duty to deliver the hat, and he would deliver the hat, but perhaps it would be well to just mention over the phone that a little accident had happened to the hat. The shock would not be so great to Mrs. Madden. He picked up the telephone directory and turned the pages.

"M," he said, "K, L, M, Ma, Mac, Mad, Madden, John C. Madden, 1—3—5 Westcote."

He put up his hand for the receiver and glanced back at the hat. His hand remained motionless in the air. The hat was gone! The last bit of *astilbe japonica* was just disappearing into the calf's mouth! Flannery let his hand fall.

"Th' rule applyin' t' th' ease," said Flannery slowly to himself; "th' rule thot applies t' th' prisint case—th' rule—" He put up his hand and scratched the red thatch on top of his head. "Now, phwat w'u'd th' rule be, annyway?" he said. "Hats w'u'd be hats, an' calves w'u'd be calves, but whin th' hat is aten by th' calf, is ut a hat *or* a calf? I wonder w'u'd Oi report th' hat in bad condition, or absint entoirely? Oi dunno."

HE TOOK down the book of Rules and Regulations of the Interurban Express Company and turned the pages slowly. It told all about calves, crated or uncrated, and it told all about hats shipped in wood or in pasteboard. It told what to do if a consignee claimed that fruit had spoiled in transit, and if a shipment of cigars arrived with several cigars missing, but it did not tell what to do if a calf ate a spring hat. Books of rules can not tell everything. Probably the man who compiled those rules never even imagined that a consignment of calf would eat a consignment of millinery.

"There be no doubt th' hat is in bad condition," said Flannery, with worried brows. "Ut stands t' reason thot a hat phwat has been aten by a calf sh'u'd be in bad condition, an' th' rules says t' so report whin goods is received in bad condition. But th' other wan—Rule twinty-six—says: 'Whin goods be lost in transit or in th' ixpriss office they shall be so reported by th' agint.' An' t' Flannery ut looks like whin a calf ates a hat th' hat is lost. Shure 'tis lost! But is ut? Some w'u'd say 'twas lost, but Mike Flannery knows moighty well where th' hat is this blissid minute! 'Tis in th' calf. So 'tis not lost."

He sighed. He knew there was trouble ahead for Flannery, whether he reported the hat lost or in bad condition. He turned to his desk.

1 Hat, packed in a calf. Bad condition

"If 'twas th' calf, now, thot was lost," he said complainingly, "'tw'u'd be no great matther, fer nobody seems chrazy over telephonin' fer th' calf, an' Oi w'u'd hev plinty av toime t' supply another wan before 'twas needed fer milkin', if 'tis a cow th' beast is t' grow into. Annyhow, Oi c'u'd pick up a calf thot w'u'd do fer a day or two, until wan thot suited c'u'd be got, but 'tis different wid millinery. To-morry's th' day, an Oi know th' wimmin! They be but wan hat in th' worrld thot will suit aich woman, an' th' hat thot suits Missus Madden is at prisint in th' stomach av th' red an' whoite calf yonder. Calves is nawthin' but live-stock, but hats is hats."

Flannery looked at his way-bills moodily. Probably the company would take the value of the hat out of his wages, if they ever amounted to the value of a new spring hat. "One calf, uncrated, value $18," he read, and then, turning to the next way-bill, he stopped with a gasp. It said: "One hat, boxed, valne $54."

As he stared, the telephone bell began to ring again, and he let it ring.

"Fifty-four dollars!" said Flannery in an awe-struck whisper. "Fifty-four—!"

He looked up at the calf reproachfully.

"Fifty-four dollars! An' aten by a cheap, inixpensive eighteen-dollar calf! Why, ye ain't no more value than th' crate av sich a hat sh'u'd be!"

He stopped short. Now he knew the rule that covered hats eaten by calves. Rule 25 said: "When the agent be in doubt which rate to charge, he shall charge the higher," and when an agent is in doubt what to do about a hat that has been eaten by a calf, what should he do but deliver the higher-priced? Flannery dipped his pen into the purple ink and scrawled across the way-bill pertaining to the calf the one word "Lost." Then he wrote carefully in his receipt-book: "From New York. Consignee, Mrs. M. M. Madden. 1 Hat, packed in a calf. Bad condition."

He stopped a moment to answer the ringing telephone.

"Shure! shure!" he shouted. "Oi'll be there in foive minutes!"

Then he took the halter of the calf in his left hand and tucked his receipt-book under his right arm, and went out.

Four minutes later Mrs. Madden was standing at her front door, her lips set, her eyes blazing, and a threaded needle all ready in her hand. Her eyes were set steadily toward the village, and they did not move to right nor to left. She was waiting for her hat, and she did not look at the man coming up the road with a red and white calf in tether. She did not see him until he turned into the yard, and it was only when he stopped at her feet and held out his receipt book that she looked at him.

"Sign here," said Flannery, pointing to the blank spot.

"What—!" said Mrs. Madden.

"Sign here," repeated Flannery firmly. "Ain't ye th' lady thot's been tellyphonin' all day fer her Aister hat? I brung ut up mesilf," he said soothingly. "'Tis in th' calf here."

"What—!" gasped Mrs. Madden.

"Well, ma'm," said Flannery, "Oi'm not askin' ye t' do nothin' more than Oi'd do mesilf. Th' receipt mentions thot th' hat is in bad condition. Th' receipt mentions thot th' hat is in th' calf. An' Mike Flannery guarantees it is. An' usually, ma'm, whin th' company does repackin' ut makes a charge fer ut, but seein' as it's you, ma'm, we'll say nawthin' about ut."

Satan and the Suffragette

(A Springtime Fantasy)

By Wallace Irwin

Illustrated by F. T. Richards

I

SAT *a pretty Suffragette*
At her desk of gold.
Though her brow was firmly set,
She was far from old.

II

WHEN *a face like hers you see,*
Beauty makes you glad.
She was writing, "Slaves, be free!"
On a pencil pad.

III

APRIL *weather in the sky*
Made one half regret,
Made one stop and wonder "Why
Should *she suffragette?"*

IV

EVEN she *seemed rather bored*
O'er her sisters' ills—
Strange! her thoughts seemed turning toward
Hems and hats and frills.

V

WHAT *a chance for Satan—my!*
So it fell aright.
Mr. Satan strolling by
Looked and saw her plight.

VI

LIKE *a shadow to her den*
Stole the antique Nick
And upon her moving pen
Laid his finger quick.

VII

ALL *unconscious, still she quilled*
Thoughts on Woman's Vote;
Yet her pulse was strangely thrilled—
This is what she wrote:

VIII

"WOMAN! *will ye wear the yoke?*
(*'Twill be worn this year*
With the bonnet called the 'poke'—
Absolutely dear!)

IX

"LAY *aside your time-worn chains,*
Claim a status new.
(*Lay aside your Empire trains,*
They're old-fashioned, too.)"

X

SATAN *at her elbow then*
Chuckled like the deuce.
Vexed, the Lady dropped her pen,
Sighing: "What's the use!"

XI

SUDDENLY *her study door*
Shook with raps and knocks.
'Twas a Milliner who bore
In her hand a Box.

XII

(FOR *the Millinery class,*
Be it here resolved,
Are with Lucifer, alas!
Very much involved.)

XIII

FROM *the Box in leafage green*
Crushed with roses red
Lay a Hat for which a queen
Might have lost her head.

XIV

LIKE *a bucket overturned*
Heaped with fruits and flowers—
'Twas the Dream for which she'd yearned,
Oh, so many hours!

XV

ON *her curls with preen and pat*
Quick she set her Joy.
("*Now I'm talking through her Hat,*"
Jeered the wise Old Boy.)

XVI

NEXT *with rash and reckless stab*
Hat-pin she thrust through—
"*Bessie, call a taxicab—*
There! I think I'll do."

XVII

SATAN *watched her go, and then*
Raised his eyebrows thin.
"*Lovely Women versus Men?*
Gentlemen, we win!

XVIII

"EVE, *who ate that fruit of mine,*
Made it ever thus.
Woman's right? the right divine
To be frivolous.

XIX

"WHAT'S *her Franchise to her Hat*
When I set the style?
Easter's here—I reckon that
Will keep her for a while."

"Gentlemen, we win!"

Hon. Mark Twain, age seventy-four, state of health good but not lonesome. He always hated Overexertion, so he took up Literature

Indoor America

"Indoor America" is Published as a Sort of Counter-Irritant to "Outdoor America," and is Intended to be a Friendly Guide to Such Readers as are Annoyed by the "Call of the Wild" and Prefer the "Call of the Tame"

What We Lie For

IN AMERICA during the past few years has arisen a cult of mischievous doctrinaires who have formed a sort of Get-in-the-Breeze Brotherhood and are continually harping on the delights of outdoor life, Marathon races, Aretic expeditions, lion hunts, and like barbarous pastimes. The magazines fairly bristle with their praise of snowballing and wet feet, with the dangerous doctrine that no man can be healthy who stays home and enjoys himself. We know better than this. We happen to come of a race of sturdy New England ancestors who spent the winter with their feet in the oven, thrived on pie and doughnuts, and regarded exercise as Work. They were a simple, pious, disagreeable race. They made no football records; but when the Nation called they took a running jump at Great Britain which may be regarded as the Athletic Event of history.

Inspired by this ancestral example, let us Indoor Americans get together and resist the invasion of the Fresh Air Fiends. We need not "stand" for any principal. We can "lie" for ours, because we are naturally built lazy. Our motto "We'd rather be Inside looking Out than Outside looking In," let us revel in the delights of air-tight apartments, lying abed till noon, forgetting cold baths, neglecting gymnastics, cultivating our minds at the expense of our bodies, and putting the Great Outdoors where it belongs. It will probably remain there without any interference from us.

The trouble with America to-day is this: It is too healthy. Health is a serious menace to our public weal. The following Table of Outdoor Calamities (compiled by the United States Commission of Mournful Statistics) proves with alarming force the damage which the Athletic Mania does annually to this country:

Annual deaths resulting from Outdoor Sports	9,448,208.06
Annual disabilities resulting from ditto	18,612,340.72
Divorces, elopements, quarrels, etc., originating at Summer Resorts	26,800,000.08
Cases of insanity, headache, poverty, irritability, resulting from reading Sporting Pages	48,611,890.00
Total	103,472,438.86

Illustrated with Fakographs

Most statistics are appalling, but *these* are particularly so. Think of it! Out of 86,000,000 inhabitants of the United States there are over 103,000,000 who are either dead, diseased, or unbalanced as a result of overexercise in the outdoor air!

Has not "Indoor America," then, an earnest appeal to every right-minded citizen? It has.

✣ ✣ ✣

Some Honorary Members of the "Independent Order of Indoor Americans"

HON WILLIAM HOWARD TAFT. Plays golf when reporters are looking, but this is only a bluff. He thinks the Athletic pose will make him popular with all classes, which is a mistake, because the Working Classes admire, above all other heroes, a man who can afford to rest. But Mr. Taft is, at heart, an enthusiastic Indoor American. If he had his way the Presidential Chair would be a sofa and he would have the members of his Cabinet provided with hammocks. Although Mr. Taft has been Traveling Agent for the Government many years, he has never cared for the outdoor life of any country—except that of China, where the air is not really very fresh.

He plays golf when reporters are looking, but this is only a bluff

HON. MARK TWAIN, age seventy-four, state of health good but not lonesome. Always hated Work, so he took up Literature. He is the Favorite Son of Arcadia. His office is where he hangs his pajamas. To gratify his passion for exercise he has built a beautiful gymnasium in his home, where he hires three strong men to punch the bag for him. He says the surest way to cultivate the funny-bone is to neglect the biceps. He is an expert mental gymnast, but his activity seldom goes any further. He prefers his nightclothes to his evening dress. He wears 'em both white.

HON. JOSEPH G. CANNON, a patriot whose unprogressive mind and ossified character fit him for the honor of ranking among the greatest Indoor Americans of his age. He has stayed in the house and sat in the same chair in the same Attitude longer than any other living man. He has often been called a "stand-patter." This is erroneous. He is a "sit-patter" of the most stationary type. Indoor Americans point with pride to Brother Cannon. He is locked in and nailed down. Neither Congress nor Public Sentiment can put him out. His favorite sport is whittling his initials on the Speaker's Desk.

✣ ✣ ✣

Special Inducements to Membership

WHY don't you join the Independent Order of Indoor Americans? You can enjoy all its privileges without any expense on your part. If you have a taste for loafing around the house you can do so safely without being called a Mollycoddle. We want barbers, janitors, stenographers, shop-girls, stage-hands, poets, Turkish bath attendants, plumbers, Congressmen—in fact, everybody who is leading an indoor life of unhealthy occupation—to aid us by the force of his or her moral example. Keep away from Nature, avoid Summer Camps, shun the Great Outdoors. To the Indoor American who can write the best essay on "Hot Air and Health" we will give as a prize a beautiful nickel-plated "Little Vesuvius" oil-stove, price $2.86.

How I Climbed Mt. Freezeout

The Blood-Curdling Experience of a Social Climber

By Mrs. Marmaduke Scrambler Van Wax, the Lady Who Did It

The lady who did it

I HAVE often been asked to tell how I, a mere woman, have been so sensationally successful in scaling the mountains, crags, and snow-capped peaks of Society, where others, more muscular than myself and possessed of refinements of mind and heart far superior to my own, have slipped back or never dared to venture. I will answer you in a word. I have the nerve. Anybody can do what I have done, provided he or she have sufficient hardihood to face any number of frosts, setbacks, and severe social tumbles.

The safest rule, in making a lofty scramble, is to set your eye on the highest place and go for it. There is always some one on the top of every mountain who does not want you there. It is always well to carry in your knapsack something to appease these wild mountaineers—a social favor or a check-book will usually do the trick. When appeased and satisfied, these people are often useful to show you easy trails to the heights beyond.

Never take up with a rival Climber. Employ any means to get rid of her—but get rid of her quick. If you can meet her on some lonesome crag it is an easy trick to dump her into some yawning chasm and go on your way. She will, probably, make a yell. But her cries will become fainter and fainter as you mount ever higher. (Please note terrible fall of Mrs. Smith-Jones in my diagram.)

Always look reverently toward the Woman Higher Up. When you reach her level you can settle matters according to circumstances.

Before taking a hard climb I usually provide myself with two or three dozen light, simple climbing costumes. Although some climbers go in for elaborate effects, I myself think it foolish to pay more than $386,000 apiece for climbing outfits, as they have to be discarded after a rough scramble. An effective costume for such exercise is a brocade sheath effect[1] with 500 emerald buttons down the back. Satin shoes with Koh-i-Noor buckles are sensible footwear for climbing. But these shoes should be provided with stout cleats or spikes to prevent slipping.

(Don't forget to provide yourself with a check-book. It will give you a lift when all else fails.)

In climbing Mt. Freezeout the first really difficult barrier I met was Ancestry Bluff. Almost discouraged with repeated efforts to elevate myself here, I was at last able to hook my alpenstock in a few scrub family trees which grew sparsely on the steep side. Pulling myself up gradually by this perilous method, I got a slippery foothold on some loose geneological strata, and so on to the top.

I regret the sad accident to Mrs. Smith-Jones, who tripped on my alpenstock and was utterly crushed in the yawning Chasm of Snubs. I deftly leaped this abyss and landed safely on Mt. In-it. I was hauled up to Prominence Ledge by my husband, who threw me out a rope of pearls.

Many have asked: "Is the Climb worth the sacrifice it entails?" Yes, and again, yes, it is! One can not adequately describe the feeling of giddy elation which comes over one while standing, chill and alone, on a social peak so high, so sterile, as Mt. Freezeout. Below one the lesser summits of Prominence Ledge, Ancestry Bluff, etc., appear dwarfed to the dead common level from which one came so recently. One seems to breathe a finer air into one's lungs. One waves one's alpenstock, one clutches one's diamond tiara and exclaims with the poet: "Excelsior!" For when one climbs is it not one's object to Get There?

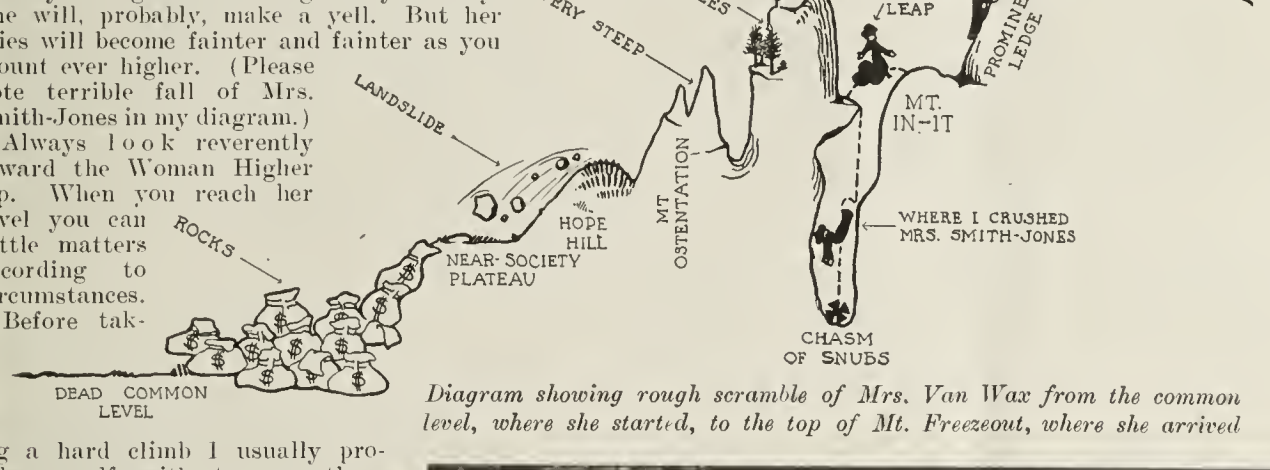

Diagram showing rough scramble of Mrs. Van Wax from the common level, where she started, to the top of Mt. Freezeout, where she arrived

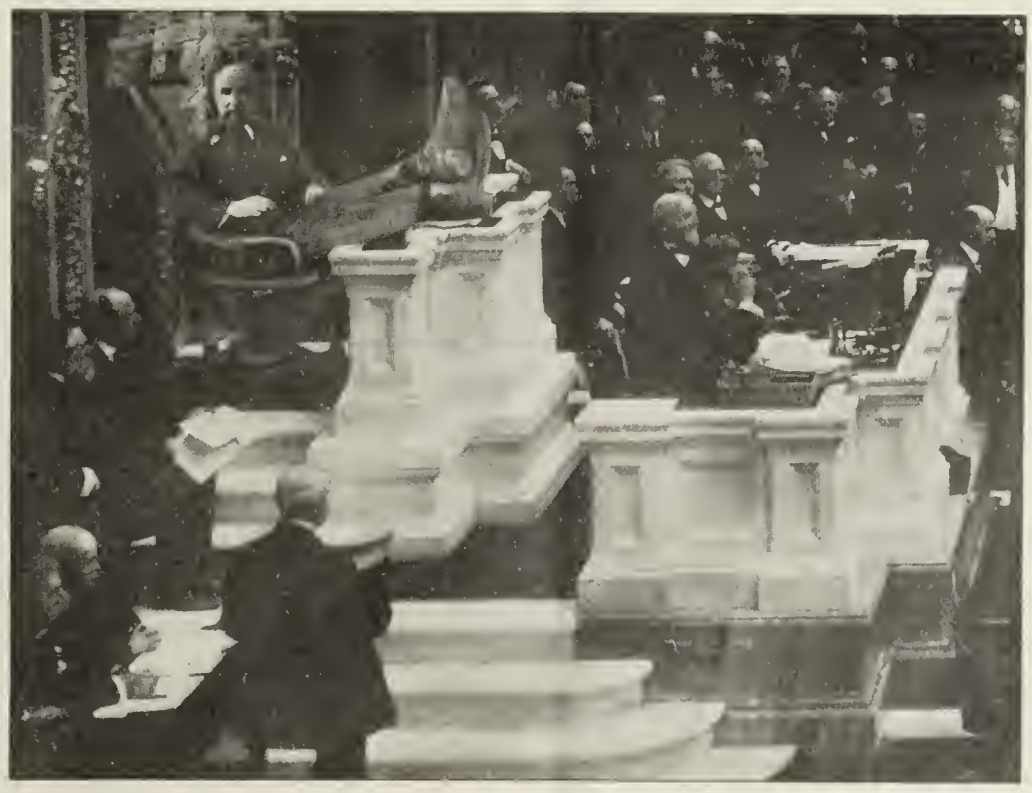
The Biography of a House-Fly

IT WAS nine-thirty of a bright Spring morning when I first met Adolph the House-Fly. I was resting quietly in that most charming region of the Great Indoors—my bed. Somewhat troubled by the disturbing thought that it would soon be noon when I would have to sit up and take my lunch, I yawned slightly—when my reverie was suddenly disturbed by the touch of light footsteps passing along my nose and into the deeper shrubbery of my eyebrows. Here ensued that fluttering, buzzing sound such as a House-Fly always makes when calling for help. Soon there answered a gentler, more subdued buzzing, and Adolph was joined by August, a handsome Fly with 48 brown toes on his right foreleg. By lying quite still and gazing fixedly at my nose, I was able to observe the play of these interesting little animals. August would hide in the shadow of the promontory formed by the meeting of of my nose with my upper lip. Adolph, taking his base on my left ear, would stalk cautiously forth, circulating on my forehead and along the bridge of my nose. At this point Adolph would pounce forth, and August, to escape him, would scamper off and hide in my hair. This game would go on, sometimes, for hours; and I counted the entertainment of my tiny friends among the pleasantest features of my days in bed.



One morning I was awakened very early—about five o'clock it was—by a petulant scratching at the end of my nose. When I looked up I saw Adolph in a state of great agitation, beckoning madly for me to follow him. With loud buzzing and wild flapping of wings, he led me to the dining-room, where I found poor August, stone dead, sticking head down on a strip of flypaper. Close to the body there lay a broom-straw, which Adolph had thrown out into the sirupy pond in a vain effort to save his chum.

He knew no companion but me

After this bereavement, Adolph became a changed and saddened Fly. He knew no companion but me. Day and night he dogged my footsteps. When I sat, he sat. When I slept, he slept. Adolph was very fond of reading the morning newspapers with me, and the act seemed to give him considerable consolation.

At length he went the way of all Flies. After a thorough search I found him pressed between the leaves of the Century Dictionary. Sadly, reverently I closed the volume. Could there be a more fitting tomb for an Indoor American?

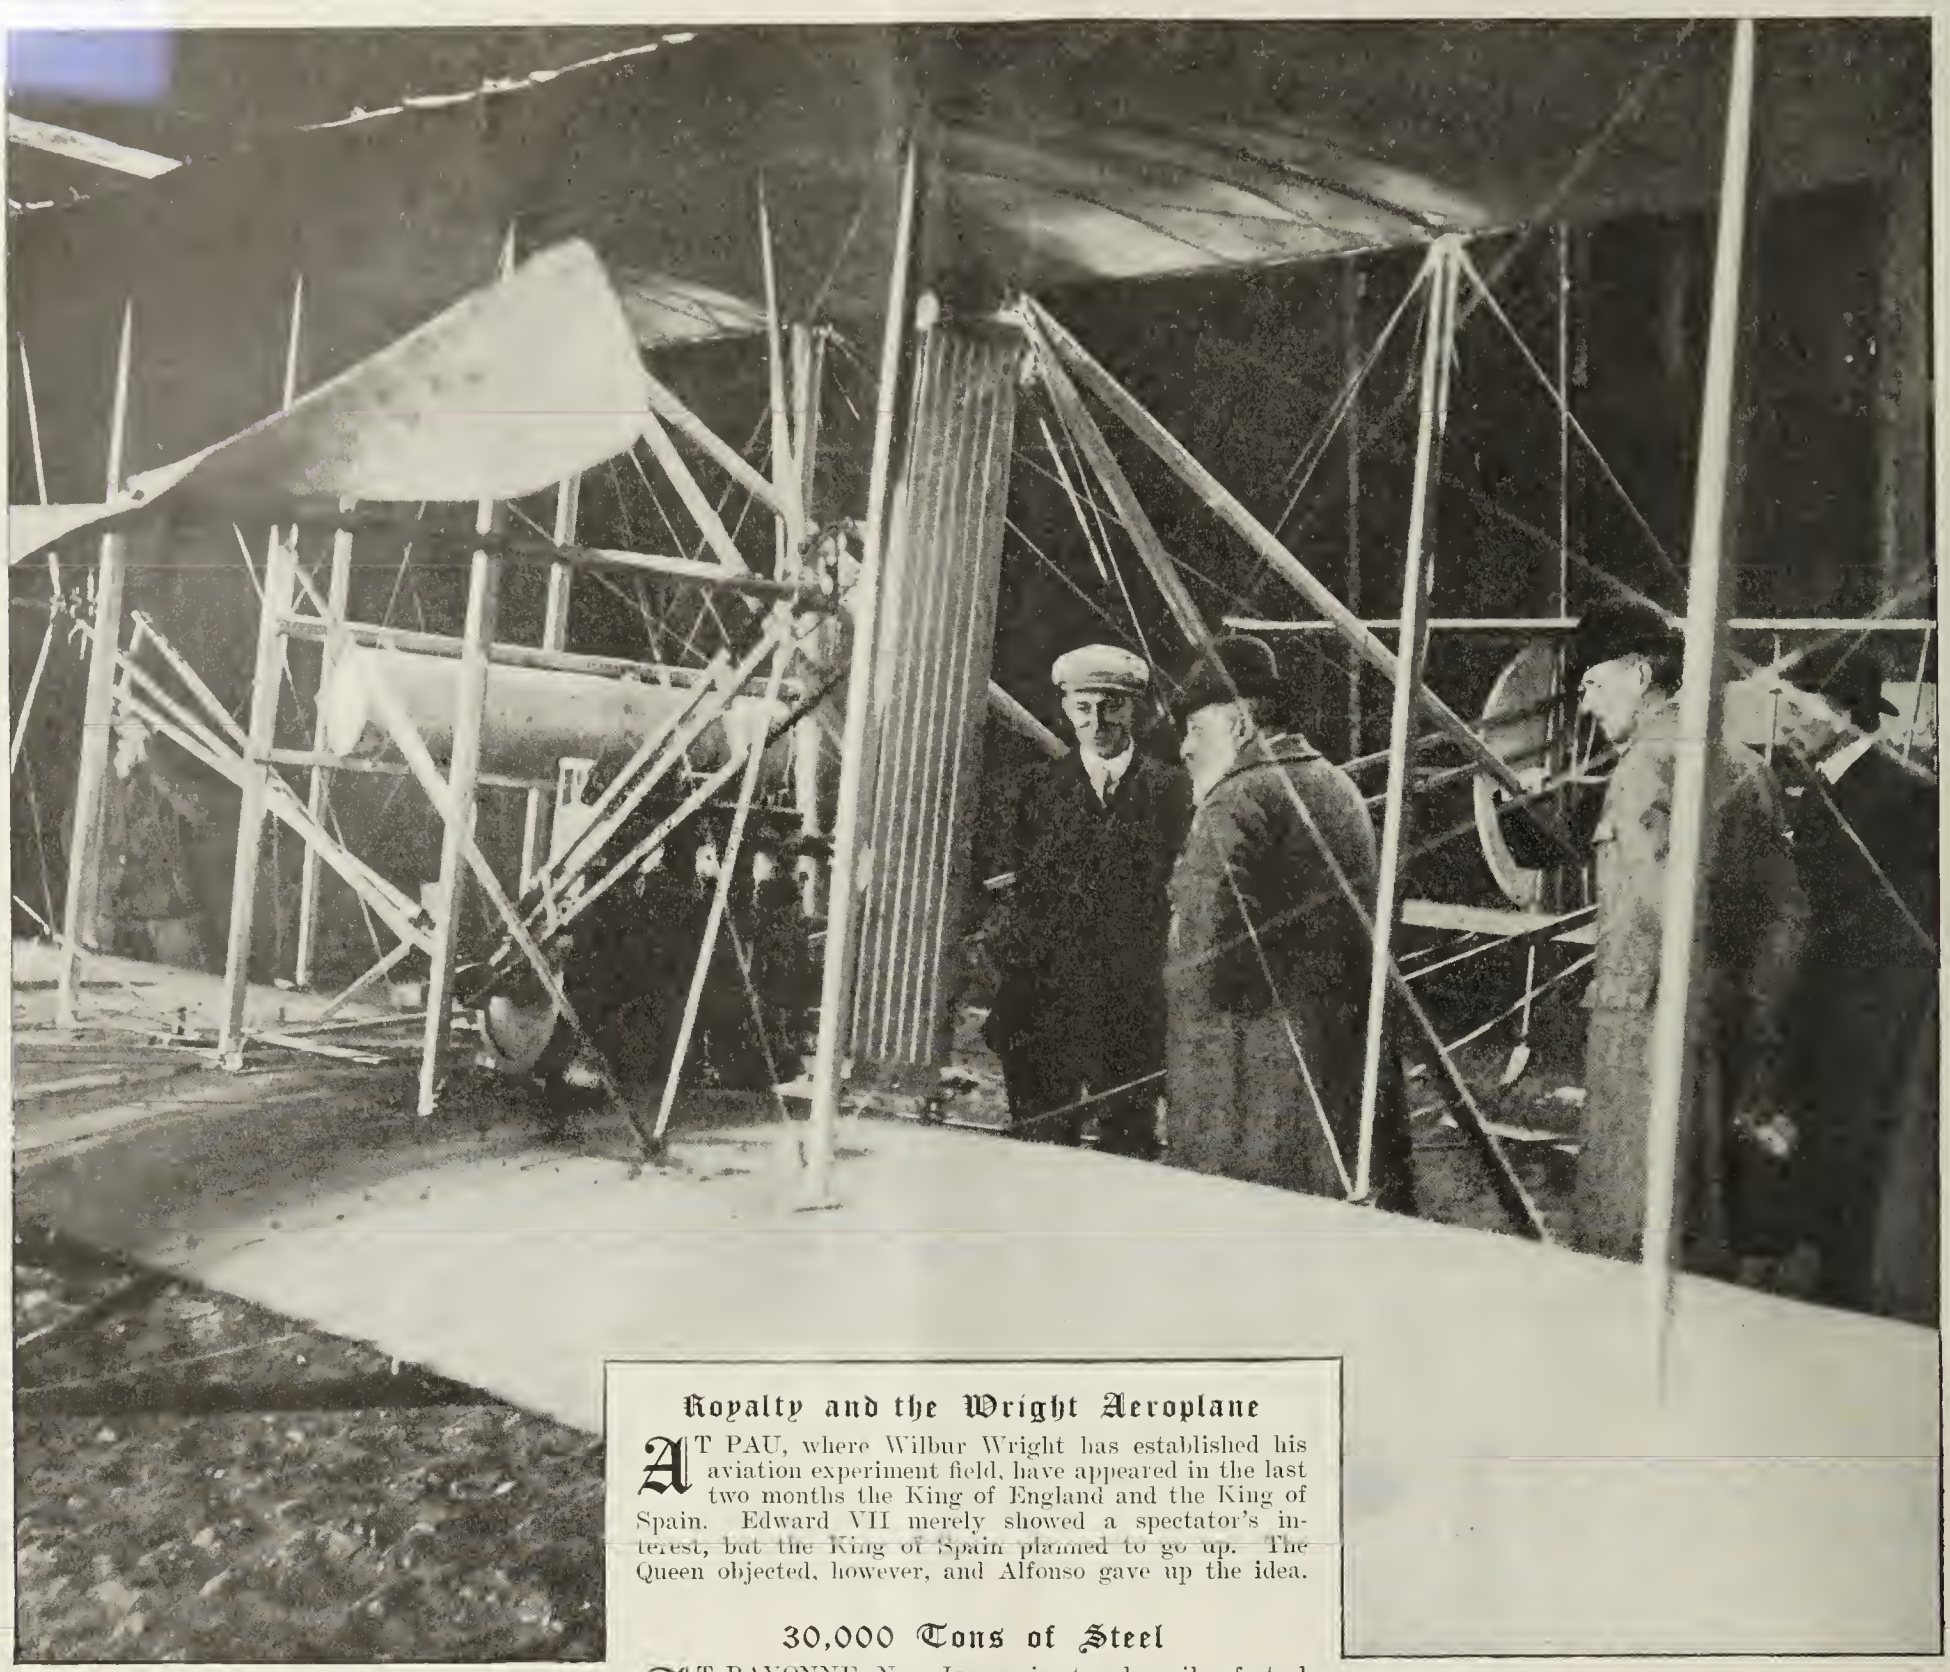
He is a "sit-patter" of the most stationary type

A Short Story

ANTONIO PORKO was a young and happy barber who ran a tonsorium in the cellar of the Hotel St. Stifle. His wife, Mandolina, did general manicure work in the same establishment, so she, too, was almost as young and happy as her husband. The mirthfulness of their lives became positively uncanny when Rômeo, their dark-eyed son, was born.

Six years passed, and little Romeo, who had never been out of the subcellar of the Hotel St. Stifle, was very, very happy. For could he not hunt rats in the boiler-room and sleep among the dust and cobwebs behind the steam-pipes? Of course he could! And when these diversions palled, could he not sometimes roll disks of shaving-soap along the tiled floors and carve the furniture with his father's razor? No country boy, bred to a life of child-labor in rural wood-piles, could understand the care-free glamour of little Romeo's electric-lighted days.

Time speeds quickly when you live in a cellar. Little Romeo was now twelve years old and still unventilated. One day a thickly veiled lady from the Fresh Air Charities entered stealthily, bent upon kidnaping Romeo. Mr. Porko was shaving a Socialist at the time, and Mrs. Porko was reading the "Police Gazette"; so the fair intruder came unnoticed. "Child," she whispered softly, "do you love Nature?" "Dunno, I never seen one," answered the dark-eyed boy. The Fresh Air Lady laughed furtively. "Come," she said, and led Romeo to a taxicab, which stole swiftly away in the direction of Meadowville Farms. . . . .



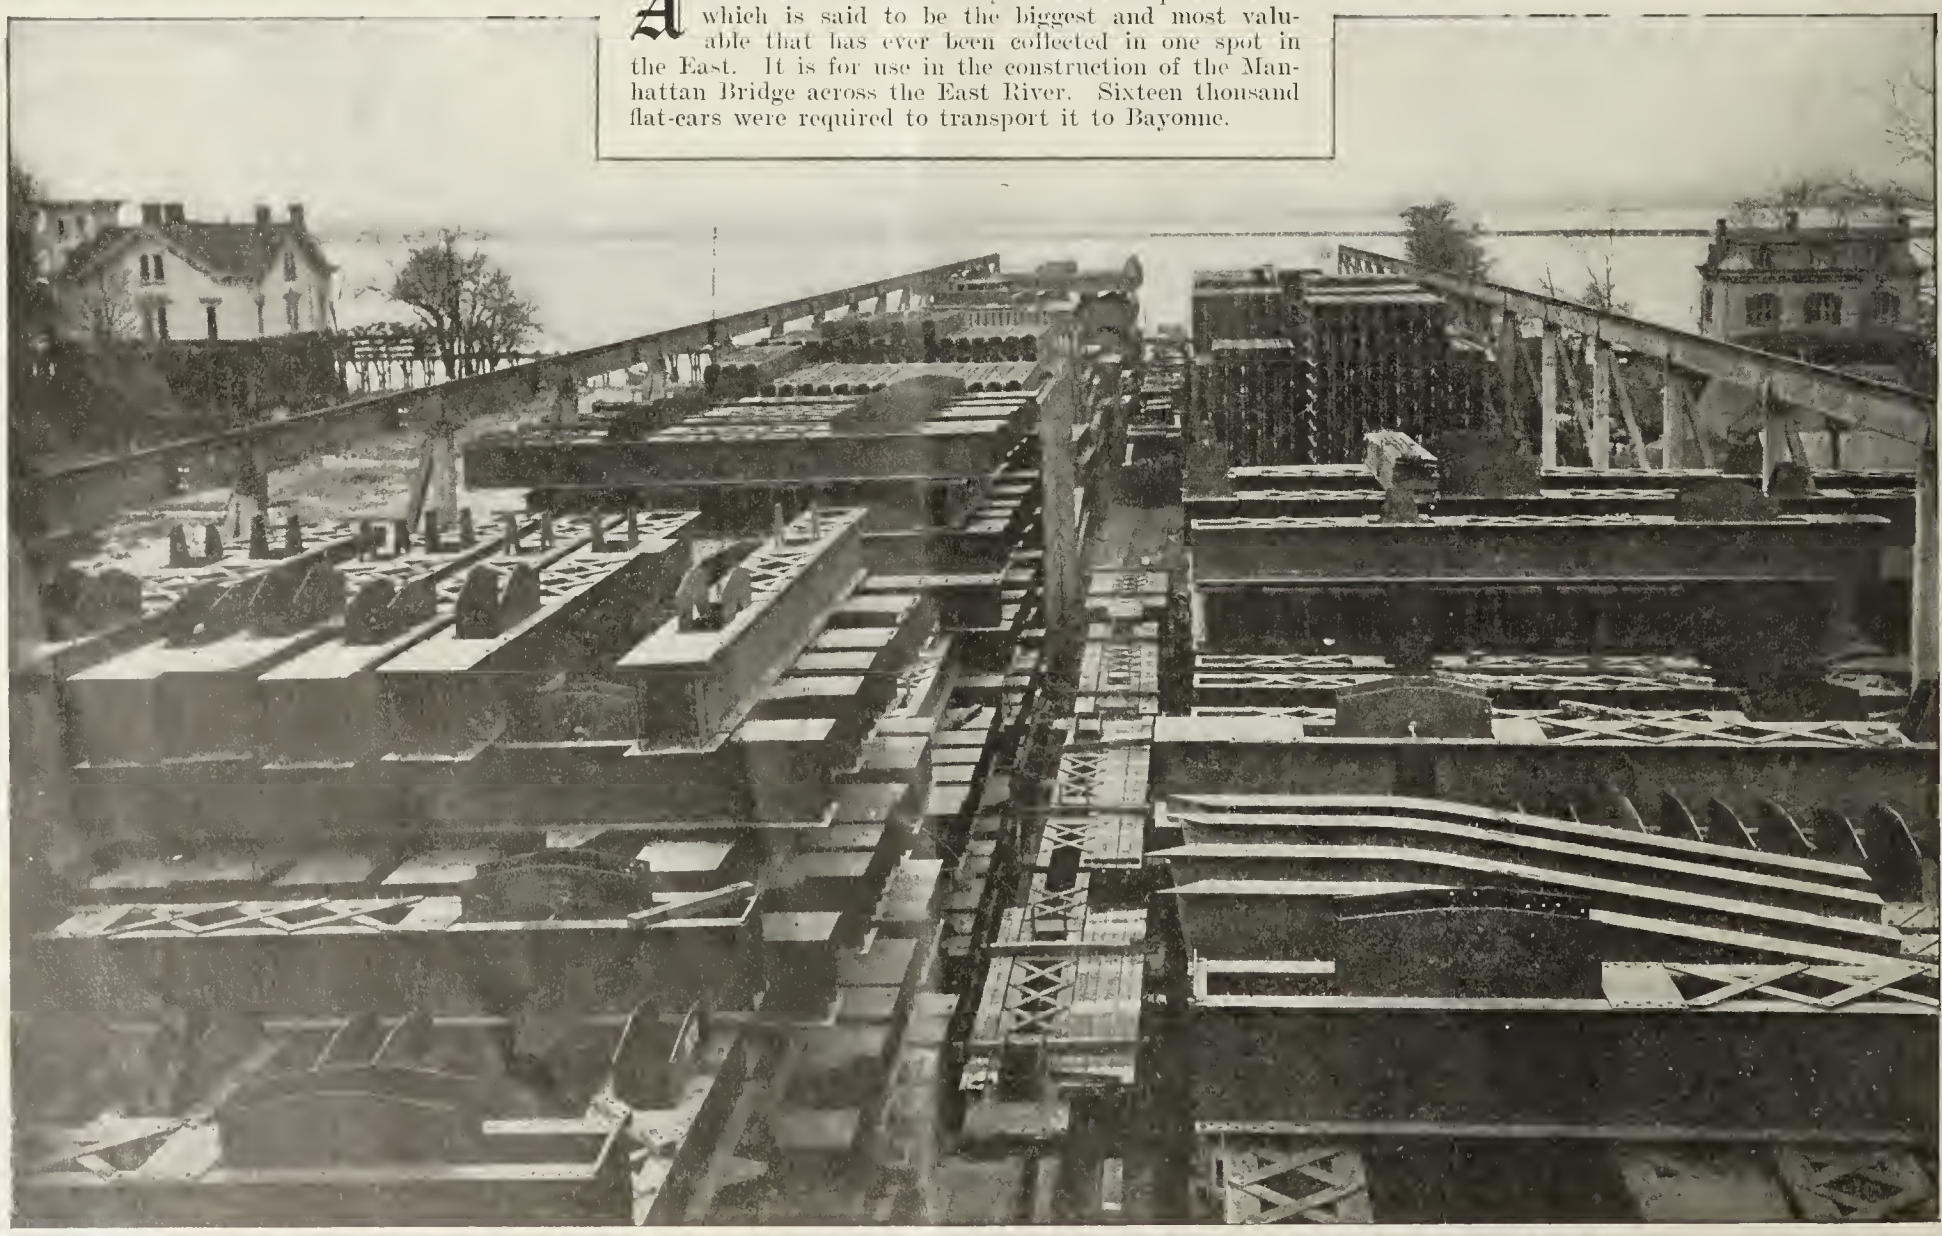
A week passed. If the barber-shop of Antonio Porko ever contained *any* air, it now had an air of gloom. Antonio was weeping in his lather. Mandolina was still reading the "Police Gazette." When suddenly Romeo, his beautiful pasty complexion spoiled by a week's sunburn, entered. "*Figlio mio!*" cried the good barber, excitedly slicing the ear of a fat customer. "Where have you been?" "Father," said the boy, "I can not tell a lie. I have been to an enormous barber-shop without any ceiling or walls. Beautiful wall-paper designs grew around everywhere, and at 7.30 in the afternoon the electric lights went out. They didn't have any nice cooked air there like they have in our home cellar. It seemed kind of raw. There were miles of stuff they called *hay* growing around. It had a sort of perfume, but it didn't smell nearly so nice as hair-oil. Bah! and the food they ate. Large white marbles stolen from hens and milk taken from cows by massaging them." "My boy," said the barber, "do you know what they call that place?" "Yes," said Romeo, "I think it is called the Country, or something like that." "Do you like it?" asked the Father hesitatingly. "I should say not!" responded the manly youth.

Antonio Porko smothered his son to his breast.

"My boy," he sobbed, "you have been strong. You have resisted the Great Temptation. If you had yielded to the Call of the Wild you would now be writing Magazine Articles and could never become a good and useful Barber."

Mandolina Porko covered her face with the "C[illegible]

[1] The Editor is not responsible for technical errors.



Royalty and the Wright Aeroplane

AT PAU, where Wilbur Wright has established his aviation experiment field, have appeared in the last two months the King of England and the King of Spain. Edward VII merely showed a spectator's interest, but the King of Spain planned to go up. The Queen objected, however, and Alfonso gave up the idea.

30,000 Tons of Steel

AT BAYONNE, New Jersey, is stored a pile of steel which is said to be the biggest and most valuable that has ever been collected in one spot in the East. It is for use in the construction of the Manhattan Bridge across the East River. Sixteen thousand flat-cars were required to transport it to Bayonne.

30,000 tons of steel, worth $2,500,000. This stack of metal is 800 feet long, 35 feet high, and 85 feet wide

"That takes me off!" is his jocular shout. At the next shot he falls. And down goes the second curtain

Soldiers and Suffragettes

A Play About Woman's Suffrage, and One Showing What Might Happen if England Were Invaded To-morrow

By Arthur Ruhl

THE two plays recently brought over from England, "Votes for Women" and "An Englishman's Home," represent a form of political argument not often found on our somewhat detached and frivolous stage. The author of each is, for the moment, a propagandist, more interested, presumably, in his subject than in the general task of writing for the stage, and able to speak on it with authority.

Major Guy du Maurier, the author of the piece which stirred England this winter so mightily, is a major in the Royal Fusiliers. He served with distinction in the South African campaign, and whatever he says about his countrymen's lack of preparedness has the authenticity of a soldier's talk about his own trade.

Miss Elizabeth Robins is a novelist, and she played Ibsen in London when to do so was to be suspected of almost improper intellectual courage. And when she demands the vote, her arguments are those of a representative modern woman, a Jane Addams, for instance, rather than the traditional square-jawed female complacently pictured by the other side.

Her play was scarcely more than a dramatized woman's suffrage speech with a rather perfunctory act attached fore and aft. The scene of this second act was an open-air meeting in Trafalgar Square. A picturesque street crowd, shouting out satirical queries, permitted the speakers to answer most of the stock arguments against giving women the vote. It was a well-arranged scene, carried off with a fine air of conviction and reality by all concerned—certainly one of the most impressive arguments for the cause yet made.

Unfortunately, no law had been passed restricting the audiences entirely to men. Had seeing the play, like getting the vote, been made a matter not of privilege but of justice, ladies enough might have hurled themselves against the box-office of Wallack's or chained themselves to orchestra seats to have permitted these arguments to reach a wider audience. As it was, few showed the slightest interest after the first night, and in spite of the fact that the subject is one of the liveliest of the day, the piece perished at the end of the first week.

Between the point at which a foreign invader would land on our coast and the nearest jumping-off place into the opposite ocean is some three thousand miles. From London in the east to Bristol Channel on the west of England is a trifle over a hundred miles, and from the county of Essex, where a German force would be likely to land, to the farthest point of refuge in the north of Scotland is only about five hundred miles—a mere pleasure stroll for our friend Mr. E. P. Weston. After feeling the creepy spell which Major du Maurier's picture of a German invasion exerts in New York, with the Atlantic Ocean between us and the nearest possible raider, it is not difficult to understand how it turned England upside down.

There had been, in the first place, a postmen's and telegraphers' strike, so that no news had circulated for days. For days, too, the south of England had been enveloped in an impenetrable fog. Stodgy old beef-eating Mr. Brown (of Myrtle Villa, Wickham, Essex, which, as you may recall, faces the North Sea just to the east of London) was indignant at its continuance. "If the Government had taken the matter in hand—that is to say, if—if steps had been taken—I venture to say—" "You mean, governor," grinned that flippant young clerk, Geoffrey Smith, "they'd have raised a wind." Mr. Brown stumped across the room, erumpling his newspaper and grumbling. "You've caught my meaning, I dare say, Geoffrey," he growled, "and expressed it in your own words."

The first act admits us to the bosom of this typical Smith-Jones-Robinson British family. They are in the playroom, in whose delightfully dowdy-respectable appearance the fine hand of our old friend of the Irving Place Theater, Mr. Gustav von Seyffertitz, can evidently be traced. Bulldoggy Mr. Brown is busy with diablo. Syd, the youngest son, in a black-and-red blazer, criticizes his father's "form" and reads from several authorities on the subject. The old gentleman defends his method of holding the left elbow glued to the hip, the right palm grasping the stick midway, etc., etc., even to the length of quoting from a letter in the "Times" on this vital question by an ex-Cabinet Minister. The youth retorts that it's all very well if *that's* what he wants to do, but he'll never get any style. Reggie, with the spectacles, is working over this week's limerick contest; the eldest daughter is knitting; Amy and her near-sighted, lisping friend, Ada, from over the way are enjoying the description of yesterday's football match as read from the sporting page by the slangy Smith.

Young Smith is one of that army—not unknown in this country—who follow the sports which occupy so much of their energies by shouting themselves hoarse at games and reading about them in next morning's papers. When Paul Robinson, one of the local Volunteers, enters in his khaki uniform, it is Smith who leads in ridiculing him. A rotten bad way of spending one's time, this lying down in the mud and shooting at a mark—if he were going to shoot he'd at least shoot at something alive—it would be more sporting. And Ada recalls that her brother shot two gulls last summer and one of them was flying. As for these Johnnies who are gassing about defending the country and all that sort of rot, let 'em tell him what they do in working hours. *He* works hard nine hours a day and *every* day, looking at a blotter or out at a dirty wall covered with advertisements about tours to the land of the midnight sun. When he gets off, he wants to have a bit of fun, and he'll jolly well see that he gets it. That reminds him—how he went out and got good and blind-o last Mafeking day and sung "Rule Britannia" from the edge of the fountain in Trafalgar Square and fell in and kissed the policeman who pulled him out and ran him in. And Amy and Ada giggle admiringly.

Safety of an Englishman's Castle

EVEN Mr. Brown, when appealed to by the young militiaman, suggests there's danger this volunteer business will encourage a spirit of militarism, from which, thank Heaven, England has thus far been free. The talk of invasion is absurd. He has no patience with it—none whatever. The heart of the country is sound, as any invader will find to his cost, and were these foreign scoundrels to land, every loyal Englishman would rush to arms and—and— "How," asks the innocent daughter from her knitting, "how, Papa, *does* one rush to arms?"

And just about this time—after the deftest building-up of domestic atmosphere and—in view of what is to come—almost tragic satire on British complacency—little Syd, looking out the window, wants to know who all those Johnnies are in the garden!

Mr. Brown, furious at this trespassing on the precincts of an Englishman's castle, rushes to the side door. "Hey, there! What do you mean by this impudence! What's that? I can't understand you. Come here—*here*—right in here!" And in marches, at a brisk, businesslike stride, a soldier in service uniform. Mud spattered on his khaki, spurs rattling, a wonderful air of preparedness and efficiency. "Who *are* you?" stammers the volunteer, scrutinizing the uniform so like his own.

There is much violence and excitement later, but I doubt if anything more creepily impressive than the sudden materialization of this sinister figure out of the fog and the first rasp of the German accent as the stranger answers evasively, "How ar-r-re you, comrade!" whips out a note-book, and with the cold assurance of a man who has no time to waste, fires a few staccato questions and scribbles down the answers.

In the next act the playroom has been turned into a military headquarters. Orderlies bustle in and out, saluting and clicking their heels. A field telegrapher is clicking off messages in code. The commanding officer, at a table, studies his map and puffs a cigar, as commanding officers always do in plays. Once, trying to recall the identity of a fellow officer, he runs over his note-book. "Ah, yes," he rumbles casually; "he was a waiter at the Royal Hotel, Brentwood." The flippant Smith, a bit soiled but still incorrigible after a night's detention in the scullery, is brought before him.

"Don't you see," he protests, with wholly unconscious irony, "*I'm* not a soldier! *I* don't want to fight! I'm a *spectator!* I'm only one of the crowd!"

The young man complains against the unwarranted attack. "If our fellows invaded your country they wouldn't go and attack a lot of harmless citizens." The officer smiles a lofty imperial smile.

"In my country," he rumbles, "there *are* no har-r-rmless citizens!"

The Germans retire presently, and the local militia, with rakish turned-up hats, handkerchiefs in their cuffs, come rollicking in. Their business is to make the house a defensive position. Lieutenant Jackson, assigned to the upper story, wants to know how you do that.

"Roll the furniture against the doors, I suppose, and all that sort of thing—what?"

"The aw—aw—the usual thing," sputters his rattled captain. "It's all in the book."

They don't know how to shoot. They have no range-finders, no doctors, no stretchers. One man is wounded by shrapnel and nobody knows what to do with him. Everybody is looking for orders and nobody knows how to give them—nobody except the color-sergeant, a regular attached for the time being to the Territorials, and a doctor who happens in. The girls try to help the wounded man, but the doctor sends even them away. They don't know how to do anything. After the ghastly inefficiency of the amateur soldiers is rubbed in with a satire as amusing as relentless, the real attack on the house begins. The young clerk, thinking only that he may be able to cut the office for a few days, and jubilant that the real show is about to start, hops on a table to get a better view. The first shot breaks the mirror behind him.

"That takes me off!" is his jocular shout. At the next shot he drops to his knees, falls limply off the table, and rolls over, face up, in the glare of the footlights. And down goes the second curtain.

The third act continues with startling realism the attack on the house, ending with the retirement of everybody but Brown himself, who, although he doesn't know how to fire a gun, is determined to stay and prove that his home is his castle. He fumbles with a rifle, which is discharged, and a mirror comes crashing down; but at last, just before the enemy rush in, succeeds in bringing one of them down. He is promptly disarmed and shot. As a civilian he had no right to defend even his own home.

Here the play should end, of course, but, as a concession to traditional prejudice, a rescuing party is permitted to rush in and turn the tables just as the curtain goes down. This fortuitous ending is not as disturbing as might be expected. Major du Maurier satirizes his countrymen with the observant eye of a humorist, then takes his perfectly real family up bodily and plunges them into what, to us at least, must seem an almost visionary invasion. It is as if he said: "Now we will imagine that this stage is a submarine boat. If the Browns are so careless, fancy what would happen if the water came in." We are duly horrified when the water comes in—only we know it isn't really water. And if the Browns hop up from the carpet and declare that they aren't really drowned, only an unusually scrupulous conscience would insist on assuring them that they were.

The acting and the stage management of the piece were of unusual excellence, and the English company added much to its realistic atmosphere. Mr. George M. Graham, as the flippant clerk, had the best part, and in a very neat and facile way he was equal to it. Mr. William Hawtrey, as Mr. Brown, and Miss Nellie Thorne, Miss Nellie Malcolm, Miss Dorothy Fraleigh, and Mr. Edgar Norton, as other members of this amusing family, were all satisfactory. Mr. J. H. Benrimo was an impressive Yoland. And one hopes that after the battle of Myrtle Villa, Mr. Frank Shannon's color-sergeant was mentioned in the despatches and recommended for a D. S. O.

Twenty-three Democrats

An Inquiry into the Motives of Those Who Helped Cannon Out, and a Suggestion as to Their Affiliations

By Mark Sullivan

FROM a resident of Georgia, who calls himself a "Cleveland Democrat," comes a letter which describes a state of strenuous confusion among those with whom he talks politics in the evenings. The point of the letter is in the last sentence:

"Now we have received or read letters, both private and published, from the interested parties on both sides of this matter, and have read considerable in the papers here. Now will COLLIER'S kindly settle for us the moral and political status of the twenty-three Democrats (?)—I use the word provisionally until you confirm it or give us another—who came to the rescue of Joe Cannon and saved him from a thorough licking in the fight on the rules the other day?"

It would be simple to lump the entire twenty-three in one broad malediction of undesirability, as the rest of the Democrats in Congress have done, but that is too inexact to be wholly just. There is no essential turpitude in their act of itself; breaking away from party lines is not necessarily a thing to be condemned—it is often a public virtue. The thing is to be judged by its intended results, and even more by its motive; and in motive these twenty-three differed widely. They have said, in their own behalf, that as Democratic insurgents their status is the same as the Republican insurgents, who have been praised. That point of view involves lack of discrimination. The insurgent Republicans broke away from their party to vote for a progressive measure, at certain cost to themselves of every favor that Cannon has to bestow and under penalty of his resentment; these twenty-three Democrats seceded in order to vote against a progressive measure—and there was no spirit of self-sacrifice in their defection; they steered their course in the direction where profit lies, and some of them have already had their rewards. Consider the twenty-three by groups. Take, first, these four:

Four Democrats in a Class Apart

ROBERT F. BROUSSARD of New Iberia, Representative from the Third District of Louisiana, composed of the parishes of Assumption, Iberia, Lafayette, Lafourche, St. Martin, St. Mary, Terrebonne, and Vermilion.

Albert Estopinal of St. Bernard, Representative from the First District of Louisiana, composed of the parishes of St. Bernard and Plaquemines.

Joseph Francis O'Connell of Boston, Representative from the Tenth District of Massachusetts, composed of the city of Quincy, the town of Milton, and seven wards in the city of Boston.

Daniel J. Riordan of New York City, Representative from the Eighth District of New York, made up of Richmond County and the heart of that section of New York City known as "the Lower East Side."

These four belong in a class apart, wholly distinct from the rest of the twenty-three. These four not only voted with the Republicans for the compromise resolution which finally settled the fight—they voted with the Republicans on every ballot taken throughout the fight. *They voted for the old rules,* and they are the only Democrats who did vote for the old rules. This one vote alone distinguishes them from the other nineteen, and is in itself a livid question mark.

In the Matter of Motives

BROUSSARD and Estopinal presumably will not need to make any excuses to their constituents. They come from the sugar-growing districts of Louisiana. They are interested in maintaining as high a duty as possible on sugar. They may have assumed, and their constituents may support them in that assumption, that they were serving the best interests of their districts by doing what would be most likely to result in favorable consideration for the duty on sugar. Broussard, within forty-eight hours after he cast his vote, was appointed by Speaker Cannon to a place on the Ways and Means Committee, which committee determines, for the House, just what the duty on sugar shall be.

O'Connell of Boston has a contest on his hands. He was elected over his Republican opponent by an apparent majority of four votes. The final judge of the contest will be the House Committee on Elections. That committee will be appointed by Speaker Cannon. It is almost the universal practise among legislative bodies, when contests are as close as this, to seat the contestant who belongs to the majority party—in this case Mr. O'Connell's Republican opponent. A man in Mr. O'Connell's shoes might reason that he had everything to gain and nothing to lose by lending a helping hand to Uncle Joe and the Republican machine in their hour of great need. On the other hand, Mr. O'Connell's motive may be as far from this as the stars. It is for his constituents to find out and judge. They are a pretty intelligent constituency, in South Boston, and strong in their Democracy.

Riordan's case is easily summed up. He represents the Bowery district of New York City, the most vicious, politically, of Tammany's districts, and therefore the most vicious in the United States. He is the particular protégé of Big Tim Sullivan. Riordan would probably take it as reproach if it were said that he ever cast a vote without first seeing advantage in it, of one kind or another. Riordan hasn't been in Congress long enough to make a conspicuous record in Washington, but he was a member of the New York Legislature for a sufficient period to display his stripe. Although he was a member of the Armstrong Investigating Committee and signed its report—a position which made his subsequent action peculiarly shameless—he *voted against the new insurance bills* that grew out of Governor Hughes's famous inquisition. He voted *against the eighty-cent gas bill* in the long fight which New York City has just won against the Consolidated Gas Company. The Citizen's Union, in its formal report, describes him as: "Tammany Senator. Good or bad, as the whip cracks." The whole machinery of the present situation at Washington would be clear if we could know just what, in this instance, preceded the cracking of the whip.

The Six Tammany Democrats

SO MUCH for those four. Consider now another group of six—six Tammany Congressmen. They are the Daniel J. Riordan already mentioned, and, in addition, these:

Michael F. Conroy, Charles Vincent Fornes, Henry M. Goldfogle, Joseph A. Goulden, Francis Burton Harrison. All from New York City.

Here are six Tammany Democrats voting as a unit *with the Republicans.* Here, again, the very fact is in itself a flaming question mark—six Tammany Congressmen breaking away from the Democrats and voting as a unit from motives of conscience and conviction is pretty strong medicine to swallow. Not only does the situation create a strong inference as to their own motive—it is in itself an indictment of the other seventeen Democrats who are so unfortunate as to be found in their company. Unhappily the position of these Tammany Congressmen is such that there is no constituency to cross-examine them. They have but one constituent, and he is Charles F. Murphy, head of Tammany. None of these men need suffer fear or shame of anything except what Murphy disapproves. So far as the fact may have weight in determining motive, the record is that within forty-eight hours after Harrison cast his vote with the Republicans he was presented with the most desirable appointment within Cannon's power—membership on the Ways and Means Committee. The spectacle of Cannon receiving aid from Tammany must be a pleasant source of contemplation to the good old-fashioned Republicans of Danville, Illinois.

The Others

THE others of the twenty-three Democrats had varying motives. Those who are best informed believe that Fitzgerald, although it was he who made the conspiracy possible, and although he accepted a desirable committee appointment from Cannon the next day, had the least sordid motive of the twenty-three. It would be easy to say he comes from Pat McCarren's district, and stop at that; it would be easy also to say he is the best parliamentarian in Congress, and that the resolution he introduced represented his honest conviction as to what the rules ought to be. He is an able man and very useful as a critic of extravagant expenditures.

What Are Their "Business and Political Affiliations"

THE "Outlook" has said: "It would be interesting to take a list of the Democratic Congressmen voting against real reform, and make a little study of their business and political affiliations." Here is the list. Their constituents and the newspapers of their districts are in the best position to examine their "business and political affiliations."

Charles Gordon Edwards of Savannah, James Mathews Griggs of Dawson, Leonidas Felix Livingston of Covington, Gordon Lee of Chickamauga, William Mercellus Howard of Lexington, and William Gordon Brantley of Brunswick, Representatives from the First, Second, Fifth, Seventh, Eighth, and Eleventh Districts of Georgia.

Stephen M. Sparkman of Tampa, Representative from the First District of Florida, composed of the counties of Citrus, De Soto, Hernando, Hillsboro, Lafayette, Lake, Lee, Levy, Manatee, Marion, Monroe, Pasco, Polk, Sumter, and Taylor.

John A. Keliher of Boston and Andrew James Peters of Jamaica Plain, Representatives from the Ninth and Eleventh Districts of Massachusetts, composed of various wards in the city of Boston.

John Austin Moon of Chattanooga, Representative from the Third District of Tennessee, composed of the counties of Bledsoe, Bradley, Franklin, Grundy, Hamilton, James, Marion, McMinn, Meigs, Monroe, Polk, Sequatchie, Van Buren, Warren, and White.

James Thomas McDermott, Representative from the Fourth District of Illinois, composed of the Seventh District in the city of Chicago.

John Joseph Fitzgerald of Brooklyn, Representative from the Seventh District of New York, composed of nine wards of the city of Brooklyn.

George Henry Lindsay of Brooklyn, Representative from the Second District of New York, composed of six wards of the city of Brooklyn.

George A. Bartlett of Tonopah, Representative from Nevada.

As to all the twenty-three, one generalization is safe. However good or bad their motives, no Democrat can forgive them who looks upon his party as a great national organization. They threw away the greatest opportunity for a striking victory that the party has had for sixteen years. For just five minutes the Democratic Party was master of the Lower House of Congress. Then the twenty-three deserted.

Every woman whose home is electric-lighted should own a Hot Point Electric Iron

A BROAD STATEMENT. We purposely make it broad and say that in a house wired for electricity, all the ironing should be done with a Hot Point Iron. If you live in such a house you should read our statement word by word, whether you do your own ironing or pay others for doing it.

No appliance of recent years has advanced household economies so much as the Hot Point Electric Iron.

There is not a single valid objection to its use. It is absolutely safe under all conditions; no risk to either user or property. Economy, convenience and comfort all demand its use.

There are two models of the Hot Point Electric Iron—The Standard Model and the Automatic Model.

Every word in this announcement regarding economy, handiness, efficiency, cleanliness applies equally to both models. They are precisely alike except that the Automatic Hot Point Iron has a device attached which automatically controls the temperature and cuts off the electric current before the iron becomes hot enough to cause a fire risk.

Insurance Companies have objected to Electric Irons because occasionally some one forgets to pull out the plug. This leaves the current on the iron and it gets hotter and hotter and finally is liable to start a fire. This has been true of the Hot Point Iron up to this year. It is true of every other iron on the market today, including our Standard Model.

This means that today with every other Electric Iron, except our Automatic Model, it is necessary for some one to think to disconnect the iron when it is not in service, or it becomes a fire risk.

The Automatic Hot Point Iron wipes out this objection. It is a perfect Electric Iron and the only perfect one. If through carelessness a servant leaves the plug in the iron, the automatic device takes care of that. The plug is automatically thrown out of its receptacle before the danger point is reached.

The automatic control is located on the inside of the iron. So long as the iron is used in the regular way the automatic device is not in evidence. The iron is used just exactly like our Standard Iron.

But, should the bottom of the iron become dangerously hot, the automatic device works instantly. It is positive and certain, and so constructed that it cannot fail to operate.

The additional cost of the Automatic Model is very slight. When you consider that it insures you against any possible fire loss from the iron, it is a mere bagatelle.

However, should you not see the necessity of this fire protection, remember the Standard Hot Point Iron is absolutely the best Electric Iron in America excepting our Automatic Model.

HOW EASY IT IS TO IRON WITH A

Hot Point Electric Iron

And safe—and comfortable—and economical, too

Why you should own a Hot Point ELECTRIC IRON

One Model or the other of the Hot Point Irons should be used exclusively in your home for all your ironing

Because it is economical—

—You use no current until ready to iron. You put the plug into the rear of the iron to form the connection. In three or four minutes you begin to iron. Shortly, when the iron is heated up, you pull out the plug and continue to iron with the stored-up heat. On light work you use the current only about half the time. At the ordinary lighting rate, light ironing costs about three cents per hour; on heavy goods it is about twice as much.

Because it saves time—

—No waiting for the fire or for the iron to heat up. No time lost in changing irons or in running from stove to board. Simply put in the plug and iron continuously with the same iron until you have finished.

Because it is so handy—

—Use it wherever there is a light socket—in bedroom or bathroom or out on the porch. Stand is attached and you simply tip the iron up on to the back end.

Because it is so efficient—

—Because of the hot point you can do better ironing and more ironing than with any other iron, no matter how heated. The point of the Hot Point Iron is always hot, even after coming in contact with the damp, cool goods. This gives you an even temperature over the whole face of the iron and the point is hot enough to iron up into the gathers and tucks.

Because it is clean and cool—

—No heat in the room: Iron all day and the Hot Point Iron will not raise the temperature two degrees. No smoke or soot or dust; nothing to soil the ironing. The Hot Point Iron is fully nickel-plated and will not stick or smirch the goods. The handle is of rubberoid and is shaped to exactly fit the hand. It never gets hot.

Because it is simple and strong—

—Any one can use the Hot Point Iron with absolute safety. It is impossible to receive a shock from it, or to cause damage of any kind. With the Standard Model there is just one thing to remember—pull out the plug when the iron is not in service. With the Automatic Model even this is not necessary.

These irons are fully guaranteed against defects in material or workmanship or electrical trouble of any kind.

All of which summed up means that a Hot Point Electric Iron in your home will save strength—save patience—save backaches and tired feet—it means that the ironing can be done in perfect comfort and that the biggest source of kitchen discomfort has been banished.

HOW TO GET A

Hot Point Electric Iron

Lighting Companies in many cities distribute Hot Point Electric Irons to their customers. Inquire first of your Lighting Company. But do not be satisfied with some other make. There is just one iron that possesses all the advantages we have described in this announcement—just one, and that is the Hot Point Electric Iron. We have taken the trouble to explain why this iron is better and safer and more economical than any other. We want you to profit by it.

If the Lighting Company cannot supply you, the leading Electric Supply Dealer or Hardware House probably can.

Or if you prefer, order direct and we will have the iron delivered prepaid without further trouble on your part.

Now, if the arguments in favor of an Automatic Iron which gives absolute fire protection appeal to you, just remember that there is only one Automatic Electric Iron on the market.

The Automatic Iron is made in 6 lb. size and larger sizes for laundries. The Standard Iron is made in 4 lb., 5 lb., and 6 lb. sizes.

We always recommend the 6 lb. size for domestic use. It is none too heavy and will do all kinds of domestic work.

Every Iron is numbered and a record kept of it at the factory. We guarantee it to the Lighting Company or Dealer and they guarantee it to you. This guarantee covers all forms of electrical trouble.

We will deliver to you, all charges prepaid, anywhere in the United States, a 4, 5, or 6 lb. Standard Iron for $5.00, or a 6 lb. Automatic Iron for $6.00.

HOT POINT ELECTRIC IRONS ARE FULLY ENDORSED BY THE National Board of Fire Underwriters

PACIFIC ELECTRIC HEATING COMPANY

MAIN OFFICE and FACTORY, Ontario, California

EASTERN OFFICE and FACTORY, 63-65 West Washington Street, Chicago, Ill.

Lighting Companies and Dealers

We are carrying on an extensive advertising campaign. This is going to create a demand for Hot Point Irons.

We want the Lighting Companies and Dealers to supply this demand.

We are not advertising to build up a mail-order business, but to increase the demand in your locality, to be supplied by you.

We want to be able to turn orders to you. But you must have samples.

Order Your Samples

If you have not already ordered samples of the Hot Point Iron, do so today.

We furnish them at wholesale, subject to 30 days' approval. Give voltage. State probable number of irons you can use and we will quote quantity price.

Hundreds of Dealers and Lighting Companies all over the country are handling Hot Point Electric Irons.

Orderasamplenow.

STERLING TIRES

The trouble with tires is that they are made of rubber and fabric, neither of which is indestructible.

Yet when you sizz around a corner with a 3000 lb. machine going twenty miles an hour, there's a strain on the rear tires that would break a steel cable.

But of course that isn't your business—it's up to the tire builder.

Nevertheless, when a tire goes to pieces it's your bones that are broken, and not the tire maker's.

So it doesn't pay to take chances on tires. It pays you to know how your tires are made, and whether they will stand the strain.

The money cost is plenty anyway—but in building a sturdy tire the cost isn't everything by any means. Anybody can buy good rubber and good fabric.

It's the way the tire is put together that makes it stand up in service.

Nine times in ten when the jack comes out of the tool box and you cuss the tire maker while a new casing goes on—nine times in ten the trouble is due to faulty construction.

Now, we've got a comparatively small mill. We don't want to make all the tires in the world. When we build one hundred "STERLINGS" a day, our shop is full. One hundred a day at an average of $20 each is $2000 a day, or $600,000 a year. That's a nice little business.

Yet it is small enough to allow personal inspection of the work at every stage. When one of our tire makers puts a layer of fabric or rubber on the core, he has to stop till it is inspected—then he puts on another, and that's inspected. In addition, each tire maker gets a weekly premium for a perfect score—meaning "no seconds."

Sterling tires are cured on air-bags, giving internal as well as external pressure, and thoroughly amalgamating the different fabric plies and layers of rubber. That's why Sterling treads and carcasses don't separate—they stay put.

Some of this can't mean much to you, but if you could see Sterling Tires in the making, you would understand just why they give the best service.

Our factory is practically right in New York—only nine miles over in Jersey, and we are building tires for New Yorkers. It's a hard trade to supply—hard to satisfy, because the proportion of heavy cars is large, and they are driven with less care than elsewhere. That tests the tires.

If you are near enough, come to the factory and we'll show you just how we do our work. Otherwise let us tell you how and where to get one STERLING TIRE. Put it on one wheel and see it outwear the other three.

Sterling Blue Tubes

Our tubes are blue and in making them blue we make them better than any other tube. There may be other tires nearly as good as ours, but the Blue Tube is absolutely unequalled. If you will tell us what tires and tubes you use and where you buy them we will tell you how you can get one Blue Tube without cost to you.

The Private Detective

(Continued from page 15)

flowers were useful in helping him to think, and so, of course, for that reason she was always glad to have them, and she had some sentiment about them then! —Oh, gee!" He swallowed another drink.

Broxton sat impassive in spite of a curious sense of unreality. "Look here," he said. "Tell me. Is she worth your feeling so about her? What does she look like, anyhow?"

"Worth my feeling—! I wish you could see her once! She's only about so high—her eyes are about on a level with my shoulder. She wears a big hat with two red feathers stuck across the front, kind of on the bias; it's such a big hat that when we walk together I can't get a look at her face at all until she turns it and looks up at me, and then—say, I want to get right in under the hat, too."

"Pretty, is she? Blonde or brunette?"

"Brunette. Pretty? Well, what would you think!" Perch gave Broxton a reproachful glance. "I tell you whenever she looks at me I want to get right in under the hat. I did it twice, too," he added reminiscently. "Walking one Sunday in the country. I thought maybe she was just pretending that she minded it that time."

He sighed in disillusionment.

Broxton was not listening very attentively. The identity of the young woman had been made sufficiently clear by the detail of the two feathers, and the thought that even in the most remote way he had interfered with Mr. Perch's happiness was so amazing that it excluded all other emotions.

"Oh, she was just playing the coquette," he said at last.

"She'd been doing that enough," responded Perch gloomily. "I let her know that if she really cared at all, now was the time to be serious. When she just handed me the worst jolly yet, that was enough; I have some pride."

"Too much, if that made you quit."

"I gave her one more chance." Perch drained his glass. "We always used to meet at the corner of Third and Walnut at half-past eight in the morning in front of the flower stand, and then after I'd got the flowers we would walk down Walnut together. I left her last night; I said good-by to her for good. She let me go. But I thought that maybe overnight she'd have thought better of it. So I got to the corner of Third and Walnut at twenty minutes past eight this morning; the kid with the flowers asked me what I'd have, and I said I didn't know as I'd have any to-day—didn't know as she'd be along. Then I told him he might have a bunch of pinks ready in case she did come. Pretty soon he said: 'There she comes,' and got busy with the pinks. I just kept my back turned to Third Street and went on reading the 'Herald.' 'Say,' says the kid all of a sudden, 'she's going on down Third! She saw you, too.' 'Yes, that's all right,' I said. 'I'm going to meet her somewhere else. Give me the pinks.' So I walked down Walnut a block or two and chucked them in the gutter."

"Well," said Broxton. "What did you want? Did you think she would run after you?"

"She needn't have thought I'd run after her," returned Perch belligerently.

"That's what you should have done."

"And been given the laugh! No, sir. I went down to the office—did I tell you I was the advertising man for the Little Brighteyes Breakfast Food? I invented the ad: 'Willie, you must not come to breakfast in your pajamas'—you know the answer?"

"'Mama, I can not wait to dress for Little Brighteyes'?"

"Correct. That ad and the picture made thousands of dollars for the breakfast food this last year," continued Perch warmly. "I originated all their ads. I was offered chances at other things with twice the money. But I stuck to Little Brighteyes. I was interested in building up the business; I felt I was doing a good work. 'A good healthful food for the millions and for the millionaires.' You know the ad. It was all right till about a month ago when Whitfield went out and Bannock came in as manager. I knew I'd have a row with Bannock some day—the lobster! Naturally I had a grouch when I got into the office this morning; Bannock sailed in first thing and gave me some what-the-hell talk about an ad. I come from Missouri myself. I resigned on the spot so that he couldn't fire me, and then I unloosed on him all those words that a man in love ought to forget." A smile at the agreeable recollection passed over Perch's somber face.

The first Derby made in America was a C&K

BY every test which may be applied, the Easter hat should be a Knapp-Felt. The variety of smart shapes in which Knapp-Felt hats are made affords an opportunity for the exercise of individual taste in the selection, thus insuring a properly becoming style; the superb quality is an enduring delight to the eye and touch, as well as a constant satisfaction to those for whom the best is none too good; the steadfast Cronap dye is deep, rich and permanent; and the noticeable elegance of style is a strong bid for the appreciation of discriminating men.

In every one of the thirty-seven processes through which a Knapp-Felt hat passes it receives the individual attention of a well-paid, contented workman who measures up to the C&K standard.

Knapp-Felt DeLuxe hats are Six Dollars, Knapp-Felts are Four Dollars, everywhere. Derbies and Soft Hats.

Your newspaper probably has the advertisement of a hatter who sells Knapp-Felts.

"So now you haven't a job, even if you could get married," observed Broxton disapprovingly.

"A man who's an artist in his line needn't stay out of a job long," replied Perch. "The Gunnison people had been after me for a year to handle their advertising for them. I'm to give 'em an answer to-morrow."

"So it's just a question whether you do that or go to the Klondike or Mexico or the devil generally?"

"That's it."

"Queer how many men go to the devil because of some woman," observed Broxton platitudinously. "In my business I'm always finding that out."

"What's your business?"

"I'm a private detective."

"No! The deuce you say!" exclaimed Perch with admiring interest, and Broxton, nodding gravely, tried not to appear too important or too proud.

"Look here," he said. "I'd like to do something for you in this case. You tell me the young lady's name and the office where she works, and I'll guarantee to find out for you everything about that fellow that's got her hypnotized; I'll let you know what sort of attentions he's paying her."

Perch hesitated, looking at the floor.

"No," he said at last. "Much obliged. But I don't like the idea of spying on them. It's her business, anyway. No, I guess I won't tell you her name; I—it wouldn't be treating her right. I care too much about her to do a thing like that; yes, darn it all," he added mournfully, "I do."

"All right. I was just thinking—" Broxton left the sentence unfinished.

There was a pause.

"A private detective's life must be mighty interesting," suggested Perch.

"Oh, it's about like anything else," said Broxton. He yawned. "How about bed for you? I guess what you need is to sleep on your troubles."

"I guess I've kept you up listening to them," replied Perch. He took the blanket off his bed, and, with a sofa-cushion and an overcoat, made up a bed on the floor. Broxton, unlacing his boots, watched him, and divined his hospitable purpose. And suddenly, when Perch had turned away, Broxton cast himself just as he was on the improvised couch, drew the overcoat over him, put his head on the sofa-cushion, and closed his eyes.

"Good night," he said.

Perch expressed himself in a manner appropriate to his Missouri origin. But as his guest did not open his eyes, he made no further protest; in a few moments he turned out the lights, and soon after that they both were asleep.

At six o'clock Broxton awoke; his host was still sleeping. Broxton dressed quietly—an easy task, as he had so little dressing to do. He wrote a note:

"DEAR MR. PERCH—I did not like to wake you, and I have to leave early; in my profession we have to be silent and mysterious. Thank you for your kind hospitality, and believe me

"Your friend,

"THE PRIVATE DETECTIVE."

Broxton laid the note on the table where it would be sure to catch Perch's eye, and then went softly down the stairs and out of the house.

Three hours later Broxton entered his office. After interviewing the witness, he had gone home, taken a bath, put on clean clothes; and now he felt disposed to set right what was wrong in the world.

Passing through the outer room, he glanced at Miss Kelly. She was bent over a letter-file, and he could not see her face. He did see that there were no flowers on her desk and that above her head, on a peg, hung a hat with two slanting red feathers.

After he had opened his letters he called: "Miss Kelly!"

She appeared with her note-book and seated herself beside his desk; on her face was the listless expression which had disturbed him the day before.

"I'll give you those notes that I got from Williamson," he said, and he began dictating: "'Williamson is prepared to swear that at the time of the accident—'" He broke off suddenly. "Miss Kelly, what's the matter? No flowers again to-day!"

She looked up with a startled appeal in her eyes. But he continued:

"I wonder if you don't need a vacation?"

"Why?" she asked. "Don't—don't I do my work all right?"

He shook his head. "How can you do it all right without flowers? You need to go into the country and pick bunches and bunches—if your garden at home has given out."

She looked at him perplexed, uneasy. "I don't know just what you mean."

"I don't believe you feel very well. I

THE "STETSON" MODEL

THE STETSON SHOE

This is beyond question the most popular all-round shoe in the country.

It is because it fits perfectly so many different feet that it is so well liked. It has enough style to suit the average man.

It has every Stetson advantage—this means that it is carefully made by skilled labor, of the very best material that can be bought.

Before buying shoes again, let the shoe man who shows the *Red Diamond* sign, put a pair of "Stetson" models on your feet. $5 to $9 the pair.

Write for this book, "The Right to Know," and learn to *judge* a shoe when you are buying a shoe.

If You're An Extremist—

By which we mean if you are *young*—if the blood still runs red and warm in your veins—if you still delight in a horse that needs holding straps—if you want to be in the thick of it every minute—in baseball, tennis, on the running track or the gridiron, instead of on the benches.

—Then Kaufman Campus Togs will suit your fancy to a "T."

—They're designed and built especially for *Young Men*. They wouldn't suit your father or elders—but they'll suit you.

Kaufman "Pre-Shrunk" Campus Togs

are stylish—eminently so. But "Extreme" Style—advance style—the style of 1910. All the little "fads and foibles" that you can secure in lots of garments *next year* you'll find NOW in these masterpieces of the tailoring art.

Step into the store of a Kaufman dealer and try on a suit of Campus Togs. Note the "tone," the indescribable "air"—see how your good points are deftly brought out and enhanced—how those slight imperfections of form which we all possess are subtly concealed.

And then remember this:

—That every iota of the style, distinctiveness and elegance which you observe as you view yourself in the clothier's glass is there to stay.

It is rendered fixed and permanent by the Kaufman "Pre-Shrinking" Process, which is exclusively our own, and which no other manufacturer can use. All the shrink tendency is taken out of the cloth before the goods are even touched with the shears. Which means that Campus Togs will not shrink, get out of shape, wrinkle, pucker, bag nor draw up.

And because our "Pre-Shrinking" Process renders style and fit permanent, we are able to Guarantee Satisfaction or Money Back on Campus Togs or any other garment bearing the Kaufman "Pre-Shrunk" Label—something no other manufacturer cares to do.

Your home dealer has our authority to make this guarantee to you. Ask him about it.

Your dealer will gladly show you the Campus Togs or other Kaufman "Pre-Shrunk" Garments, in any of the popular fabrics for Spring and Summer, at $12 to $30.

Our handsome *Style Book* will post you on the correct styles for Spring and Summer. Ask your dealer for it—or send to us direct, if you prefer. It's *Free*. You should have it before deciding.

Chas. Kaufman & Bros., Chicago

Will you accept $5.00 a day for your services?

Whatever your present employment may be—whether you are a man or a woman—this offer is open to you.

You can establish yourself in a **pleasant, profitable,** and **permanent** business that will pay you more than **$5.00 a day** at the start—and will pay you as **much more** as you care to make.

You can learn this business in **less than a week**—and make **good money** while you are learning it. You will have practically no competition.

You Take no Risk Whatever

You will invest no money in this business until you are **absolutely sure** you can earn the money at it. You therefore **run no risk** of losing money. You are **paid well** for **all** you do.

You know the principle of the vacuum cleaner. It sucks up **dirt** and dust from floors, carpets, rugs, furniture, walls, woodwork, etc., and takes **all** the dirt and dust **out of the house**—quickly, easily, economically.

It makes housecleaning the work of **hours** instead of the work of **days**—and it does the work **ten times as thoroughly** as any other method.

How the Business Increases

Every housewife who has a rug, a room or a house cleaned by this process, is so **thoroughly satisfied** that she tells her friends about it.

You get **their** orders. They tell **their** friends—and you get **more orders.**

You get the work month after month, season after season, year after year. The more **customers** you get—the more **they** get for **you.**

Duntley Standard Vacuum Cleaners

embody **every principle** and **every improvement** known in the vacuum cleaner business—and combine all these advantages in a **portable machine,** weighing about 50 pounds, that can be easily carried from room to room, or house to house.

You can take one of these machines into a residence and remove **every particle** of dust and dirt, from **every room,** without taking up carpets or rugs—without removing furniture—without taking down curtains or portieres—and do it in **one-tenth time** it could be done otherwise.

What This Invention Means

Before the invention of the Duntley Portable Standard Vacuum Cleaner, this work could only be done with a big, cumbersome, costly wagon apparatus—yet these wagon outfits earned for their owners **immense profits.**

The Duntley Portable Standard Vacuum Cleaner does the same work that the big wagon outfits do, and costs only a fraction as much originally and much less to operate. It will therefore pay you far **larger profits.**

My Pay From Profit Plan

I want one good, earnest, honest, active man or woman in **every** city or town—**no matter how small**—where residences are **lighted by electricity,** to engage in the Duntley Vacuum Cleaner business, on the "Pay from Profit Plan."

I will **establish** you in business—**show** you how it is done—**enable** you to make good money while you are learning it—and assure you an income of at least **$5.00 a day.**

Or, should you want a Duntley Standard Vacuum Cleaner for use in your **own home,** I will prove its **value, its economy,** and its **necessity** to you—and give you an opportunity to use it, **at my expense.**

Let me Prove These Truths

I do not ask you to invest one dollar. All I ask is that you fill out the coupon below, and let me prove to you the truth of every statement here made.

This offer is made to you—**now**—**today.** It is your great opportunity to start in a **new business**—in a **coming business**—in a **profitable business**—in a business of **your own,** that will grow bigger each year. Fill out and mail the coupon **right now.**

noticed it yesterday. You looked out of sorts—as if you'd just lost your best friend."

Then, under his keen gaze, her eyes faltered, swam with tears, and dropped, and the crimson rushed to her face.

"I—I—you know, that *was* it," she confessed. She drew out her handkerchief and touched it to her eyes. "But I'll get over it; I'm not going to think about it any more, Mr. Bryce; truly, I'm not; and I'm not sick or anything. I can do my work, I can."

"But why should you get over it? Why don't you make it up with your friend, if you've quarreled with her?" Broxton's solemn face gave no intimation of the mirth which he was controlling as he threw out that suggestion. "Probably she's feeling just as bad about it as you."

"I hope"—Miss Kelly bit her lip for a moment and then ejaculated desperately—"oh, I hope she is!"

"Aren't you the unchristian person! Now, Miss Kelly, look here; I'll be your counsel in this matter. I feel able to advise you just from what I see. Here you've had a quarrel with your best friend, and both of you are quite broken up about it—you feel sure she's broken up about it, don't you?"

Miss Kelly, her lips pressed tight together, nodded.

"And it's upset you so that if you don't mend the situation you'll have a nervous breakdown, and have to take a vacation for months."

"Oh, no, I won't!" she cried with sudden spirit. "I won't think of hi—her; I won't think of her, I—"

"But why shouldn't you?" asked Broxton soothingly. "Isn't it foolish, obstinate pride to refuse to make up a quarrel with your best friend when you miss her so much and when you know, as I am sure you do, that you've been to blame as much as she?"

"I'll never admit it," declared Miss Kelly with spirit. "Never, never. If—if she wanted to come back—then it might be different. But I can't go after her; I won't. I—I'd rather suffer."

"But if she's as proud as you are—"

"She has no business to be," snapped Miss Kelly.

"But aren't you ever willing to take the first step, even though you may think the other person was in the wrong? Of course I could understand your holding back if the other person was a man, but—"

"Mr. Bryce!" she cried imploringly. "I know you want to help me, but please don't talk about it any more! I can't do anything about it, and I feel as if I just couldn't bear to think of it—and I do want to work, so as to keep my mind from thinking of it—and—" Her voice choked and her eyes filled again; she impatiently brushed away the tears. "I'd like to show you how well I can take dictation," she said, with an entreating, sad little smile.

"All right," said Broxton cheerfully. "I guess it's no use ever for a man to try to act as peacemaker between women. Now we're off: 'Williamson is prepared to swear that at the time of the accident he was driving his express wagon—'"

Miss Kelly bent her head and began scribbling earnestly in her note-book.

Later in the morning, when he was alone in his room, Broxton wrote the following note:

"DEAR MR. PERCH—The brunette girl who wears the big hat with two red feathers and who has a face that makes you want to get in under the hat is Miss Anna Kelly. She is a stenographer in the law office of Starr & Parsons, and she is crying her heart out for you. Go to her as soon as you can.

"Your friend,
"THE PRIVATE DETECTIVE."

He addressed the note to Mr. Perch's lodgings, and posted it at noon.

He came back after luncheon to find Miss Kelly sitting idle at her desk, gazing out of the window with a dreary face. He glanced at her when she looked round. She blushed and at once began to play industriously on the keys of her instrument.

Broxton closed his desk early that afternoon; as he was putting on his hat he heard the telephone bell ring in the outer office. Thinking that the call might be for him, he lingered while Miss Kelly answered it.

"Yes," she said, and then Broxton saw her face undergo a sudden change, a sudden transfiguration of joy, and he heard her say with a little gasp of laughter: "This evening? Yes, I will." At once, as unobtrusively as possible, Broxton departed.

The next morning when he entered the office Miss Kelly was there, arranging a bunch of roses in a tall tumbler on the top of her desk. She looked at Broxton with a radiant, shyly embarrassed smile,

TRADE MARK. Registered in U.S. Pat. Office

of great interest to

Every Prospective Mother.

Something new — only scientific garment of the kind ever invented. Combines solid comfort and ease with "fine form" and elegant appearance in the home, on the street, and in society. — **Always drapes evenly in front and back** — no bulkiness — no draw-strings — no lacing — no ripping or basting. — **Can be worn the year round.**

Made in several styles, and at prices lower than you can buy the material and have them made at home.

FREE Send for our **Fine Illustrated Book — "Fine-Form Maternity Skirt"** — It's FREE to every woman writing for it. Tells all about these skirts, their advantages, styles, material, and cost. Gives opinions of physicians, dressmakers, and users. **10 Days Free Trial.** When you get our book, if your dealer has not yet been supplied with Fine-Form Maternity Skirts, make your selection of material and style, and we will make the garment to your order. When you get it, **wear it ten days,** and **if you don't find it exactly as represented,** send it back and we will cheerfully **refund every cent** paid. **Other Skirts** — If not in need of a maternity skirt, remember our famous B & W dress and walking skirts will positively please you — **same guarantee** — Illustrated book free. Which book shall we send? Write to-day to

Beyer & Williams Co., Dept. 51, Buffalo, N. Y.

WARNING

To protect you against disappointment we caution you that the **Fine-Form Maternity Skirt** is the only "Maternity Skirt" on the market, as it is the only skirt which can always be made to drape evenly, front and back—all substitutes offered will rise in front during development—a fault so repulsive to every woman of refined tastes. No pattern can be purchased anywhere for this garment. Its special features are protected by patents.

"A Kalamazoo Direct to You"

O'Sullivan's

Heels of Live Rubber

Listen! Have your feet lost their spring? Do you sit down where you used to stand? Do you ride where you used to walk? Are you disinclined to walk? Do you wear the soles of your shoes on the inside? Look to your shoes; look to the heels of your shoes particularly. These symptoms and many others arise from improper attitudes in walking, bringing disproportionate weight on the inner or weaker side of the feet.

The Great Reason. See to your shoes; see to the heels of your shoes; see that the heels are low and long enough to receive a perpendicular line passing down through the center of the ankle on the inside of your foot; see that your boots are fitted with heels of Live Rubber for just one reason, though there are many others which physicians, nurses, teachers, housekeepers, and in fact all sensible people, will offer; and the great reason why you should wear Heels of Live Rubber is that they encourage walking, which is universally conceded to be the simplest and best exercise, and enable you to walk more briskly and farther with the same effort. They do more than that; they help you to walk normally and gracefully.

If all people wore Heels of Live Rubber and had them put on by shoemakers who understood their work, they would be wearing heels one inch high and long enough to receive that portion of the weight which ought to be supported by the breast of the heel and to relieve the strain upon the instep arch.

Resiliency. The resiliency of the Live Rubber Heel induces you to walk normally; that is, to carry your feet parallel in walking. Leather heels are inclined to make you toe out; that is abnormal, ungainly, and tiresome, and results in the afflictions for which instep supports are worn on the inside of the shoes.

Ball of Foot. Provided Heels of Live Rubber encourage walking, and induce normal attitudes in walking, then it follows that they cause you to use the ball of your foot as the fulcrum, and the muscles of your leg to lift your body in walking.

Substitution. If Heels of Live Rubber are helpful along these lines, isn't 50c. a low price for them? Isn't it almost a shame to substitute ash-barrel rubber stuffed with rags when *Live Rubber* is the only article that will fill the mission of the rubber heel? But that is the situation; if you want *Live Rubber* you must demand O'Sullivan's. The few cents more profit that the substitute leaves the dealer explains why he makes his little speech as to why they are "just as good."

Diagram. When you encounter such a condition send diagram of your boot heel and 35c. to Lowell and get your Live Rubber Heels direct from the makers.

Free Booklet. A free booklet on the proper walk and proper walking shoes, written by Humphrey O'Sullivan, expert foot fitter, for the asking.

O'SULLIVAN RUBBER CO., LOWELL, MASS.

DEEP BREATHING
IS
Nature's Substitute for Bodily Exercise
NULIFE

"Does not Bind Under the Arms or Press the Abdomen"

"Gives the Perfect Form Demanded by Health and Fashion"

Compels Deep Breathing
—Prof. Charles Munter

The lungs are the storage rooms of energy for the body, and deep breathing is the method required to keep them constantly charged. Every motion of the body uses up energy, and continued deep breathing rebuilds healthier tissues as fast as the old ones are consumed.

The larger the lungs, the greater the vitality of the body. Nulife expands the lungs to their fullest capacity and holds them open to receive all the air that continued deep breathing draws into them. The lungs regulate the health of the body—deep breathing regulates the strength of the lungs.

Back View, Showing How Nulife Straightens Round Shoulders

Prof. Charles Munter's

Nulife

Trade **PATENTED** Mark

For Man, Woman and Child

Nulife expands the chest 2 to 6 in., straightens round shoulders instantly, holds the spine erect, fills out the hollows of the neck, reduces the abdomen, and resists all downward pressure on the body, preventing congestion on the heart, lungs, stomach and other internal organs.

Nulife insures perfect circulation throughout the body, keeping it at an even temperature and in perfect health. Nulife gives to Man a commanding, military figure, and to Woman the graceful, curved lines of beauty, with or without a corset. Nulife makes children stand, sit and grow erect, healthy and strong. Nulife is entirely new in its principles and construction.

Nulife is designed on absolutely correct bodily lines, being the result of years of study by Prof. Chas. Munter, who is an authority on human anatomy. Nulife is recommended and worn by eminent physicians, physical and vocal instructors, military authorities, and other professional people. Its wearers number over a million men, women and children. Nulife is a thin, washable garment, light as a feather and strong as steel. There is no metal to rust or rubber to decay. Nulife positively does not irritate under the arms nor press against the abdomen. Nulife requires no lacing and is so simple any child can put it on without assistance. **Every wearer of Nulife is a living testimonial of health.**

Order a Nulife Now and Begin to Enjoy It at Once

I guarantee that Nulife will straighten round shoulders, expand your chest two to six inches, increase your height and compel free, regular deep breathing as Nature wants you to do. The price of Nulife is now **$3.00**, for which it will be sent prepaid to your address, and I know you will be well pleased and recommend Nulife to your friends after you receive and wear it. To order correctly give Chest Measure (close up under arms), Height, Age, Weight, Sex and Occupation.

MAIL THIS COUPON FOR MY **ILLUSTRATED BOOK** **FREE TO YOU**

Sign and mail this coupon to me and I will send you free the Nulife booklet which tells you all about Nulife, what it has done for others and will do for you. This booklet is filled with illustrations and reading matter that clearly describe the efficiency and benefits of this wonderful garment. You ought to know these facts whether you ever expect to purchase Nulife or not. Send your name and address, plainly written, to

A GARDEN OF ROSES

In order to introduce The Housewife, the best of women's magazines, into new homes we will send it on trial all the rest of this year for 35 cents, together with Six Guaranteed Ever-Blooming Roses, all fine, strong plants, sure to bloom and give satisfaction. They are as follows:

The Bride. *An Ivory-White Rose.* This is undoubtedly the finest white Rose ever offered to the public. None of them compare with the Bride in the size and shape of buds and half expanded flowers.

Star of Lyon. *A Profusely Blooming Rose.* This magnificent Tea Rose is a rich golden yellow; a strong, healthy and vigorous grower, immense bloomer, bearing flowers and buds early and late. The flowers are very deep, rich and full, excellent substance, very sweet.

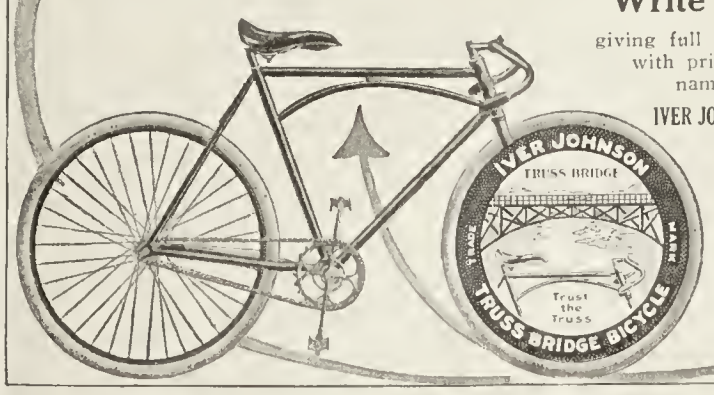
Clothilde Soupert. *A Hardy Ever-Blooming Rose.* In a single season small plants will grow fifteen to twenty-five feet, producing cluster after cluster of finest formed flowers. They are large, round and durable, and deliciously sweet. The color effect is magnificent ivory-white.

Maman Cochet. *A Delightfully Fragrant Rose.* The growth is vigorous, with rich, healthy foliage. The extra large flowers are produced on long stems, are very double, and the buds and half expanded flowers are simply exquisite in their graceful form, delicate color and rich fragrance. The color is deep rose pink, the inner side of the petals silvery gray.

The Bridesmaid. *An Incomparable Rose.* The most popular pink Tea Rose. Thousands of this variety are grown every year for cut flowers, and it is also very desirable for Summer bedding. It is a delightful shade of bright pink, very fine flowering and easily grown.

Scarlet Bedder. *A Splendid Hardy Rose.* It can be planted anywhere, being entirely hardy. Flowers are large size fiery scarlet, a color rarely seen in Roses. Planted everywhere on account of its color and freedom of bloom. The size of the flowers and the brilliant coloring are marvelous and it blooms all through the season in profusion.

☞These Six Handsome, Hardy, Well-Rooted Plants are grown especially for us and are carefully packed and sent postpaid, by mail, direct from the greenhouses in Ohio. They are not common plants, but are guaranteed true to name and color and to be satisfactory or money refunded.



THE HOUSEWIFE HAS NO PEER AS A FIRST-CLASS MAGAZINE FOR THE HOME, and numbers among its contributors many of the foremost writers of the day. It is Bright, Cheerful, Original, Practical and Timely. The **stories** are clever and pleasing; the **fashions** simple and sensible; the Mother's Hour, helpful; the Kitchen Page, a delight; while other departments, Fancy Work, Social Circle, The Garden, and others are among the best. The Housewife's Editorial Page is alone worth ten times the cost of a subscription. *You will be delighted with it!*

We will send The Housewife all the rest of this year with the above described Collection of Six Roses for only 35 cents. Address **THE HOUSEWIFE, 52 Duane Street, NEW YORK.**

IVER JOHNSON
TRUSS BRIDGE BICYCLE

TRUST THE TRUSS

The Iver Johnson is proof against the strain of racing or coasting or the jars of rough roads, because of the Truss Bridge which holds the frame absolutely rigid, preventing sagging and spreading, "give" and "play." Thus the Iver Johnson is wonderfully easy running and far stronger and longer-lived than other bicycles.

Imitations of Lea & Perrins Sauce have met with no success. The original Worcestershire fills every requirement.

Unequaled as a Digestive.

JOHN DUNCAN'S SONS, Agts., New York.

and she came to him quickly, and said: "I must tell you right off, Mr. Bryce. I shan't need any vacation, for I'm going to—to leave the office for good pretty soon. I'm going to be married."

"Are you!" exclaimed Broxton. He put out his hand. "Well! How sudden you are! I never suspected! Who's the lucky man?"

"A Mr. Perch—Peter Perch. He's an advertising man—he writes advertisements, I mean."

"Really!" said Broxton. "I think I must resort to advertising if it produces such results. What papers did he use?"

Miss Kelly blushed and laughed. "Oh, I didn't mean that. Oh, now you're laughing because you got a rise out of me! Well—!"

"I hope I'm to have an opportunity of meeting Mr. Perch some time?"

"Oh, in about ten minutes. He walked downtown with me: he's making a change in his business, and he's coming round here right away to let me know if it's all right. I'd like awfully to have you meet him."

"I shall be delighted." Broxton turned to enter his room, then stopped. "Oh, Miss Kelly! Now surely you'll make it up with that friend of yours who's feeling so unhappy?"

She laughed. "Oh, I'm not going to bother about that any more."

Broxton shook his head. "Dear me, but you're the unchristian person."

He wondered whether Perch would betray himself at the meeting: he opened and read his letters, feeling a pleasurable undercurrent of excitement. He was writing at his desk when he heard a buoyant voice outside—"It's all right, Annie"—and looked up to see Perch standing just beyond his door.

Again he bent over his desk; he was much absorbed in his work when Miss Kelly entered. "Mr. Bryce," she said timidly, "this is Mr. Perch."

"Oh," cried Broxton, springing up quite suddenly. He looked at Perch and smiled, and put out his hand. Perch seemed not to see the outstretched hand; his frightened eyes were fixed on Broxton's face with an expression of incredulity; a flush mounted to his cheeks and forehead. Broxton took his hand masterfully and continued: "So glad to meet you and offer you my congratulations; Miss Kelly has just told me."

"Yes." Perch laughed nervously. "Thank you very much." And then, without any warning, he burst into a shout of laughter, in which Broxton instantly joined him; and so, shouting, they wrung each other's hands. Miss Kelly stood petrified.

"Where's the joke?" she demanded with asperity. "Are you crazy, Peter Perch? What's the matter with you, anyway?"

"I'm a little hysterical, I guess, because I'm so happy," Perch ventured apologetically, with a depreeating glance at Broxton.

She looked at him with scorn. "I don't like it. You seem to know each other; you have some secret. You're laughing at me." She was growing more excited, more suspicious every moment; her blue eyes, which at first had been snapping, were now misting over with a hint of tears. "I—there's something you're keeping from me, Peter." Her lips quivered, her eyes were reproachful; she turned away.

"Miss Kelly!" cried Broxton, and she paused and looked at him irresolutely; there was a pleasant twinkle in his eyes. "Mr. Perch and I happened to be thrown together once; we were able to help each other. I suppose Mr. Perch will tell you some time how it was. But if he doesn't choose to, you must trust him, and you must trust me. There was nothing discreditable to either of us. We weren't laughing at you, Miss Kelly. But we oughtn't to have laughed, for it must have seemed rude. Only, you see, it was such a surprise to Mr. Perch—our meeting. Isn't that all true, Mr. Perch?"

"Every word," said Perch fervently.

Miss Kelly looked at them both doubtfully for a moment. Then her eyes cleared and shone; she stepped up to Perch and slipped her hand into his.

"Of course I do trust you, Peter," she said. "And I shan't ever ask what it was that was so funny. But," she added, "I do hope that some time you'll want to tell."

"Some time I will," Perch promised. "But not right now. Good by, Mr. Bryce." He gave Broxton a grateful glance.

"Good by." As they were going out, Broxton called: "Oh, there's one thing, Mr. Perch; do all you can to reconcile Miss Kelly to that friend of hers that she's quarreled with."

"What's that?" asked Perch.

But Miss Kelly, with a merry laugh, took a firmer grip upon his hand and drew him away.

Home-made Gas-Light From Crushed Stone

TWENTY years ago the oil lamp had already been driven out of the city into the country home where gas could not follow—so we thought.

In those days we would have laughed at the idea of a country home lighted with gaslight.

But like the telephone and free mail delivery gaslight has finally left the city to become a common rural convenience.

In the year 1909, the up-to-date villager or farmer not only lives in a gas lighted house, same as his city cousin, but when he drives home on a cold, wet night he actually lights up his barn, his barnyard or porches on his house with this gas-light by simply turning an "ignition" button on a post or wall.

***

And this change seems quite like magic when you consider that this rural gaslight is home-made—made by the family itself right on the premises.

Take fifteen minutes once a month to make all that can be used in a large house.

The magic is all in the strangely, weird, manufactured stone known commercially as "Union Carbide."

This wonderful gas producing substance, "Union Carbide," looks and feels just like crushed granite. For country home use it is packed and shipped from warehouses located all over the United States in sheet steel cans containing 100 pounds.

Union Carbide won't burn, can't explode, and will keep in the original package for years in any climate. For this reason it is safer to handle and store about the premises than coal.

***

All that is necessary to make "Union Carbide" give up its gas is to mix it with plain water—the gas, which is then instantly generated, is genuine Acetylene.

When piped to handsome brass chandeliers and fixtures Acetylene burns with an intensely brilliant, stiff flame, that the wind can't affect.

This flame makes light so white in color that it is commonly called "Artificial Sunlight."

Experiments conducted by Cornell University have proven that it will grow plants the same as sunlight itself.

Physicians recommend Acetylene as a germicide and a remedy for eyestrain, and it is used as an illuminant in fifty-four hospitals in New York City alone.

Then too, Acetylene is so pure that you might blow out the light and sleep all night in a room with the burner open without any injurious effects whatever.

On account of its being burned in permanent brass fixtures attached to walls and ceilings, Acetylene is much safer than smoky, smelly oil lamps which can easily be tipped over.

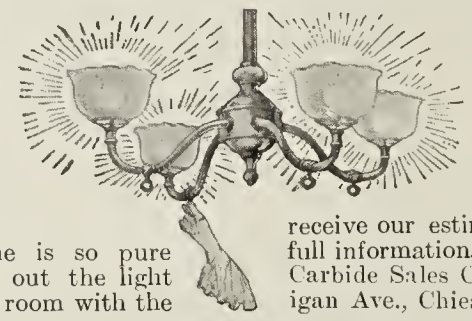
For this reason the Engineers of the National Board of Insurance Underwriters called Acetylene safer than any illuminant it commonly displaces.

In addition to all these advantages, Acetylene light is inexpensive.

An Acetylene light of 24-candle power costs only about 3¾ cents for ten hours' lighting, while for the same number of hours regular oil lamps of equal volume cost about 6 cents in kerosene, chimneys and wicks on the average.

***

Consider this carefully and you will hardly wonder at the fact that there are today no less than 176,000 town and country homes lighted with home-made Acetylene, made from "Union Carbide."



Once a month some member of the family must dump a few pounds of Union Carbide in a small tank-like machine which usually sets in one corner of the basement.

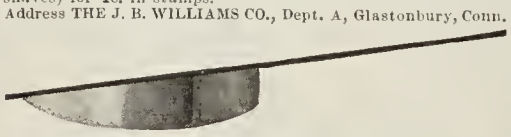
This little tank-like machine is automatic—it does all the work—it makes no gas until the burners are lighted and stops making gas when the burners are shut off.

The lights located in every room in your house, on your porches, in your horse and cow barns, or barnyards and chicken yards if you like, will all be ready to turn on with a twist of the wrist or a touch of the button at any time of the day or night.

No city home can be as brilliantly or as beautifully illuminated as any one of these 176,000 homes now using Acetylene.

Won't you let us tell you how little it will cost to make this time-saving, money-saving, beautifying light at your own home?

Write us today how large your house and how many rooms you have, and receive our estimate and books giving full information. Just address Union Carbide Sales Co., Dept. A, 158 Michigan Ave., Chicago, Ill.



Williams' Shaving Stick

Nickeled Box—Hinged Top

Can you afford for the few cents you may save, to run the risk of some of the inferior shaving soaps that claim to be "Just as good as Williams'?" Ask your face this question.

Williams' Shaving Sticks sent on receipt of price, 25c., if your druggist does not supply you. A sample stick (enough for 50 shaves) for 4c. in stamps.
Address THE J. B. WILLIAMS CO., Dept. A, Glastonbury, Conn.

As strong as a solid wheel
No solid wheel is speedier

In the "Sintz" Reversing Propeller are combined perfect control over both speed and direction; adjustable pitch, elimination of grease, dirt, wasted space and power. We are dead certain that the "Sintz" is king of all reversing devices—that it will satisfy you.

We'll back up that statement by refunding purchase price on any "Sintz" Wheel that does not satisfy, paying freight both ways. We want you to have our catalog. It contains the whole proposition in a concise form. Send today.

MICHELIN TIRES

HISTORICAL

The Paris Bordeaux speed and endurance contest of 1895 was not only the first important automobile event ever held in the world, but it possesses additional historic interest because on that day pneumatic automobile tires were first used. They were Michelin Tires of course.

Michelin was the pioneer then and is the leader now. Dating from that first appearance in 1895 Michelin Tires have carried to victory the winner of practically every speed and endurance contest in the world.

Copyright 1908, Pictorial News Co., N. Y.

Michelins Winning the Briarcliff

In the World's Workshop

Devoted to Facts, Observations, and Thoughts Concerning Common Industrial Methods, Products, and Influences

By Waldo P. Warren

A New Trade Press

A NEW concept of the proper function of the trade press is making itself felt. It is not especially new to some of the best of trade publications, but it is very new to others.

The new order of trade paper does its duty by the reader whether the advertiser likes it or not. If the advertiser tries to exert his moral influence by canceling his advertisement, the publication has an opportunity to win the advertiser's respect by refusing his terms, and if the advertisement does not come back of its own accord later on, it affords an opportunity to consider whether it is really desired.

If it should ever come to be generally suspicioned that a trade paper framed its editorial policy to please its advertisers at its readers' expense, the prosperity of that paper would tend to wane. A publication that is not what it purports to be, purports to be what it is not. Reading matter that purports to be written to enlighten the reader, and yet withholds known information that would be of use to him, or colors information that is given, because such methods suit the purpose of some advertiser, is just the kind of reading matter that the reader stands least in need of.

The new trade press will disseminate trade information without fear or favor, and other things will adjust themselves accordingly. It will take courage to conduct such papers, but the fact that it has been found possible in some cases should encourage the faint-hearted. It may be true that it is not generally possible in all cases at present, because of the handicap of long existing conditions and attitudes. The overzealous reformer sometimes forfeits his ability to accomplish anything by offering inadequate resistance to the opposition.

One fact, however, remains. The right basis of a trade paper is to serve the reader with reliable information and incidentally to sell advertising space. The trade press must eventually gravitate toward that basis. Happy the man who moves with the current, when the current is running in the right direction.

Economies

ALMOST every advance in business development involves the discovery of new economies. New machinery usually has one unanswerable point in its favor in that it effects economies before unthought of. A new idea of business procedure usually means a greater revenue or a greater saving. In any event it is the making use of opportunities hitherto unappreciated.

Attention is turning, and will doubtless continue more and more to turn, to the great possible economies in developing the productivity of employees. The increase of ability, in response to instruction and encouragement, is very great. The value of an employee increases more rapidly than the need of increasing his salary, even if adequate encouragement be given him for his improvement.

Many an employer is paying $100 for service that another employer gets done for $50. This is not because the first employer pays better wages than the other, for often he not only does not do that, but he keeps his employees in a rut where, after ten years, they are worth scarcely more to him or another. The second employer gets the work done for $50 because he took an employee who, for lack of training, was unable to command a higher wage, and by a systematic effort to bring out the best there was in him, soon had a more efficient employee for his business than the other man who paid enough to command the services of an employee who had been trained elsewhere, or, as is more often the case, who paid for two or three untrained employees to accomplish the work of one trained employee.

When the possibilities for economy in training employees becomes more generally recognized, we may look for radical changes in the present methods of many

Beautiful Floors Without Care or Attention

You who continue to use wax and common varnishes on your floors do so only because you have never found the *right varnish*.

For wax and wax finishes, at best, are but makeshifts. They need constant care—endless replacement.

While the right varnish, once on, needs no care—no attention.

But beware of the wrong varnish—which mars, because it is brittle.

There is but one varnish for floors which can be relied upon to stay smooth, flexible, beautiful. But one varnish tough enough for floors.

Tough, Flexible Varnish

That is *Elastica*—the product of 39 years of varnish-making experiment.

Don't judge *Elastica* by the common varnishes you have seen on floors.

Common varnishes for floors mar and scratch under heavy heels and casters.

Elastica bends and gives and stretches after it is dry on the floor.

Common varnishes crumble and crack.

They turn white where water touches them. *Elastica* does not turn white—it is waterproof.

Elastica is more than elastic; more than tough; more than waterproof. It is as nearly *permanent* as a varnish can be.

Send for this Book

Our free book is brimful of practical points on finishing floors. It tells not only about *Elastica*, but about the application of other floor finishes—and the right treatment for each kind of floor.

Simply say: "Send me your book **The Right and Wrong Finish for Floors.**" Address Dept. 4, 29 Broadway, New York, 2620 Armour Ave., Chicago, or International Varnish Co., Ltd., Toronto.

New Americanized Encyclopedia

Its Scholarly Authority

The classic literature of the world's ripest scholars is the characteristic feature of this work. Here are some of the contributors: Matthew Arnold, James Bryce, John Morley, Andrew Lang, St. George Mivart, Canon Farrar, Edmund Gosse, John Stuart Blackie, Leslie Stephen, Edward Freeman, Lord Kelvin, Robertson Smith, Sir Norman Lockyer, Thorold Rogers, Saintsbury, Swinburne, Simon Newcomb, John Fiske, Cardinal Gibbons, John Bach McMaster, Admiral Melville, Thomas B. Reed, Carroll Wright; and these with hundreds of others equally famous give it an authority so overwhelming, so incomparable that it reigns without a rival in the realm of scholarship.

Limited Half Price Offer

We are making for a limited time only a special introductory offer at just ONE-HALF the regular price. The cloth set we price at $37, the half morocco at $46. Moreover, with each of the first hundred orders to reach us we will send absolutely FREE Webster's Huge New Encyclopedic Dictionary, retailing regularly at $8.50. It is bound in Full Sheep, marbled edges, gold stamped and indexed. This combination of the world's most famous Cyclopedia and equally famous Dictionary gives you a magnificent reference library of enormous extent and unmatchable value.

How to Get the Books

Send No Money. Sign and mail the attached coupon and we will ship you a complete set for five days' FREE examination. You can return them AT OUR EXPENSE if they fail to give you entire satisfaction. We pay all transportation charges. Should you decide to purchase, then send us $1.00 as first payment and pay the balance at the rate of $2.00 per month for the cloth and $2.50 per month for the half morocco.

Do Not Delay—Sign Coupon Now

At these phenomenal prices the introductory sets will vanish like magic. It is the opportunity of a life-time. Enrich your mind, adorn your library, delight your family with this stupendous work. Write TO-DAY. Remember. No risk! No obligation! You purchase only if satisfied.

The Booklovers Society 156 FIFTH AVENUE NEW YORK CITY

Let us send you today this superb set of books. Look them over at your leisure. We shall abide by your decision.

Here are fifteen massive magnificently bound volumes, 10,000 double column pages, 100 superb maps, 37,000 biographical references, hundreds of illustrated color plates of the rarest beauty. You will marvel at the beauty, the skill—the unapproachable perfection of it all.

Every phase of human knowledge, of discovery, experience and belief is included in this stupendous work. It covers all epochs of literature, all forms of government, all systems of religion. All gallant deeds and stirring scenes, all victories of war and brain, all marvels of science and invention, all the glorious achievements that have made history luminous and civilization possible are found in the ten thousand teeming pages of these magnificent volumes. Think what it means to have an inexhaustible storehouse of the richest knowledge and invaluable information. And to have it always at hand.

Don't Paint Your Roof!

Buy Amatite—the "Full Service" Roofing.

WHY buy a ready roofing that constantly needs painting and repairing to keep it serviceable? Amatite doesn't cost any more than these "half service" kinds, and will give you *full service* after it is laid, with no further care or attention.

Half the time the ordinary roofs go to pieces or fail to give good service because you neglect to keep them coated or painted. You are so busy doing other things that you forget to paint your roofs, and first thing you know they leak.

Now Amatite is made to be free from care and needs no special attention. It is a finished product, ready for the service required. *It needs no painting*, because it has a *real mineral surface* which makes all such expense unnecessary. All *you* need to do is to nail it on the roof and your roof troubles are over.

If your dealer does not keep Amatite, drop a card to the nearest office named below, and a sample and booklet telling more about this roofing will be mailed you at once. Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburg, Cincinnati, Kansas City, Minneapolis or New Orleans.

institutions, where business system is composed largely of rules as to what employees are not permitted to do, and involves very little that is calculated to inspire them to develop greater and greater ability in their work.

Success will attend such efforts for development in the proportion that employers, and especially their lieutenants, learn the economic difference between driving employees by constant fear of censure and leading them by awakening the potent influences of their better nature.

The man whose faith in human nature is so blunted that he can not see the possibilities for individual development, and who defends coercive measures as the only fruitful ones, is least of all capable of being an economical manager. He may for a time deceive himself and his employers, and continue to kill the goose of spontaneity that lays the golden eggs of results, but as surely as the world is growing more enlightened, the time approaches when such managers and such methods will be seen to be the most wasteful extravagances in business, which progress and the economic law will inevitably eliminate.

Unsafe Conclusions

THE living root of most of the errors that infest the business world—whether those errors concern the administrative policy of a railroad president or the way the office-boy puts the stamps on the envelopes—will be found in a certain inherent trait of the human mind. It is the habitual tendency of every human being to reduce his observations to dogmatic conclusions, and to begin subsequent thought from that point. A composite of the dogmatic spirit is the policy which says: "I always handle that sort of thing in this way." Examine a cross-section of the average mentality and you will find it filled with little conclusions. Trace many of those conclusions back to their beginnings and you will find that they have been reached by one or two feeble observations, hastily interpreted, and a large measure of unfounded guesswork. The key is turned on that point, and that conclusion, no matter how inadequate, becomes a factor in all subsequent thinking. Any new thought that disagrees with that conclusion is regarded with suspicion if not with contempt. Possession of a dogmatic conclusion is nine points of the law of loose thinking. The lazy mind delights in a short cut, and the more it gets used to these short cuts the more lazy it becomes. When the mind gets clogged up, and thoughts do not flow freely, it is almost a certainty that one of these little conclusions forms the obstruction. The mind that is ever seeking to know is alive. The one that is satisfied that it knows, and condemns every conflicting opinion, and will listen to no more evidence, has ceased growing. Fear of new evidence is a self-conviction of insecurity and an unwillingness to be found out. A fixed conclusion, based on meager and untypical observation, and that misinterpreted, is the most dangerous instrument ever devised by man. Progress is largely a matter of breaking up such conclusions.

The Dull Finish

EMPLOYERS who may prefer to have their organization done in the popular dull finish, and avoid the vulgar shiny effect that is occasioned by life and enthusiasm and interest in the work, can bring about the change with little difficulty. The work is so simple that no experience is required. Any short-sighted employer can do it with ease. Some have found it effective to fill the upper vacancies with outsiders. This does not disturb the long experienced workers who have grown used to their tasks and would not thrive on a change. The outsiders can quickly learn from these workers enough to enable them to fill the place. The effect is quick and permanent. The shiny appearance gives way to the dull finish with the first few rubs, and soon tones down to a darker shade. The same effect may be secured by ill temper and red tape, but there are always some spots in the organization which continue to shine, even if feebly, in spite of these measures, whereas the other method removes all these shiny spots and distributes the dull finish quite evenly, and prevents it from wearing off. Samples of this sort of work may be seen in a great many places. A little experimenting will convince any one that the method is worthy of the attention of any employer who desires to produce this effect.

REDUCE THE CARES

of housekeeping. One decidedly practical way is to use Borden's Peerless Brand Evaporated Milk in all cooking where milk or cream is required. Results will be more satisfactory than with most "fresh" milk. The convenience and economy will please you. Dilute Peerless Milk with water to any desired richness.—*Adv.*

Broadway and 6th Avenue
34th to 35th Street NEW YORK

PENNSYLVANIA

WITH the present epidemic of cheap cars, and the extravagant claims made for them, it is well to remember that in motor cars, as in most other things, you usually get what you pay for.

"PENNSYLVANIA" cars are not cheap cars. They are not thrown together by the thousand, but custom made throughout. They will probably cost you less at the end of the season than those of the cheaper sort, and you will have the added satisfaction of owning a car that looks and is of the highest class.

Our phenomenal growth, in less than four years, from an idea to one of the largest producers in America of high grade cars, is due to the fact that there has never been an unsuccessful "Pennsylvania" model. The first car built is in daily use and giving satisfaction, and each succeeding model has been a refinement of its predecessor, until today they represent the farthest advance in motor car construction.

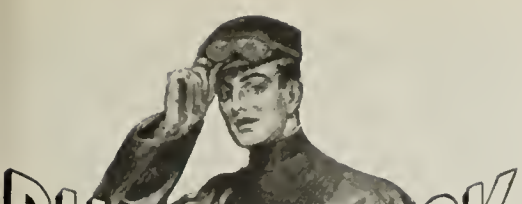
Type F 6 Cylinder 75 H. P.
Guaranteed speed 75 miles, $4500

Type D.	Runabout - - - -	$2000
Type D.	Touring or Baby Tonneau -	$2100
Type C.	" " "	$3000
Type E.	" Quinby Equipment	$3800

Magneto and gas tank on all models.

PENNSYLVANIA AUTO MOTOR CO., Bryn Mawr, Pa.

J. M. Quinby & Co., Newark, N. J., distributors for New York, Philadelphia and New Jersey



NOTE: If there is no "Pennsylvania" representative in your territory, we shall be pleased to supply you direct from the factory.

RUBBER NECK COAT

The only absolutely Waterproof Coat ever made in the World

A broad statement—yet only the simple truth. **No Rubber Coat that is put on like the ordinary Coat must be put on, can be waterproof.**

Driving against the wind in rainy weather, what's there to prevent the water from beating in all the way down the front of coat, at the neck, at the sleeves, through the button-holes, and even through the **very seams.**

If you want a Rubber Coat that **is** waterproof—as waterproof as a diving suit—get the **Patented Rubber-Neck Coat.** It costs no more than any other, but is worth a great deal more.

It's made with a **one-piece yoke of pure gum rubber** that fits around your neck as snugly as a glove—not a drop of water can ever get in.

From this yoke hangs the Coat of high grade black rubber, **all made in one piece**—without a clasp, or a button, without any opening either in front or back—**so how could the water get in?**

You put the Coat on like you put on a sweater—pull it over your head—and that's all there is to it. The sleeves are protected by waterproof wristlets, so no moisture can reach you there.

The Coats are from 48 to 56 inches long—tell us your chest measure—**and we'll guarantee the fit absolutely.**

The entire Coat comes neatly put up in a small bag measuring only 3x8 inches, just a handy size for your overcoat pocket.

Price, including express charges to any part of the United States **$6.50**

Send us your order today—and if you do not find it the best Rubber Coat you ever saw, return it and have your money refunded.

Sold exclusively by

Saks & Company

Broadway at 34th Street **New York City**

Brickbats and Bouquets

Kind Words and Bitter Spoken by Editors, Subscribers, and Readers, Regular and Occasional, About Collier's

"COLLIER'S has the largest single audience of intelligent readers in Ameriea."
—Fresno (Cal.) *Republican.*

✣

"Occasionally you come across a magazine or newspaper that does more than stir your curiosity or even stimulate your interest. It enthralls you by the charm of its personality, holds you by its individuality, and grips you with something that is harder to define—it is the subtle thing that wins your confidence, that makes you presently willing to stake everything on the integrity, honor, and high idealism that you believe to be the foundation on which the publication is built. Such a magazine is COLLIER'S, the National Weekly."—Merrill (Wis.) *Advocate.*

✣

"BATAVIA, N. Y.

"I have enjoyed for years the perusal of your journal. You have many good stories and much sound, clear-headed sense in financial and political matters. I beg leave to express my disgust with the arrant nonsense, painfully simple, meaningless, and silly, which you have been printing under the caption: 'Letters of a Japanese Schoolboy.' Please spare us. Do not inflict any more on a long suffering public. If I must have this or dispense with COLLIER'S I will choose the latter.

"J. W. LE SEUR."

✣

"COLLIER'S, the strongest and most fearless weekly in the country."
—Rockingham (N. C.) *Post.*

✣

"We gladly give honor to whom honor is due, in commending the widely effective work being done by COLLIER'S WEEKLY in behalf of temperance and prohibition. This great paper does not claim to be out and out for prohibition, but it stands for national decency, fairness, and truth."
—Atlanta (Ga.) *Golden Age.*

✣

"COLLIER'S is not a periodical we can not do without. It is too bumptious, too ropulous, too amateurish."
—Chicago *Musical Leader.*

✣

"LINCOLN, NEB.

"We are charmed with your articles from time to time, and the whole country is under obligation to you.

"J. B. CAMES,
"State Superintendent Anti-Saloon League."

✣

"Surely COLLIER'S is made glorious by the enemies it has created. Breezy and timely in nearly everything it tackles, its influence reaches far beyond the confines of its own immediate community."
—Joliet (Ill.) *News.*

✣

"SPRINGFIELD, MASS.

"Go on, COLLIER'S, treading where our other American publications do not follow. Keep up your present progressive pace. H. JACKSON POOLE."

✣

"COLLIER'S is fearless in its expression of opinion, true to the reputation that the editorial columns have made."
—Denver (Colo.) *Times.*

✣

"COLLIER'S—full-page picture, a frontispiece in 800 colors, by Jessie Maxfield Leyendecker. One long article on the 'Peruna Soul-Souse,' with illustrations cribbed from the daily papers.—Ten cents. Perhaps it will be better next week."
—New York *Life.*

✣

"The last infamous effort upon the part of the New York periodical is to injure the business of the Duffy Malt Whiskey Company, a business that has existed for years."—Memphis (Tenn.) *Times.*

Welch's Grape Juice

YOU could ask nothing richer and sweeter than the juice of the Concord Grapes which ripened last fall.

While the yield was small the quality was better than it has been in years.

The choicest from all that the Chautauqua Grape Belt produced was at our disposal in making Welch's Grape Juice, and the result is a million gallons of fresh, new juice—a little sweeter, richer and better than the best of any previous year.

If your dealer doesn't keep Welch's, send $3.00 for trial dozen pints, express prepaid east of Omaha. Booklet of forty delicious ways of using Welch's Grape Juice, free. Sample 3 oz. bottle by mail, 10 cents.

The Welch Grape Juice Co., Westfield, N. Y.

JANUS VACUUM BOTTLE

Its Cork

Put lemonade in a bottle one day and milk the next. What will the lemon juice absorbed by the cork do to the milk? A needless question if it's the Janus Bottle.

Why? Because the Janus cork is tipped with aluminum. Liquids can't touch the cork itself. Contamination is impossible. A patented feature, exclusive, with the Janus.

The Janus takes apart. Easily sterilized. A strong practicable bottle.

Buy one. Use it 60 days. If it breaks through fault in construction or workmanship, you get a new bottle.

A necessity—not a novelty. Keeps hot liquids hot and cold liquids cold.

Half Pints, $2.50. Pints, $3.75. Quarts, $5.75.

At your dealers or from us direct. Send for Booklet.

JANUS VACUUM BOTTLE CO.
652 Broadway, New York

"DALLAS, TEXAS.
"We need at least one great fearless journal in Ameriea. B. F. RILEY."

✣

"COLLIER'S . . . is the best exponent of American life and culture to-day."
—Jordan (Minn.) *Independent.*

✣

"SEATTLE, WASH.
"COLLIER'S is, in my mind, the greatest newspaper or periodieal in the United States. FREDERICK C. NOLF."

✣

"The 'list of undesirables' published in COLLIER'S, with the reasons telling why they are undesirable, constitutes, on the whole, the strongest indietment of the obstruetionists in the United States Senate that has ever been published."
—Sioux City (Iowa) *Tribune.*

✣

"COLLIER'S has rendered the country some valuable services in the recent past in exposing frauds of various eharaeters, but to our mind it is now doing its very best work in an effort to 'unhorse' that genuine old politieal fake and trieksters, Joseph G. Cannon, Speaker of the House of Representatives, the promoter of all that is worst in legislation, and necessarily a hindrance of the best."
—Salem (Va.) *Register and Sentinel.*

✣

"SAN DIEGO, CAL.
"As a subseriber and reader of COLLIER'S, I feel a deep interest in its reading matter, and I am at a loss to know why the Letters of a Japanese Sehoolboy should have been permitted to take the pages of so valuable a journal. I fail to see any resemblanee to wit, humor, or intelligence in these letters.
"H. C. HOPKINS."

✣

"PITTSBURG, PA.
"Your editorials are fearless and have done *great work* in this country of ours, where the majority of editors are wont merely to eall attention to wrongs that need righting. Your short stories are splendid and well seleeted. Your Togo letters were clever satire.
"LEWIS C. FRANK."

✣

"COLLIER'S is getting better and better every week of the year and has done more good toward revolutionizing things than any paper issued at present."
—Exeter (Cal.) *Sun.*

✣

"COLLIER'S, one of the greatest workers against the liquor interests of the day."
—De Sinet (S. Dak.) *Independent.*

✣

"One of the most important weeklies on the continent is COLLIER'S."
—Calgary (Alberta) *News.*

✣

"DES MOINES, IA.
"I consider COLLIER'S, editorially, the strongest magazine to-day.
"ANNA ROSS CLARKE,
"President Woman's Press Club."

✣

"BOSTON, MASS.
"Let me say that you strike me as always being in touch with the times; you are frank and fearless, but just 'sassy' enough to hold one's interest.
"JOHN M. THOMPSON."

✣

"COLLIER'S, a publication of great national influence and circulation."
—Sabetha (Kans.) *Republican Herald.*

✣

"COLLIER'S is one of the best edited papers in the United States on political matters."—Lemoore (Cal.) *Republican.*

✣

"ARKADELPHIA, ARK.
"I notice that your paper is free and fearless in the use of publie eriticisms, and also that you seem to take criticisms as cheerfully as you make them.
"JOHN E. BRADLEY."

TRIUMPHAL CARS—PAST AND PRESENT

From the two wheeled chariot to the first motor car is a stride which includes the greater part of the history of civilization. From the first motor car to the Oldsmobile of today is another stride, which includes the perfection of an absolutely new method of locomotion.

The Oldsmobile is a triumphal car inasmuch as it surmounts every road obstacle and responds to every demand. On account of the silence of the motor and the grace and refinement of design, its rugged strength is not at once apparent. . . . But it is precisely this combination of style and luxury with reliability and endurance which constitutes the essential triumph of the Oldsmobile.

Four-cylinder touring car, roadster or toy tonneau $2750. Six-cylinder cars $4500.

ZODENTA

A PRESERVATIVE FOR THE TEETH

I want you to let me prove the superiority of my tooth paste to you at my expense. It is whiter, smoother, and I believe it possesses greater cleansing and preserving properties for the teeth—stopping their decalcification and consequent decay and discoloration—is more refreshing to the mouth and gums and is more strongly antiseptic—preventing the acid-forming micro-organisms—than any other dentifrice.

It is better and it is different from all others.

In form Zodenta is not a powder to be wasted and spilt over everything—to be an annoyance to the clean housewife.

It is a paste or cream—economical and clean—without any defects.

For Zodenta is not dirty or dark in color, but is brilliantly white.

Zodenta does not petrify in its tube but remains moist and pliable.

Zodenta does not disintegrate into a number of separate ingredients, such as water, chalk, wintergreen, oil, etc., but always remains the same, an inseparable definite entity.

Zodenta does not scratch the teeth because of some cellulose or woody ingredient, for there are none such in Zodenta.

Zodenta is made as no other tooth cream or paste is made.

The ingredients of Zodenta are ground or milled until they can easily sift through silk.

I mix these ingredients together, then form the true inseparable combination in retorts under a temperature of from 350 to 400 degrees Fahrenheit.

Its texture is fairly like satin.

Whether under the burning sun of the Sahara or in the cold of Siberia—the soft, moist, pliable texture of Zodenta will remain always the same.

Let Me Prove My Statements

This is my fair and square offer—

If your druggist does not keep Zodenta send me 25 cents for large 2½ oz. tube, which I will mail you promptly and include free an aluminum Tooth Brush Holder.

Try Zodenta, if it does not bear out all my claims tell me so and I will return you your money. Write today.

FREDERICK F. INGRAM, 59 Tenth Street, DETROIT, MICH.
President of the F. F. Ingram Co., Manufacturers of Milkweed Cream

Varnishes

M. P. Durable Exterior Varnish

HEALTH MERRY GO ROUND

Makes Happy, Healthy Children

who prefer to stay at home and enjoy themselves rather than play on the streets. Operated by children themselves; the movement not unlike that of rowing, brings every muscle into play. Most healthful form of outdoor exercise; keeps lungs inflated, develops sturdy bodies, strong arms, straight backs, broad shoulders. Makes children studious. You owe the children this delightful pleasure—you'll save it in doctor bills. Inexpensive, simple, absolutely safe; no cogs or complicated gears to catch and tear clothing. Not a toy, but a real Merry-Go-Round Will last for years. Full particulars and handsomely illustrated booklet free.

Booklovers Shakespeare

ROMEO · AND · JULIET

Your Final Chance

Cut Price Offer to "COLLIER'S" Readers Closing

THE UNIVERSITY SOCIETY begs to announce to its friends and patrons among the readers of this periodical that after a successful season it is closing out the very last sets advertised under the present offer of slightly damaged sets at a sweeping cut in price. *This is the final opportunity.* We offer to send these damaged sets for your inspection. The defects in the greater part of them are decidedly trivial and are more than offset by the drastic reduction in price. Doubtless you have seen our previous advertisement and have been intending to investigate. *Do not delay further.*

All of Shakespeare in Choice, Handy Form

The Booklovers is admittedly the best Shakespeare in existence. It is printed in large type and with ample margin, from new and perfect plates, on pure white paper of a very high grade. There are 40 dainty volumes of great beauty, 7 x 5 inches (just the size for easy handling), 7,000 pages in all, handsomely and durably bound in half-leather and superbly illustrated. There are 40 full-page plates in colors and 400 reproductions of rare cuts. The mere handling of these charming volumes affords a keen sense of artistic satisfaction.

The Booklovers is an absolutely complete and unabridged edition of Shakespeare. Each volume contains a complete play and all the notes that explain that play. These notes are the most complete and valuable ever offered to readers of Shakespeare. In the extent of information it contains, the Booklovers is, in fact, a Shakespearean Encyclopædia. Its simplicity and lucidity will appeal to every intelligent reader, while even advanced students can glean instruction from its copious and valuable commentaries.

UNIQUE EDITORIAL FEATURES OF THE BOOK-LOVERS

TOPICAL INDEX: By means of which the reader can find any desired passage in the plays and poems.

CRITICAL COMMENTS explaining the plays and characters, selected from the writings of eminent Shakespearean scholars.

GLOSSARIES FOLLOWING EACH PLAY, so that you do not have to turn to a separate volume to find the meaning of every obscure word.

TWO SETS OF NOTES: Explanatory notes for the general reader and critical notes for the student or scholar.

ARGUMENTS giving a full story of each play in interesting, readable prose.

STUDY METHODS, consisting of study questions and suggestions—the idea being to furnish a complete course of Shakespearean study.

LIFE OF SHAKESPEARE by Dr. Israel Gollancz, with critical essays by Bagehot, Stephen, and other distinguished Shakespearean scholars and critics.

Absolutely Free on Approval—No Deposit

An entire 40 volume set of the BOOKLOVERS SHAKESPEARE will be sent for examination, prepaid, to any address, if you will fill up and return promptly the coupon in the corner. **We ask for no money now.** We allow you ample time for a careful, intelligent and unprejudiced examination of the set in the comfort and privacy of your own home. If you are disappointed you may return it at our expense. If you are satisfied—and we know you will be—that the Booklovers Shakespeare is without a peer, you retain possession of the entire 40-volume set and send us $1.00 only. The balance may be paid at the rate of $2.00 a month. Can anything be fairer than this proposition?

Send Your Request at Once

The low price and easy terms have made a strong appeal to book-buyers all over the country, and inquiries come from distant lands. The regular price of the Booklovers when sold through agents is $56. You can get a set now for $25.00 and you have the privilege of paying for it a little each month. Any commentary on this fact would only weaken its importance. No expense—no risk is involved on your part. We can still ship sets promptly.

THE UNIVERSITY SOCIETY, 44-60 East 23d Street, NEW YORK

Back of Vol., Much Reduced

THE CLOSING COUPON

THE UNIVERSITY SOCIETY, New York — Coll. 4-17

You may send, prepaid, for my examination, a set of the BOOKLOVERS SHAKESPEARE in half-leather binding at your special price of $25.00. If the books are satisfactory, I shall pay you $1.00 within 5 days after their receipt, and $2.00 each month thereafter for 12 months. If they are not, I shall notify you and hold them subject to your order.

Editorial Bulletin

Saturday, April 17, 1909

FICTION NUMBER *Next Week*

Containing:

BUCKO

By

PERCEVAL GIBBON

¶ *A story of the sea that gives you some of the shivers experienced by the crew of a South Sea sailing vessel in rough weather and under the domination of a second mate whose usual form of discipline was breaking skulls and other ungentlemanly deeds. When the tables turned the sea itself took him in hand and meted out to him its revenge for his demeanor to her hard-working sailors. What the sailors didn't do for him when he was helpless showed the depth of their aversion better than any active form of revenge might have done.*

THE TROUBLE HUNTER

By

FREDERICK UPHAM ADAMS

¶ *When a man is looking for trouble he usually finds it, and one would naturally think that the owner of a circus would be able to satisfy his cravings in that direction without effort or delay. But Old Bill Simms, after an uneventful forty years of managing a one-elephant circus, was still sighing for some excitement to break the monotony of his humdrum life. That it never rains but it pours was proved by his experiences on board the "Daisy D.," en route for Australia. When they struck the voleanic zone, and the Fiji sailors assumed that the end of the world had come and turned the menagerie loose, Old Bill got trouble enough to satisfy his longing, and stock up his story-telling reservoir for many years to come. Mr. Adams happened to be an eye-witness to the affair, much to the reader's delight.*

FILIBERTO

By

SARAH COMSTOCK

¶ *It seldom falls to the lot of any man to live part of a love story, get friendly with an author who is on a vacation, and then afterward read not only his past but also the future. Filiberto, an early settler in the California redwood district, had such an experience. Being simple-minded and not used to the ways of literary men, he mistook the latter part of the story for predestined fate, and set about to fulfil it. The first part of it fulfilled so well, he gained a boldness he could not have otherwise acquired, but the author's gift of propheey failed him, and Filiberto received an awakening that after all was more human.*

UNFIT

UNTRAINED—UNFIT Can't do the work when he finds it to do. The result of neglected opportunity

The attached coupon is *your* opportunity. Without any cost or obligation to you it will bring you information and advice that will clear the way to a good paying position *at your chosen line of work.* It will bring you the VOLUNTARY testimonials of thousands of once poorly paid men and women who to-day are earning splendid salaries due wholly to the help of the International Correspondence Schools of Scranton. The number heard from in February was 275.

Never mind how far away you live—what you do—what your age, or how much or how little you earn—MARK the COUPON. There's an I. C. S. way that fits your case exactly. You can qualify in your *spare time.* There are no books to buy. Get out of the *untrained* class, the UNFIT class. Mark the COUPON

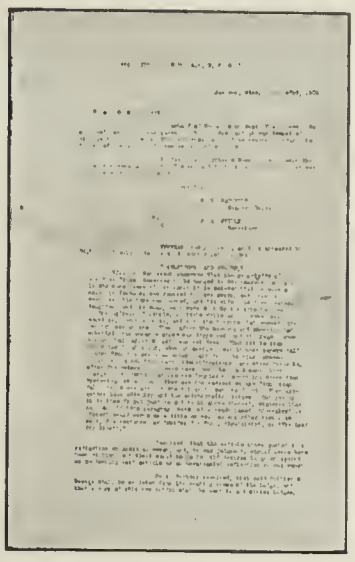
FIRE THE JAP

FIRE THE JAP

Confessions by Collier's Man

"Space sobering upon this field of work I have received from physicians enough fundamental misinformation to keep me in jail for the rest of my natural life on libel charges had I accepted one tenth of it."—Samuel Hopkins Adams, in an address before the Maryland State Medical Association.—(*Maryland Medical Journal*, February 1906.)

This is the same Samuel Hopkins Adams who wrote a series of scurrilous articles in *Collier's Weekly* about which



The St. Louis Globe-Democrat

the most able and influential daily newspaper west of the Mississippi River, on April 4, 1908, said:

"We are not conscious of any particular fondness for the senior senator from Missouri but we do prefer him, with all his faults, to such a professional character as *Collier's Weekly*, the most prestigious and the most contemptible of the muck-raking publications which recently had quite a vogue, but which are now rapidly finding the level of other despicable things in this country."

The evidence of the mendacity of Samuel Hopkins Adams was placed before the medical profession by the *Medical and Surgical Journal*, a magazine whose able editor made an unbiased investigation of the 37 supposed cases of poisoning by different remedies reported by Adams. Of the 37 cases, **not one** was truthfully reported, not one case of poisoning occurred where the advertised dose was taken, and 21 of the reports were plain, unvarnished lies, of which the following five are samples.

The remaining 27 cases reported in *Collier's* were equally untruthful and misleading, but to quote them all would require too much space, so we set out only these five to demonstrate why many persons now refer to *Collier's* man as Samuel Hopkins Adams. Had Adams investigated the above mentioned 37 cases before publishing them, he would have escaped the awkward position in which he was placed in by the American Medical Association, who furnished these cases to him and who, it is known, deliberately manufactured them out of mere rumors and lies, for selfish purposes only.

SEEN BY COLLIER'S MAN

DOPE

LOOK, READER, at the circulars reproduced above. Literally millions of them are being sent about the country. Who is furnishing the money for this enterprise? What are the motives back of the huge expense? Singly such plots would scarcely be worth our answer. Taken together, they bring to light methods worthy of attention.

First, look at the patent-medicine pamphlet, with its caption, "Collier's Man Confesses." What does Mr. ADAMS "confess?" He "confesses" that he does not believe without investigation what physicians tell him. The trick is simple. Print some statements from a patent-medicine organ and make the headline tell the careless reader that this foolish and dishonest screed is the "confession" of Mr. ADAMS. A stupid device, you say? Fifteen persons out of twenty fall easy victims to such tricks. For the majority, headlines make the news. You thought, dear reader, the patent-medicine vender had gone to the hereafter? You imagined that our little exposures could end his tribe? Vain confidence! Flattering mistake! No evil is so quickly ended. The vender lost a pint of blood, and limped off with an injured thigh, but he is busy once again.

Another set of enemies are the saloons. They campaign shrewdly; their last move is shrewd indeed. They can not go through the South, saying, "COLLIER'S is hurting our business in this region, so please be cross with it. It is pointing out that most crime, especially negro violence, has its start in some saloon. This injures us, and we invoke the law of MOSES." Such a speech would be too frank. The saloon men take another line, intricate, and not too easy for the unsophisticated to unravel. In the first place they dominate, wherever they are able, that well-known society called the Elks. In many towns the Elks are led by the best and most influential citizens, and such first-class lodges blush over the domination of saloon men in other places. In our office are numerous letters from the better class of Elks, protesting against the tricks played in the name of that society by saloon men wherever they control. Here is their scheme. They take an editorial of ours in which we give reasons why prompt court trials are more efficacious than the judgment of a mob. Among other things we had occasion to mention a certain class of women, happily far smaller than the corresponding class of men, and certainly as a class deserving more of sympathy than scorn—victims of man, demoralized by his passions and contemned by him for a demoralization of which he is the cause. This admission of ours that fallen women do exist upon this earth gave the saloon men one opening. They needed another. We had been discussing a riot in a Northern State. They merely transferred it to the South. Then they added a blaze of rhetoric, which they deemed suited to the population. Stripped of fierce verbiage, their propositions are:

COLLIER'S is attacking womanhood.
Especially womanhood in the South.
We, the saloon men, are spending the money of the Elks in an unselfish, chivalrous effort to protect the women of the South.

The saloon men should have added items thus:

"Not only does COLLIER'S wish women to be degraded; it wishes all small babies to be tortured, and old men, wherever possible, to be thrown away to starve.

"The only refuge from COLLIER'S assaults on womanhood, babyhood, and manhood is the saloon."

You, O philosopher, think all this absurd? Alas, you know not the credulity of the human soul, dwell it west or east, or south or north. One more of these conspiracies and we have done. Our views about the Japanese are clear. We support the exclusion act and believe it is enforced. Merely, however, because we credit the Japanese with powers and merits, some dishonest fire-eaters see a chance to raise money for themselves and work injury to us by distributing circulars:

"COLLIER'S WEEKLY, the leading scab-glorifying publication of the United States, has been openly subsidized by the Japanese Government, and all articles dealing with Japan are edited and revised by a Japanese subeditor."

Observe the paucity of invention. Just as the saloon men in the South drag in a race question, trusting that excitement will blind the South to the hand of the saloon beneath, so this agitator (raising money to be sent to him!) with similar purpose and with equal trust in human gullibility, plays the union label in spite of the fact that we happen to be a union shop.

Do not imagine, reader dear, that our heart is wrung. Skilful plots against us will continue as long as COLLIER'S retains its present character. This weekly is not exclusively an article of commerce. It is not manufactured by men whose sole endeavor is to make it sell. Other things also we endeavor to accomplish, and when change is sought, and contended for, enemies must abound. It is human, if the mirror shows a streak of dirt upon one's countenance, to smash the mirror. This little sermon has run its course. We have pointed out a slight fraction of the organized agencies laboring against us. Each year will have its crop. We roar gently in reply. Whatever happens in these little skirmishes, the truth to a certain extent is mighty, and to a certain extent undoubtedly it will prevail.

And now, even as these words are flowing from our reflective pen, along comes the news that CHARLES L. BARTLETT has gone to his eternal rest. He was a true believer in his Orangeine, and it probably hastened by many years the end of his career. Rest his soul; and rest the souls also of those others, less honest than poor BARTLETT, whose plots and counterplots are unfolded on this page.

In Kentucky

RACE-HORSES, whisky, mountain feuds, and night-riders have appeared out of fair proportion in Kentucky news. A crime committed there receives much wider advertising than a similar performance in Pennsylvania or New York. Take Lexington as an example. No town has suffered more from undesired fame than she. Let us hasten, therefore, to note that manual training, for boy and girl, white and black, is being furnished by this city, and is intended ultimately to extend from kindergarten to high school graduation. Also Lexington can boast a juvenile court, compulsory school attendance laws, public playgrounds, vacation school, and the Civic League is pushing forward. Lexington is on the firing line.

Welcome

TO OUR NEIGHBOR, the "Metropolitan Magazine," all prosperity under its new management. The more vigorous those periodicals which establish standards of public service, the better for the United States. The "Metropolitan" is presenting serially what is known about consumption so graphically that all may understand. The following words are from Mr. TAFT in his letter of acceptance:

"I have long been of opinion that the various agencies of the national Government established for the preservation of the national health, scattered through several departments, should be rendered more efficient by uniting them in a bureau of the Government under a competent head, and that I understand to be, in effect, the recommendation of both parties."

Some day the Government will do much more in preservation of national health. Meantime, while we wait for the national department to be formed, education by newspapers, periodicals, societies, and State and city officers is increasing. In India the length of life is less than half what it has become in Europe. In Europe it has doubled in three hundred and fifty years. Prussia, home of preventive medicine, holds the place of honor in the lead. America, in spite of quacks, is contesting fairly in the march ahead.

So It Is

THE TORCH OF TRUTH sometimes drops a cinder or lets fall a splash of coal-oil. In one of our editorials in the issue of February 20 we said that in the Ruef case the public would be alert to see whether the upper court decided upon the merits or whether all points would be violently strained to reach a verdict satisfactory to Mr. HERRIN, general counsel of the Southern Pacific Railroad Company. This brought a rather sharp rejoinder from Mr. T. T. WILLIAMS, whose letter was dated New York. We were informed in language somewhat glowing that our characterization of the Supreme Court of California was all wrong; that there "was not a man on the Supreme bench of California against whom distrust or suspicion had ever been directed." Mr. WILLIAMS defended Judge W. H. BEATTY, the chief justice, and Judge FRANK ANGELOTTE by name. We were asked pointedly to retract, else our "boast of justice and truth-seeking" were "empty braggadocio and nothing more." Mr. WILLIAMS, it happens, is the business manager of the New York "Evening Journal," and for years has been Mr. HEARST'S newspaper manager. Mr. HEARST recently established close relations with Mr. HARRIMAN'S purse. Mr. WILLIAMS himself is the close and intimate friend of W. H. HERRIN. When FRANCIS J. HENEY was shot down in the San Francisco court-room, Mr. HEARST'S San Francisco "Examiner" office had to have police protection. The "Examiner's" circulation fell off so enormously that Mr. WILLIAMS and a New York staff were rushed to San Francisco to attempt a rehabilitation. There is no judge on the Supreme bench of California who may defy the Southern Pacific political machine and hold the same office a second time. COLLIER'S does not retract any of the language of its editorial of February 20. Instead, we repeat the belief that if CALHOUN is convicted the Supreme Court of California will go any length to upset the conviction, and that for RUEF, whom it holds less dear, it will go far, although not quite so far as for CALHOUN.

Law

DOES IT SOUND SENSATIONAL to declare that American law, to a very large extent, makes for injustice? The facts are as sensational as the sound. The American Bar Association has admitted it; leading judges have admitted it; and President TAFT once framed a pointed amendment that no judgment, civil or criminal, should be set aside unless it appeared affirmatively that the error of the complaint had resulted in miscarriage of justice. Americans often mourn about lynch law. Not always do they take into account the part played by the law's delay in encouraging rough attempts at justice. In England procedure is swift, and punishment follows with certainty. For seventy-five years, in England, Ireland, Scotland, and the British Colonies all over the world, there has not been one case of lynching. We have recently pointed out that the lawyers succeeded in beating simplification in Montana. In an admirable article in the "Kansas City Bar Monthly" for March, Professor JOHN D. LAWSON, of the University of Missouri, recalls the fact that when the Missouri Legislature passed a law simplifying procedure the Supreme Court of that State upset it. Judge LAWSON believes that our civil procedure is immeasurably behind the age, and that in criminal procedure we have not advanced a step since the days of Queen ELIZABETH. Judge AMIDON, of the Federal bench, has stated that if a man has the means to keep up the fight he can, in a *majority of cases*, escape punishment for crime. As our rules are now, the main concern is not a search for truth. Lawyers struggle to get errors into the record, witnesses are bullied, and judges are afraid. Those complicated technicalities, which the English judges invented long ago to protect the individual from cruelty and oppression, have been retained and exaggerated by us. The English threw them away when the days of cruelty and oppression were at an end. An indictment in England now states, in perhaps forty words of utmost simplicity, that a certain crime was committed by a certain person. We fill pages of foolscap with most ridiculous language, and then upset convictions if some one of the unnecessary words can be strained into a failure to observe some minor rule. The conviction of a man for murder is upset because the foreman of the jury spelled first "fust." Another conviction for murder is upset because the indictment charged that the victim died instantly, instead of then and there; another, because breast was spelled without the "a"; another, because the record failed to state the fact that the prisoner was present at his own trial, although the Court could readily have determined that he was. These things truly sound incredible. We need a Jeremy Bentham to goad us into making legal justice a reality. We need a novelist to do what DICKENS did in "Bleak House," or what GOLDSMITH did in "A Citizen of the World." We need a John Wesley to point out that our attempts at justice would have brought discredit on any court of centuries ago in Greece or Rome.

Sense

MONTANA has by legislative enactment cast off the party control of the judiciary. Readers of current literature may perhaps remember the titanic struggle between F. AUGUSTUS HEINZE and the Amalgamated Copper Company for the control of judges in Montana. The local judges had the power of passing over to one or the other litigant the ownership and control of properties worth millions. A judge would decide one week, and change his opinion the next, giving out from the bench that he had misunderstood the import of the decision which he had signed only a few days before. It was never seriously disputed in Montana that these conflicting decisions were purchased by both sides. The decisions were supposed to be based upon the testimony of partizan mining experts, which testimony was also openly bought, and paid for according to the reputation of the expert. The cases were all decided by the judge under the law without a jury, and these lawsuits were thus decided and won in advance by the corporation which could control the party nomination of the candidates. Other litigants were compelled to await the final issue of the struggle, which lasted years. Outside of the districts where this corporate war had its center and influence the Montana judiciary was composed of clean and patriotic men. The new Montana law provides that candidates for the bench shall be nominated by the filing of a certificate of nomination, to be signed by not less than five per cent of the electors. This will give men of principle and integrity, who under the old system were discredited, an opportunity to serve the State. It will put a premium upon honesty and ability. It will give the public some influence in selecting the men who shall decide disputed questions in their daily life.

Tortuousness

WILL THE MARK of a conscience ever appear again under the troubled brow of our much-abused captains of industry? Judge PARDEE enjoined the Florida Railroad Commission and all of the State officials from instituting suit in the Supreme Court of the State to compel the Louisville & Nashville Railroad Company to reduce its passenger fare from four cents to three cents per mile in Florida. This injunction was granted upon the affidavit of the vice-president of the Louisville & Nashville Railroad to the effect that the property of the road in Florida was worth at least $5,200,000. The high valuation was essential to his case. The State officials then produced an affidavit, made by the same man one month and twenty-eight days prior to the date of his first-mentioned affidavit, in which affidavit he had sworn that the identical property was not worth to exceed $1,700,000. And yet the prophet wondered at the way of a serpent on a rock, the way of an eagle in the air, and the way of a ship in the sea.

Easy to Answer

GOOD COUNSEL needs to be repeated. Among many similar letters that have come to us lately is one from a young woman in Boston:

> "I am writing to you to ask your help in finding out something definite concerning this [a certain fake mining] company. My mother, who is dependent upon me, together with an invalid sister, has resolved to put what few hundreds she has into this company. She will not listen to me, because I can not prove that the company is a fake concern. . . .
>
> "Perhaps if mother could see a letter from you telling us the true state of this concern she might repent. Personally, I don't believe in stocks. What I want mother to do is to put her money in a savings bank, so that, if anything should happen to either of us, my sister would be, in some measure, protected. Mother has promised to wait until I get a reply from you."

We shall advise mother to be guided by her daughter. Another letter from Pennsylvania asks us to pass on the stock of a magazine. In its prospectus the claim is made that the common stock offered as a bonus to purchasers of preferred stock should shortly pay dividends of one hundred per cent or more a year. "Are their claims within reason?" we are asked. No, brother, they are not. Much money is seeking investment in enterprises that seem fairly certain of returning five and six per cent. Extravagant promises are the staple bait for "suckers."

The Finest Ear of Corn in the Country

THROUGH THE SCHOOLS of a number of Western corn-growing States boys and girls are stimulated by prizes to plant little patches of corn. Out of each community, where an exhibit is held, ten prize-winning ears are sent to the county exhibit. The best ten there are entered in a State show, and then the States compete. The final winners are sifted to the best one ear in the whole United States. Scientific interest in agriculture is growing. It is one finger-post on the road from the city to the farm.

A Woman Indian Agent

IN CHARGE OF MISSION RESERVATIONS, CLARA TRUE has fought and downed a big, hard-hitting whisky ring that for years made huge illegal profits out of its traffic with the Indians. She has been mixed up in gun-fights. Her pillow was riddled with buckshot one night when, by chance, she was away from her house. She has been opposed by public officials, compromised, threatened, and harried. Added to the trouble with the wine, beer, and whisky gang has been her contest with land thieves and cattlemen who, before she came, used Indian land as if it were their own. As a teacher, in North Dakota and New Mexico, she made a splendid record. She is a small, high-strung, but perfectly balanced, woman; she has met the needs, not only of the Indian children, but of their mothers. The men she has encouraged to build better houses, and she has pushed their just claims with vigor. When Commissioner LEUPP (himself the one "live-wire" head of the Indian Bureau we've had in the last dozen years) looked round for "the best man in the service" to send to California he picked Miss TRUE.

Comment About Congress

The Eight Senators Who Will Make Over the Payne Bill—How the Tariff on Zinc Was Determined—Two Weak Brothers Smoked Out

By MARK SULLIVAN

ON THE eighth working day of the present session, Congressman Young of New York introduced House Bill No. 5461, which means an average of about 900 bills per day. They range in importance from No. 5357, "granting an increase of pension to Gustave Freudenthal," all the way up the line to No. 1438, which is "to provide revenue, equalize duties, and encourage the industries of the United States"—this being the Payne tariff bill. In the Sixtieth Congress, which closed last 4th of March, over 28,000 bills were introduced. In such a mass of the irrelevant and unimportant, the bills in private interest and the foolish ones introduced "by request," it is easy to lose sight of what is important.

Only Three Things This Session

BUT in spite of the quantity of bills introduced, the present special session, when it ends in June or thereabouts, will have attended to and will have undertaken three and only three important matters—the census bill, the Payne tariff bill, and the adoption of the rules. The rules fight began at 1 o'clock the first day of the session and was officially concluded at exactly 21 minutes past 5 the same day. (Unofficially, it is still the liveliest thing in Congress; it will be in virile existence for at least eighteen months, when the members of the present Congress are up for reelection.) The census bill was passed in the last Congress, but Roosevelt vetoed it because it provided for the appointment of the 3,400 extra clerks on the old spoils system. There was some sullen talk then of passing the bill over Roosevelt's veto; later on there was a suggestion of putting it up to Taft in the original form, but it was concluded that his views and his determination would coincide with Roosevelt's. So the former census bill was redrawn in a form satisfactory to the friends of the civil-service system, and was passed by the House and sent to the Senate during the first ten days of the session, so now the way is clear and will be kept clear for the tariff bill.

These Eight Men

IN THE Senate it is the Finance Committee which has charge of the tariff bill. Nominally, this committee has thirteen members—eight Republicans and five Democrats. Actually, the five Democrats are rigidly excluded from participation in the committee's deliberations. It was so also in the Ways and Means Committee of the House. So long as that committee was holding public hearings, the Democratic members were permitted to attend—as the rest of the public was. And the Democratic members rendered good service at that time, for both Bourke Cockran and Champ Clark were adroit and successful cross-examiners of the manufacturers who came before the committee to tell why they must have a high tariff. But the very day the public hearings ceased, the day—it was December 24—when the committee actually began to make the schedules, the Democrats were excluded; and they never again were permitted to meet with the rest of the committee, nor did they have any knowledge of what the bill would be until it was publicly introduced in the House on March 17. The same exclusion will be practised by the Republican majority of the Finance Committee of the Senate, and the Payne bill, as transformed by that committee, will be the work of these men:

Nelson W. Aldrich, *Chairman, Rhode Island*
Julius C. Burrows, *Michigan*
Boies Penrose, *Pennsylvania*
Eugene Hale, *Maine*
Henry Cabot Lodge, *Massachusetts*
Frank P. Flint, *California*
Reed Smoot, *Utah*
Shelby M. Cullom, *Illinois*

It is fair to the Republicans to say that fifteen years ago, when the Democrats were in the majority and were making a tariff bill of their own, they practised this same exclusion against the minority party members. Mr. Aldrich, the present chairman of the Committee on Finance, in defending the position of the Republican members the other day, said, concerning the time when a Democratic majority of the Finance Committee, under Voorhees of Indiana as chairman, was making a Democratic tariff bill, and Aldrich was a minority member:

"I will confess that for myself I should have as soon thought of going to Mr. Voorhees and insisting that I should be invited to his house to dinner as that I should have insisted that I had a right to go before the members of the committee and hear the statements of the men whom I knew were there every day."

However custom may justify the practise, it deprives the public of the wholesome benefit of opposition within the committee and hostile cross-examination of the favored manufacturers whom the Republican members invite to confer with them.

The People Pay the Bill

CHAMP CLARK of Missouri, in his speech on the tariff, accused Speaker Cannon of having gone into Missouri during the campaign last fall and promised the people of the zinc-producing region that if they would retire their Democratic Congressman and elect his Republican opponent, Cannon would see that their zinc was taken care of in the tariff. The Speaker apparently did not like Clark's version of the episode. He left his chair, interrupted Clark, and told the tale in his own words:

"We had great audiences on that two-day trip across the State and back. . . I told them [the people of the zinc district] that action was louder than words: that, they being experts on zinc, I being a member of Congress, their action would control my vote; that if they sent the message by the Republican candidate, Representative Morgan (and I laid my hand on his shoulder), that they, being experts, believed that zinc ore ought to go upon the protected list, I would take their action and vote accordingly; and if they sent the Democratic candidate, Mr. Hackney, I would take their action and vote accordingly, and that it was up to them."

This is the Speaker's own version, told with as much euphemism, presumably, as recollection would permit. Did the Speaker mean the people of Joplin to understand that he was merely promising his individual vote as one member of Congress, or that he was promising the influence of his position as Speaker, with power to appoint the Ways and Means Committee which puts or does not put zinc upon the protected list? In any event, the people of the zinc district took Cannon at his word, retired their Democratic Congressman, and elected a Republican one. Maybe there should be a tariff on zinc; perhaps not. In any event it ought to depend on some economic investigation other than such a bargain and promise as Uncle Joe describes.

Smoked Out

ON THURSDAY, October 22, 1908, about six months ago, the Hon. Henry W. Palmer of Wilkesbarre was a candidate for Congress in the Eleventh District of Pennsylvania, composed of the county of Luzerne. The election was eleven days off, and the district was close (the sitting member was a Democrat). In this situation the Wilkesbarre "Times-Leader," a virile Luzerne newspaper, published this paragraph:

"The 'Times-Leader' is not against you, Mr. Palmer, but it is with the people and against Cannon. Come, state your position."

Two days later, Saturday, October 24, Mr. Palmer wrote and published broadcast the following letter:

"THE 'TIMES-LEADER':

"*I shall vote against Mr. Cannon for Speaker*, or against any other man who obstructs the Roosevelt policies, as announciated by William Howard Taft. This letter is to answer the question you asked in your issue of Thursday afternoon, and also to congratulate the 'Times-Leader' on its advocacy of the policies of President Roosevelt. Yours truly, HENRY W. PALMER."

Palmer was elected by a plurality of 993 in a total vote of 40,057 (Taft carried the same district by a majority of 7,000). On March 15 came the fight on the Speakership and on the rules. *The Hon. Henry W. Palmer voted for Cannon; he also voted for the old rules on every one of the several ballots which constituted that fight.*

Another

THE Eighth Congressional District of Minnesota is composed of the counties of Aitkin, Anoka, Carlton, Cook, Isanti, Itasca, Kanabec, Koochichang, Lake, Millelacs, Pine, and St. Louis. It includes the city of Duluth. For six years these counties were represented in Congress by J. Adam Bede, a very popular and well-known Republican. Bede was a lieutenant of Cannon and proud of the fact. Last fall, when Cannonism became an issue throughout the country, Clarence B. Miller of Duluth had a vision of Opportunity. He opened a fight on Bede, and made Cannonism the issue. Because of Bede's prominence, the fight became the focus of almost national attention. "Cannon" and "Cannonism" were harped on every stump in twelve counties. From the Duluth "Evening Herald" of Tuesday, September 15 last, we quote this account of one of Miller's meetings:

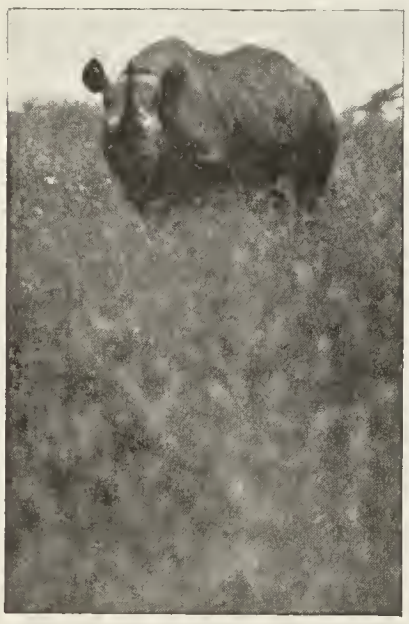
"Before one of the largest audiences that ever attended a political gathering in this city, Clarence B. Miller last night, at the armory, outlined his convictions regarding the duty of a Congressman to the people, and took the opportunity to denounce Cannonism and the methods that have resulted in the obstruction of popular measures in the House of Congress. The speaker declared that he is in opposition to a condition whereby one man—a great white Czar—and perhaps a clique of six members of Congress, could abrogate to themselves the power of the entire House, could usurp the rights of the people, and declared that it was his desire to do all in his power to change such a condition of affairs that had led him into the contest.

"THE VOICE OF THE PEOPLE

"'If you elect me to Congress,' said the speaker, 'you will have at least one voice that is raised against a condition of affairs where the voice of the people is unheeded, where their rights are abused, where the rights guaranteed them by constitutional government are usurped by a clique of a few members of Congress.

"'There has gradually been growing up a condition that bodes ill for the American people. A few members of long service, with the aid of certain rules, act as the rulers of the American people. Measures demanded by the people are held up and defeated. This condition of affairs has brought me into the campaign. It is to protest against such a condition that I have entered the contest.'"

Mr. Miller was elected. On the 15th of March he took his seat. On the same day he voted for Cannon for Speaker. On the same day he deserted the thirty-one insurgent Republicans whose conferences and councils he had previously shared, and voted *for the old rules and with Cannon on every one of the ballots in the rules fight.* What the people of his district now think of Congressman Miller is fairly obvious. What would most interest us just now would be the views and reflections of Bede, ex-M.C.; and after that a confidential statement as to what Cannon and his regulars, in their heart of hearts, really think of the new Congressman from Duluth. However glaring the things that make him the enemy of the people, Cannon was never lacking in courage, nor in standing by such convictions as happened to be his.



"He stood near a bush with the tick-birds sitting on his back"

"We found a pair of rhinoceroses asleep under a bush. The tick-birds gave warning of our approach, and immediately the two animals got up and faced us"

The Masai with his bent spear

Pointing out the line of march—the picturesque Masai guide, "very tall and slight, dressed only in a loose cloth hung from one shoulder, his hair done up in minute braids and covered with red earth and grease"

The charge of an angry bull rhino

Photographs by the Author

AFTER spending time and money in assembling an outfit for photographing wild animals, I finally found myself at Mombasa, the old Arab-Portuguese-British seaport town, starting-point of the so-called Uganda Railroad—the road which was to bring me into the greatest of all game countries.

There were the usual horrors of landing, the aggravations of custom duties, and other seemingly needless and apparently endless delays which beset the new arrival. That's all a part of the price one pays for travel. At last all things were ready, and on January 30 my companion and I found ourselves with two traveling companions in a comfortable compartment on the train. We were armed with blankets, overcoats, and cold drinks. The drinks were welcome during the first few hours of the journey, for the coastal region is certainly hot.

We passed through country clothed in the richest of vegetation, thoroughly tropical in its lusciousness, where cocoanut palms swung their long leaves to the breezes and offered but little shade to the things below. Gradually we left the more cultivated region and passed through drier country, thickly wooded with the ubiquitous thorn tree and strange-shaped cactus; creepers of many kinds covered every available support, while brightly colored birds and still more brilliant flowers gleamed in the blinding sunshine. Everywhere it was hilly, and our course was snakelike as we gradually climbed higher and higher. By seven o'clock in the evening we reached Voi, where a good dinner was served at the station rest-house. The change in the temperature as night came on was most welcome, and blankets were needed. Before morning it became very chilly, and overcoats were used to supplement the blankets.

With the first gleam of dawn we were peering out of the windows in search of game. We could see animals moving about in the dim light; what they were we could not see, but we were delighted to know that wild animals could really be seen from the train windows exactly as we had been told. Daylight came with the rapidity usual in equatorial regions; and, as the country lighted up, we could scarcely believe that the sights before our eyes were real.

On every side game abounded: Hartbeests, Thomson's and Grant's gazels, zebras, gnus, duikers, and ostriches were there in herds. Some scampered away as the train went by; others stopped and gazed in an interested sort of way. Presently there was a cry of "giraffe," and instantly we all rushed to the side of the train. There, not 120 yards away, stood a huge bull giraffe, not a mangy-looking specimen such as one might see in a zoo or circus, but a dark, richly colored animal, the picture of grace, its head overtopping the trees as it watched the passing train. We were still within sight when it turned and ambled away in its peculiarly characteristic gait. Writers have described the giraffe's action as grotesque, or ugly. Grotesque it might possibly be called, but certainly not ugly or even ungraceful; rather might it be said to be of a strange grace thoroughly suited to the remarkable build of the animal.

Fresh herds of animals appeared unusually near the train. Several times antelopes would actually run along the tracks directly in front of the engine and then bound off to one side, scampering to the nearest hill, to survey the strange puffing creature that had presumed to race with them.

It was all too wonderful to be real. It was really like going through an ideal zoologieal park, hundreds of miles long, where animals could roam free of the restraint of fences. Even when we stopped at the tidy railway stations, where strangely bedecked Masai, armed with long spears and scanty clothing, stood alongside of hardy English flowers, such as geraniums and roses, we had but to raise our eyes to the surrounding country to see herds of antelopes and zebras grazing on the sun-dried grass.

All the way to Nairobi this abundance of animals continued. The town is encircled by a double line of barbed-wire fences hung with wind-blown rags, to keep the wild animals of the plains from entering the town. Such a precaution really seems absurd when one considers that Nairobi is a fair-sized modern town, which, though but about ten years old, boasts of fine stone buildings, water-works, electric light, and an excellent hotel and stores, where all manner of things may be purchased (and at only slightly more than home prices). Here, in the heart of what but so few years ago was termed "Darkest Africa," thoroughly modern steam-rollers were working on well-made roads, on which marched the almost naked people of the neighboring country. Probably no town in the world has a more delightful climate than Nairobi; even though it is situated within a few miles of the equator, the days are not unpleasantly hot and the nights are invariably cool, owing to the altitude of about 6,000 feet. It is within sight of both the great snow-clad mountains, Kenia, over 17,000 feet, and Kilima-Njaro, which is over 19.000. As we entered the station, about the busiest I have ever seen, the troops (King's East African) were entraining for the Somaliland expedition against the Mad Mullah (so called). The native soldiers, as fine-looking, soldierly men as one would wish to see, seemed pleased with the idea of the expedition, while the British officers were fairly beaming with delight at the immediate prospect of active service.

Our sajari[1] outfitters met us at the train, and soon had our belongings off to their stores, while we went in a riekshaw to the hotel. It was Sunday, so nothing could be done toward getting ready for a trip. We decided to take advantage of the Governor's permission to work on the big game reserve, where *no* shooting is allowed. This district covers about 10,000 square miles and includes the country from one mile north of the railway, southward to the German boundary, and from Tsavo about to Nairobi. I was anxious to try my photographic outfit thoroughly before undertaking a long expedition, and to learn something of the way of camping in East Africa. Therefore this trip suited my purpose exactly. Two days later our caravan, consisting of eighteen porters, head man, cook, guide, gun-bearer, camera-bearer, and our two "boys," marched to the railway station, and, after chattering as much as a tree full of monkeys, they were finally packed aboard, each man sticking closely to his red blanket, water bottle, and three days' rations. At noon we left Nairobi and went southward to Kiu, arriving about 4:30. There we camped near the station, enjoying our first night under canvas in equatorial Africa. How different it was from what one might have expected! The wonderful clearness of the nearby full moon alone was in keeping with our ideas of what a tropical night should be. The insects that should have been there to torment us, the suffocating heat which should have made us dread the very idea of bed, where were they? Certainly not here! Of insects there were none save an occasional moth, which fluttered against the lamp; and, instead of heat, the keen and clear air actually waxed us to our beds, where three warm blankets kept us comfortable and happy as we passed into the land of dreams.

By four o'clock next morning we were up and making ready for an early start, as we wanted to do most of the march of sixteen miles before the sun became too hot; but it was nearly six before we actually started, owing to the incompetence of the head man, who had no idea of handling the men. Three sheep, which were to be used for food during our trip, seriously objected to leaving their native place, and it required the united efforts of the cook (for whom they had an instinctive dislike) and our two boys to persuade those sheep to keep anywhere near the caravan.

My companion, C——, and I walked ahead, with the Masai guide leading; a more picturesque figure could scarcely be imagined—very tall and slight, dressed only in a loose cloth hung from one shoulder, his hair done up in minute braids and covered with red earth and grease. He was armed with a long spear and a very long knife. As we watched him in admiration, we little thought that the spear, which seemed more for ornament than use, might soon save the life of at least one of us.

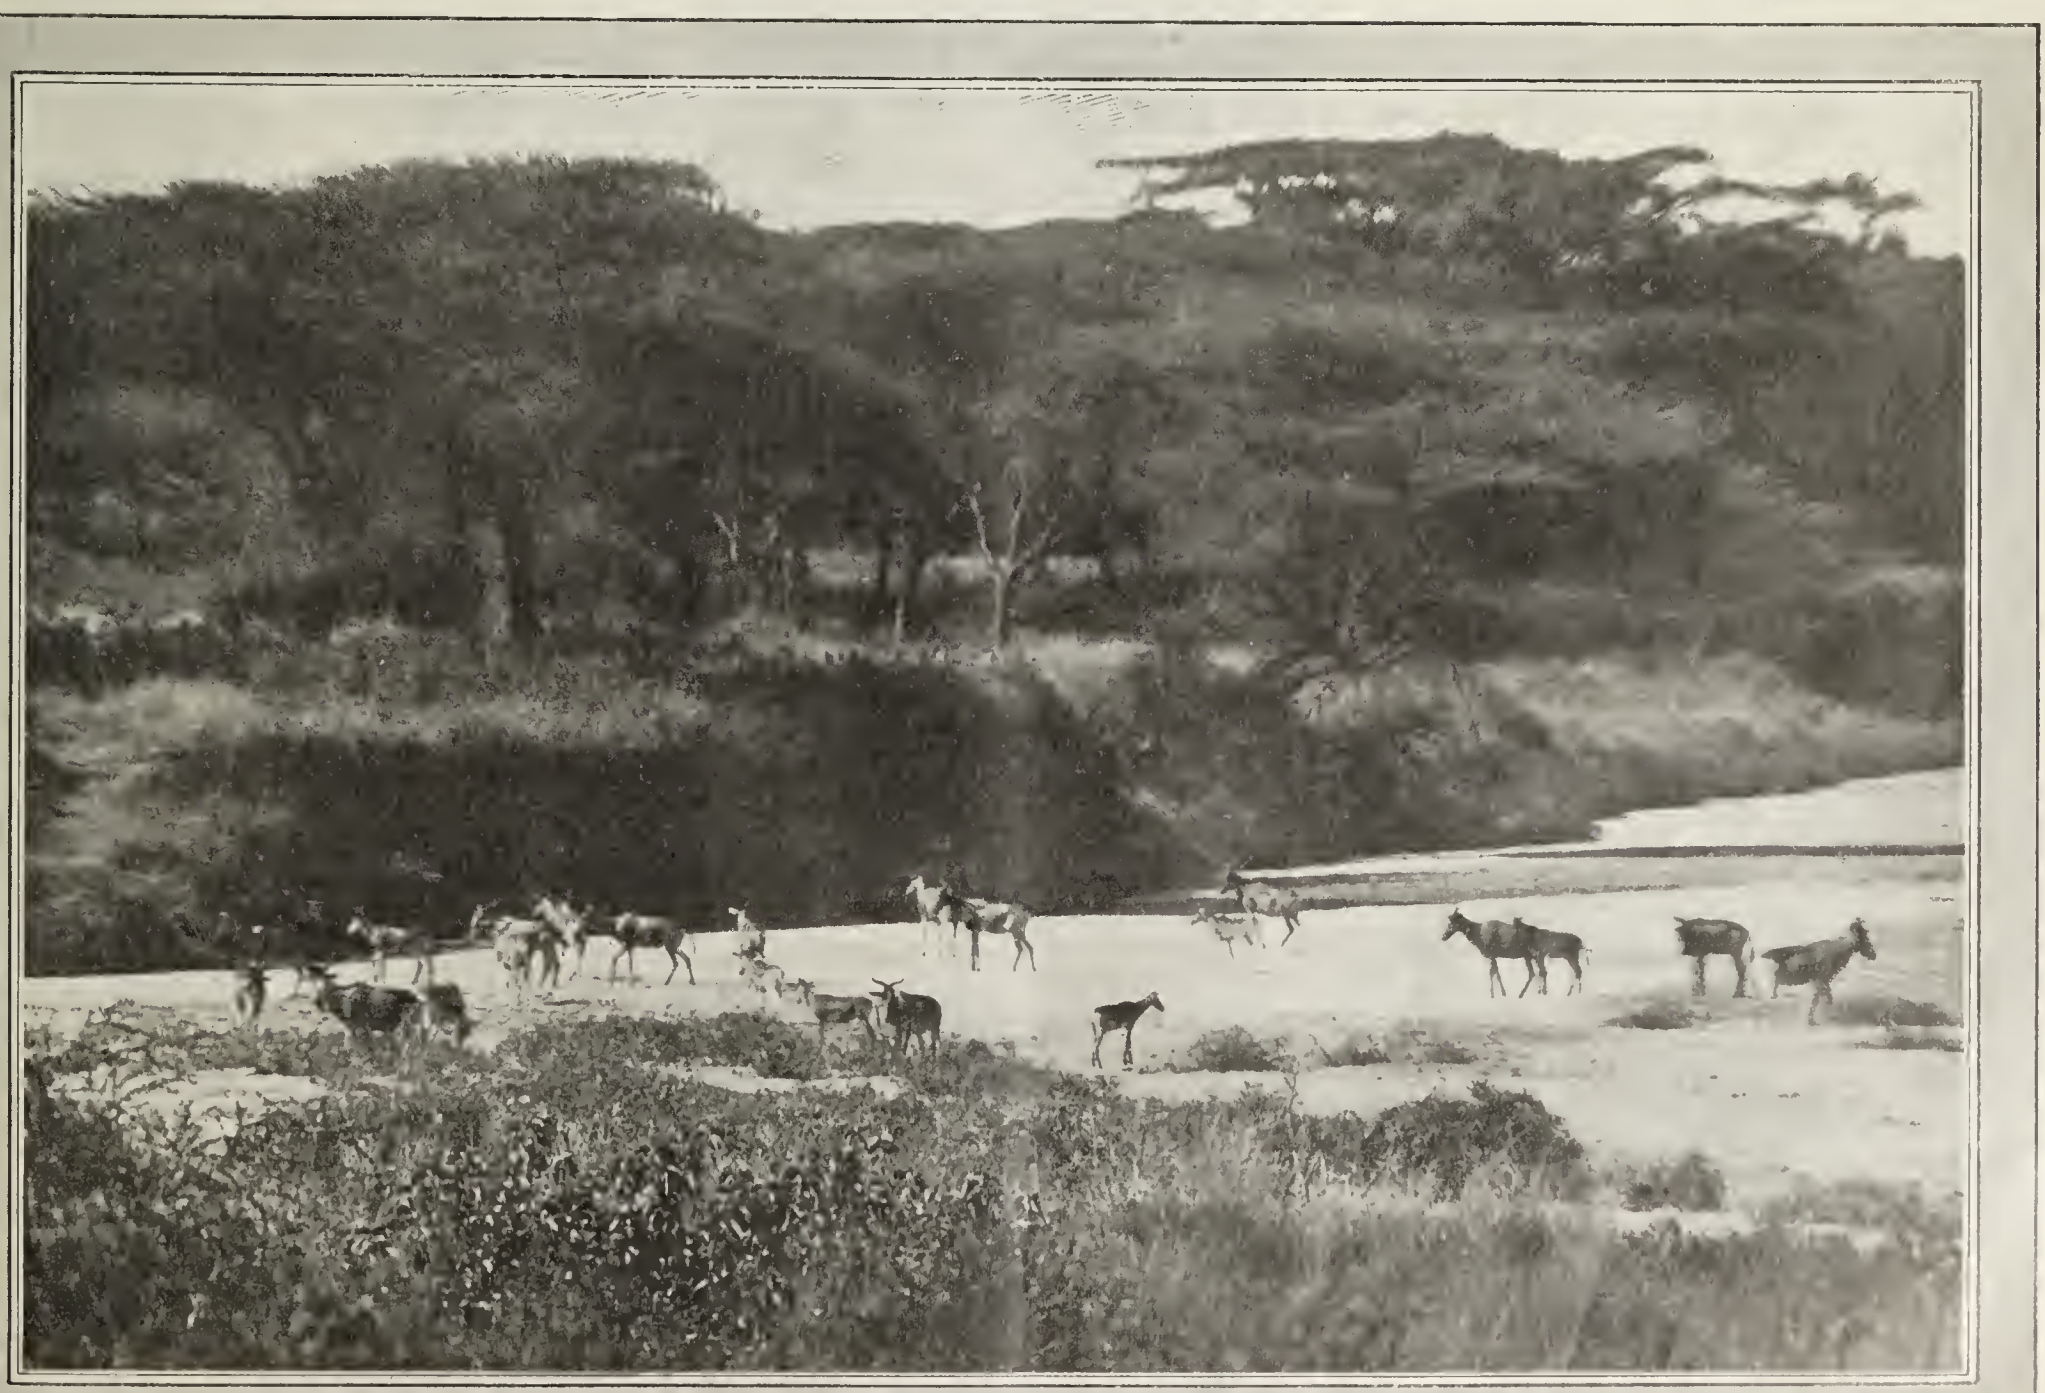
The country through which we passed was rolling land, covered with rather short grass and scattered low-growing thorn trees, many of which were in bloom, and the air was filled with the delicious perfume. It was like an immense abandoned apple orchard in New England. The effect of the long dry season did not seem so very noticeable, and yet between Kiu and the Olgerei River, sixteen miles away, there is no water except during the brief rainy seasons.

Game we saw on all sides, but did not wish to delay the caravan by doing any photographing, so we pushed forward at a good pace, stopping now and then to enjoy the delightfully cool shade of a tree. We saw our first rhinoceros on a nearby hill, and it gave us a strange sensation to see the huge beast, more like a relic of bygone days than an animal living in the twentieth century, walking along in an unconcerned way. A tall giraffe accompanied us for several miles, keeping always well ahead and occupying every available high place, from which he could obtain a good view of us. Farther on we saw wart-hogs and fringe-eared oryxes for the first time.

Digging for a Drink

BY NOON we reached our camping-ground on the Olgerei River: river in name only, for we found it nothing but a dry sand bed, except for a small water hole containing a dark-colored fluid unfit for drinking, owing to the contamination of the cattle, immense herds of which were watered there by the Masai. By digging a hole in the sand we were able to procure comparatively clear water of disgusting flavor. As there were no signs of any animals that we particularly wanted, we moved camp early the following morning, going southward across country until we struck the dry river bed about nine miles below; there we found a large water hole which was also used by cattle. However, we finally found very fair water by digging a hole a couple of feet deep in the sand. This hole we protected by a thorn hedge to keep away any animals. That night we heard our first lion, and a strangely weird sound it was, but not quite as blood-curdling as I had expected it to be. Our camp was, of course, well protected by a thorn fence, so that we had nothing to fear.

Early next morning we started in search of game; scarcely had we gone a mile from camp when we saw three rhinoceroses about a quarter of a mile away. One of these big animals is really quite enough to begin with in a photographic way, but three can be called a crowd, especially when those three have already got our wind. However, we tackled them, making a big circuit so as to get down wind. As we approached we were somewhat disconcerted by their extreme restlessness. They knew by our scent that we were somewhere in their neighborhood, and it worried them; backward and forward they ran, trying in vain to place us. As we were not more than eighty yards away, and there were no available trees, we felt very queer sensations creeping up and down our spines. I tried an exposure as they passed us about sixty yards away, but in my excitement I failed to notice an intervening bush [illegible] completely spoiled the picture. The noise of the [illegible] ter startled the snorting trio, and they drew t[illegible] in a most alarming way. Of course, we fully expected they would charge us, as they certainly had our wind. I didn't feel justified in making another exposure, though I did change the plate and focus carefully on them. But the sound of the shutter would undoubtedly have precipitated a charge, so I forbore regretfully enough, as it was a splendid opportunity for a picture.



I had promised that there should be no shooting unless in actual self-defense, and it would have been most unpleasant to shoot at least two rhinoceroses on the first day, so it was with a feeling of intense relief that we saw the excited creatures turn and bolt. After going some distance they separated, the big bull going by himself. We followed him for several miles, and finally got within about one hundred yards, when I made several telephoto exposures before he ran off. Unfortunately the grass was very deep, so that I was unable to get satisfactory pictures. It had been a time of great excitement for us, and we were glad to have come out of it with no mishap. We had had enough for one day, and so returned to camp and a good lunch.

The next day we found a pair of rhinoceroses asleep under a bush—an old cow and a nearly full-grown calf. The chance for a good photograph seemed decidedly favorable, so we walked cautiously up wind toward them. Not knowing much about rhinoceroses, I scarcely expected to be able to get nearer than about eighty yards. At that distance the regular lens would not be of much use, so I fitted the telephoto to the camera. The tick-birds, which live on nearly all rhinoceroses, gave warning of our approach by loud cackling, and immediately the two animals got up and faced us. I made an exposure, and before I could change the plate they headed directly for us. My companion waited till the last moment, in the hope that I would be ready for another picture, but it was useless. Those animals came too quickly, and at fifteen yards we fired a shot from the 450 cordite, striking the old cow in the shoulder. Fortunately, the bullet made her change her mind about us, and she swung round and made off as fast as she could with her calf close behind her. So ended our second experience with rhinoceros. We had really been charged. Holding a large camera steady and then trying to focus it correctly is not quite as easy as it sounds. The rest of the day was spent in trying to get near to several rhinoceroses, but without any success. Only long-distance shots were possible, and they were not worth wasting plates on.

We watched one big bull that came across our trail about seven hundred yards behind us. The moment he struck it he charged violently to where he thought we might be. Finding nothing, he turned and charged back again, and so he continued for some minutes, looking all the time for some object upon which to vent his indignation. At last he got tired of it and walked off in a very uneasy frame of mind. We kept a pretty sharp lookout on our back trail, to see that he did not follow us.

The Woman Who Votes

Campaign Days in Denver.- The First of Three Papers Showing the Western Woman Voter's Equal Interest in Jelly-making and Politics

By SARAH COMSTOCK

Mrs. Alma V. Lafferty, a Denver candidate for the Legislature

IN THOSE October days when Mr. Taft and Mr. Bryan were contending for the same residence, it looked to my inexperienced eyes as if there were something doing among womankind in Denver, although Mrs. Toppin informed me that "it was nothin'."

"'Tain't like the old days," she said with a mournful headshake for the flown past. "Them was days. 'Twas when McKinley was runnin' in '96 that I got my hat smashed for defendin' a feller that was holdin' the flag, an' one o' the candidates give me a new hat. He says: 'Mrs. Toppin, here's the price of a new hat. Take it an' buy you one. You lost yours in a good cause.' An' I bought me a grand hat. Oh, them was times! It's dull campaigns nowadays."

Mrs. Toppin is one of the "workers" or "precinct women" of North Denver; she has canvassed many a campaign through and she ought to know. But when I found the Woman's Republican County Committee occupying two adjacent store buildings on Glenarm Street, the Woman's Democratic County Committee holding a suite on California Street, and the Woman's State Democratic Committee ensconced in the Albany Hotel, it looked as if the women were busy in a mild fashion at any rate, even though the bright days of hat-smashing had passed away forever.

When I inquired for those women whose names have long been connected with the suffrage movement in Colorado, I learned that the most of them were making headquarters at one or another of these committee-rooms. Here I found them, here I came to know some of them, here I heard them discuss current issues from the tariff to Wallachian embroidery. And here, as the October days led up to November, I watched the tension grow and grow and culminate in those two enormous rallies, the like of which no other State in the Union knows—when women speakers address the great Auditorium full of women voters, knowing that their power of swaying that audience will tell in the issue. To one from an Eastern State it appears most curious that what a public hall full of women thinks about politics should be of the slightest moment to city and county and State candidates, to say nothing of those who are racing toward the White House.

". . . I was so busy then that I used to make my jelly at night, and leave it to drip during the day while I went to work."

"Don't you always leave it to drip, anyway?"

"It's better than squeezing it, of course."

"Dear me, the year I was in the Legislature I was glad I'd put up plenty of fruit the summer before. The three meals went on just the same, Legislature or no Legislature."

This was my initiation into womanly politics. The two of them were in the State headquarters' rooms at the Albany; they were officers, and they awaited the hour when this take-it-easy little capital of the Rockies should arouse to the day's labors. It was something of a shock. I had come to beard the suffragette in her lair, to meet the down-with-the-tyrant-man type. But where I had expected to hear chat of revisions, reenactments, and representation, of primaries, precincts, and platforms, the conversation was hinging on the dripping *versus* the squeezing of jelly.

"Don't you women politicians talk politics?" I inquired.

"Yes," somebody responded. "We do. But the jelly has to be made all the same."

Even then a truth dawned upon me: that herein lay a radical difference between the two sexes in political life. Nobody ever heard of a masculine politician who knew anything but politics during campaign days; but

Mrs. Anna M. Scott, President of the Woman's Republican Club of Colorado

in the feminine mind there is a little corner reserved for the jelly. How this fact may affect national issues is for greater minds than mine to investigate.

There were some rocking-chairs being rocked violently when I dropped in at the County Headquarters and I heard low and earnest talk. . . . "If he was a simon-pure, dyed-in-the-wool Democrat, he wouldn't . . ."

The headquarters was in the Easterman Hotel because it chanced to be next door to the Men's Democratic Club.

"We like to be near, so that our chairmen can communicate," an officer told me. Whereupon a thick-set, businesslike Democrat from the other building appeared to bear out the statement. An officer renounced her rocking-chair and went off to the inner office to confer with him. I heard continuous talk in a masculine growl: "There's too much catering. . . . We won't stand for it."

A boy entered with a load of campaign portraits and of post-cards which bore some sort of a joke anent a full dinner-pail with the bottom falling out. Officers put these away for distribution later on, and again there was low and earnest discussion. Somebody reported a ruse of the opposing party.

"That's a mean trick," said somebody else.

Then there was a putting together of heads and the talk appeared profound until a brisk little woman bustled in with a good morning all round.

"It's Mrs. Lafferty, our candidate for the Legislature," everybody told me, and I gathered with the rest of them around the chair where she sat enthroned.

"I know I'm late—I had a fitting at the milliner's and I thought I'd never get through. But I'm ready for business now. Isn't it hard to get a becoming hat? I always get so discouraged trying them on."

"Then the bonnet as well as the jelly must enter in where woman takes up politics," I said.

"Everything that concerns a woman must enter in," responded Mrs. Lafferty. "I keep house just like other women." She did not add, but I observed, that she also liked pretty clothes. "I love to do housework. Here's my folder." And with marvelous agility she leaped from housework to the State, and handed me a printed slip wherein she pledged her support of "the bill for a Forestry Law, a State Home for Feeble-Minded, and other bills equally important."

At the Republican headquarters there were looped and draped flags in the windows and portly portraits, and on the steps a buzz of busy women who came and went. Within, at a manly desk, I found the president. She presides over the Woman's Republican Club of Colorado, and her name is Mrs. Anna M. Scott.

When I entered she was engaged in absorbing conversation with a man who stood at her desk. He departed, and she gave me a chair beside her.

"That was my candidate for the Legislature," she said. "I'm going to send him there, too." She gazed with serene firmness through her green-dotted veil.

"You see, I run my own ward," she went on with pride. "The fourteenth. And I'm the only woman that does run a ward. Oh, you've got to understand these things, but some women never do. For one thing, you can't make 'em see that it's all in the primaries. I've been in it a long time. I've lived twenty-eight years in Colorado, and I've been in politics fifteen years—that's ever since we had suffrage."

Running the Machine

SHE leaned back comfortably with that air of easy possession of the desk and its corner which rarely comes to woman, who is more likely to sit forward with an air of obedient attention, as if the desk were master. Noting her manly attitude, it occurred to me to ask whether she kept house.

"Of course I do. We're all good housekeepers," she replied, her green-dotted glance covering all the busy, stirring women who filled the room. "We none of us have children, though. The housewife who has children has no business in politics, any more than the average man has. Let her stay at home and look after her kitchen and her nursery, just as the average business man attends to his desk or his counter. When election day comes he can go to the polls and so can she—that's all she has to do. Let her take care of her home; we'll run the machine."

Mrs. Scott's eyes, above her executive nose, narrowed to an expression of excessive wisdom. The door of a rear room opened and a lady emerged, accompanied by the cheering fragrance of a fricassee.

"Scotty!" called the lady. "What time can we have lunch?"

"They'll all be here by one o'clock," responded the president, who apparently answered to "Scotty." She explained to me. "You see, we officers have lunch in the kitchen here every day during campaign so's to save the time it takes to go home. We haven't got any time to spare nowadays."

The fricassee fragrance vanished behind the closing door. Mrs. Scott resumed political topics.

"You see, it's like this: the men are selfish, but we can't get along without 'em. They're all right—yes, they're all right. But we've got our interests to look out for. Suppose a woman's left a widow—she goes to a lawyer. I'd rather be held up with a gun—it's more gentlemanly. The lawyer's protected by his profession and the highwayman isn't. Oh, it's time the rest of you States had suffrage."

"Suffrage is one thing and politics is another. How do you get time to do anything besides run the machine?"

"I don't know how, but I do it. Just let me tell you what I've done since last spring. I got my Denver house all renovated, then I went out to my ranch, three hundred and fifty miles from here. I took charge myself, did the cooking, fed eight or ten people, hired a man and superintended his hay-cutting, rode to town, twenty-two miles, cross-saddle, every few days, ran back to Denver

just long enough to attend the primaries, back to the ranch, in again for the State convention, back, and now I'm in for the campaign. Scott ran out to the ranch once; that was all I saw of him till the State convention. My train was late and I had to go straight to the Auditorium instead of going home. About eleven o'clock Scott came in and he said: 'Why, howdydo?' and I said: 'Why, howdydo?'"

As one o'clock drew near, the officers began to gather, and suddenly in their midst appeared a lone man. "That's Scott now," the president remarked. "Want to have lunch with us to-day?" she asked him. "We let a man in now and then," she explained to me.

So the lone man was given a place at the table in that atmosphere charged with platforms and policies and the frieasee fragrance. "I knew that old hen—raised her myself," said the president, by way of salutation to the departed, and I left them as they all fell to.

When next I saw the headquarters it was nine on a night, and there were lights and an orchestra and aigrets and dress suits and ices and five hundred carnations and an equal number of Taft buttons. The committee was giving a reception for the candidates.

Automobiles sneezed outside and street urchins peered in and men and women struggled to make their way through the crowd in the rooms. Candidates dashed up to the door, shook hands rapidly with the guests, then dashed away on their mad speech-making career. One little gentleman who wanted to be an alderman or something of the kind clasped my hand with fervor, apparently under the impression that I was a voter. So much was I a stranger in a strange land, so cordial was the handclasp, that I deeply regretted for the nonce that a week or two's residence did not give me the privilege of dropping my gratitude into the ballot-box.

The "parlor meetings" are one of the most important features of the women's campaign in Denver. They are neighborhood affairs, held all over the city for many days before election. I picked out the address of one at random and set off for the Sixth Ward in North Denver, where little brick cottages abound and where people run out bareheaded to buy a spool of thread in the shop around the corner. No doubt there was an imposing residence concealed somewhere, a residence befitting a patriotic gathering, I thought; but when I had tracked down the number I found that it applied to one of the many little brick cottages.

It was early, and the hostess was alone and making ready. The portières were drawn back, throwing the little parlor and the little dining-room together, and she was putting chairs around in rows. The house shone in readiness for the event: its Brussels carpet was speckless, its base-burner stove glittered in nickel regalia, its flower-pot had taken on a tissue-paper cloak which was drawn up in a ruffle. There was the same expectant, tense hush that other houses of the kind wear when the Ladies' Aid Society is to meet over the thimbles for an afternoon. After all, women must gather, whether it be to make house-gowns for Alaskan natives or to discuss the city water question.

It lacked some time yet of the hour set for the meeting, when the neighbors began to arrive. They came with hats and without, in ones and twos and threes. One brought a husband and one brought a Fluffy Ruffles in a white bearskin coat who hadn't wanted to be left at home and was as good as if she were in church. A young lady stirred about the piano with an air of much preparation, twisting the piano stool up and down and up again, sorting over the music. The numbers increased so rapidly that all the rocking-chairs and parlor chairs and dining-room chairs in the two rooms were not enough, and the door into the adjoining bedroom was thrown open to receive the overflow. The hostess moved about among her guests, and everybody talked all at once until a sudden hush fell, for the speakers had arrived.

Personalities Versus Issues

THERE were two of them—Mrs. Eleanor Van Ness, who, I was told, was making speeches at a rate worthy of him whom she was endeavoring to thwart, and Judge Hudson. The latter is the fortunate possessor of a profile, and he has the touch of gray put on at just the effective point where some of our matinée idols are wont to apply it, and I fell to wondering whether there is method in the choosing of candidates who shall address parlor meetings.

He began at once, and he whizzed through the personality of every candidate on his ticket. Party issues and platforms he barely grazed; but this man Denver had known since he was in knickerbockers at the high school—that man was the sort of father that every home needs. "Ladies, please don't leave your party," he implored. And then he plunged into the juvenile-court matter, and there was a flood of oratory. "You mothers—our daughters—human wolves stalk the street." The wolves were creating such an emotional tension that it was a relief to have an intermission while one young lady played and another young lady sang about Baby Bunting and the Rocking-horse Brigade.

The family dog, shut in the kitchen, had been squeaking and sobbing to be admitted to hear Judge Hudson's speech, and his lamentations increased while Mrs. Van Ness addressed the meeting. She avoided the personal appeal and drove straight to the city water question, evidently judging that issues as well as personalities are concerns of her sex. After this "The Old Church Choir" was sung and the political meeting broke into a social one, Fluffy Ruffles being allowed to stir, the unhappy dog being admitted, and everybody talking at once again.

I cornered Judge Hudson for a minute.

"Evidently," I said, "you believe that women vote according to a man's private life."

"Certainly they do," he responded. "It's a good thing, too. It's the women, not the men, voters that look us up."

When Mr. Bryan was to address the city wherein he had been nominated, the street outside the Auditorium was crowded by five-thirty, and a large part of the crowd consisted of women. The rope was up, protecting the sidewalk; out in the street they crowded and waited. By six o'clock it was raining [illegible] departed.

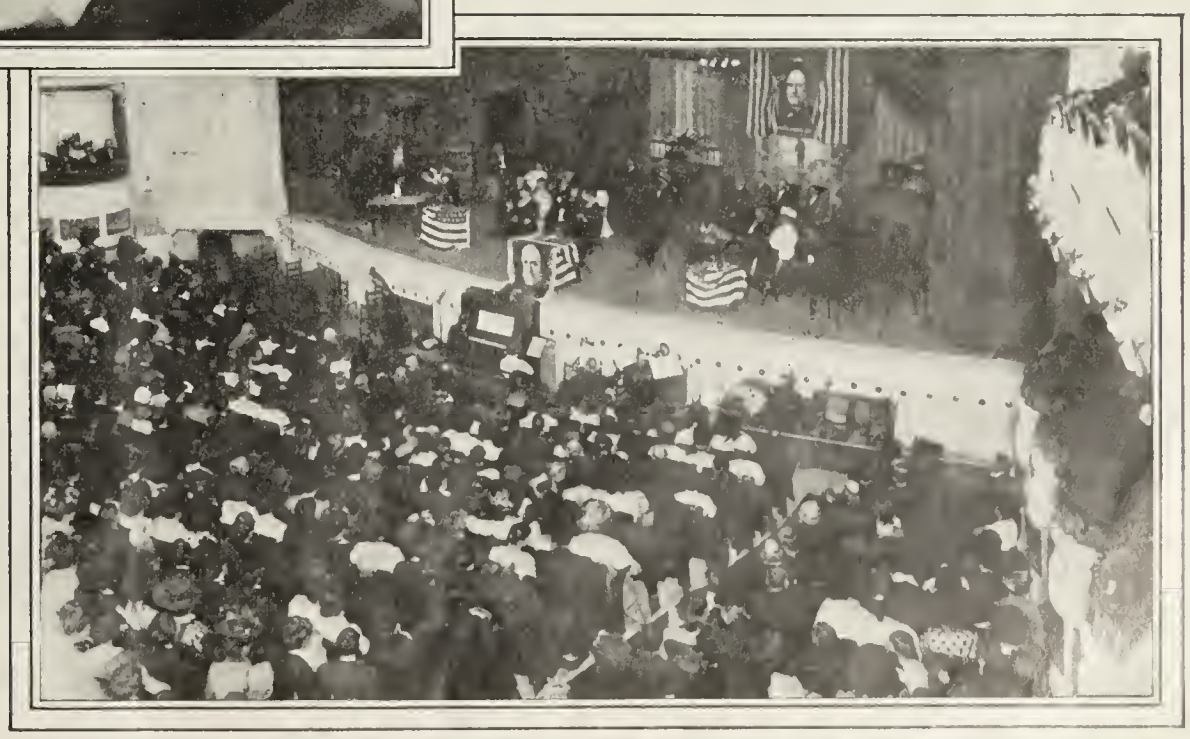
"Gee, I'm glad it's rainin', the women'll go [illegible]" an urchin who had tried in vain to wedge his [illegible] the curb. But he was mistaken. There were few [illegible] brellas; plain hats and dress hats, veils and plumes [illegible] tulle were exposed to the elements, and their wearers never budged. Perhaps women would have done the same anywhere; but I thought I detected a different, a more purposeful, air about these feminine citizens who were privileged to vote for the Peerless One, to hear whom they stood half an hour in a pouring rain. Some arrived with the men pertaining to them, others came in sober, determined little groups. Some marched over many wet blocks to accompany Mr. Bryan to the scene of action.

And there—it was somehow different, in a subtle way, from what it is at political meetings in non-suffrage States. Here we are merely interested in a detached way, there the personal equation enters in. I saw women leaning forward to grasp the bank question more firmly; they wore the same expression that is worn during "The Ring" by those who take their Wagner painfully, conscientiously, as a part of their education rather than as one of the many blessings in a blessed world. A tiny woman in the crowded gallery tearfully begged her neighbor in front for room to get one glimpse of that fringed baldness which was cordially bobbing above an armload of American Beauty roses. "Well, if I can't see him, I can vote for him anyway," she consoled herself.

The week before election I returned to Denver after snatching a glimpse of the campaign in other States; and now I found matters at the boiling-point. Parlor meetings were engrossing the afternoons, public-hall meetings the evenings, men and women speakers whirled in automobiles from house to house and hall to hall all over the city. They were rapidly shuffled. Over at Goss Hall one evening I heard Mrs. Grenfell in a brown tailored effect tell an audience of men, women, and children the story of the little girl who got-a-quarter-out-of-the collection-plate-what-did-you-get-mama; heard Mrs. Lafferty, in a black dressy effect, tell them that "in the East they seem to think we go to saloons because we vote"—then I saw an automobile pick them both up and whizz them off to another public hall while another machine honked up with a man speaker, and a band bridged the brief gap.

And at the end of the week came the two great rallies of, by, and for the women voters. I was able to attend but one; there I found the Auditorium filled to overflowing, men mere islands here and there in the sea of women. Pretty girls ushered. Mrs. Sarah Platt Decker presided with an agreeable jokelet at each introduction, and, besides the male quartet, but one or two mere men were permitted utterance. Women addressed women, women listened to women, women cheered women. But as we all crowded out I heard my neighbor say:

"It takes those big potatoes so long to bake through. They ought to have been in twenty minutes ago."



Luncheon in the kitchen of the Woman's Republican Headquarters of Denver. To save time the women politicians lunched here regularly

Take Off Your Coat

AMONG the final acts of the last Congress was the killing of the Appalachian and White Mountain Forest Reserve bill. So again the effort to conserve the great watersheds of the Appalachian and White Mountain sections has failed; betrayed this time by the Senate. Strangely enough, bitterest opposition came from the Rocky Mountain contingent, where (if anywhere) one would expect intelligent appreciation of the necessity for preserving the forests. Or, is it a matter of sectional prejudice? And thus the fight must be made over again during this present session of Congress. Meanwhile, the wood-butchers diligently pursue their devastating way.

The only way to save these important watersheds is to take off your coat, you intelligent citizens, and fight for them. Much worthy endeavor has been expended spreading high-minded resolutions on record, and in sending forth into the country lengthy appeals for support. That is well enough as supplemental effort, but this now is a case that needs something more convincing than rhetoric, something more persuasive than resolutions; it needs direct appeals, personal activity. Let us not waste time talking about the need of preserving forests—we know all about that; every schoolboy knows it—but let us take off our coats and *get busy*. And this means you, Mr. City Man, as well as the small town and country man.

In the White Mountains the fine growth on the steepest slopes has been spared by the lumbermen. This is because it is the hardest to get at, and therefore the most expensive to handle; and also because the lumbermen are leaving considerable hard-to-get-at timber areas as bases of settlement at exaggerated values of damage when the Government comes on the field to buy. If Congress goes on mumble-the-pegging, the rise in value of spruce will make even those growths on the slopes profitable for the lumberman to handle. Just now, however, lumbermen are turning their attention in the White Mountains to paper (pulp) because, as one of them recently said to Mr. Ernest Russell, whose special investigation will appear in the May OUTDOOR AMERICA, "there's more money in pulp."

Do you realize for one minute the enormous destruction of timber that is making? You have seen innumerable statistics, of course, and, no doubt, they have had as little effect upon you as statistics usually do; but give the following statement an instant's thought: The International Paper Company operates twenty-six mills in Massachusetts, Maine, New Hampshire, Vermont, and New York, with a twenty-four-hour capacity of 3,472,000 feet.

Just think that over.

Never think of this question of forestry preservation as one of sentiment. It's cold, hard economics, and it affects every man doing business in this country. It isn't that lumber should not be cut. Of course it must be cut. It is that it shall be cut with intelligent regard for the future supply. It isn't that forest lands shall not be rented. It is that they shall be so lumbered, and the trees so safeguarded, that the land be not denuded, and on that account lose its water-storage capacity. And it is as a reservoir of water that the forestry movement makes its widest appeal.

Let 'Em Breed

WITH native Yankee shrewdness, the Maine legislators put protective laws on their books against destruction of their deer. And they have the good sense to insist these laws be enforced. Not that they are moved by lofty sentiment; it is a matter of business, but it results in the competent protection of the State's deer and moose. A few years ago the Maine voters discovered that a live deer is worth to the average citizen in hard cash several times as much as a dead one. They learned that it is the live deer which attracts sportsmen and campers by the thousands every season and puts gold into the purse of the shopkeepers, the railroads, the hotels, and gives employment to a great many men as guides and wilderness assistants. Here is a concrete illustration of the practical value from the business point of view of the adequate protection of game.

Some good people think the effort to stop the shooting of ducks in the spring-time is based on purely emotional reasons; or, if not that, is an effort of sportsmen to protect the birds in the spring so they may have the more to shoot in the autumn. But the movement to abandon spring shooting is for neither one nor the other of these reasons. It does happen that sportsmen are the most active in seeking such legislation, because it happens also that sportsmen, as a rule, are not only more intelligent than the average, but have a little more of the milk of human kindness flowing in their veins. Protection of wild fowl in the spring offers equally inviting business reasons as does the protection of deer in Maine to the citizens of that State. If you wish a practical illustration of the business folly of merciless duck slaughter, you may find it on Long Island at the present day in great numbers of unoccupied baymen, who formerly made steady money by caring for and by boating and housing the sportsmen that have now abandoned once good duck-shooting grounds.

Shooting ducks in the spring is objected to because that is the time when the ducks are mating; in this particular month of writing is the time when the female is full of eggs. The average wild duck will raise, ordinarily, during the season, from eight to sixteen; therefore, every female killed in the spring-time means not only the loss of that one duck, but of the brood.

Isn't this simply and convincingly put? Surely it does not take a superior quality of intelligence to understand that slaughter of this kind leads to extinction! It is strictly up to the people in the different sections where wild fowl more or less abound. It is up, not to their decent instincts, but to their own selfish interest, to see that the ducks are properly protected. Many of the States have made protective spring laws, and in every locality where the fowl are thus safeguarded the increase of birds is noticeable and authentic. Wild fowl touch a great many localities in this big country, and wherever found are a marketable article, giving occupation and profit to many, as well in the marketing as in the business of furnishing means of transportation, lodging, guides, etc., to visiting sportsmen.

Back up the Law

IT IS hard to understand a humane and intelligent person would deliberately kill birds during the period which nature has allotted for the propagation of their species. But if my entreaty to refrain from killing God's creatures during their natural breeding season does not reach your heart, I beg you to consider the economic argument of a live duck being worth more than a dead one to any given community. It is well enough to talk law, but law is of no avail unless it is backed by the sentiment of the people; and that is why it behooves you and me and all of us who, for one reason or another, have a little keener appreciation of this situation, to do some missionary work: and by missionary work I don't mean the mere endorsement of this sentiment, but I mean active, energetic work. The inactive good man is not of much service to his community.

Men give as an excuse for spring shooting several different reasons: some shoot at this time because others do, so they say, and, therefore, why deny themselves? Others fall back on the selfish reason that if the birds are allowed to pass north unharassed in the spring, it means only a greater number for the South to slaughter next winter—that South, so unmindful of its feathered heritage.

Of course there is no argument to meet such sordid sentiment. Reminds me of the reply a man made me last month in Washington, when I was endeavoring to secure his influence in the support of certain forestry measures: "What's the use of worrying about such things?" says he. "The forest will last as long as you or me." And so I find men who say with regard to birds: "There will be enough birds to shoot as long as we are on earth." Plenty of men of this character, of course—and, strangely enough, quite a lot of them are out of jail.

There is another subject which should have the attention of anglers generally, and particularly of the Southern California Rod and Reel Club, as well as the National Association of Scientific Angling Clubs—and that is the unholy slaughter of big game fish, like the tuna, the yellowtail, etc., off the coast of southern California. No tourist seems to consider his visit to God's country—which is another name for California—complete unless he has chased up a tuna off Santa Catalina Island, and, with his victim, had his photograph duly taken and published. May I not suggest to the Tuna Club that it s

the contrast portentous and disheartening. Never before had the blighting effects of the modern congestion of population and unwholesome living conditions been exhibited in such concrete and spectacular form. Within the memory of living men the bulk of the English race had dwindled and become feeble and worthless, and there were the figures to prove it beyond all optimistic argument.

There were worse revelations than these. Small men may be sturdy men, as in the case of the Japanese, but these millions of city-bred Britons were rotten to the core. Fifty per cent of the London youths who offered themselves as recruits were rejected as unfit, even after the physical standards had been lowered. Of eleven thousand young men examined in Manchester eight thousand were rejected for want of stamina or because of physical defects. Throughout the United Kingdom from forty to sixty per cent of those wishing to enlist were found to be unfit for the service, and so desperate was the need of "food for powder" that the class of men thus rejected was as worthless as it is possible to imagine. Of the men actually in the ranks, three out of five were incapable of enduring the hardships of active service and broke down in two years or less time. During the year of 1903 no fewer than 81,723 British soldiers of less than two years' service were discharged as invalids.

Almost fifty per cent of the recruits in the Boer War were between eighteen and nineteen years old, many of them under eighteen, and in Manchester lads were enlisted who appeared to be no more than fifteen and sixteen. At one time England was maintaining in the field thirty thousand immature lads, thirty battalions, an army corps, who would not have been accepted for service in France or Germany, on account of their youth. It was a British critic, Lord Denman, who said of this enfeebled military strength:

"Excepting a few picked corps, the regular army consisted of derelicts and weeds, and even of these a diminishing number."

England Saved by Her Colonies

FOR the first time during her valiant centuries of warfare, England could not stand alone. The Colonies helped to save her in South Africa by sending men of the stamp and breed which the mother country had been wont to rear for herself in days gone by. Her statesmen were compelled to question the use of a strong army and navy if there was heart disease at the center of the empire, and to ask each other:

"Is it true that the whole laboring people of the land are at present living under conditions which make it impossible that they should rear the next generation to be sufficiently virile to supply more than two out of five men for the purposes of either war or peace?"

The appalling condition of the army, an army until then believed to be worthy of its glorious traditions, awakened England like a sleeper who had been given no warning of incredibly shocking tidings. The universal wrath, humiliation, and alarm were as if the slums of London and Liverpool and Manchester had been created overnight, as if their baleful existence had been just discovered. Yet for generations they had been permitted to spread and fester, to breed their new race of physical and mental degenerates, until of the thirty-three millions of souls in Great Britain, twenty-five million were crowded within urban boundaries. The cities have crowded these millions upon a total area of five million acres, while thirty million acres of good land have been almost deserted by the people that belong on them.

The England of the future, even more desperately congested and concentrated than now, will be packed tightly in such gigantic aggregations of population as the world has never known, and the working classes will become more enfeebled, unfit, and unmanly. For several generations the process of deterioration was largely concealed by the continual inflow of emigrants from the rural districts, who leavened London with healthy, energetic men and women reared in pure air and a wholesome environment. But the children of these able-bodied folk become the London riffraff, the average men of the coming century, hopeless denizens of a city "which is the visible type of a universe hastening confusedly to unknown ends and careless of individual pain."

Three hundred thousand Londoners live in one-room tenements with three or more occupants. The death-rate of the London districts in which a million people are housed not so well as horses is four times higher than normal. But London is not the only plague spot of England. In seven other cities the number of preventable and unnecessary deaths reaches a yearly total of twenty thousand, a black list of those slain by vile living conditions and overcrowding that equals the losses of the British in South Africa from wounds and disease. In London alone twenty thousand more perish annually from the same causes, which makes a total of forty thousand deaths each year, in eight cities of Great Britain, from lack of healthful homes. In Scotland twenty-three per cent of the families live in one room, and in Glasgow one-third of the population of families have no more than one room to huddle in.

Conditions are no better in the smaller cities of Scotland. Kilmarnock has only 28,000 population, yet thirty-five per cent of its families dwell in single-room tenements. One-eighth of the total population of Scotland do not know the decency of a two-room home. Eight million people of the United Kingdom have an average family income of no more than five dollars a week, and in the cities they must pay at least a fourth of this for rent of the pigsties miscalled tenements.

From such homes as these was largely recruited the army that set all England by the ears. And the plans proposed to check the sorrowful decadence of the masses are singularly inadequate, based as they are upon the efforts of individuals and private organizations to lure the city dweller back to the land where he belongs. Prevention was not thought of in time, and the nation is floundering about to find belated remedies. Manufacturers are beginning to move their plants into the country in order to give their working people good air and decent homes.

While these and many other remedial measures are getting under way in England, the machinery of prevention is successfully operating in Germany, where the Government believes it to be the business of the state to conserve the race as its most valuable national asset. In order to provide vigorous recruits for her army, to produce an efficient working class, and to strengthen the foundations of empire, Germany prevents the spread of crowded slum districts in her cities by a system of wise, far-sighted legislation. In Berlin, for example, the municipality closely watches the housing accommodations of the poor, and whenever overcrowding occurs, it finds a new outlet for population and sends the surplus thither. The city selects suitable areas for new settlement, constructs the streets and sewers, and obtains the practical cooperation of builders by telling them that the land will be sold or leased on easy terms. Thus encouraged and directed, the builders proceed to erect small houses and airy tenements, and the city itself has decided where and how the living districts of the working classes shall next develop.

Common Sense in Germany

THE Prussian Ministry instructs the municipal councils of all cities that they are under moral obligation to provide all persons in their employment with cheap and healthful dwellings, and that they are to promote schemes to extend the same benefits to the poorer classes in general. For this purpose the council has authority either to create building companies and support them by subscribing for shares, by floating loans at a low rate of interest, or by assuming part of the cost of streets, sewers, and development in general. It is also ordered that the municipalities shall help to create adequate and cheap means of transportation for working people and school-children, and they have the power to tax vacant land in and around cities for the purpose of encouraging building.

Healthy manufacturing villages are common in Germany. Industries are wisely scattered, so that a village will live by means of a single wage-earning plant as the center of its activity. The great Krupp firm at Essen has built cottages and flats for thirty thousand of its work-people.

No German town is without a generous area of open space close to its population, and, in fact, as soon as the

original nucleus of the town has reached a certain density of population a broad zone is drawn around it and further crowding is pushed back beyond this belt and its avenues. In these and other ways the strength of the race is so safeguarded that the average recruit of the German army is much taller, stronger, and heavier than the British soldier, spends less time in hospital, and has a lower death-rate. During the seven years previous to 1901 the German army returns showed that the percentage of acceptable recruits had fallen off only one per cent, in spite of the very rigid standards of examination. In other words, the modern tendency toward congestion in cities and the increase of unhealthful living conditions have been so ably combated in Germany that no real impairment of her manhood can be detected. Nor does Germany find it necessary to ask the pathetic question credited to an English statesman:

"If these men are unfit for military service, what are they good for?"

There are lessons for the United States to learn both from Great Britain's plight and from the wisdom of the Continental nations in grappling with this problem in time to avert calamity. The drift of population toward the cities in America has been rapid. A century ago only four per cent of the American people were town dwellers. In 1900 more than thirty per cent were classed as urban population. This percentage has doubled since the Civil War, which was fought by country-bred men for the most part, since only sixteen per cent of the population was then urban. The virility of the nation is bulwarked by the fact that almost one-half of the ninety millions of people are still living on farms or are interested in pursuits that keep them close to the soil and in the invigorating out-of-doors.

Unless the movement cityward is checked, however, the present century will see this country massed and crowded in city streets to the extent of Great Britain's population at present. The slums of New York and Chicago have not yet enfeebled the average American stock, recruited and replenished as it is by the great tide of immigration from the vigorous, country-bred peasantry of Europe. But New York takes little better care of her swarming million than does hapless London. In America's greatest and richest city a million people live in unsanitary tenements without sufficient light or air, places unfit for human habitation. In block after block of the East Side one thousand persons are living on each acre, in the most densely populated area in the world.

What such conditions will some day mean to national welfare is written big and bold in England's confession that her manhood has decayed and that her race is degenerate. Conservation of the forests and the rivers and the mines, splendid undertakings as they are, must be held secondary to the conservation of American manhood if the foundations of the nation are to be secure and strong. England has furnished a tragic object-lesson for the rest of the world to take to heart, and the doctrine of "back to the land" has become more than a theory. It is the only salvation for the United States if her people are to build for the future of their country.

Skimmer defending its nest

The Individuality of Animals

Birds More Generally Courageous Than Beasts

By J. ALDEN LORING

A Naturalist on the Roosevelt African Expedition

KEEPERS in zoological parks and menageries learn to know their animals quite as well by personal character and individual temperament as they do by color or physical appearance. The bears, for instance, are jolly and good-natured as a family, and the wolves also are inclined that way, but one who has an opportunity to study a number of individuals of a given species discovers certain sullen and morose animals that are entirely different from the rest. Then there are others that are ever on the watch for their keeper and always meet him at the door in anticipation of a friendly bout; and the one with the greedy temperament who "hogs" as much food as he can cram into his mouth and with his paws scrapes the rest together into a corner, stands guard over it, mumbling and grumbling to himself, and when another bear comes near charges him, snorting and striking out with his paws. His opposite is the bear that passively submits to almost any indignity rather than have a fight.

Rarely are bears born ill-tempered. They may show some resentment at the time of their capture when but two months old, but this feeling soon disappears, leaving a jolly rogue ever willing to box and wrestle.

I once knew a cub that was a regular terror, however, and he never reformed. He would attack anything regardless of its size or strength. At the age of three months he would charge at me, snorting, sniffling, and striking with his tiny paws, and when I did not protect myself he seized my trousers' leg between his teeth and shook it violently.

At first I thought that he had been abused by his former owner and that by kind treatment he would soon outgrow his temper, but no, he just had it in him and he became more and more dangerous as time sped by.

Finally he grew large enough to be put in with the mature bears without danger of his squeezing between the bars and escaping, and to the surprise of every one he immediately took charge of the den. Old bears twenty times his size, possibly from some sense of honor, if animals have honor, submitted to cuffs and slaps in the face, and actually allowed him to snatch food from their mouths without resenting the insult.

Studying the personality of mammals in captivity is quite different from studying them in their wild state. The few wild mammals that become tame enough to be watched at close range seldom live long enough for us to discover much concerning their character.

While I was watching at an Alaskan salmon stream, where bears came to catch fish, two medium-sized brown bears finally made their appearance some two hundred yards away. One was lighter colored than its mate, and I soon discovered that, so far as self-preservation was concerned, they were as different from each other as difference could make them.

One was always on the alert. He would come to the edge of the timber fifty yards from the stream, stand upright upon his hind feet and survey the flat before him. Then, dropping down on all fours, he would disappear and, circling about again, strike the opening farther up and cautiously look about. Sometimes he ventured out of the timber, but he always exhibited the same vigilance. For fully an hour he worked in and out of the timber, while his companion, oblivious of all danger, sauntered about in the woods and in the tall grass, digging into stumps, rolling logs over, and turning the bodies of decaying fish for the insects and bugs that might be beneath them. He was impatient and always in the lead, as though anxious to get to the stream and begin fishing, but whenever his companion turned back into the timber he took the hint and followed, although not more than half a dozen times did he rise to look for danger.

Compared with mammals, parental love is stronger in birds. In protecting their nests and young, birds often show courage and strategy, more or less of which is doubtless inherited. Even the so-called dangerous mammals, the bears, mountain lions, wildcats, and other mammals that are best able to protect themselves, seldom make a stand against domestic intrusion. Rarely do they attempt to entice an enemy from their home by strategic means, but at the first warning of danger they either hide or watch the intruder from a safe distance.

This, in a way, might be considered one form of protection, for outcries or suspicious actions at such a time would at once betray the young. But there are very few species of birds that do not attempt to defend their homes in some way, and even the most timid evince more courage and more intelligence than most mammals.

Those birds of prey that are wild and difficult to approach under ordinary circumstances are usually fearless when their nests are in danger. Flying back and forth over the intruder's head, they dart at him, snapping their bills and screaming with rage. When within two or three feet of his head, their courage deserts them and they turn abruptly in the air and mount for another charge. Cases are on record, however, where exception-

the children advantages," have purchased automobiles and moved back to their farms. "Country homes" have sprung up for miles around almost every town, and the landowner oversees the work with better results.

The automobile is being used more generally through Iowa, Nebraska, Kansas, Oklahoma, and the Southwest than in older farming districts. The need is greater, the farms are larger, neighborhoods more widely scattered, and in those districts the automobile is fomenting a social revolution. What even one automobile in such a district will do in bringing the people together is remarkable. In Illinois, above Clinton, there is a farmer who owns a big touring car. He is religious, and bought the car so that he could run all over the neighborhood Sunday morning and bring the children to Sunday-school. He can transport twenty at a time, and he has the most popular Sunday-school in Illinois. Now the church itself has decided to buy another automobile.

I was driving along the "hard road" between Dixon and Ottawa, Illinois, when the whir of an automobile sounded from behind a red barn on the hill above the road, where a whiskered, prosperous-looking farmer was shredding corn. The rear wheels of his automobile were jacked up and it was furnishing the power. He was M. J. Durfee, and he consented to talk automobile, shut off the power, and climbed into the tonneau.

"Ted—that's my boy," he said, "bought this contraption in Chicago second-hand for $625, learned to run it in two days and rode home in it. I thought it was a fool trick. He said he could make it pay and save railroad fare to college and back. I wouldn't trade that machine now for the best plow team in La Salle County. Ted drove over to the university in it this fall, and I wrote if he didn't send it back I'd have to buy another. This summer the whole family used it going into town, visiting and pleasuring. I hitched it to the hayfork and put the hay in the mow twice as fast as the horses could do it. We made trips when it was too hot to drive the horses. I built an elevated bin at the top of the barn and lifted the wheat with it, ran the cream separator, chopped feed, and churned, made it do the washing for the girls, and besides, Ted marketed eggs, chickens, butter and butter fats in it, and made the trip in a quarter the time it used to take."

"Far from the dull impertinence of the skyscraper"

"Hasn't it any drawbacks?"

"Yes," laughed Durfee; "the durn thing won't breed." Then seriously: "If a fellow has a knack with machinery—and every farmer has—it isn't any trouble, and it makes a handy little power machine for the farm. But that isn't why I'm for it. The fact is that machine is the best thing for farm folks ever built. My girls went to school in town, made nice friends, and when they came back the farm was lonesome. Betty swowed she'd never marry a farmer—now she says she won't marry one unless he owns an automobile."

I looked at Betty and predicted a boom in automobiles.

"The farm *is* lonesome for girls," said Mr. Durfee. "But since Ted bought the machine we go to town twice as often with the loss of half the time. The girls can bring out their friends, and the young people in town and around here who own autos have plenty of company. I haven't heard any more kicks on living in the country. We go into Ottawa to theater, church, and visit all around. This machine has made neighbors out of friends we used to see about twice a year, and I'd pay the price twice for the good it has done my wife."

Almost everywhere the report was the same. In Cerro Gordo County, Iowa, I found seven automobiles in one little farm community. The owners all said the same thing—that the machines had destroyed their desire to move to town; they can go there quickly enough and often enough and prefer the farm—and they have improved the roads for miles around.

Real-estate dealers in a dozen large towns assure me that the use of the automobile has extended truck-farming areas widely in all directions, because small produce can be marketed quickly. Through the Central West and West the automobile has caused a new movement, a country-house movement. In scores of cities which I visited or from which I received reports many business and professional men are building country homes on their farms and living there.

Saving Money

MANY use them only in summer, others all the year, preferring the farm if they can get to business in time. Around Fort Wayne, Connorsville, Indianapolis, and Lafayette, Indiana; Dayton and Springfield, Ohio; Bloomington, Paris, Champaign, and Rockford, Illinois; Ottumwa, Waterloo, and Des Moines, Iowa; Lincoln, Nebraska; Madison, Wisconsin; Battle Creek, Lansing, and Detroit, Michigan, this movement is noticeable. At Fort Wayne one man recalled eleven cases, and all the country places except two were built after the owner purchased an automobile.

In the South the movement is oddly different, but the machine has partly solved a big agricultural problem. In many quarters of the old South the white population is congregated in cities, the blacks tilling the soil. At Selma, Alabama; Montgomery, Meridian, Vicksburg, and Rome this condition exists. The whites fear to live on the plantations, especially in the "Black Belt" around Salem, and in the Yazoo Delta above Vicksburg. In these places the plantation owner is using the automobile that he may live in town and visit his lands each day and supervise plantation work, instead of living in the country and running into town as the Northerner is doing.

Among the thousand or more farmers and farm authorities interviewed, not over ten objected to the automobile on grounds of cost of maintenance or repairs or difficulty in handling. Even those who regarded it as a toy ignored the city man's chief complaint. Owners said that any farm boy used to handling farm machinery could repair ordinary breaks or defects and get twice as much out of an auto as a city man. Convincing evidence of this was found in a visit to a public garage in Chicago. Twenty-eight chauffeurs were on duty, and eleven of them were farmers' boys making big wages running cars in the winter. Most of them will return to the farm. The proprietor said the farm boys made the most reliable drivers and knew more about practical mechanics than any others.

As a power engine the farmer has created a new field for the auto. The good farmer does not believe in idleness, even in machinery, and he has adopted the automobile engine as a power generator. The uses to which the farmer puts an automobile, besides riding in it, would astonish its inventor. Here are some of them: shredding corn, shredding hay, chopping feed, pumping water, flushing dairy barn, driving circular saw, lifting hay into mow and wheat into elevator, shelling corn, separating cream, churning, washing, and running fan. One inventive Missourian has made a rotary post-hole digger to run by auto, and a Wisconsin dairyman hitches his to a fire pump to protect his house and property.

At several agricultural colleges instructors asked classes of farmers to write short essays on the use of automobiles in their districts. Also I secured the written views of over one hundred farmers and authorities on farming. Here are a few, chosen at random:

Los Angeles County, California—Widely used by big ranchers overseeing labor and to haul citrous fruits to packing-houses.

Jackson County, Oregon—Number doubled in one year. Used marketing fruits and hauling gold.

Macomb County, Michigan—Enable country merchants to avoid carrying big stocks. Better market for farm produce. Increase church attendance. Benefit socially.

Dewitt County, Illinois—One hundred and fifty autos, half owned by farmers or retired farmers living in town. Stimulated demand for better roads, also roused opposition, some claiming autos destroy macadam.

Allen County, Indiana—Many used. Caused movement to country homes. Used by several to oversee tenants on widely separated farms.

OUTDOOR AMERICA

Edited by CASPAR WHITNEY

Take Off Your Coat

AMONG the final acts of the last Congress was the killing of the Appalachian and White Mountain Forest Reserve bill. So again the effort to conserve the great watersheds of the Appalachian and White Mountain sections has failed; betrayed this time by the Senate. Strangely enough, bitterest opposition came from the Rocky Mountain contingent, where (if anywhere) one would expect intelligent appreciation of the necessity for preserving the forests. Or, is it a matter of sectional prejudice? And thus the fight must be made over again during this present session of Congress. Meanwhile, the woodchoppers diligently pursue their devastating way.

The only way to save these important watersheds is to take off your coat, you intelligent citizens, and fight for them. Much worthy endeavor has been expended spreading high-minded resolutions on record, and in sending forth into the country lengthy appeals for support. That is well enough as supplemental effort, but this now is a case that needs something more convincing than rhetoric, something more persuasive than resolutions; it needs direct appeals, personal activity. Let us not waste time talking about the need of preserving forests—we know all about that; every schoolboy knows it—but let us take off our coats and *do* it now. And this means you, Mr. City Man, as well as the small town and country man.

In the White Mountains the fine growth on the steepest slopes has been spared by the lumbermen. This is because it is the hardest to get at, and therefore the most expensive to handle; and also because the lumbermen are having considerable hard to get at timber areas as losses of settlement at exaggerated values of damage when the Government comes on the field to buy. If Congress goes on mumbling the pegging, the rise in value of spruce will make even those growths on the slopes profitable for the lumberman to handle. Just now, however, lumbermen are turning their attention in the White Mountains to paper (pulp) because, as one of them recently said to Mr. Ernest Bicknell, whose special investigation will appear in the May OUTDOOR AMERICA, "there's more money in pulp."

Do you realize for one minute the enormous destruction of timber that is making? You have seen innumerable statistics, of course, and, no doubt, they have had as little effect upon you as statistics usually do, but give the following statement an instant's thought: The International Paper Company operates twenty-six mills in Massachusetts, Maine, New Hampshire, Vermont, and New York, with a twenty four hour capacity of 3,472,000 feet.

Just think that over.

Never think of this question of forestry preservation as one of sentiment. It's cold, hard economics, and it affects every man doing business in this country. It isn't that lumber should not be cut. Of course it must be cut. It is that it shall be cut with intelligent regard for the future supply. It isn't that forest lands shall not be rented. It is that they shall be so lumbered, and the trees so safeguarded, that the land be not denuded, and on that account lose its water-storage capacity. And it is as a reservoir of water that the forestry movement makes its widest appeal.

Let 'Em Breed

WITH native Yankee shrewdness, the Maine legislature put protective laws on their books against destruction of their deer. And they have the good sense to insist these laws be enforced. Not that they are moved by lofty sentiment; it is a matter of business, but it results in the competent protection of the State's deer and moose. A few years ago the Maine voters discovered that a live deer is worth to the average citizen in hard cash several times as much as a dead one. They learned that it is the live deer which attracts sportsmen and campers by the thousands every season and puts gold into the purse of the shopkeepers, the railroads, the hotels, and gives employment to a great many men as guides and wilderness assistants. Here is a concrete illustration of the practical value from the business point of view of the adequate protection of game.

Some good people think the effort to stop the shooting of ducks in the spring time is based on purely emotional reasons; or, if not that, is an effort of sportsmen to protect the birds in the spring so they may have the more to shoot in the autumn. But the movement to abandon spring shooting is for neither one nor the other of these reasons. It does happen that sportsmen are the most active in seeking such legislation, because it happens also that sportsmen, as a rule, are not only more intelligent than the average, but have a little more of the milk of human kindness flowing in their veins. Protection of wild fowl in the spring offers equally interesting business reasons as does the protection of deer in Maine to the citizens of that State. If you wish a practical illustration of the business folly of needless duck slaughter, you may find it on Long Island at the present day in great numbers of unoccupied laymen, who formerly made steady money by caring for and by leading and luring the sportsmen that have now abandoned once good duck-shooting grounds.

Shooting ducks in the spring is objected to because that is the time when the ducks are mating; in this particular month of writing is the time when the female is full of eggs. The average wild duck will raise, ordinarily, during the season, from eight to sixteen; therefore, every female killed in the spring-time means not only the loss of that one duck, but of the brood.

Isn't this simply and convincingly put? Surely it does not take a superior quality of intelligence to understand that slaughter of this kind leads to extinction! It is strictly up to the people in the different sections where wild fowl more or less abound. It is up, not to their decent instincts, but to their own selfish interest, to see that the ducks are properly protected. Many of the States have made protective spring laws, and in every locality where the fowl are thus safeguarded the increase of birds is noticeable and authentic. Wild fowl touch a great many localities in this big country, and wherever found are a marketable article, giving occupation and profit to many, as well in the marketing as in the business of furnishing means of transportation, lodging, guides, etc., to visiting sportsmen.

Back up the Law

IT IS hard to understand a humane and intelligent person would deliberately kill birds during the period which nature has allotted for the propagation of their species. But if my entreaty to refrain from killing God's creatures during their natural breeding season does not reach your heart, I beg you to consider the economic argument of a live duck being worth more than a dead one to any given community. It is well enough to talk law, but law is of no avail unless it is backed by the sentiment of the people; and that is why it behooves you and me and all of us who, for one reason or another, have a little keener appreciation of this situation, to do some missionary work; and by missionary work I don't mean the mere endorsement of this sentiment, but I mean active, energetic work. The inactive good man is not of much service to his community.

Men give as an excuse for spring shooting several different reasons; some shoot at this time because others do so, they say, and, therefore, why deny themselves? Others fall back on the selfish reason that if the birds are allowed to pass north unmolested in the spring, it means only a greater number for the South to slaughter next winter—that South, so unmindful of its feathered heritage.

Of course there is no argument to meet such sordid sentiment. Reminds me of the reply a man made me last month in Washington, when I was endeavoring to secure his influence in the support of certain forestry measures: "What's the use of worrying about such things?" says he. "The forest will last as long as you or me." And so I find men who say with regard to birds: "There will be enough birds to shoot as long as we are on earth." Plenty of men of this character, of course—and, strangely enough, quite a lot of them are out of jail.

There is another subject which should have the attention of anglers generally, and particularly of the Southern California Rod and Reel Club as well as the National Association of Scientific Angling Clubs—and that is the unholy slaughter of big game fish, like the tuna, the yellowtail, etc., off the coast of southern California. No tourist seems to consider his visit to God's country—which is another name for California—complete unless he has chased up a tuna off Santa Catalina Island and with his victim had his photograph duly taken and published. May I not suggest to the Tuna Club that it secure an extension pointed properly fish for the use of its publicity seeking guests; papier mâché will look equally formidable in the photograph—and what a saving of the tuna!

Vegetation Spells Degeneration

THE spring season opens with the olive branch waving invitingly, encouragingly, from the college campus, and we seem entering on an era approaching a little nearer to the ideal of amateur sport. Perhaps the most pleasing exhibition of the spirit which should obtain among gentlemen is that of the Yale crew, spending its Easter vacation on the Schuylkill River in open practise for the race at the end of the week with Pennsylvania. I hope it's a beginning which will have no ending.

It's a cheering season of peace, this new spring of 1909, in addition to Yale and Pennsylvania's innovation, Princeton and Harvard have come together for a Freshman foot ball game; Pennsylvania and Columbia have resumed track relations, and there is talk of Michigan returning to the Western Conference Colleges, where she belongs. The fetish of putting out winners has played the mischief with Michigan athletics. It is suffering at the present moment from that unwise (athletic and baneful (athletic) policy. Michigan needs to learn that not one or two seasons' mad pursuit of stars and pennants will bring substantial success to a university. The foundation must be well laid, and the foundation of college sport rests on building up home material and developing a sporting spirit among the candidates and the university at large. Columbia suffers similarly, but from a different cause, for Columbia seems to me to be approaching athletic degeneracy because of its city environment and the illiberal attitude of its faculty toward sport. Degeneration comes to the city man who clings to the city, and a college located in town is more in need of vigorous general play than one situated in the country. If the present policy is persisted in at Columbia, I look for a very material lowering in the physical standards of its undergraduates. There isn't much hope for Columbia until her undergraduates become more young men of the open, or are encouraged to greater athletic activity on the campus.

For Michigan, hope alumnus. She need only turn her thought to building up a healthful athletic spirit and direct more attention to the home circle, instead of chasing forever to the East.

Harvard, Yale, Cornell, and Annapolis all promise to have better crews than last year, and are doing more rowing. And racing during their so-called preparatory season is one great need in the development of American crews. It has been a tradition among American rowing colleges that a crew must not be called on for more than one race a season. Happily that tradition appears now to have been laid on the shelf. Harvard was the first to acquire wisdom in this respect from her English experience, and Yale is following her example.

Why Not Drink Clean Water?

IT MAY be that you are so unfortunate as never to have known the joy of whipping a stream for the gamy speckled trout—but at least you are an eater of fish, and therefore mayn't I urge you to help the effort that fishermen are making to keep the streams free from sawdust and other polluting substances? And this subject of stream pollution does not only concern the life of the fish, but also clean, healthful water. Man is inured somewhat to germs, and hence seems to survive polluted water longer than the fish, but it gets him sooner or later; sometimes sooner than the fish.

In almost every community in this great country having a stream there are a few anglers, striving against almost overwhelming odds to cleanse the local waters.

You, my friends, may have looked upon this as a sportsman's business, and that's where you have made your mistake. It is quite as much to your interest as to the sportsman's, so get out and join hands with him and help to clean out that break.

The angling associations all over the country seem to me to be strangely scattering their ammunition. If they would organize against stream pollution and make a united effort instead of each firing at random, usually over the heads of the offenders, there would be more result. Many State angling organizations exist and if they will get together for a national movement there is something doing of practical value.

Where twenty-five families live in one house

Keeping up the Physical Standard

How Congested City Life Has Decayed English Manhood—a Tragic Object-Lesson for America

By RALPH D. PAINE

THE heart of the British Empire is rotten, according to the confessions of its wisest men, who see in the physical deterioration of the millions crowded in city slums a graver menace to the life of the nation than any war could offer. Within the last century rural England has been almost depopulated, until four-fifths of its people are huddled and herded in cities and towns. Well-nigh extinct is the race of robust, stolid, and courageous men dispersed in villages and country homes who were Britain's stanchest bulwark through the dominant centuries of her history. The Englishman of to-day, the man of the street, of the rank and file, is street-bred, stunted, narrow-chested, without stamina, lacking moral and mental ballast. England is ashamed of him, afraid of him, but she has been forced to recognize him as her most insistent and vital problem.

The Boer War flung this national issue into the foreground. The recruiting sergeants compelled the patriotic Briton, blindly proud of and confident in his army, to face the ugly truth that instead of the "thin red line of heroes," such as had fought at Inkerman and Sebastopol, the ranks must be filled with sorry specimens of refuse humanity who would have been instantly rejected for military service in Germany, France, or America. One generation after another had been pouring out of the green fields into the cities and left to breed and multiply and stifle and starve, a prey to official indifference, victims of greedy landlords, creating slums for lack of room to live with any regard for health and decency, a vast, seething, submerged world beneath the notice of upper-class England. The yeoman had been transformed into the hooligan. In 1902 the Inspector-General for Recruiting was forced to make this ominous admission:

"The one subject which causes anxiety in the future as regards recruiting is the gradual deterioration of physique of the working classes from which the bulk of recruits must always be drawn. Were all classes of the community able to provide their offspring with ample food and air space, a healthy race would be produced and the proper material to fill the ranks of the army would probably soon be obtained."

Statistics are not the liveliest reading in the world, but for once they shocked the phlegmatic, complacent nation as if every figure were a live wire. They could not be pooh-poohed. The yardstick and tape-measure were more eloquent than all the reports dealing with the condition of the poor that had ever been printed. In the Crimean War, when England had last put an army in the field to fight a civilized foe, the minimum standard of height for her infantry was five feet six inches, and most of these stalwart troops of the line were country-bred. Thirty years later, in 1883, the standard had been lowered to five feet three inches. In 1900, when the transports were filled with drafts for South Africa, another inch was gaged off the height, and before the end of the campaign recruits were mustered in if they stood five feet in their stockings. More than half the men of the British army were below the standard required of the troops in the Crimea half a century before.

There had been a similar shrinkage of girth of chest. Of every thousand recruits for the Boer War 511 measured less than thirty-four inches around the chest, which had been the minimum girth as late as 1883. In the matter of weight one-third of the whole number of enlisted men in the Boer War fell short of the standard of one hundred and thirty-six pounds, which had been required of the preceding generation. In 1900 the average British recruit at the age of nineteen years was two inches shorter, an inch less around the chest, and fifteen pounds lighter than the normal Anglo-Saxon youth of the same age ought to be.

After the Boer War the standard of height was restored to five feet three inches, but the army made no great improvement in its average physique. As recently as 1906 the average height of the British infantryman was five feet four and one-half inches, but his girth of chest was only thirty-three inches, and his weight one hundred and twenty-three pounds, showing that he had been underfed and given no fair chance to grow. England compared these weedy, flabby striplings with the rank and file of her old army of the Crimea and found the contrast portentous and disheartening. Never before had the blighting effects of the modern congestion of population and unwholesome living conditions been exhibited in such concrete and spectacular form. Within the memory of living men the bulk of the English race had dwindled and become feeble and worthless, and there were the figures to prove it beyond all optimistic argument.

There were worse revelations than these. Small men may be sturdy men, as in the case of the Japanese, but these millions of city-bred Britons were rotten to the core. Fifty per cent of the London youths who offered themselves as recruits were rejected as unfit, even after the physical standards had been lowered. Of eleven thousand young men examined in Manchester eight thousand were rejected for want of stamina or because of physical defects. Throughout the United Kingdom from forty to sixty per cent of those wishing to enlist were found to be unfit for the service, and so desperate was the need of "food for powder" that the class of men thus rejected was as worthless as it is possible to imagine. Of the men actually in the ranks, three out of five were incapable of enduring the hardships of active service and broke down in two years or less time. During the year of 1903 no fewer than 81,723 British soldiers of less than two years' service were discharged as invalids.

Almost fifty per cent of the recruits in the Boer War were between eighteen and nineteen years old, many of them under eighteen, and in Manchester lads were enlisted who appeared to be no more than fifteen and sixteen. At one time England was maintaining in the field thirty thousand immature lads, thirty battalions, an army corps, who would not have been accepted for service in France or Germany, on account of their youth. It was a British critic, Lord Denman, who said of this enfeebled military strength:

"Excepting a few picked corps, the regular army consisted of derelicts and wrecks, and even of these a diminishing number."

England Saved by Her Colonies

FOR the first time during her valiant centuries of warfare, England could not stand alone. The Colonies helped to save her in South Africa by sending men of the stamp and breed which the mother country had been wont to rear for herself in days gone by. Her statesmen were compelled to question the use of a strong army and navy if there was heart disease at the center of the empire, and to ask each other:

"Is it true that the whole laboring people of the land are at present living under conditions which make it impossible that they should rear the next generation to be sufficiently virile to supply more than two out of five men for the purposes of either war or peace?"

The appalling condition of the army, an army until then believed to be worthy of its glorious traditions, awakened England like a sleeper who had been given no warning of unrelishly shocking tidings. The universal wrath, humiliation, and alarm were as if the slums of London and Liverpool and Manchester had been created overnight, as if their baleful existence had been just discovered. Yet for generations they had been permitted to spread and fester, to breed their new race of physical and mental degenerates, until of the thirty-three millions of souls in Great Britain, twenty-five million were crowded within urban boundaries. The cities have crowded these millions upon a total area of five million acres, while thirty million acres of good land have been almost deserted by the people that belong on them.

The England of the future, even more desperately congested and concentrated than now, will be packed tightly in such gigantic aggregations of population as the world has never known, and the working classes will become more enfeebled, unfit, and unmanly. For several generations the process of deterioration was largely concealed by the continual inflow of emigrants from the rural districts who traversed London with healthy, energetic men and women reared in pure air and a wholesome environment. But the children of these add leaflet folk become the London riffraff, the average men of the coming century, hopeless denizens of a city "which is the visible type of a universe hastening confusedly to an unknown end and careless of individual pain."

Three hundred thousand Londoners live in one-room tenements with three or more occupants. The death rate of the London districts in which a million people are housed not so well as horses is four times higher than normal. But London is not the only plague spot of England. In seven other cities the number of preventable and unnecessary deaths reaches a yearly total of twenty thousand, a black list of those slain by vile living conditions and overcrowding that equals the losses of the British in South Africa from wounds and disease. In London alone twenty thousand more perish annually from the same causes, which makes a total of forty thousand deaths each year, in eight cities of Great Britain, from lack of healthful homes. In Scotland twenty-three per cent of the families live in one room, and in Glasgow one-third of the population of families have no more than one room to huddle in.

Conditions are no better in the smaller cities of Scotland. Kilmarnock has only 28,000 population, yet thirty-five per cent of its families dwell in single-room tenements. One-eighth of the total population of Scotland do not know the decency of a two-room home. Eight million people of the United Kingdom have an average family income of no more than five dollars a week, and in the cities they must pay at least a fourth of this for rent of the gigantic unlovelied tenements.

From such homes as these was largely recruited the army that set all England by the ears. And the plans proposed to check the sorrowful decadence of the masses are singularly inadequate, based as they are upon the efforts of individuals and private organizations to lure the city dweller back to the land where he belongs. Prevention was not thought of in time, and the nation is floundering about to find belated remedies. Manufactures are beginning to move their plants into the country in order to give their working people good air and decent homes.

While these and many other remedial measures are getting under way in England, the machinery of prevention is successfully operating in Germany, where the Government believes it to be the business of the state to conserve the race as its most valuable national asset. In order to provide vigorous recruits for her army, to produce an efficient working class, and to strengthen the foundations of empire, Germany prevents the spread of crowded slum districts in her cities by a system of wise, far-sighted legislation. In Berlin, for example, the municipality closely watches the housing accommodations of the poor, and whenever overcrowding occurs, it finds a new outlet for population and sends the surplus thither. The city selects suitable areas for new settlement, constructs the streets and sewers, and obtains the practical cooperation of builders by telling them that the land will be sold or leased on easy terms. Thus encouraged and directed, the builders proceed to erect small houses and airy tenements, and the city itself has decided where and how the living districts of the working classes shall next develop.

Common Sense in Germany

THE Prussian Ministry instructs the municipal councils of all cities that they are under moral obligation to provide all persons in their employment with cheap and healthful dwellings, and that they are to promote schemes to extend the same benefits to the poorer classes in general. For this purpose the council has authority either to create building companies and support them by subscribing for shares, by floating loans at a low rate of interest, or by assuming part of the cost of streets, sewers, and development in general. It is also ordered that the municipalities shall help to create adequate and cheap means of transportation for working people and school children, and they have the power to tax vacant land in and around cities for the purpose of encouraging building.

Healthy manufacturing villages are common in Germany. Industries are wisely scattered, so that a village will live by means of a single wage-earning plant as the center of its activity. The great Krupp firm at Essen has built cottages and flats for thirty thousand of its work people.

No German town is without a generous [illegible] space close to its population, and, in fact, [illegible]

original nucleus of the town has resisted a certain density of population a broad zone is drawn around it and further crowding is pushed back beyond this belt and its avenues. In these and other ways the strength of the race is so safeguarded that the average recruit of the German army is much taller, stronger, and heavier than the British soldier, spends less time in hospital, and has a lower death-rate. During the seven years previous to 1907 the German army returns showed that the percentage of acceptable recruits had fallen off only one per cent, in spite of the very rigid standards of examination. In other words, the modern tendency toward congestion in cities and the increase of unhealthful living conditions have been so ably combated in Germany that no real impairment of her manhood can be detected. Nor does Germany find it necessary to ask the pathetic question credited to an English statesman:

"If these men are unfit for military service, what are they good for?"

There are lessons for the United States to learn both from Great Britain's plight and from the wisdom of the Continental nations in grappling with this problem in time to avert calamity. The drift of population toward the cities in America has been rapid. A century ago only four per cent of the American people were town dwellers. In 1880 more than thirty per cent were classed as urban population. This percentage has doubled since the Civil War, which was fought by country-bred men for the most part, since only sixteen per cent of the population was then urban. The virility of the nation is bulwarked by the fact that almost one-half of the ninety millions of people are still living on farms or are interested in pursuits that keep them close to the soil and to the invigorating out-of-doors.

Unless the movement city-ward is checked, however, the present century will see this country massed and crowded in city streets to the extent of Great Britain's population at present. The slums of New York and Chicago have not yet enfeebled the average American stock, recruited and replenished as it is by the great tide of immigration from the vigorous, country-bred peasantry of Europe. But New York takes little better care of her swarming million than does hapless London. In America's greatest and richest city a million people live in unsanitary tenements without sufficient light or air, places unfit for human habitation. In block after block of the East Side one thousand persons are living on each acre, in the most densely populated area in the world.

What such conditions will some day mean to national welfare is written big and bold in England's confession that her manhood has decayed and that her race is degenerate. Conservation of the forests and the rivers and the mines, splendid undertakings as they are, must be held secondary to the conservation of American manhood if the foundations of the nation are to be secure and strong. England has furnished a tragic object-lesson for the rest of the world to take to heart, and the doctrine of "back to the land" has become more than a theory. It is the only salvation for the United States if her people are to build for the future of their country.

Skimmer defending its nest

The Individuality of Animals

Birds More Generally Courageous Than Beasts

By J. ALDEN LORING

A Naturalist on the Roosevelt African Expedition

KEEPERS in zoological parks and menageries learn to know their animals quite as well by personal character and individual temperament as they do by color or physical appearance. The bears, for instance, are jolly and good-natured as a family, and the wolves also are inclined that way, but one who has an opportunity to study a number of individuals of a given species discovers certain sullen and morose animals that are entirely different from the rest. Then there are others that are ever on the watch for their keeper and always meet him at the door in anticipation of a friendly bout; and the one with the greedy temperament who "hogs" as much food as he can cram into his mouth and with his paws scrapes the rest together into a corner, stands guard over it, mumbling and grumbling to himself, and when another bear comes near charges him, snorting and striking out with his paws. His opposite is the bear that passively submits to almost any indignity rather than have a fight.

Rarely are bears born ill-tempered. They may show some resentment at the time of their capture when but two months old, but this feeling soon disappears, leaving a jolly rogue ever willing to love and wrestle.

I once knew a cub that was a regular terror, however, and he never reformed. He would attack anything regardless of its size or strength. At the age of three months he would charge at me, snorting, smiting, and striking with his tiny paws, and when I did not protect myself he seized my trousers' leg between his teeth and shook it violently.

At first I thought that he had been abused by his former owner and that by kind treatment he would soon outgrow his temper, but no, he just had it in him and became more and more dangerous as time sped by.

Finally he grew large enough to be put in with the mature bears without danger of his squeezing between the bars and escaping, and to the surprise of every one he immediately took charge of the den. Old bears twenty times his size, possibly from some sense of honor, it and seals have honor, submitted to cuffs and slaps in the face, and actually allowed him to snatch food from their mouths without resenting the insult.

Studying the personality of mammals in captivity is quite different from studying them in their wild state. The few wild mammals that become tame enough to be watched at close range seldom live long enough for us to discover much concerning their character.

While I was watching at an Alaskan salmon stream, where bears came to catch fish, two medium-sized brown bears finally made their appearance some two hundred yards away. One was lighter colored than its mate, and I soon discovered that, so far as self-preservation was concerned, they were as different from each other as difference could make them.

One was always on the alert. He would come to the edge of the timber fifty yards from the stream, stand upright upon his hind feet and survey the flat before him. Then, dropping down on all fours, he would disappear and, circling about again, strike the opening farther up and cautiously look about. Sometimes he ventured out of the timber, but he always exhibited the same vigilance. For fully an hour he worked in and out of the timber, while his companion, oblivious of all danger, sauntered about in the weeds and in the tall grass, digging into stumps, rolling logs over, and turning the bodies of decaying fish for the insects and bugs that might be beneath them. He was impatient and always in the lead as though anxious to get to the stream and begin fishing, but whenever his companion turned back into the timber he took the hint and followed, although not more than half a dozen times did he rise to look for danger.

Compared with mammals, parental love is stronger in birds. In protecting their nests and young, birds often show courage and strategy, more or less of which is doubtless inherited. Even the so-called dangerous mammals, the bears, mountain lions, wildcats, and other mammals that are best able to protect themselves, seldom make a stand against domestic intrusion. Rarely do they attempt to entice an enemy from their home by strategic means, but at the first warning of danger they either hide or watch the intruder from a safe distance.

This, in a way, might be considered one form of protection, for outcries or suspicious actions at such a time would at once betray the young. But there are very few species of birds that do not attempt to defend their homes in some way, and even the most timid evince more courage and more intelligence than most mammals.

Those birds of prey that are wild and difficult to approach under ordinary circumstances are usually fearless when their nests are in danger. Flying back and forth over the intruder's head, they dart at him, snapping their bills and screaming with rage. When within two or three feet of his head, their courage deserts them and they turn abruptly in the air and mount for another charge. Cases are on record, however, where exceptionally courageous birds have actually struck [illegible] scrotum, face and scalp wounds.

Almost without exception the ground-nesting birds, whether or not they be of the species [illegible] plover, or deer families, will try first to draw [illegible] from a nest by appealing and fluttering to [illegible] themselves over the ground as though injured. [illegible] efforts failing, they are apt to submit and assume a more aggressive attitude. I was once examining a cock bird's nest when the female flew at me. In [illegible] of the nest, and pecked my hand several times as I touched the young ones. Gallinules, though normally shy and demure, are aggressive when angered.

For five successive years a pair of house-wrens occupied a bird-house in our back grounds and brought forth two broods of young each season. The male bird became so tame that he would take spiders, flies, and mealworms from my fingers. He would never, however, perch upon my hand but as soon as he could reach the food he took it and flew away to eat it at his leisure. The same methods as those used in taming the male were adopted in trying to tame his mate, but her confidence was never won.

While the shyest "camp robber" is tame in comparison with most birds, you soon discover that certain ones have a personality by which they can easily be recognized.

Hunting Lost Explorers

Digging Cities Out of Sahara

By CYRUS C. ADAMS

THE fortunes of eight men who are about to sail from Denmark for the coast of Northeast Greenland will be followed with much interest because their mission is almost unique. They are going to search for the records of lost explorers. In 1907 Mylius-Erichsen and two comrades from his large party completed the mapping of the coasts of Greenland. The great achievement cost their lives, for they perished of hunger and cold while groping their way southward toward their ship in the growing darkness. Only the body of Brontlund, the native Greenlander, was found last spring; and in a bottle, swung around his neck, were the priceless survey sheets. Those crumpled pages filled the gap remaining on our maps, and now we know the whole outline of the largest island in the world and can make a map picture of its actual shape. The two largest facts revealed are that Northwest Greenland is penetrated by mountain-walled fiords from forty to eighty miles deep, and that a great peninsula extends so far east that the end of it, Northeast Foreland, is only about 280 miles from Spitzbergen.

If we were to visit the largest unknown area of the world, outside the polar regions, we should go to inner Arabia, where two or three expeditions will try, this year, to throw new light upon its vast, dark spaces. But if we should go to the part of the world where pioneer exploration is to-day most active, we would join the French in the Sahara Desert, where a network of routes is being traced in all directions through that wide area of desolation. Something may soon be told in this column of the forgotten settlements and cities that explorers are beginning to dig out of the Arabian sands; but attention is first due to a phase or two of the wonderful work in the Sahara from which so many new facts are coming that it is hard to keep the maps abreast of them.

The latest "Bulletin" of the Paris Geographical Society contains twenty pictures and plans of monuments, walls, inscriptions, potteries, implements and other objects that have just been discovered in the Sahara, with a map showing their distribution in the heart of the desert, halfway between Algeria and the Sudan. These are vestiges of an old civilization that once thrived in the mid-Sahara; and all that the Touaregs and other nomads can say about them is that their fathers told them a race of giants had built towns so long ago that the earliest traditions reported them models as ruin heaps. Very likely the scholars who are now to study the inscriptions may throw light upon their origin.

Dr. M. A. Stein has just returned from another two years of exploration in central Asia with fifty camel-loads of ancient manuscripts and other antiques and many new geographical facts. He made the curious discovery that the Great Wall of China is much longer than it was supposed to be. It had been traced for a thousand miles from the eastern edge of China to the Nan-shan Mountains in Kansu; but Stein has found it stretching farther west where it was evidently built to protect the oases along the Nan-shan against Mongol incursions. Greatly to his surprise, he found a second wall extending southward at right angles to the first, and built only half as many centuries ago. The later wall was erected to close the great trade routes toward central Asia when China resumed her attitude of seclusion from which she is now emerging.

It turns out that the great mountain range in Tibet which Sven Hedin calls the Trans-Himalaya is not exactly a new discovery. Several explorers have crossed it, but Hedin's merit is that he has crossed it ten times and traced its great length.

Bringing the Market Nearer

The Automobile Is Doing Good Work for the Farmer

By HUGH S. FULLERTON

THIS article is written by one who does not know a carburetor from a clutch and who took his first extended automobile ride while investigating for OUTDOOR AMERICA the question of the worth of the automobile to farmers and in farming. The facts and figures contained are furnished by farmers and agricultural experts, not by automobile makers or salesmen. The writer visited six of the agricultural colleges of the Central West, secured the opinions of twelve hundred farmers, their boys and girls, and made an extensive trip to see how the farmers use the automobiles. Besides, he secured reports from State officials, heads of farmers', dairymens', and similar organizations, and from heads of practically every agricultural college in the United States.

There are two hundred and seventy-three thousand automobiles in use in the United States, of which number seventy-six thousand are used by farmers. Approximately one and a half per cent of the farm owners also own automobiles. One person in every one hundred and ninety in New York owns an automobile, one farmer in every thirty-four in Iowa owns one, and a larger percentage of the Pan Handle of Texas farmers than of residents on Michigan Avenue in Chicago possess automobiles.

Do these facts, which are not press agents' figures, mean anything? If they do not, here are some more figures: Approximately two-sevenths of the automobiles manufactured in the United States in 1907 went to farmers. Of the seventy two thousand made to sell in 1908 twenty-seven thousand were designed especially for farm use. Second-hand dealers in Chicago, St. Louis, and Kansas City, supplying America's garden, the Mississippi Valley, say that nearly seventy per cent of second-hand automobiles are sold for agricultural use. One Iowa City man last summer sold two hundred and forty second-hand machines to farmers, and one Minneapolis dealer sold four hundred farm-type autos to farmers in three months.

The figures mean that the automobile is becoming the farmer's implement as well as the millionaire's toy. The farmer is not infected with any speed mania or desire for display of wealth; he simply thinks he has found a good thing. The automobile has come to him as a triple benefit: first, socially; second, as a speedy means of reaching and keeping in touch with the market; third, as a handy power machine. To the community at large the auto-farmer has become an active good-roads advocate.

The extent to which the farmers are adopting the automobile is shown by these figures: Twenty-one wagon and carriage factories in Indiana and Illinois and five in Iowa (perhaps I overlooked some) are turning their shafts into steering wheels and manufacturing high-wheel, stump-straddling automobiles.

There are districts, many of them, where prejudice against the automobile remains strong, but the prejudice rapidly is disappearing. Through the great agricultural district of the Central West, the Dakotas, Montana, the Coast, and the new America of the irrigated Southwest, the automobile is becoming the farmers' vehicle.

Good Roads Necessary

IF THE roads of the United States were such that automobiles could be used the year round, farmers would within a short time regard the automobile as too important a necessity to be without. The bad roads and first cost are in most cases the only objections to the machines. Two-thirds of the farmers interviewed said: "I'd buy one in a minute, but it's no good on our roads." They will not invest in something they can use only half the time, in some sections two months in twelve.

Regardless of the utilitarian value, the automobile today is socially (and interestingly so) a greater force in farm life than university extension, rural delivery, telephones, or trolley lines. To-day farmers owning automobiles and living within a ten-mile radius of any town of size consider themselves as living in town. Among them it has brought contentment with farm life that has displaced, or is displacing, the discontent, especially among the girls and boys. Farmers testify it is the best cure for "city-itis," a disease that threatened to devastate agricultural districts. Hundreds of "retired" farmers who tenanted their farms and moved into towns "to give the children advantages," have purchased automobiles and moved back to their farms. "Country homes" have sprung up for miles around almost every town, and the landowner oversees the work with better results.

The automobile is being used more generally through Iowa, Nebraska, Kansas, Oklahoma, and the Southwest than in older farming districts. The need is greater, the farms are larger, neighborhoods more widely scattered, and in those districts the automobile is fomenting a social revolution. What even one automobile in such a district will do in bringing the people together is remarkable. In Illinois, above Clinton, there is a farmer who owns a big touring car. He is religious, and bought the car so that he could run all over the neighborhood Sunday morning and bring the children to Sunday-school. He can transport twenty at a time, and he has the most popular Sunday-school in Illinois. Now the church itself has decided to buy another automobile.

I was driving along the "hard road" between Dixon and Ottawa, Illinois, when the whir of an automobile sounded from behind a red barn on the hill above the road, where a whiskered, prosperous-looking farmer was shredding corn. The rear wheels of his automobile were jacked up and it was furnishing the power. He was M. J. Durfee, and he consented to talk automobile, shut off the power, and climbed into the tonneau.

"Ted—that's my boy," he said. "Bought this contraption in Chicago second-hand for $625, learned to run it in two days and rode home in it. I thought it was a fool trick. He said he could make it pay and save railroad fare to college and back. I wouldn't trade that machine now for the best plow team in La Salle County. Ted drove over to the university in it this fall, and I wrote if he didn't send it back I'd have to buy another. This summer the whole family used it going into town, visiting and pleasuring. I hitched it to the hayfork, and put the hay in the mow twice as fast as the horses could do it. We made trips when it was too hot to drive the horses. I built an elevator bin at the top of the barn and lifted the wheat with it, run the cream separator, chopped feed, and churned, made it do the washing for the girls, and besides, Ted marketed eggs, chickens, butter and butter fats in it, and made the trip in a quarter the time it used to take."

"Hasn't it any drawbacks?"

"Yes," laughed Durfee. "The darn thing won't breed." Then seriously: "If a fellow has a knack with machinery—and every farmer has—it isn't any trouble, and it makes a handy little power machine for the farm. But that isn't why I'm for it. The fact is that machine is the best thing for farm folks ever built. My girls went to school in town, made nice friends, and when they came back the farm was lonesome. Betty swore she'd never marry a farmer; now she says she won't marry one unless he runs an automobile."

I looked at Betty and predicted a boom in automobiles.

"The farm is lonesome for girls," said Mr. Durfee. "But since Ted bought the machine we go to town twice as often with the loss of half the time. The girls bring out their friends, and the young people in town and around here who own autos have plenty of company. I haven't heard any more kicks on living in the country. We go into Ottawa to theater, church, and visit all around. This machine has made neighbors out of friends we used to see about twice a year, and I'd pay the price twice for the good it has done my wife."

Almost everywhere the report was the same. In Cerro Gordo County, Iowa, I found seven automobiles in one little farm community. The owners all said the same thing—that the machines had destroyed their desire to move to town; they can go there quickly enough and often enough and prefer the farm—and they have improved the roads for miles around.

Real-estate dealers in a dozen large towns assure me that the use of the automobile has extended truck farming areas widely in all directions, because small produce can be marketed quickly. Through the Central West and West the automobile has caused a new movement, a country-house movement. In scores of cities which I visited or from which I received reports many business and professional men are building country homes on their farms and living there.

Saving Money

MANY use them only in summer, others all the year, preferring the farm if they can get to business in time. Around Fort Wayne, Connersville, Indianapolis, and Lafayette, Indiana; Dayton and Springfield, Ohio; Bloomington, Paris, Champaign, and Rockford, Illinois; Ottumwa, Waterloo, and Des Moines, Iowa; Lincoln, Nebraska; Madison, Wisconsin; Battle Creek, Lansing, and Detroit, Michigan, this movement is noticeable. At Fort Wayne one man recalled eleven cases, and all the country places except two were built after the owner purchased an automobile.

In the South the movement is oddly different, but the machine has partly solved a big agricultural problem. In many quarters of the old South the white population is congregated in cities, the blacks tilling the soil. At Selma, Alabama; Montgomery, Meridian, Vicksburg, and Boone this condition exists. The whites fear to live on the plantations, especially in the "Black Belt" around Salem, and in the Yazoo Delta above Vicksburg. In these places the plantation owner is using the automobile that he may live in town and visit his lands each day and supervise plantation work, instead of living in the country and running into town as the Northerner is doing.

Among the thousand or more farmers and farm authorities interviewed, not over ten objected to the automobile on grounds of cost of maintenance or repairs or difficulty in handling. Even those who regarded it as a toy ignored the city man's chief complaint. Owners said that any farm boy used to handling farm machinery could repair ordinary breaks or defects and get twice as much out of an auto as a city man. Convincing evidence of this was found in a visit to a public garage in Chicago. Twenty-eight chauffeurs were on duty, and eleven of them were farmers' boys making big wages running cars in the winter. Most of them will return to the farm. The proprietor said the farm boys made the most reliable drivers and knew more about practical mechanics than any others.

As a power engine the farmer has created a new field for the auto. The good farmer does not believe in idleness, even in machinery, and he has adopted the automobile engine as a power generator. The uses to which the farmer puts an automobile, besides riding in it, would astonish its inventor. Here are some of them: shredding corn, shredding hay, chopping feed, pumping water, flushing dairy barn, driving circular saw, lifting hay into mow and wheat into elevator, shelling corn, separating cream, churning, washing, and running fan. One inventive Missourian has made a rotary post-hole digger to run by auto, and a Wisconsin dairyman hitches his to a fire pump to protect his house and property.

At several agricultural colleges instructors asked classes of farmers to write short essays on the use of automobiles in their districts. Also I secured the written views of over one hundred farmers and authorities on farming. Here are a few, chosen at random:

Los Angeles County, California—Widely used by big ranchers overcoming labor used to haul citrus fruits to packing-houses.

Jackson County, Oregon—Number doubled in one year. Used marketing fruits and hauling coal.

Macomb County, Michigan—Enable country merchants to avoid carrying big stocks. Better market for farm produce, increase church attendance. Benefit socially.

Lenawee County, Illinois—One hundred and fifty autos, half owned by farmers or retired farmers living in town. Unanimous demand for better roads, also general opposition to some claiming autos destroy horses.

Allen County, Indiana—Many used. General movement to country homes. Used by several to convey them to widely separated farms.

"Far from the dull impertinence of the skyscraper"

Ames College—Lectures delivered on subject. Use of auto urged upon farmers.

Kansas State Agricultural College—The use of the auto in this State is removing the desire of the farmer to move into town. With the auto the farmer within fifteen miles has all the advantages and benefits of city life, and can enjoy country life. Some autos in Kansas are used as power in plowing.

Montana—The auto is being used extensively by ranchers.

E. Q. Cordner, Expert for Farm Implement Works—In the corn, dairy, and cattle belt it is being used extensively in quick marketing of heretofore waste by-products. The farmer uses it as a light express car as well as a power engine, and is forcing makers to change their types.

Iowa State Fair Association—The State fair last fall revealed the extent of the use of the auto by Iowa farmers. In one day over four hundred automobiles were parked in the grounds, mostly owned by farmers. Not fewer than twenty-five auto parties of from three to twelve machines toured to the fair from different parts of the State.

L. W. Chase, Department of Farm Mechanics, University of Nebraska—About five-tenths of one per cent of the farmers of Nebraska are using automobiles. They have nothing but praise for them. I am doing all in my power to urge them to avail themselves of the use of the machines. Socially, the automobile is a boon to the farmer.

There was a dairyman's convention recently that brought to Chicago milk producers from the five States immediately tributary to the great Elgin and Wisconsin creamery districts. Of those attending one hundred and twelve were asked as to the use and value of the automobile to them. Thirty-eight of them own automobiles and use them constantly in business. Eleven own more than one. They are used in marketing butter fats mainly, but several utilized the power to operate separators, one to flush his dairy barn, another to operate his bottle-washer.

The roads in the creamery district are better than the average country roads, and the automobile most used is a late type, with a tonneau that can be removed, leaving a flat platform for freight. But that is not all. Lastly, yet perhaps as important as anything, is the effect already felt, and increasing constantly, of the influence of the farmers who own automobiles upon the character of the roads. Reports from nineteen agricultural schools, covering practically the entire country, prove the interest of farmers in good roads is increased and increasing greatly because of the automobile. Iowa and Illinois, the "corn belt," where roads are impassable in winter, report active agitation in favor of good roads among the farmers, and state that owners of automobiles are leaders in the movement. In many districts there also is active objection, farmers saying they will not have their taxes raised to benefit autos, and others claiming automobiles destroy macadam roads. One of the strongest good-roads advocates I found was leader of the opposition until he bought an automobile.

The office of the Road Commissioner of Kansas says: "The good-roads movement in Kansas is widespread, and we attribute much of recent agitation and *results* to automobile owners." J. M. Parkins, president of an Iowa farmers' club, writes: "All farmers want good roads. They don't like to pay for them. What is needed to get good roads is organization and a leader, and out here the automobile owners furnish both." Pete Estey, one of the Glidden tour "scouts," who has helped lay out the routes for these tours, says: "I can tell by the road whether or not the farmer whose place we are passing owns a machine. If he does his road is improved or being improved. The betterment of the roads through the agricultural districts in the last two years has been wonderful."

Late last fall I was driving over the mountains from Hendersonville to Asheville, North Carolina. The road was dirt and bad. Near Skyland I overtook a mountaineer trudging at the side of a rude, home-made sled drawn by an ox. On the sled was a twenty-five-pound sack of corn meal, nothing else. "Pretty hard sledding," I greeted.

"Beats totin'," he replied.

An hour later I crested the hill above Biltmore and looked across Vanderbilt's estate with its hundred miles of perfect roads, over which his foremen were flying in automobiles. The contrast seemed an object-lesson in farming. Shiftless or scientific, which?

Riding off

The Economical Cottage

What You Can Do With $2,500

By JOY WHEELER DOW

THE simple life is a relative term. It depends. To sacrifice the offices of a valet or lady's maid would signify the simple life to some people. But most of us do not look upon the details of one's toilet, the brushing of one's clothes, etc., as either very laborious or demeaning duties. The simple life, then, to the majority of people, must entail some more substantial sacrifice. The butler and chambermaids might have to go, which is to say that we are willing to care for our bedrooms and wait upon ourselves at table without complaint. But be very careful what further simplification you advocate, or shortly you may become unpopular.

Elizabeth to her German garden fled from the conventionalities of an opulent state, but did not forget to take with her several faithful retainers who did the work. You sadly decimate the ranks of those who profess to believe in simple life if you interpret it to mean cooking one's own meals and washing the dishes. To prepare and take your bath, then scrub out a five-foot porcelain tub, wash the soap-dishes, and wipe up the bathroom floor, is a much more arduous task than it is to prepare your luncheon, wash and dry your single cover. Only, Mrs. Grundy says that the bath is *noblesse oblige* for everybody, while she has placed an ineffaceable stigma upon kitchen work. And yet a constantly increasing number of otherwise estimable Americans have known no life exempt from it, expect no other, and to whom a life with kitchen work in it appeals as entirely endurable and even happy, provided the environment is only gracious and uplifting as it ministers unto the inner man and there is income enough, without nervous prostration and heart failure, to buy the wholesome articles to be cooked, pretty china to be washed, dainty window curtains to be laundered, an Eli Terry clock for the kitchen shelf, and a kitchen library, to be made up, let us say, of Fannie Farmer, Jeannette Hill, "Catering for Two," "Left-overs Made Palatable," etc., etc., with ways and means still to equip the kitchen with up-to-date culinary apparatus and utensils.

To this great middle class of sober and industrious Americans, often self-educated and self-refined, is this article addressed—this class of American citizenship to which crime and scandal rarely attaches, and which honors our nation by its cleanliness and strength.

And a very discerning class has the middle class of Americans, in recent years, developed into. Its home architecture means to it more than does his château to the millionaire. And it demands as subtle architectural skill in the design of a twenty-five-hundred dollar cottage as we imagine was designedly prearranged in the romantic glimpse we obtain of some quaint English village with its great minster silhouetted against the sunset.

Good lines, be they vertical or horizontal, refinement of architectural detail and proportion are, in themselves, not enough. The ideal English village has something else—another attribute. Can you tell me what it is? Why, personality. There must be the personal element for comradeship—the historical sequence of our antecedents architecturally expressed, or the design of our cottage fails.

With one's surroundings and sensibilities in accord, workaday life wears a very attractive mask. Even the kitchen of an ideal cottage is delightful in contemplation, and quite as much fun to arrange and equip as the drawing-room of a palace.

A kitchen, a living-room, an entry, four bedrooms, bath, and attic, of what earthly use is more accommodation for simple living? Our grandmothers used always to let down the leaves of the fascinating gate-leg table when dinner was over, place it against the wainscot of the room, and lo, we were in the parlor again!

Here is economy of space, of money, of time, and steps. Why not return to this simplicity and save on the original investment interest on money, taxes, insurance, fuel, every way, and—be happy?

The exigencies of good-planning have placed the bathroom directly over the kitchen, the kitchen over the laundry trays, which set upon a wooden platform, eight feet square, in the basement, an arrangement which simplifies the plumbing greatly. A place for the [illegible] ator is provided close to the rear entry, and [illegible] the rear entry itself, well—it is Plantagenet [illegible] to beat the stage. Through its deal boards (with all due respect to a familiar episode in "Pickwick Papers" to the contrary) the imaginative mind descries a vista of entrancing personal reminiscence, fetching up with King Richard III upon the eve of Bosworth Field. Yes, royalty may have passed through this very doorway. The charm of it operates for us, at any rate.

The ceilings are low, the cunningly grouped, seemingly tiny windows are, in reality, very broad and sunny windows. They have leaded casements opening outward. The one generous fireplace will burn up as much wood as one can well pay for; but even while we fancy we see bank-notes ascending our chimney with the smoke, we never contemplated their flight with greater equanimity.

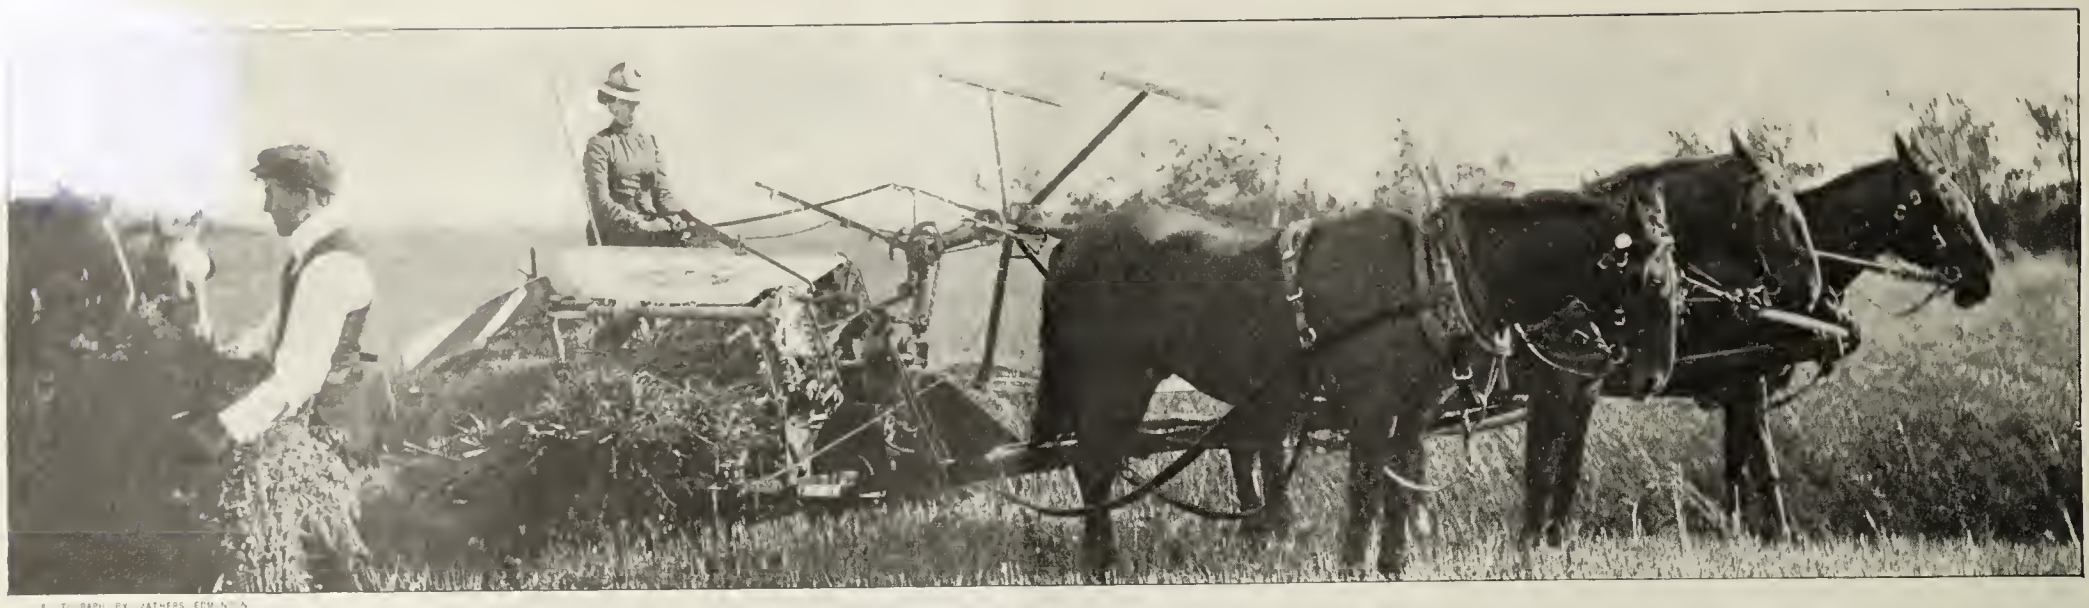
Especially is this true at supper-time upon an autumn evening. The struggle for existence is over for the day. Deep shadows are closing in. We light the silver candelabra, and set out the silver tea service that has, likely, taken months of rigid self-denial to acquire. The tea-kettle on the cook-stove is singing a refrain much more agreeable than anything we ever heard in grand opera with which society bores itself every winter. And then the delight of preparing a dish of Finnan haddie à la Newburg when one is hungry! Only, don't buy your Finnan haddie or salt codfish in New York City. Send to Gloucester or to Portland direct. It is not the same thing.

Cheaper at Home

TO KEEP warm in winter, a very small heating plant will do the trick in such a tiny affair as this house, and still leave enough to settle with the plumber and painter—indeed, everybody except the architect and the electrician. The latter, however, is not entirely necessary to one's comfort while we may fit duplex burners to pottery of our own selection and burn oil, which is so much cheaper than electricity and so much better for eyesight upon the point of giving out.

But it is the springtime which opens to us a vista of unalloyed happiness in the new cottage, when the perennial and flowering shrubs are to be selected and placed about it, when the kitchen garden is to be planted and the fruit trees and berry bushes set out. At last we are to live near nature, "far from the dull impertinence of the *skyscraper*."

It is economical, too, living in the country, if you know how; and, contrary to all that you hear about the economy of European life to the disadvantage of our own country, let me say, by recent comparisons, it is cheaper and much more comfortable living in America for your money. I do not except Florence, Italy, where rents and commodities are now a little on the rise.



Of course, if you buy porterhouse steaks, and waste the unbroilable end, if you buy cream at eighty cents per quart, and insist upon certain green vegetables, as asparagus, which never retails for less than twenty-five cents per bunch, even in season, you are not studying economy, to say the least. For the idea is to make fifty cents' worth of beef for braizing, for example, with vegetables costing ten cents more, serve two people with four dinners—people for whom a single egg costing two and one-half cents, in winter (if you know where to buy) answers to make two different puddings upon two consecutive days. The idea is to discover ways and means of living well at a minimum cost, and that is the true economy, "not," as somebody has said, very truly, "to cut off your feet when you need shoes."

Then, everybody needs fresh air, and plenty of it. This costs you nothing in the country. We need gracious environment, and that also costs nothing in the country. With a little forethought and selection, it costs no more to look down an enchanting country lane from the breakfast table than it does to reflect upon a frightful chasm of rear walls and fire-escapes. The rent of a flat in Harlem, in a dreary and interminable row, might come at a little less than the interest would be upon such an investment in country real estate—as the Bishop house—but not less than the twenty-five-hundred-dollar cottage proposition.

A new and grateful possibility begins to dawn upon us. May we not be able to earn our living in the country after a little further evolution of existing conditions? This is the only permanent solution there can be to the perplexing problem of increasing population, and the sooner our economists "get on the job" the better it will be for everybody.

There are people, it is true, who, while they have their health, do not want a home in the country, in the city or, indeed, anywhere. There are people who just love to "bat about," who can live in a tent, if they can arrange for their meals to be prepared, and sent in from somebody's kitchen, and who can laugh if rats and other outdoor vagabonds pay them nocturnal visits. There are people who crave pure excitement as much as an inebriate craves alcohol; and the oftener the scene of their lives changes from place to place, the better they like it. Hotels, pensions, lodgings, tents, steamships fast or slow, railways de luxe or third class—even traveling upon foot when funds are low—are all in the program of their mode of life. There is but one proviso. There shall be no domestic responsibility—no domestic duties. If children come to them, the children must be gipsies like themselves, and the dearest charm to the heart of the normal temperament is no charm at all.

But these amusing exceptions to the rule of the love of home supply the needed ethical background.

The Borderland Woman

A Suffragette Who Acts Without a Vote

By AGNES C. LAUT

OUTDOOR America has evolved very nearly a new type of woman; or, rather, the old type has met the challenge of new conditions half-way in a fashion that has evolved a new type. She is not the new woman; for she does not talk about rights. She is too busy doing them. All about the Upper Missouri last year, all the way canoeing down the Saskatchewan this year, I met such types, types that would stand aghast at being different from the ordinary woman on the daily round. There was the army officer's daughter turned missionary's wife—Mrs. Riggs—at Oahe Reserve out from Pierre, for thirty years keeping an oasis of decency in a wilderness of savagery before she could see improvement in the lives of her wards. Fifty miles in another direction on the Missouri were girl wage-earners turned homesteaders ten miles from neighbors, not lured by desire to escape domestic duties or false sense of independence, but pushed out by the hand of necessity to make provision for parents. "I don't quite approve of this homesteading by girls, which is becoming so frequent," said the missionary's wife to me, as I spent a night in the beautiful little Swiss chalet which she had designed, parts of which she and her husband had built with their own hands. "I don't believe in any woman undergoing all the hardships Mrs. Missionary has in this country," said a girl homesteader one night I had driven out to sample the 8 x 10 match-box shack. Behind my mask I smiled, for they were both types of the very same thing—courage meeting the challenge half-way. They are not sorry for themselves, these borderland women; they are buoyant with the burden, and that way grow the wings of strength and slants the light across the trail.

Quick Wit Saves Fort

"WE THOUGHT no more of hitching up our raft, pitching our tent on it for day and night, and drifting down the Saskatchewan for Red River, than you think of boarding a street-car in New York," said Mrs. Hardisty of the old days in Edmonton, when the late Senator was chief trader of the north. "Drifting down the Saskatchewan," I may explain, was a slight diversion, lasting a month and covering from 1,000 to 1,500 miles, according to the channel followed, big trees lashed to each side, keeping the craft in midcurrent, a couple of Indian pilots with long poles on guard at the countless rapids. Then, between Edmonton and Fort Pitt, you are on the very stamping-ground where the first white woman who came to the north, Marie Gaboury, followed her hunter husband through buffalo stampedes and Blackfeet raids. Down on the site of Fort Pitt you are on ground where the wife of Archdeacon McKay perpetrated a pretty bit of heroism when she was a girl. The men had been called from the fort.

It was a blistering, hot day. Some one suggested that a pail weighted with stones and dropped to the bottom of the river would bring up a fresher drink than the tepid water inside the walls; but who was to go to the river? The narrow trail down to the cutway in the high bank was lined on both sides by brushwood; and plundering Indians were always on the ramp round Fort Pitt. Shouldering a light rifle, the future wife of the archdeacon marched out from the fort gates to the river. Behind the wicket watched the children of the chief factor. They saw their aunt disappear down the cutway. Then she came up the trail with the pail of water in one hand, the rifle in the other. Suddenly she paused and set down the pail. Between her and the fort gate had emerged from the brushwood two naked warriors painted and plainly on mischief bent. What was to be done? There was not a white man nearer than two hundred miles, and the women inside the fort were afraid to open the gates lest other warriors were concealed in the woods. On the tip of a nearby tree perched a whisky jay. The children saw their aunt coolly level the rifle. Snap, and a piff of smoke! The whisky jay tumbled headless from the branches. The white girl had picked up the pail and was walking deliberately to the gate. As for the savages, they did not wait.

Heroism of the Present

ALL borderland heroism does not, however, belong to the past. We were having supper off pemican—"pemmy," the youngsters call it—at the Onion Lake Indian school, under charge of the Rev. Jack Matheson, a famous frontiersman, when the mistress of the house incidentally referred to having driven ninety miles that week to set the broken leg of a new settler.

"Where did you take training as nurse?" I asked.

"I didn't take any training as nurse. I took a full course in medicine and surgery. You see when we came here, seventeen years ago, the nearest medical aid was three hundred miles away, and there was terrible suffering from lack of a doctor. Something had to be done. Mr. Matheson couldn't leave; so I took the full four-year course, and came home here each summer. You have no idea what a help that was."

Helping Father

Doing, Not Talking

ONE day we went to call at a cottage in Prince Albert, where lived a little lady of the old school—the kind done up in ceru lace and black silk—who had come out in tented wagon to the West in the seventies to inaugurate some sort of academy for the frontier. Clergymen came out at the same time on the same errand; but they did not stay. The post was perilous and lonely, six weeks from the nearest town by fastest travel; and one after another—there was a twenty-year procession of them—the white-shirted gentlemen chucked their commission (got "a call" elsewhere) and withdrew; but Miss Baker, with blue blood in her veins and high living behind, stayed on. Then, when settlement came, the academy gave place to modern institutions; and the little lady seemed stranded high and dry, like other good things of the old school left behind by the tide of progress; but wait a bit. The borderland woman doesn't strand easily.

Across the river from the new town was a band of "outcast dogs," outlaw Sioux driven from the United States after the massacres with prices of $1,000 reward on their heads and girdles round their waists made of scalp locks from the murdered down in Minnesota. Canadian tribes would have nothing to do with the outlaws. They were a hunted, hounded, haunted band, living no one knew how, keeping to themselves, suspicious of all comers.

The Canadian Government would, of course, do nothing for these American Indians; but to the little Christian lady of the old school this didn't seem a very Christian-like policy; and without any prospect of the salary which came from the church afterward, she told Commander Perry of the Mounted Police that if he would put up a tent for her over on the Sioux camping ground she would see what could be done for the outcasts. But the river was very wide here. Who was to take her back and forth?

The Sioux resented any white coming among them. They thought she might be a spy after that $1,000 reward; and they would not answer when she accosted them for passage across the river. Watching her chance, she followed a young hunter, who had been selling his game in the town, down to his dugout on the river, and when he jumped in to push himself off she jumped in after him; that was the way she got her first passage across. Later an old dugout was procured, and in this she punted herself back and forth, through all kinds of weather and ice-runs. Then a friendly young hunter came to her with word that the Sioux were threatening some night when she was delayed to waylay her on the bush trail and drown her.

"Nonsense, François," laughed Miss Paker. "That would do no good. My body would come up. Then you would all be punished. You have been driven out of the States. What would you do if you were driven out of Canada?"

François scratches his tousled head. He can not understand the dauntless spirit of the little lady with the soft voice and snapping black eyes; but he begins to respect her. All the same, it is a mile from the river back through the bush to the Sioux camp; and any night she is delayed till dark the young Indian rowdies have a way of lounging on that trail, and there are nameless insults hurled at the little black figure hurrying past; so François joins her very often on that trail.

"Poor, good François," laughs Miss Paker with twinkling, kind eyes, "what are you doing out so late from the camp, François?"

"Jes' happen to be goin' dis way for short—y-a-s, sure." But he sees her safe to the boat all the same.

How the little lady won the arab outcast youngsters to school, mastered the Sioux tongue, poring over the Riggs Missouri Dictionary till four in the morning, forgetting to eat; how she and Miss Cameron, a kindred spirit who had joined her, with their own hands taught the outlaws to make doors and windows and sashes for the houses, are all stories in themselves. Once on an errand of mercy, Miss Paker was benighted and lost herself. Wrapping her coat round her, she ensconced herself under a bush and slept dreamlessly for the night. I tried to get her to tell me that story; but she said: "It was nothing." In fact, I would like some of those borderland women to tell me what they really do *consider as considerable of something;* for, you remember, it was also nothing to have driven ninety miles to set a broken leg a few days before a baby was born.

To-day Miss Baker is worshiped by those Indians, who would have murdered her, and by their children's children. When a salary at last came from the church and a reserve was finally granted the outcasts by the Government, the old chief came to her. "Miss Baker," he said with puzzled look, drawing a circle on the ground with his cane, "if we build on the new reserve here," pointing

to the rim of the circle, "will you build here in the center? Will you stay in the center if we go into houses?"

Happy and Busy

ALL the way down the Saskatchewan we saw them, these borderland women—wives of new settlers, far from neighbor as sail at sea; daughters of fur traders, thoughtless of the leagueless trail as city women are of squares—canoe in summer, dog train in winter; Indian agents' wives, living pretty much as birds live, on the wing in the wilds; soft-voiced nuns with beads in one hand and courage unto death in the other; hunters' daughters paddling about in the raw-red, birch-bark canoes, making the muskrat marshes ring with laughter. And they were not sorry for themselves, these borderland women. They would not be able to understand the lugubrious yarns in Eastern print about the hardships of woman's life on the frontier. Much less would they understand the social unrest of the pampered town woman with her energies dammed in on herself, wretched from idleness and sheer lack of the wild joy of living.

Improve Your Fruit

The Magic Wand of Grafting

By JULIAN BURROUGHS

EXCEPT for cherries April is the month to graft fruit trees, apples, plums, and pears especially. When the buds begin to swell and the cold gray of winter gives way to a reddish hue in the woods on the hills it is time to think of placing the grafts. Almost every country place, even the smallest, has some trees the fruit of which is not wholly satisfactory and which their owner would like to see turned, by waving a magic wand, as it were, to some kind he has read of in the nursery catalogue or has eaten as a boy back on the farm. The magic wand in this case the owner can learn to wave so as in two or three years to produce the kind of fruit he may most want, which otherwise, by the long process of growing the actual trees, would take ten or fifteen years.

Briefly stated, grafting fruit trees simply consists of placing a twig or "scion" from one tree into a split or "cleft" of another. If this is properly done the twig will grow and in a comparatively short time bear its own kind of fruit—that is, the fruit like that of the tree from which the scion was cut and not that of the tree on which it is growing. By this process wild fruit trees, seedlings, or worthless or undesirable kinds are made to bear choice varieties. In fact, often wild trees are grown in order to have their virile, quick-growing bodies on which to graft the delicate, slow-growing, high-bred varieties. The great advantage of grafting for the man with a small place is that he can both have exactly the kind of fruit he wants, often cutting his scions from a limb whose fruit he has tasted, and that a large, well-fed tree will bear, when grafted, a variety or succession of fruit. One big apple tree, for instance, if well cared for and properly grafted, would keep a small family in apples almost the year around.

First, the twigs or scions. Care must be used to get only fine, thrifty twigs from the ends of actual fruit-bearing branches. Never, in any case, use those nice-looking shoots or "suckers" that often grow on the main trunk of trees in such a convenient place and profusion. About twelve years ago some professional grafters once used some of these shoots or suckers, and though the grafts have grown as large as was the original plum trees, they have never borne a single plum. And they never will. The scions should be from two to five inches long and have three buds. The big or lower end cut to a neat wedge, cutting back from an inch to two inches, leaving one of the buds on the side of this wedged part, the other two above it. When possible the scions should be cut and used at once. When this is not possible or when they are sent a distance they must be wrapped or packed in damp moss in order to keep them from drying out.

The limb to be grafted must be a sound, thrifty one in a fruit-bearing part of the tree and about the size of a shovel handle. Because large limbs are so difficult to graft, owing, no doubt, to the fact that they pinch the scion so hard, the beginner should not attempt a limb larger than a man's wrist. Some grafters slip a thin pine wedge into the cleft of large limbs, thus preventing its pinching unduly hard. If possible it is better to take a branch that has a side shoot a few inches down from or nearer the tree trunk than the place where the grafts are to be set. This seems to draw the sap up to the scions, and in case they should not live will either take the place of the limb removed or can be grafted in turn.

Since all the tools necessary for grafting are found about any home no description of them is necessary—a saw and pocket-knife are the only indispensable ones and the ones for which something else can not be substituted. The saw is best if it has a narrow blade with coarse, well-set teeth. If the knife is a very heavy one it can be used for splitting or making the cleft as well as cutting the scions, otherwise a chisel, hatchet, or ax will be necessary.

With the saw cut off the limb that has been chosen for grafting, split it open enough to admit the scions and place them in the cleft thus made. Care must be used in placing the scions, the principle of which is to have the "sap" or white outer ring of the wood of the scion against that of the limb that is grafted. It is through this sap that the real sap flows and it is here that the union must take place. Though authorities differ in regard to methods of placing the scions, the easiest and surest way is to place the scion in the cleft on a slight slant so that its sap crosses that of the limb. If the inner sap of the scion at the top of the wedge part

"Seen many fishing seasons and hope to see many more"

crosses the sap of the limb at the top of the cleft the slant that has been given the scion will cause the outer sap of the scion to cross the sap of the limb at the bottom of the wedge. Always, of course, place two scions, one in each end of the cleft. Now withdraw the wooden wedge, chisel, or whatever has been used to hold the cleft open while placing the scions and wax thoroughly all exposed parts of both limb and scions.

Grafting-wax can be had at most drug or seed stores, being rather expensive and generally poor in quality. It can be made at home with little trouble or expense and of best quality.

Of the many recipes this is the best: by weight four parts resin, one part beeswax, one part hard tallow; melt and pour into a vessel of cold water. With the hands, after thoroughly greasing them, work the mass until it grows light in color and hard in substance. In using melt and apply with a small paddle or flat stick.

Try Apples First

APPLES, pears, and plums are easiest to graft. Cherries must be done very early in spring while the frost is still in the ground. Because Japanese plums and peaches are so short-lived and begin to bear at such an early age no attempt is ever made to graft them. Before the graft could amount to much the tree would have passed its prime. Even experts have trouble in grafting grapes. In grafting them cut off the vine below the surface of the ground; either place the grape scions as you would apple, or else take a long grape scion of four buds, cut one side of it to a wedge midway of its length and slip this edged part into the cleft, thus letting one end of the scion with two buds stick down into the earth and the other with the remaining two buds up across the stump and out of the ground, which must be thrown back over the stump again. Do not wax. Though pears can be grafted on thorn trees, and even apple, it is best for the beginner, unless he likes experimenting, to stick to the regular method, which is, of course, grafting apples on apples, cherries on cherries, etc. Stone fruits will not live on seed fruits and *vice versa*.

Grafted trees will need some pruning—not too much in one year, a little each year. This helps to check out the water sprouts or suckers that heavy grafting causes and throws the strength of the tree more and more into the grafts.

Do Your Own Cutting

SCIONS can be had of most nurserymen or orchardists. When possible it is best to cut them yourself from a neighbor's tree. The list of varieties of apples, pears, plums, cherries, etc., is long. If you cut the scions yourself you know what you are getting; if you order get them of a reliable person and tell him what you want, whether sweet or sour, eating or cooking, summer, fall, or winter sorts.

Early Flowers

Without Hothouse Expense

THOUGH the snows still linger till April in most of our Northern States and hardly a glimpse of spring buds is to be had, one may, by a little forethought, have green leaves and blossoms for the mantel and window without the care of potted plants or the expense of a conservatory. The bare twigs of the wood and garden are loaded with wax-coated buds that stand securely buttressed against frost and storm, yet almost bursting to be coaxed out by the fondling sun and the steady embrace of warm weather. The leaves are all there, hidden, crumpled, and tiny, but perfect. Where blossoms form the core of terminal buds, as in the lilac, these, too, are waiting, each tiny stamen and pistil in place, petal and sepal perfect in miniature, models of the riotous, perfumed life that will burst into being when May has really taken the well-loved earth to her heart. It is easy, too, to anticipate May. If you will cut handfuls of terminal lilac sprays from an old-fashioned garden and place them in clear water in a warm room the buds will respond to warmth there as readily as if they remained on the parent stem and Memorial Day were right at hand.

Beating the Florist

THUS treated, within a few weeks purple or white lilacs will bloom for you, while the tender green of unfolding leaves will enhance the charm of the bouquet. Peach and apple blossom-bearing twigs will give similar results. To be sure, some of the robust exuberance of the outdoor plant will be lacking. Probably it misses the homely vigor of the earth pulsing up through the sap ducts, but in its place will be a spiritual fragility, a slenderer growth, and more transparent coloring that will make the blossoms a bit unreal: dainty spirits of flowers that have a peculiar charm. Many a wild shrub will respond freely to the same treatment. The great velvety tips of the staghorn sumac will put forth delicate, green, pinnate leaves that are like fern fronds. Birches will grow tiny leaves as brilliant as if cut from chrysoprase by the jeweler's art, while shad-bush and elder, sweet fern and azalia, may be coaxed to add their beauty and fragrance to the bouquet. Thus potent is the vitality stored up within the wood itself.

The Violet's Way

"Such a starved bank of moss,
On that May morn;
Blue ran the flash across,
Violets were born."

THE Martian astronomers, if they have an eye for color, must gaze with delight at the northern half of our hemisphere these April days as the soft springtime colors flush ever northward into the cold whiteness of the boreal snows. As our ice-cap recedes its thin southern edge is everywhere tinted with the pale pink of wood anemones, while soon following them over hill and valley, plain and meadow, the surgent violets flash the world with blue. Surely the Martians and everybody else should see these blossoms, for they are for show. Their honey is for the bee and their faint perfume and lovely color for whoever will eatch them in passing, but few of these beautiful spring flowers of the violet produce seed. Cattle crop them from the pastures, living daintily on violets and dew, and the scythe of early summer adds them to the hay crop for the delectation of other cattle, while even those that survive ripen but few seeds. If the plants depended on these blooms for reproduction they would in a short time become extinct. But My Lady Violet, though she flames forth thus beautiful for the eyes of an admiring world, has domestic yearnings hidden deep within her shy heart, dreams of flowers far different from these which she flaunts thus boldly. After the season of scent and beauty is over, she produces these others, sheltered, hidden almost in the brown earth, and so utterly insignificant in appearance that few lovers of woodland things know them. These bear seeds in profusion, and in late autumn, overswollen perhaps with pride in the consciousness of their true worth, burst and scatter them far, sometimes a dozen feet. It is to these unseen, home-loving blossoms that we owe the world-wide flash of blue that flies ever northward in spring and which the Martians, if they can see it, may well admire.

Collier's *Outdoor America*

Seasonable and Helpful Reminders

Stable and Barn

HORSES.—Standing on dry stable floors all winter, it is more than likely the forefeet of many need attention. They may have become dry and hardened to the extent of contraction, or inability to properly expand, which amounts to the same thing. A special oil dressing is good and, as a preventive, should be in every stable cupboard. When the trouble exists, a flaxseed poultice, large enough to more thau cover the hoof, may be spread on a cloth, the foot set down on the poultice, and the edges of the sack tied about the pasterns. Standing the horses iu wet clay during the day is also good. This complaint, so commonly met with at this time of the year, is not always due entirely to dry floors, dry bedding, etc. The trouble probably began with the blacksmith, who, as a rule, cuts away all that loose, scaly substance found about the frog aud sole of the hoof. This practise, so general among blacksmiths, is entirely wrong. To cut it away makes a cleaner-looking job, but destroys the natural conditions that surround the bottom of the hoof, which acts as a sponge and supplies the growing hoof with the necessary amount of moisture.

The first essential, therefore, in the protection of your horse's feet is to insist that the bottom of the hoof is not pared away, however rough and lrregular it may appear. Another source of trouble with horses is the shape and condition of their teeth. Every horse should have its teeth examined at least twice a year. They often wear down unevenly, causing sharp projecting points that irritate the mouth, in which case they do not properly masticate their food, and indigestion, poor condition, gas, and offensive excrements are the results. There is no better investment than a float or file for the purpose. The veterinary had better be consulted in the first instance, and after that the owner, if he wishes, can do his own horse dentistry. Probably a large proportion of the disorders above mentioned are owing to bad teeth.

Horses should be watered before they receive their grain. Timothy hay for work-horses is better than clover. The best method of feeding grain to horses is to run some hay through a cutting-box, dampen it, and to this add a ground-grain ration thoroughly mixed with the wet chopped or cut hay.

For brood mares not working, mixed hay (clover and timothy) or clear clover, oats or wheat straw chaff, is better than timothy, and should be used as a chopped feed and fed as above. This, together with a piuch of salt and a bit of molasses, as advised in the March number, makes the hest possible ration.

Cows.—The usual time for their coming flush in milk is at hand. Heifers with their first calves should have a very liberal feeding; even if they have been taking on flesh somewhat during the winter, the fleshy appearance, which is not consistent in a cow after her first calf, is excusable in a heifer, aud usually disappears in a few months after the birth of her calf. The young mother needs this extra store of food in her system to meet the increased demand; besides, she is still growing and can not reach maturity properly unless she is somewhat overfed. She must be growing her unborn calf as well as herself, and she should continue growing for another year, even while giving a large quantity of milk.

There is no danger of milk fever with heifers, so that high feeding after they become in calf may be safely indulged in, especially if the grain ration is mostly wheat or buckwheat bran or middlings or chopped clover hay, as recommended for brood mares.

Preparation or plans should now be made for growing certain soiling crops on which to feed the cows and the brood mares during summer mouths.

The methods of feediug soiling crops are best presented in Peer's "Book on Soiling." A full-grown cow requires from one-half to three-quarters of a square rod of rye, oats, and peas, or clover hay per day. When the amount of land required has been decided upon, it should he heavily manured and plowed and sowu every week from the time spring sowing begins. First, barley and peas, then oats and peas, followed by several sowings of Stolwell's evergreen sweet corn, millet, and, lastly, winter rye, to follow on land devoted to first-soiling crop as soon as fed off. This will give a succession of green forage for the season, and the autumn sowing of winter rye will be provided for the first feeding the following spring.

Sheep.—It is time the wool was trimmed from about the ewes' udder, so the lamb will experience no difficulty in locating the maternal fount. The most forward ewes should be separated from the flock and great care taken not to drive them through uarrow doors or between sheep-racks where they are likely to wedge. Doors to lambing sheds should be very wide or so narrow that only one ewe can pass at a time.

Many premature births, many unnatural conditions and positions of lambs at birth, come from crowding the ewes in driving them through doors with sharp corners. They should, therefore, have water at hand, and all feed-racks and doors so arranged as to avoid all this wedging, and their hay and grain should be iu easy reach, to prevent straining to get it. Should a ewe have difficulty iu delivering her lamb, do not be in too great haste to relieve her, which is invariably the case with amateur breeders. As a rule, leave nature alone. If, however, no progress is being gained for half an hour, and the proper presentation is being uade—*i. e.*, the two fore feet and nose—the attendant may take hold of first one foot, then the other, and bring them well forward. This straightens the elbow joints and reduces the size of the lamb considerably.

Should any other presentation be made, the amateur breeder should send for a veterinary. Ewes after lambing should have au increased grain ration, and continue for a week or so after they go to the pasture, for there is little nutrition in the first grass, and the lambs would probably suffer a check in growth. They had better be turned out daytimes and taken in at nights for a week or so more, and given a grain ration.

There should be in the lambing shed a pen or enclosure with a "lamb creep" (a hole large enough to let the lamb through, but small enough to exclude her mother). In this enclosure there should be a trough always filled with grain, where the lambs can help themselves. If they begiu with such extra feed, they will uever eat more than is good for them. When they finally go to pasture, where the same conditions should exist, a few portable fence .panels in a field with a "lamb creep" is all that will be necessary to continue the indoor grain-feediug system. Later in the season soiling crops growing iu the adjacent fields, and fed over the fence into portahle racks, should be provided.

The grain ratiou for such lambs should be wheat, bran or middlings, *nutted* oilcake and crushed oats to begin with; later cracked corn might he added to advantage. About equal parts by weight. Some trouble may be experienced in making young ewes own their lambs, but if they have been well fed aud come to their milk properly, there is usually little trouble; but sometimes, from excessive labor-pains or from the fact that they have not properly come to their milk, they take no iuterest in their first lambs.

In case the mother dies, the lamb may be chauged to a fresh mother that has lost her lamb. Bringing lambs up on a bottle is the last resort and usually costs many times what the lamb is worth, but in case there is no other alternative, the lamb should be put on another ewe or different ewes for its main supply and gradually changed on to cow milk reduced by half with warm water, and fed through a rubber nursing nipple.

The Wise Farmer Knows His Hen

THE first question I asked myself when I began with eight hens was: How cau I quickly tell the good from the poor layers? On the correct auswer to this depends all success with poultry. It is the keystone of profits. I was far too busy to attend to trap-nests; besides, the cost of trap-nests will eat up profits. So I begau to watch the hens, each one laying in a separate spot enabled me to tell the good layers from the poor. Then I studied the physical characteristics of each in order to apply anything I might learn later when the flock was larger aud the weeding-out process began. Two things struck my uotice: first, the good layers had hright eyes, a pert and more intelligent expression; second, the two bones each side of the vent were wide apart in the good hens, close together in the poor. I have followed this up for years, always killing the dull, sluggish-acting hens that have these two bones close together. So far the results have confirmed this theory; the post-mortem examination when dressiug the hen proved that I killed the right one, and, further, I now have a flock of thirty-six pullets averaging over a dozen eggs a day in December and January. My birds are "all-purpose" fowls. These two bones are slightly forward of and each side of the vent, easily felt just under the skin. Some hens, good layers, have room between these two bones for all four of a man's fingers, others only one. Three is a good average. Whether this is a safe guide for pullets that have never laid or for hens during the moult I am not sure. It is all right at other times, that I am certain.

The next thing of importance is a green bone mill. It is astonishing what a lot of excellent egg-producing food one of these little six-dollar mills will provide. Soup bones, bony scraps from the table, heads of chickens and ducks, cats, dogs, horses, crows, "fishy" wild ducks, "deacon" calves, rats, etc., can all he made into a bony, meaty meal that not only makes the hens lay eggs, but cuts the bills for corn and wheat in half. It is fine exercise turniug it, too; a few minutes invigorating work producing five or six quarts of this feed.

Thirdly, the best way to save the iuvaluable hen manure is by mixing it with kainite. The kaiuite itself costs but ten or twelve dollars a ton, has about twelve per cent of potash, and is, therefore, an excellent fertilizer. It goes iuto a chemical union with the ammonia of the manure, preventing its "heating" even when stored green and damp, making an ideal fertilizer for gardens, hotbeds, etc. This method is not only superior to the dryiug, grinding process of curing hen manure, but it costs neither time nor labor. My opinion, or rather experience, is that kainite must not he put where chickens or ducks can eat it. It will kill them. Further, kainite must be stored in a dry place; it can be used to freeze ice-cream also.

Fourthly, the best green food for hens in winter is the common chick-week that grows of itself in vineyards, on truck lands, etc., late in the fall. It is the best because it costs nothing, is quickly gathered with an iron rake and wheelbarrow, and stored in barrels, etc., where it will freeze and *stay frozen;* it will keep green and bright all winter long. In fact, I have kept it until spring and fed it to the chicks in the hrooder. It must he stored outdoors, on the north side of a building. If it ouce thoroughly thaws it will heat. I do not suppose it is as good as alfalfa or clover or cabbage, but these cost money. Let me add that the only way to make money on a farm is to devise ways of getting along without spending auy. As soou as you begin to spend money, you are lost—the interest on the capital eats up all the profits.

The best and easiest obtained scratching material is leaves. Bag them up dry in November, and every few days dump a fresh bagful in the hen-house.

Lastly, don't throw away the feet, neck, wing tips, gizzards, etc., of the chickens you eat. Cut the toes off the feet, then dip them in boiling water and remove the skin. This material can then be used to make soup or broth.

Further, always separate the cockerels from the pullets. The cockerels will not only do better, hut the pullets won't lay until separated.

Lawn and Garden

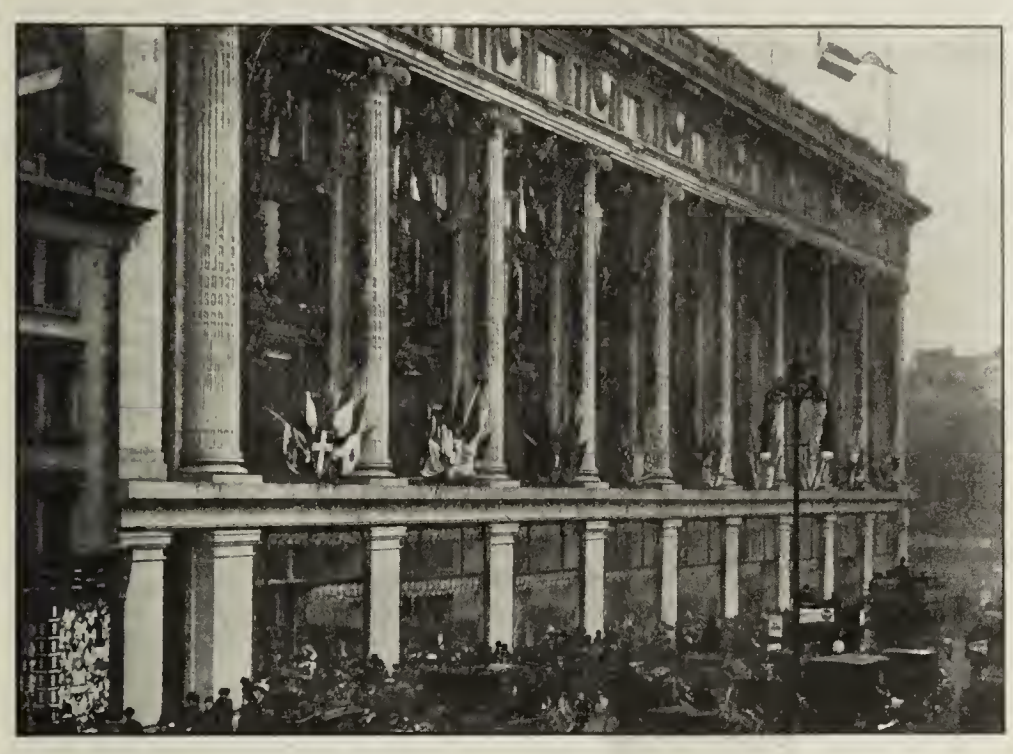
AS TO THE LAWN.—Turf is mainly made or marred in April and October. Grass that has wintered well needs little more in April than stimulation and slight repair. A light top-dressing with a good commercial fertilizer, one fairly rich in ammonia and phosphates, sets the green blades to springing magically. Along with it there may well be a dusting of lawu-grass seed, to thicken and strengthen the turf; grass roots are wise euough always to know where there is room for one more. Small plots and borders, where rolling is impossible, ueed to be beateu down with a flat-headed mallet, or a square of heavy board nailed fast to a stake, as soon as frost is out of the ground. In the beating over, stick a peg by every dandeliou clump or root of pereuuial weed, so they may be cut out. Cutting out is better than pulling. Keep a piece of sod handy and cram a fragment of it into holes left by the knife. Pull up seedling weeds before they reach finger-height. Burn, bury, or compost all manuer of weeds. They are so vital if merely thrown away; they arc likely to root themselves and grow somewhere, producing a further plague of seed.

Washing spring rains are apt to rag and tatter the turf upon sharp slopes, as the faces of terraces, roadside scarps, or the ramps of made earth buttressing a wall. One of the best helps to it in such situations is moneywort, whose creeping stems lie flat on the earth, and whose netted roots go far and bind fast. The stems also hind, as they root along their whole length. The round green leaves are fresh as grass itself, and the thready yellow blossoms not the least bit garish. Well-established moneywort stays for years and years, defying equally storms and storm water. It grows quickly and easily—given half a chance, it will in three months make a mat of green. But with a new bank or terrace sodded, it is well to help it a little, particularly if the bank earth is cold and clayey. Scoop holes in the bank-face, fill them with very rich earth, then plant the moneywort, and pack the sod neatly over it. On a five-foot rise plant two rows of roots, one along the top, the other zigzag a foot below. Moneywort droops so much it will soon reach the bottom.

April, when huds are breaking, is the time to judge understandingly the needs of lawn shrubs. Few of them can be left to grow of themselves. Look at them as part of the picture—if they are too tall, shorten aspiring stalks; if there are stubby, clubby masses that mar the geueral outline, cut them away. Take special note of new shoots and piuch off those coming out in wrong directions, no matter how promising. Likewise coax and encourage weak ones needed to fill in gaps. Boundary shrubberies need to he always taller than the others, not only so as to show what they are, hut to serve as frame for the picture. Every lawn ought to make a picture—haphazard planting too often makes it lnstead a blurred maze. Said Heine: "Womau, woman, much must be forgiven thee! Thou has loved much—and many." The saying applies forcibly to half the folk who plant things—they love much, and so many they seldom get the good of anything.

As to the Garden.—Here one may wisely try for "much and many," since gardening quickly teaches that much and many spell good tilth and good ground. A single square rod well fertilized and well tended will give more and better vegetables than five times its breadth of poor earth ill-tilled. Unless your garden is very rich, fertilize everything in the row or the hill. Mix the fertilizer, whatever its sort, well with the soil in the row-bottom, then sow the seed, cover aud press the earth firmly down. A good way is to walk aloug the sown length, letting the toe of onc foot barely miss the heel of the other, and steppiug on the seed.

Sow secd for successiou ten days apart—a shorter interval will fetch them too near together. String beaus in particular, with growing weather, have an unholy knack of overtakiug their little elders. Green peas have so long a season through early aud late sorts they almost take care of themselves. But with the extra-early buuch peas—Tom Thumbs in catalogue phrase—repeated sowings are hest, as they are bred to mature all at once. Plant sweet corn in succession from the time the ground mellows to the middle or the end of June, depending on the date of frost. Sow lettuce three times between mid-April and mid-May in the open ground to supplement the supply from cold frames. If there is a damp, rich spot available, sow it thickly with cress-seed and cut the tender young plants for salad when they are three inches high.



Set out half a dozen pot-grown tomato plants in deep rich hills, and pinch them hack vigorously after they bloom the third time. Keep them pinched—thus their fruit will be extra fine and extra early. Plants for summer use should he set the first week in May, those for the canning supply and green pickles the first two weeks in Juue. Something, of course, depends on the latitude.

Strawberries plauted from April forward to June and well tilled come to bearing the next season. Pot-grown plants are hest—they grow more certainly; besides, in using them, one seldom overplants. Sandy loam well fertilized is their delight, hut they thrive in any earth that is rich enough and kept clean and light. Set them in very low ridges, two feet apart in the row; keep all runners clipped until well past midsummer. Beds in bearing give much more fruit if they are well watered two or three times a week, especially if the weather is hot and dry. A single good soaking just as the fruit is setting often does wonders. If very early berries are wanted, set planks on edge ahout a corner of the bed in March, and cover the enclosed space with a sheet of cheesecloth stretched taut. It will quicken growth and ripening, but the berries will not be so firm nor so flavorous as those grown in the open.

What the World Is Doing

A Record of Current Events

England on Edge

GERMANY continues to preserve a masterly reticence on the *Dreadnought* scare, while England is undergoing the most acute case of nerves since the Boer War. Old-age pensions, unemployment, and suffragettes alike have been temporarily forgotten in the demand for additional *Dreadnoughts*, immediately to be laid down, in order to meet the rapidly increasing navy of Germany. Men of such diverse mind as A. J. Balfour, Frederic Harrison, and Mr. Asquith unite in urging the immediate construction of the greater navy. The appeal is based on the danger of an invasion of the island unless "our preparations for naval defense are absolutely and beyond suspicion superior to Germany's." Crowded meetings, breathing militant patriotism, are being held in many parts of England; and party lines have been for the moment wiped out in Parliament and throughout the country. The people are enthusiastically declaring themselves ready to meet the severe additional taxation that will be rendered necessary. It is expected that the Irish Party, or the Redmond branch of it at least, will fight the proposed and now imminent change of policy. The official speeches are carefully guarded in stating that the increase of *Dreadnoughts* will make for international peace, but the tone of the people at large is that of almost jubilant excitement.

Eliminating Diphtheria Rash

RECENTLY an unannounced discovery has been made by Dr. Banzhaf of the Laboratory of the Department of Health in New York City that will result in an alteration in diphtheria treatment. The discovery is a notable gain in the elimination of the non-antitoxic substances in diphtheria antitoxic solution. Rashes have been apt to break out on the skin of the diphtheria patient after the antitoxic treatment. This unsightly and painful after-effect has tended to make the treatment unpopular with the ignorant. Dr. Banzhaf heats the diphtheria serum for eighteen hours at a temperature of 57°. As the result, twenty per cent more of the insoluble substances, leading to the patient's breaking out, are eliminated. By a fortunate chance experiment in another direction, Dr. Banzhaf happened on the discovery. He tested it on guinea-pigs, and found that a serious retardation in diphtheria treatment had disappeared. Quietly, by letter and conversation, the news has spread, and the method being adopted in various cities.

Abolishing Seasickness

IS THE roll of the ages about to be abolished? An adaptation of the gyroscope has been made that promises to put a stop to the side-to-side motion of vessels at sea. If perfected it will do away with seasickness and the shipping of heavy seas, and will enable gunners to shoot accurately. Billiard-balls and the noon meal in the salon will behave as on land. The deck will resemble a Middle Western prairie, while waves are foaming impotently over the erect and steady side. Storms will become legendary, and special prayer for those that go down to the sea in ships will be obsolete.

Some of that will be a long time coming. But some of it has already come. The gyroscope is an apparatus which heretofore by means of a mighty flywheel sucks up and fights the motion from side to side of the body to which it is attached. Already, R.M.S. *Lochiel*, plying from Bunessan to Tiree, on the Scotch coast, has diminished her roll from eighteen degrees to about six degrees. She is a vessel of 443 tons displacement, and her gyroscope weighs seven tons. She is close to being stable, even in a severe storm; and in certain ports, riding at anchor, she is used as a dock to which the little lighters, dancing on the waves, tie up, and from which live stock may be safely landed.

Such a gyroscope as successfully operates on the *Lochiel* is being installed on a Hamburg-American coastwise liner at a cost of about $37,500.

A distant relative of Admiral Sperry's, an electrical experimenter of high professional standing, Elmer A. Sperry, has turned from the European "passive" gyroscope and theorized along new lines. His invention is being installed on a model of one of the new battleships. The Navy Department is cooperating with him in his experiments. His is the "active" gyroscope, and therein differs from all former adaptations of the flywheel and rotary idea. His instrument is able to impart control impulses in any given direction in rapid succession. The swing of the European gyroscope is that obtained from the comparatively small angle of motion of the ship itself. The Sperry gyroscope gains a full angle swing, as it functions independently of the motion of the ship. More simply stated, the ship must rock to make the European gyroscope operate. In the Sperry gyroscope, external power for developing control is largely derived from the oscillating parts of the machine itself. It develops more powerful impulses with which to fight the rolling ship, and it is far lighter in weight than the European model. It makes up in activity what is lost in weight.

If this instrument shall indeed hold a vessel on a steady keel, ocean travel will lose many of its insecurities.

Mr. Bryce at the Golden Gate

JAMES BRYCE, Ambassador of Great Britain to the United States, has been gladdening California with a friendly visit of sightseeing and university lectures. With a wisdom too tardily learned in a lusty and hospitable democracy, the "Argonaut" pleaded that he should not be overwhelmed in a genial hurricane of banquets and receptions. How well the point is taken will be appreciated by those who remember the wan and weary Prince Henry of Germany when he emerged from his tour of peace and good-will through our borders. And more recently, grateful and fatigued the Italian historian, Ferrero, mourned that he could not come to us in disguise instead of being a public character on tap for all associations and committees to drain of epigrammatic impressions. Mr. Bryce's thought, like that of Mr. Harriman, is busying itself with good government. To the Commonwealth Club of San Francisco, Mr. Bryce said:

"There are three principles which in all efforts at reform should be borne in mind. First, politics is an experimental science. Let us approach it with scientific methods, and make it as exact as we can. Second, patience. How many experiments are there not made in the physical sciences in order to establish some great scientific truth. There must be equally great patience in political science. Third, we have got to combine two things in our progress toward civic reform, viz., a rigorous punishment of wrong-doers and an infinite charity toward those who merely differ with us in opinion. The reformer ought to be charitable and a profound student of human character. He must have zeal for the good of the city, irrespective of political party."

Coto and the Missionary

HERE is a little unpublished episode which the Pure Food and Drug crusade has unearthed. It deals with the drug Coto. Coto is efficacious in the treatment of dysentery; and has been of proved success in the last stages of the disease. Its leaf and fruit are of the European laurel family. For three years stuff labeled Coto has poured into this country, and sick men have fed themselves on it, but without working a cure. Four kinds of innocuous but unavailing substitutes have been doing duty where once the genuine bark did its work. There may be plenty of Coto where the true stuff first came from. But there is no one now to marshal the savages and send them out to gather it, and then to ship it to northern markets.

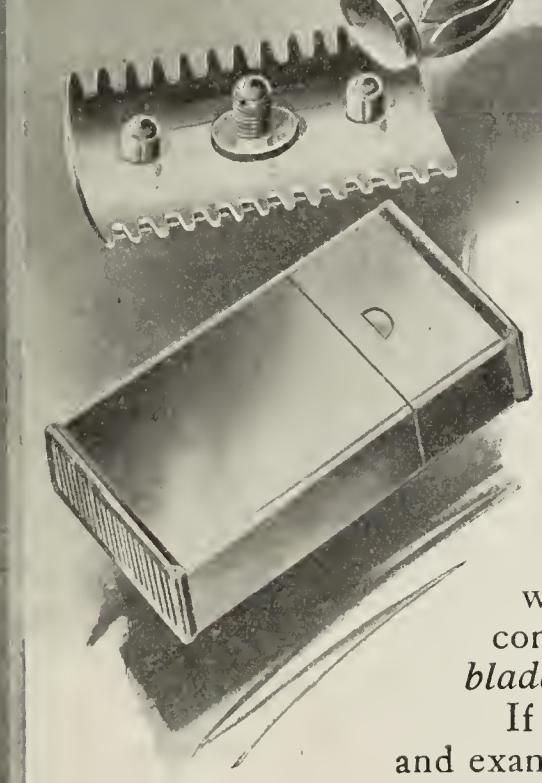
For several years after this century began a Roman Catholic Spanish missionary labored with the natives in a village of Bolivia seven hundred miles east from the coast-line, on the other side of the Andes. He taught them, showed them how to work and dress and till the soil, and in particular how to gather and market the bark of the tree that cured them when they fell ill with the disease which ravages tropical countries with the fury of typhoid in the temperate zones. But savages are whimsical, and in their lighter vein are apt to eliminate their benefactors. One day, growing tired of the higher life, they murdered the missionary. That is what has happened to the shipment of Coto. The supply waits for the missionary or trader who will reestablish the lines of communication.

In the Air

IT COSTS money to fly. The wife of Dr. Alexander Graham Bell has spent thirty thousand dollars in his Aerial Experiment Association during the last eighteen months. At Hammondsport, New York, and at Baddeck, Nova Scotia, Dr. Bell and his colleagues have experimented with tetrahedral kites and aeroplanes, achieving a recent flight of twenty miles with their "Silver Dart." Dr. Bell will continue his experimentation. Some of his associates plan to make a business of flying.

Count Zeppelin added to his already rich stock of perilous experiences by an attempted trip on April 1 from Friedrichshafen to Munich and return in his dirigible balloon. He was eleven hours in the air, and during the last four hours he drifted at the will of a high wind. The airship, drifting to leeward, was followed on the earth beneath by soldiers in motor-cars and squadrons of cavalry to give first aid if needed. The Count outdistanced them, though at one point in his adventure he dropped a note of thanks to the commander of the cavalry. He finally grounded in a thirty-five-mile-an-hour wind on a marshy tract forty-eight miles northeast of Munich. The experience tended to prove that the dirigible balloon responds to a certain amount of control even in a gale.

At the very time when the Hammondsport experimenters were winding up their accounts, and Count Zeppelin was plowing through a snowstorm in the upper regions, an Archbishop of Paris was pronouncing a solemn benediction on the aerodrome and the Voisin aeroplanes at Juvisy, France.



The Vanishing Saloon

"RUM" is still on the run. Whatever novelty of appeal the anti-saloon crusade may have lost, the map of the United States continues to change from wet to dry in expanding areas, much as the map of Africa in our boyhood changed color under the exploring feet of Stanley. Three counties of Indiana voted dry in the election of March 30, thereby abolishing seventy-three saloons. The election was dramatically conducted in Vermilion County, where there was a large foreign vote of mine-workers. Twenty-five automobiles from Terre Haute invaded the county in the service of the liquor interests. Opposed to this display were sunrise prayer-meetings and free hot luncheons. The "drys" won by 332 votes. One day later, Henry County went "dry" by 2,816 votes.

Death to the Plant Louse

A SPRAY has been discovered that will surely kill that innumerable and ubiquitous pest of Aphids (Plant Lice). George E. Tallmadge, a scientist out in Madison, New Jersey, compounded the discovery, which is named "Aphine." Tallmadge used to be an orchid collector in South America, and he has always interested himself in the problems and tragedies of plant life. His spray looks like hard cider, and he runs it through a still all night. It costs $1.50 a gallon, and is mixed one gallon to forty gallons of water. Essential oils are used in its make-up, and these are imported and therefore expensive. Tallmadge has nearly fallen into the hands of the Philistines in several episodes. A shyster lawyer, who saw the death-dealing possibilities of "Aphine," seized fourteen barrels of it and tried to force various park departments to take it at a price of $300 a barrel of fifty gallons. Now six dollars a gallon is too costly for any public utility, however deadly. This same lawyer wanted to flood the market with the stuff and guarantee its killing anything up to undesirable cats. But Tallmadge finally shook loose from the crook, and in a very humble way has been distilling and selling the poison

Gillette Safety Razor

New Pocket Edition

HERE is news indeed—for the two million men who shave themselves every morning with the Gillette Safety Razor.

Our first announcement of the latest GILLETTE achievement—*the New Pocket Edition*—the GILLETTE Safety Razor in such compact form that it can be carried like a card case in the waistcoat pocket, or slipped into the side of a traveling bag. Same size blade as before, same principle; but neater, more workmanlike, the most perfect shaving implement in the world—as compact and as beautifully finished as a piece of jewelry—*and the blades are fine.*

If you are a GILLETTE user call on some progressive dealer at once and examine this new razor.

If you have never used the GILLETTE now is the time to get acquainted. You can shave yourself in from two to five minutes with the GILLETTE—a clean, satisfying shave. *No stropping, no honing.*

The pocket-case is of gold, silver or gun metal. Plain polished or richly engraved in floral and Empire designs. Inside the pocket-case are *handle* and *blade box*—triple silver-plated or 14K. gold-plated. Prices, $5 to $7.50, on sale everywhere.

You should know GILLETTE Shaving Brush—a new brush of GILLETTE quality—bristles gripped in hard rubber; and GILLETTE Shaving Stick—a shaving soap worthy of the GILLETTE Safety Razor.

ROYAL POULTRY FARM, Dept. 199, Des Moines, Iowa

from his own home. If he will keep his hands on the patents, fight shy of partners, make the stuff pure, and shun adulteration as he would the devil, he has a life work ahead of him that will be blessed to husbandmen and housewives everywhere, and that will turn back to him a cozy income. There are plenty of insect destroyers for "chewing insects." It is the problem of "sucking insects" that has been difficult. They must be killed by contact. "Aphine," when sprayed, liberates a gas that kills the lice. And this without injuring tender plants or delicate foliage. It answers summarily for some hundreds of varieties of soft-bodied insects, ranging in color from nearly white to a brilliant red. Many plants have their own special variety of pest. There is the hop-louse, for instance. In the South, the pea-louse will sometimes destroy the entire crop. Melons and gourds, greenhouse and garden plants, vegetables, flowers, all table plants (where the leaves are not directly eaten), apple trees, peach trees, and many other varieties of fruit trees—all have been in need of relief from plant lice. The old methods of fighting with tobacco smoke, pumpkin fumigation, and kerosene spray had objections and limitations. Every section of our country has some variety of malicious louse. "Aphine" has a future as wide and long as the United States.

Admiral Cervera

ELEVEN years after the destruction of the Spanish fleet at Santiago de Cuba, Rear-Admiral Cervera died at Puerto Real, Spain, on April 3. Scarcely any other single influence did so much to soften the acerbities of the Spanish-American War as his winning personality, brave under absurd odds, and courteous to his captors, who had wrecked his fleet and career. He was seventy years old when he died.

From earliest youth he had been well known to his countrymen, being the son of a wealthy wine merchant. He saw naval service in Morocco, Cochin-China, and the Philippines, was naval attaché to the Spanish Legation at Washington, and served actively against Chile and Peru. He was steadily promoted with the years, and at the outbreak of the Spanish-American War was put in command of four armored cruisers and two torpedo-boat destroyers, and ordered to Cuba. He entered the harbor of Santiago. Admiral Schley and Admiral Sampson blockaded his fleet, and Lieutenant Richmond Pearson Hobson sunk the *Merrimac* in the unsuccessful attempt to seal the harbor. Admiral Cervera relieved the anxiety of the entire nation by sending swift word of the safety of Lieutenant Hobson and his men. A little later, the Spanish fleet attempted to sally out and dodge past the American battleships. The Spanish fleet was destroyed, and Admiral Cervera made prisoner. He was court-martialed, but the publication of his correspondence with the Spanish Government showed that he had foreseen every item of the disaster and had warned his superiors against making the campaign which his loyalty and gallantry afterward drove him to carry through with as much dash and success as his vastly inferior armament permitted.

A Spanish Conquest of America

WITH the popularity of a comic opera, the two Spanish exhibitions of paintings by Sorolla and Zuloaga won New York, and will achieve a like success in the other cities of their sojourn. Also, they revealed that New York has a little gem of a building in the Museum of the Hispanic Society of America, tucked away in the extreme northwest corner of Manhattan Island. The Zuloaga exhibition was held from March 21 to April 11, and showed forty-two canvases of dwarfs, dancers, bull-fighters, sorcerers, smiling girls, boulevardiers—the "knowing" types of a vivacious, nervous external world. With a keen instinct for contrast, the museum trustees thus set off in high relief the blither paintings of Sorolla which had preceded the Zuloaga exhibition. The two exhibitions have shown how responsive is a great American city to an enlightened method of spending leisure time on a Sunday. There were crowds of spectators on all the Saturdays and Sundays of both exhibitions. The Sorolla paintings were seen by 150,000 persons, of every nationality and social grade. And the spectacle of a crowd, even in its dimensions a mob, of human beings on culture bent was prophetic of what the American community may become. Perhaps we shall be nearer than we dream to solving the Sunday saloon troubles of our larger cities when, like Mr. Archer Huntington and his colleagues, we provide democratic means of entertainment that are innocent and appealing.

Alone in Accuracy

There is just one speed indicator—The Warner Auto-Meter—which is so sensitive—so supremely accurate that it correctly registers the speed of an Automobile when *pushed by hand* on the garage floor, and every variation of speed up to 100 miles per hour.

All other indicators fail to register *any speed whatever* under 5 to 10 miles per hour. After a few months' use, wear of delicate cams multiplied dozens of times through the indicating hand, renders them so grossly inaccurate that they are worse than useless. The cheapest alarm clock is a marvel of accuracy by comparison.

Difference in principles is responsible for this difference in results. There are but two principles adapted for speed indication — Magnetic induction and Centrifugal.

The Warner Auto-Meter alone is made on the Magnetic induction principle, the only principle which permits of absolute accuracy and almost everlasting durability in the same instrument.

THE WARNER
AUTO-METER

Guaranteed Absolutely Accurate

The Auto-Meter is so sensitive that it registers the *slightest forward movement of the car*. The speed dial is *always steady and readable*. Speed alone moves it. It is so durably built that practical tests have shown that the Auto-Meter will endure a MILLION MILES of the roughest kind of jolting without showing appreciable wear, and still accurately register speed within *10 feet to the mile*.

* * * *

The Auto-Meter is built like an expensive Chronometer. It has but two moving parts. These revolve. There is no sliding friction. The bearings are sapphire jewels and imported Hoffman Balls. Every part must test accurately to 1-1000 of an inch or it is thrown out. Such bearings will practically last a lifetime without wear.

The Auto-Meter, because made on the only correct principle, is *unvaryingly accurate* year in and year out and so durable that it will *outlast a dozen cars*.

No centrifugal instrument—though the price may be the same—can be considered in the same class, any more than a $1 watch can be classed with a $200 Chronometer.

* * * *

We want every automobile owner to know the comparative tests which will enable him to prove the truth of every claim we have made. We have put these in a book which will be sent for the asking to anyone who writes. In your own interest buy no speed indicator of any kind until you know. To buy the wrong instrument is to waste your money.

Your Spring Suit

One of our 40 New Spring Models

Right now is the proper time to order your new Spring clothes. The green grass, the budding trees, the babbling brook, the balmy air, are all suggestive of a change from the somber and heavy attire of winter. To secure "timely" clothes have them made to your individual measure through

Strauss Brothers'
National Tailoring Service

(5,000 local representatives and branch stores throughout the United States)

In ordering from us you gain all the advantages of individual service to your exact requirements. At the same time you benefit financially from our modern methods of producing tailoring on a large scale. Note our low prices:

Guaranteed Suits or Overcoats

To Order at $20 to $40

We have an established dealer in nearly every town and city of the United States. Call on him and ask to see our great line of almost 500 newest Spring fabrics. He will also show you our album of semi-life size fashion plates. You'll find it pleasant and easy to make a satisfactory selection, and then our dealer will skillfully measure you. In about a week's time you will receive the splendidly finished, perfect fitting clothes, conforming in the minutest detail to your personal requirements.

Drop us a postal for our new fashion magazine No. 14 entitled Spring Thoughts. It tells you all about the season's correct attire and shows reproductions in the natural colors of many new and beautiful weaves.

YOU CAN SHOOT THE NEW

10 Shots Quick

SAVAGE

10 Shots Quick

.32 Caliber Automatic Pistol

QUICK, QUICK AS LIGHTNING

quicker and straighter with either hand than any other pocket arm you ever saw. No time need be wasted taking aim; you point it straight instinctively, just as you do your finger, because it fits the hand naturally and balances perfectly. The Savage will get in the first shot every time.

And you can follow up that vital first shot with 120 shots a minute. You have ten shots instead of five or six, and can reload in a flash. Can be carried anywhere—only 6½ inches long.

SPECIAL FEATURES WHICH WILL APPEAL TO YOU:

Ten Shots: Double the number in an ordinary revolver and two more than other automatics. *Accuracy:* The only automatic which locks at the breech while the bullet traverses the barrel, insuring extreme accuracy, as well as freedom from fouling. *Simplicity:* Fewer parts than any other automatic pistol. Completely dismounts by hand without the aid of tools. *Safety:* Breech automatically locked during time of discharge. Cannot be fired unless the trigger is pulled. Safety positively locks it against discharge. *Weight:* 19 oz., including magazine. *Price* $15. No wide-awake dealer will offer you a clumsy, old-fashioned, slow-as-molasses substitute. If he does, write us. Write us anyhow for descriptive pamphlet.

SAVAGE ARMS CO., 824 Savage Avenue, UTICA, N. Y.

When the Hon. Theodore Roosevelt set about the selection of his personal equipment for his African expedition it developed that our 456 page catalog was the final authority on what he should take with him, because we were assisted in the preparation of this volume by the big Nimrods who have repeatedly journeyed and hunted over just the spots which he will visit. We furnished Mr. Roosevelt with his complete personal equipment because we carry and our catalog shows exactly the best thing for the purpose, each purpose, every purpose, and because these things could not be secured or even found about elsewhere.

Are you an Out-of-Door Man? A Hunter, a Fisherman, a Motorist, a Camper, a Canoeist? If so you *need* our 456 page volume and *nothing* can take its place. The acknowledged leaders of YOUR chosen sport have contributed their personal experiences to its pages. It is an expensive book, a large book—its pages larger than this advertisement. It is full from cover to cover of just the sort of information YOU want, but have never been able to get—and which you CAN'T get elsewhere. No matter which of the sports you follow—our book places before you the personal experience of the leaders of that sport which shows you where to go, what to take—what to wear—and what to avoid, what *not* to take—what *not* to do.

We are just a big clearing-house of intimate and exclusive information for Sportsmen. The big explorers, hunters, fishermen, seekers of strange places are our friends as we want you to be. They constantly exchange information with us and that is why we are VALUABLE and why our catalog is NECESSARY to YOU. It gives you what you WANT and what you *can't get* elsewhere.

For instance the Tanalite tent which we furnished Mr Roosevelt can be pitched in a swamp with water inches deep around its sides and never a drop get through its floor or over its door sill. It is waterproof and windproof—yet cool—the ONLY tent which SAFEGUARDS health in jungle country.

Hundreds of pages of this volume are filled with exclusive accessories like this—specialties you NEED for your chosen sport but don't know you need because you CAN'T find out about them elsewhere—specialties which will double the fun you'll have next time—safeguard you against accident, make you twice as comfortable—make possible sport which you COULDN'T have without them. You will treasure our catalog as long as you live. It is costly to us and very, very valuable to you and we want you to have it FREE and to have it NOW. Cut out the coupon to-day and mail to us. It will bring you thousands of dollars worth of enjoyment and value.

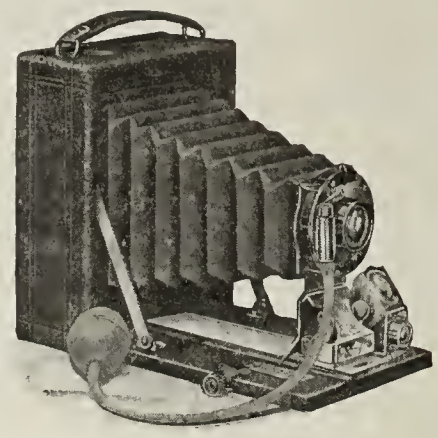
Snapping Africa's Big Game

(*Continued from page 13*)



The picture of that big beast is one that I shall never forget; not alone on account of the animal himself, but of the whole setting, for the valley below was literally covered with game. At one time we could see, besides droves of the commoner antelope, oryxes, elands, zebras, ostriches, and the giraffe; and surmounting the whole scene was the beautiful snow-capped mountain Kilima-Njaro, eighty miles away, its summit dazzlingly white in the clear upper air, while its base was completely lost in the haze of distance. Unfortunately, in hot countries one can not photograph objects over two or three hundred yards away, except under unusual conditions, owing to the shimmering of the heated atmosphere near the earth. It was too bad to miss such a wonderful picture.

A couple of days later, while we were on the lookout for game to photograph, we saw, about a third of a mile ahead of us, a pair of rhinoceroses, one a bull with a pretty good horn. The wind was favorable, so we started for them. We hadn't gone very far when my camera-bearer called out: "Kifaro, Kifaro!" and, to our surprise, we saw another rhinoceros nearly down-wind of us and not two hundred yards away. It was certainly fortunate that we had seen him, for had we gone but a very little farther he would undoubtedly have had our wind, and would probably have come for us. In this case we would have been in a nice predicament, with rhinoceroses on both sides of us. It might have been rather too exciting. We carefully stalked the newly-found one, and at about one hundred yards I made a couple of telephoto exposures as he stood near a bush with the tick-birds sitting on his back. Before we had proceeded more than a few steps we were much surprised to see him settle down for a nap.

Here, then, was a most excellent chance for some close work, so with the utmost caution C—— and I crept ahead, until we were within thirty yards of the sleeping animal. I focused the camera carefully and C—— held his 450 ready, and then we wondered what would happen next. To say that my heart was beating violently scarcely expresses it, but I held on to the camera and wished devoutly that our friend would bestir himself. Suddenly it seemed to dawn on him that something was wrong, and as I watched through the focusing hood of the camera I heard a loud snort and saw him rise with wonderful speed, and then, without hesitating a second, down he came on us. Yes, I pressed the button, but that is all I can remember doing before, with a loud report, the rifle spoke and the rhinoceros turned and made off. We measured the distance to where the shot had been fired and found it was exactly fifteen yards, and it must be allowed that fifteen yards is pretty close range. We rested up a short while, and then, as the other rhinoceroses were working away from us, we hurried after them. I was anxious to get a photograph of them against the skyline as they reached the hill-top, and so kept within comfortable distance for telephoto work, about one hundred and twenty yards. Suddenly, without any warning, they turned round and faced us, the big bull looking very fine, with his big horn showing clearly against the sky. From his manner we judged that trouble in rhinoceros form was coming our way, and it came, surely enough. The two big creatures thundered down the hillside, with tails erect and heads well lowered. C—— fired at the cow, which was clear of any intervening brush, while I tried to make some photographs. I did not like the looks of things when that cow continued in our direction after receiving the shot, and I was sorely tempted to abandon the camera and reach for a more useful weapon of defense. But a picture was what I wanted, and so I changed plates as quickly as possible, and without entirely realizing that the telephoto was in the camera (and it's very difficult to focus such a lens quickly) I pressed the button just before C—— fired the left barrel at the big bull. Fortunately, the shot was well placed, directly in the center of the forehead, and the huge beast dropped stone dead, exactly eleven yards away from where we stood. The cow had turned in the mean time, so no more shooting was necessary.

All the excitement of other hunts seemed as nothing to what we had just gone through. We were literally shaking from the strain, and as we gazed at the dead monster before us we could not but wish that the fatal bullet had not been neces-

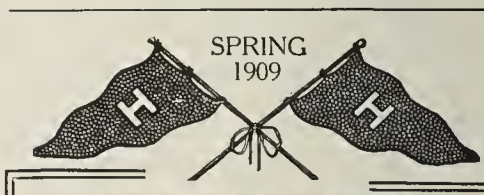
A New Camera For 3¼ x 5½ Pictures

Pocket Premo C

As light and compact as an exclusively film camera; yet taking films or plates with equal facility—combining ground glass focusing with every film convenience—and furnished at the modest price of fifteen dollars.

It has a rack and pinion attachment for easy focusing, a splendid lens and improved automatic shutter for time, bulb and instantaneous exposures.

As a film camera, it loads in daylight with 3¼ x 5½ Premo Film Pack and permits the removal of one or more exposures at any time, for development by tray or in the Premo Film Pack Tank.



Pocket Premo C is also furnished with all these advantages in the 3¼ x 4¼ size for $12.00.

Catalogue of these and fifty other styles and sizes of Premos at the dealer's, or write us to send it to you, postage free.

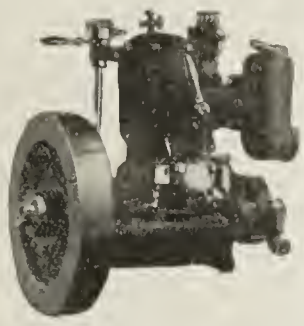
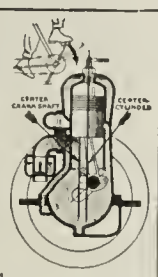
Copyrighted 1908



A. STEIN & CO., 160 Center Ave., Chicago

HEN Mr. S. A. Griffen of Suva, Fiji Islands, makes the remarkable statement—

"My 25 ft. boat with a 5½ H. P. Ferro engine won second prize in the races here, over 6, 7, and 8 H. P. engines, and was only defeated by a much larger powered boat. There were 13 starters, and it was a great pleasure to "trim the bunch." The natives here have no trouble whatever with Ferro engines. No other engine, and we have a host of them, approaches the Ferro in simplicity and good results in operation." he is repeating the praise of thousands of Ferro owners in America. The 15,000 Ferros in use are the result of the *mechanical perfection* of the engine. You will be enthusiastic if you run a Ferro.



FERRO
Marine Engines

Made in 1, 2 & 3 cylinders from 3 to 25 H. P.
Jump Spark Ignition.
1 & 2 cylinders, 4 to 15 H. P. Make & Break Ignition.
Just the engine for any boat for work or pleasure.

Attractive Prices—Best Quality.

Offset Cylinder—

An improvement found in the highest priced automobile motors and Ferro engines. Force of explosion exerts all turning force on Crankshaft. Gives greater power efficiency, reduces and equalizes side thrusts of piston on cylinder walls. Eliminates "knock" which loosens parts.

Ferro Engine Embodies Most Advanced Improvements

Counter Balanced Crankshaft.
Successful Cooling System for any climate.
Positive Pressure Oiling System.
Efficient Ignition—Jump Spark & Make & Break.
Accessibility of Working Parts.
All Parts Interchangeable.
And others too lengthy to mention.

SPECIAL—5000 3 H.P. FERROS AT $60 EACH. Good as money can build. All improvements of standard Ferros, quantity brings down the price. Just the thing for launch, canoe, dingey or auxilary yacht.

Leading Boat Builders use Ferro engines. They must be good. Ask any of the following: W. H. Mullins Co., Salem, O. Outing Boat Co., Kankakee, Ill. Cleveland Auto Boat Co., Cleveland, O. Memphis Boat Co., Memphis, Tenn. Pope Boat Co., Fond du Lac, Wis. Rippley Hdw. Co., Grafton, Ill. Inland Lakes Boat Co., Lake Geneva, Wis. W. J. Hand, New Bedford, Mass. Niagara Boat Co., N. A Promise to Pay

WOULD you accept a stranger's note? No. Then why accept from a stranger any other promise to pay? A Fire insurance policy is such a promise. Ought you to accept it without knowing all about the Company? Your usual business confidence is based on knowledge. Why make an exception in that part of your business which deals with insurance? A name is worth nothing on any kind of a promise to pay unless it is backed by character and resources.

The Hartford Fire Insurance Company favors insurance knowledge, particularly about itself. Its promise to pay has never gone to protest. Its obligations to its policy holders are backed with such a good reputation and such ample financial resources that the more you know about it the more you will want protection by its policies.

It has published a book "Fire Prevention and Fire Insurance" which contains in separate chapters valuable information for Householders, Merchants and Manufacturers. It ought to be in the hands of every property owner in America. It may save you thousands of dollars. It is free. Send for it.

HARTFORD FIRE INSURANCE CO.

The New Idle Hour Picture Puzzles

Stand for PERFECTION in PUZZLE-MAKING

P. F. Collier & Son announce the publication of a line of Picture Puzzles which include such **famous artists** and **famous pictures** as Maxfield Parrish's **Old King Cole** and Arabian Nights series; Frederic Remington's Far West Paintings, and Jessie Willcox Smith's Modern Fairy Tales. ***Subjects have been selected for their extreme brilliancy of color and their special adaptation to puzzle-making.***

Scroll Cut Animal Pieces

Every Collier puzzle will contain pieces cut in the shape of animals and various unique devices which add human interest as well as intricacy. The number of animals and devices will vary according to the size of the puzzle, but every puzzle bearing the Collier imprint **will contain not less than four such devices.**

A Puzzle Box that Sells the Puzzle

Particular attention has been given to the Collier puzzle box and it will be recognized everywhere for its appearance of quality. The box is square in shape (no matter what the size) and of a uniform depth. This feature will be appreciated by the dealer who wants to display the puzzles in his window or in the show-case.

If your dealer cannot supply you with Idle Hour Picture Puzzles send direct to us for Catalogue of 60 different subjects, sizes and prices.

Print and Calendar Dept., P. F. COLLIER & SON, 416 W. Thirteenth Street, New York City

The Deviltry in Oil Makes Floor Finishes Brittle

We experimented for 39 years before we found the way to make a perfect floor finish.

We learned, that by a secret process of ageing our oils, we could make a varnish which would dry *elastic*—instead of drying *brittle*.

We Age Our Oils

By overcoming the "deviltry" there is in oils, we perfected a varnish elastic enough and tough enough for floors.

The product of these years of experiment is known as *Elastica*.

Don't judge *Elastica* by the common varnishes you have seen on floors.

It will not scratch and mar under heavy heels and castors, as common varnishes do.

Elastica bends and gives and stretches. It does not turn white where water is spilled on it.

Elastica is a permanent floor finish, once on it needs no care, no attention.

Think of that, you who are the slaves of wax and wax preparations and common varnishes.

Think of that, you who know the constant bother, the endless refinishing which wax and common varnishes entail.

Elastica is now sold by dealers everywhere. But to learn more about this wonderful new varnish, send for our free book, **The Right and Wrong Finish for Floors.**

Get this Free Book

This book tells, too, about the application of other kinds of floor finishes—and the right treatment for each kind of floor.

Simply say "send on your book." Address, Dept. 4, 29 Broadway, New York, 2620 Armour Ave., Chicago, or International Varnish Co., Ltd., Toronto, Can.

Elastica Floor Finish

Elastica Floor Finish is made only by the

---

sary. It had, however, been simply a matter of choice between his life and ours, so that it was best that it had ended as it had.

The next day our experience was repeated with a pair of rhinoceroses, an old cow and a calf. They charged unexpectedly, and came so dangerously near that it became necessary once more to save our lives at the cost of the older animal. After that we seldom tried any further encounters with rhinoceroses, as to go anywhere near them seemed to result in being charged. We remained in the neighborhood for another eight days, devoting the time to smaller game. We found the antelope extremely wild, and it was only with the greatest difficulty that I was able to get any photographs at all. Those I did get had to be made with the telephoto lens in nearly every case.

Seeing that I should not be able to do very much with the animals of the Olgerei region, I decided to return to Nairobi, and arrange to start up-country to the Mt. Kenia country. We broke camp on the morning of the 19th and started for Kin, going by a direct route, so that we could make the trip in one day.

We were marching along, single file, the Masai leading and the porters bringing up the rear. Suddenly, as we walked into a patch of high grass, the tall Masai stopped, and, pointing ahead, whispered: "Kifarn!" Sure enough the gray back of a large rhinoceros showed above the waving grass not more than twenty yards away—directly in our path. This was rather too sudden, and we quickly realized the value of rapid action. The loading of the rifles and the opening of the camera took but a few seconds, but we were ready none too soon. The porters had scarcely gone back a few yards, and I had gone a little to one side, that I might get a better view of the beast in case he charged (unless he charged me first!), when that rhinoceros was up and at us. Never did I see anything so quick. It seemed incredible that so large an animal could move with such rapidity. I focused on him as he rushed toward C—— and the Masai and the two thoroughly scared boys who were just back of them. Almost unconsciously I released the shutter when, at the same moment, a shot rang out. C—— was trying to turn that animal with a charge of buckshot. The attempt, however, was futile, and the creature came on without even hesitating. C——, realizing that the shot had failed, fired a 12-bore ball from the left barrel, and then, grabbing his revolver, began firing right into its head as it rushed past him not six feet away, making straight for the Masai, who stood quietly waiting the onrush, and actually jumped aside when within touching distance of the big horn. Having missed the Masai, it next turned toward me just as I was endeavoring to put a second plate in position so that I might get a picture of the actual encounter. In my hurry I did not put the plate-holder all the way in, as I afterward found to my disappointment. But just for the moment I had other things with which to occupy my mind, and the camera became less important than the angry beast, when to my relief the Masai, with wonderful coolness, drove his spear into the side of the rhinoceros; that turned him toward C——, who quickly put another revolver shot into its head, and that decided the very much confused animal to leave us alone, and off he went, heading almost directly toward the very much frightened caravan. The wretched porters, seeing the imminent possibility of trouble, dropped their loads and ignominiously bolted. The Masai chased the retreating animal so closely that when it once turned toward the porters it saw an enemy within a few yards, armed with a long, sharp knife; that was too much for the rhinoceros, and he thought it better to continue his course.

The Masai soon returned, and picking up his spear, which had fallen from the animal, found that it was badly bent.

No sooner had we started the caravan than we discovered another rhinoceros about four hundred yards away. When I spoke of trying to stalk and photograph it, the expression on the men's faces was truly ludicrous. They had had enough of rhinoceroses for one day and were ready to chuck their loads on the smallest provocation. As we had a long march before us, I gave up the idea of tackling any more "side-shows" for the day. We reached camp late that afternoon, tired and hot, and glad enough to get a good bath and something to eat. Then we talked over the doings of the day and decided that we had had all the rhinoceroses we wanted for some time.

MOTHERS, BE CAUTIOUS

In selecting a food for the baby don't experiment. Baby can't stand much experimenting. Borden's Eagle Brand Condensed Milk is acted upon by the infant stomach substantially the same as mother's milk. In the World's Workshop

Devoted to Facts, Observations, and Thoughts Concerning Common Industrial Methods, Products, and Influences

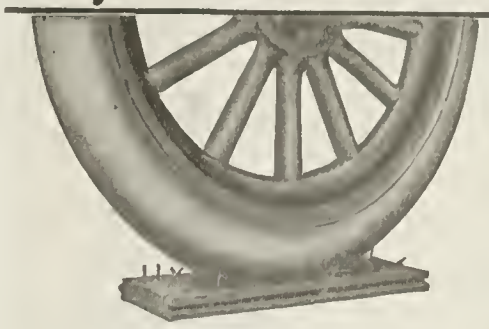
By WALDO P. WARREN

THE SELLING PROBLEM

THE big problem of economic development is to reduce the cost of selling goods. In many instances the cost of selling greatly exceeds that of manufacture. If selling costs could be reduced to as scientific a basis as manufacturing, the purchaser's dollar would almost do double duty. Competition in the future will doubtless gravitate largely toward the problem of economies in selling. Two important factors will have a conspicuous part in this development—advertising and distribution. The day wanes in which these two departments of business are conceived separately. The new conception of sales promotion is to include advertising and distribution in one plan and make each serve the other. Whatever tends to eliminate waste in advertising or distribution brings the necessities and luxuries of life closer to the consumer. Fortunately for the people, the world is so arranged that the rewards go to those who can eliminate the waste and reach the market on the most economical basis. The people aid this work in their own behalf in the proportion that they respond to advertising, "getting up when they are first called." This effect is secured in proportion as experience demonstrates the trustworthiness of advertising, and begets confidence in the fact that, in legitimate fields, it is the thing that can best serve the public that can best afford to be advertised. The elimination of such forms of advertising as impair confidence in other advertising is also a potent means of increasing the response, and thus of reducing the selling cost. A further indispensable factor in this development will be the intensifying of periodical circulation, the elimination of non-buyers in a given class from the estimates of circulation available for any given advertiser. The chief direction of growth, in sales promotion, will, therefore, be in the elimination of uncertainties, guesswork, and bunko, and the reduction of distribution, to a fine art.

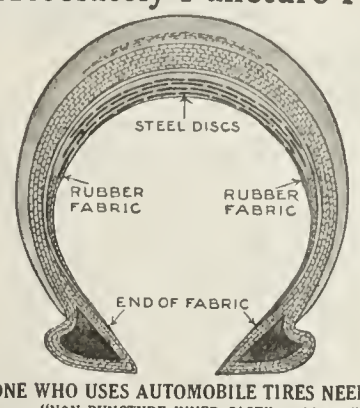
THE TELEPHONE

THE telephone, touching as it does every phase of active business life, is at once the most vital and the least conspicuous of the externals of business intercourse. A few of the uncommon aspects of the telephone, such as do not appear on the surface, and which are known only from unpublished records compiled by the American Telephone and Telegraph Company, will be of interest.



The cost of long-distance telephoning, as compared with telegraphing, is due, among other things, to the fact that when a man is using a long-distance telephone he has the exclusive use of a very large amount of property. In talking from Boston to Omaha the proportion of the line and apparatus at the sole disposal of the user is worth about $400,000. The weight of copper wire for a talking circuit between these points is 1,131,000 pounds, or 565½ tons.

The beginning of long-distance telephoning dates from the construction of the line from New York to Chicago which was opened in 1892. It was purely a pioneer enterprise, as there was at that time no public demand to warrant such an investment. In fact, anticipating public demand, and trusting to the usefulness of the telephone to demonstrate its worth to the public, is a constant feature with telephone expansion, whether for local or long-distance service.



The earliest record for toll and long-distance connections is for the year 1888, when the number reached 2,636,000. At that time the longest line was only a few hundred miles. In 1891 the number had grown to 11,000,000. Since that date the number of recorded connections by years, in round millions, is as follows:

1892, 13,000,000; 1893, 11,000,000; 1894, 12,000,000; 1895, 16,000,000; 1896, 20,000,000; 1897, 24,000,000; 1898, 30,000,000; 1899, 42,000,000; 1900, 47,000,000; 1901, 60,000,000; 1902, 77,000,000; 1903,

Why Have Punctures?

ATLAS NON-PUNCTURE INNER CASES are Absolutely Puncture Proof

EVERYONE WHO USES AUTOMOBILE TIRES NEEDS HELP
We offer in our "NON-PUNCTURE INNER CASE" positive relief from all punctures, and in addition reinforce the whole fabric structure of the Tire

BUFFALO, N. Y., March 11th, 1909.
ATLAS RUBBER CO., Buffalo, N. Y.
GENTLEMEN:—I beg to state I have used your Inner Cases on a heavy Pierce Limousine weighing 3800 pounds, tires 34 x 5, covering a distance of 12,450 miles without a puncture. I have at different times taken a great many nails out of the tire, once having taken a large spike out of the rear case which had penetrated the shoe, and when it struck the Inner Case it was turned and went around the Inner Case and clinched in the shoe. The car was run about 45 miles with the tire in this condition until the head of the spike was worn to a polish. The spike was so clinched in the shoe that same was badly torn in removing the spike. I consider these Inner Cases absolutely puncture-proof and in addition they greatly increase the life of the tires. From the service I have secured from the set I used during the past season, I consider them one of the best articles on the market for the elimination of tire troubles, and can thoroughly recommend them to anyone who wishes to be relieved of this annoyance.
Very truly yours (Signed) THOMAS McARTNEY, Mechanician.

Triple Action means Triple Safety

The HOPKINS & ALLEN

Triple Action
(Trademark)
Safety Police

is the only triple action revolver in existence.

The Triple Action is the Safety Action. The third movement of the **TRIPLE ACTION** prevents the hammer from striking the firing-pin until you actually pull the trigger. The remotest chance of accidental discharge is thus made absolutely impossible.

$9.50 Nickeled Finish

Immediately after firing, the hammer slides up mechanically and rests against a solid frame of steel, safely out of the danger-zone—not in any way in contact with the firing-pin. It is held there, firm, fixed and immovable, until the second discharge. This third movement eliminates wholly and finally **even the supposition of danger.**

The New Army Grip gives a strong, firm handhold. It adds greatly to the effectiveness of the revolver. .32 and .38 cal., 4 in. barrel. Blued finish, $10.00.

Ask your dealer to show you this revolver. If he doesn't sell it, we will send it to you direct, charges paid, on receipt of price.

82,000,000; 1904, 96,000,000; 1905, 118,000,000; 1906, 148,000,000; 1907, 158,000,000.

The universality of the telephone in relation to business gives a peculiar significance to these figures as showing not only the growth of the telephone, but the growth of American business activity.

The telephone day is a short one, as the bulk of the business is done in about five hours. This necessitates an equipment great enough to handle the service smoothly at its highest point, although for a large portion of the time it is not being used at its full capacity. The big problem in telephoning economy is a more even distribution of the traffic through the less busy portion of the day, but satisfactory means for accomplishing this have not been devised.

While the popularity of the telephone has grown more readily by the contagion of example than almost any other thing in general use, it has been found that advertising the advantages of using the telephone, even to people who have used it daily for years, would bring a response of a remarkable extent. This is perhaps the best instance extant to illustrate the power of advertising to gather rich cream from milk that had already been well skimmed by other methods.

FOUNTAIN PENS

IT IS said that the greatest impetus to the popularity of the fountain pen came from its acceptance by the younger generation of business men as a typical twentieth century idea. The first fountain pens were faulty, not having the benefit of recent years of mechanical development, and most of the prejudice against them that manufacturers have encountered is found, when sifted down, to be based on impressions gained when the invention was in its less perfect beginnings. This incidentally illustrates the origin of much prejudice encountered by all kinds of manufactured devices, and suggests the wisdom of standardizing a product before marketing it—at least, to the extent that this is possible.

The fountain-pen business has also demonstrated another principle of wide possible application, that the presence in the market of cheap pens not only does not lessen the sales of the higher-priced and better-made pens, but initiates new users and demonstrates the utility of the fundamental idea and creates sales for the better grades.

The coming of the clip-holders is said to have had a marked effect on the popularity of the fountain pen, by preventing loss of the pen, and also by holding it in plain sight where non-users could catch the suggestion.

The use of fountain pens in schools, and the breaking down of the prejudice which once caused school boards to specify against their use in school work, has afforded another important center for the contagion of fountain-pen using.

The well-advertised fact that the treaty at the conclusion of the Spanish-American War was signed with a fountain pen is also said to have given a conspicuous impetus to its use.

TOUCH-BUTTONS

New ideas begin with an inward desire to do something in a better way.

The way to get enthusiasm is to appreciate the usefulness of your work—see how it fits into the main scheme of things.

One definite step, however small, will do more to set a good thing going than any amount of desultory contemplation.

Lack of definite knowledge on some little point is often the only thing that delays a piece of work, and that knowledge can often be gained in a few minutes.

To put personal comfort before duty is to miss the victory of self-mastery, without which all else is largely in vain.

Deal in essentials every hour and one year may yield as much as an ordinary lifetime.

The only trouble with some people is that they are in the wrong business.

Don't let this valuable day be consumed in trivial concerns. Undertake today some of those big things you intend to do—some time.

The WINDSOR

IT'S easy to make a suit of clothes—but to make it *right* is another story.

Michaels-Stern Clothes

are for the man who insists on absolute accuracy in style, quality, fit and finish.

Priced within reason.

¶ *The season's newest models should be on sale in your City. If not, we'll tell you where to obtain them and will also forward you one of our handsome Portfolios of styles if you'll send us your local dealer's name.*

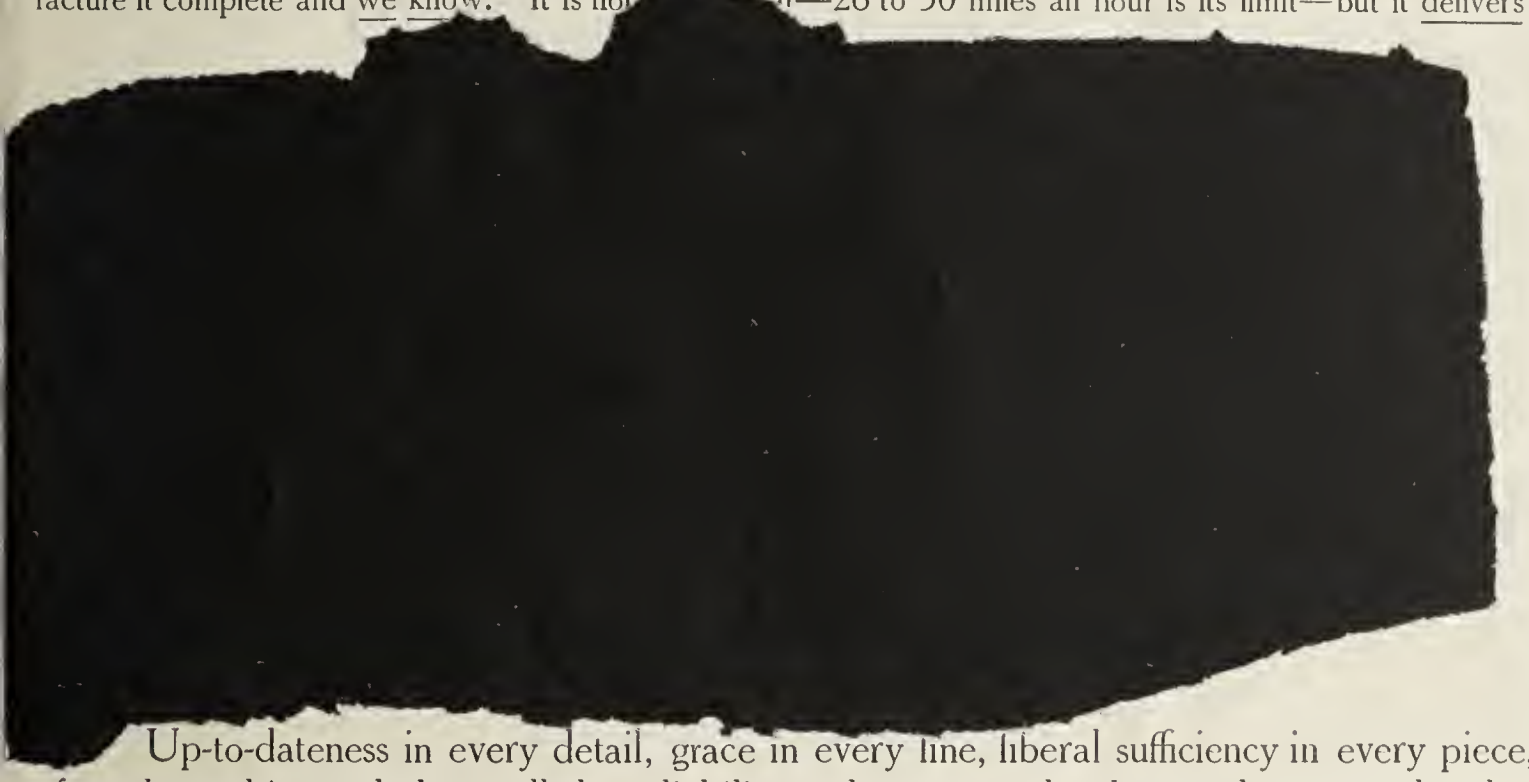
INFORMATION ABOUT THE BRUSH RUNABOUT

THE WORLD'S MOST WONDERFUL AUTOMOBILE



Wonderful in its simplicity, its staunchness, its reliability, its ease of riding, its convenience, and above all in its almost unbelievable economy. Nothing built compares with it in these respects, as even competitors admit, and the public knows.

These are the reasons our two plants in Detroit are working 21 hours a day in double shifts.

We show you pictures of our car, our factories, and our officials that you may, in a measure, see us face to face. As buyers you should know with whom you are dealing. We, individually, have been in this business since its very start. Over 20,000 cars of Brush's design are running today. We know the automobile business from stem to gudgeon, and we are not afraid to face you nor to back our car with our personal reputation.

We have made the Brush Runabout what it is by work—hard work. Brush spent over a year working out the first designs. Since then we have perfected them and spent two years in making and selling cars, in building up an expert manufacturing organization and a perfect plant, in showing users all over the world the car's remarkable merits.

The Brush is a true runabout in its own right—not a mere imitation of a big car with the complications left in, but the strength left out. It embodies the most advanced engineering principles and practice,—yet design is not all. Even more important is the way it is made. No car at any price is or can be better made than the Brush. We are not mere assemblers—we manufacture it complete and we know. It is not a racer—28 to 30 miles an hour is its limit—but it delivers the goods every time.

The cost of this space is too heavy to give a full description here. Send for literature and name of nearest dealer.

Up-to-dateness in every detail, grace in every line, liberal sufficiency in every piece, extreme accuracy of workmanship, and above all the reliability and economy that betray the master hand of Brush, acknowledged the greatest of all small car designers.

OUR RECORDS

Who cares what car wins the speed races? We don't. But what car wins the endurance and hill climbing trophies? Why, no car at anywhere near our price even goes into them—let alone win, as the Brush has done.

What other car at this price ever crossed the American Continent, or climbed Pike's Peak, or won the classic Algonquin Hill Climb trophy? Other records are the Five-Car Efficiency Run, the Eight Day Kansas City-Oklahoma, the Michigan Dealers, the Atlanta-Macon, the Ohio, and other endurance runs and contests. This year we have two entries in the Glidden Tour, and will shine in numerous other events. But above all we refer you to users. Ask them.

You can make no mistake in buying a tried, proved, known car, backed by reputation, popularity, a strong manufacturing company, and reliable dealers.

Chalmers-Detroit "Forty"—$2,750

Judge This Car By Its Record

If you were hiring a man at a good salary to work for you, you would hire him largely on his record.

If you are going to buy a motor car at a good price to work for you, why not buy one on its record?

No car has a better record than the Chalmers-Detroit "Forty"—which sells for $2,750.

During 1908 the "Forty" finished first, or with a perfect score, in twenty-five nationally known races, hill climbs and endurance contests.

We send our cars freely into contests—for your benefit. A car that will stand up under the bitter strain of contests will prove reliable for the owner in every day use.

We do everything we can to prove out the cars, for your benefit. You have a right to know what a car will do—or what it will not do. You like a car that has done things, just as you like a man who has done things.

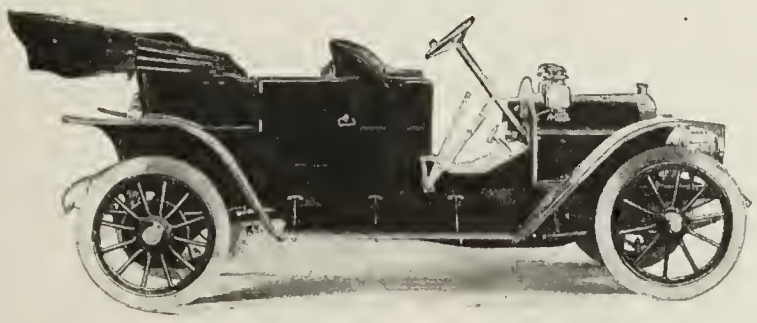
Read What This Car Has Done

In the Detroit Endurance Run of 450 miles last spring, perfect scores were earned by all three Chalmers-Detroit "Forty" entries. The same story was told in Baltimore-Hagerstown, the Kansas City and the Hartford Endurance Runs, and in the Detroit and Atlanta Sealed Bonnet contests.

In the Minneapolis Endurance Run of 262 miles, the "Forty" made the only perfect road score among nineteen starters, winning the Minneapolis Tribune Trophy.

At Denver it won the Rocky Mountain Cup Race of 320 miles over treacherous roads, the only car to finish out of seven entries. As a hill climber the "Forty" demonstrated its superiority by being first at Algonquin, Cincinnati, Giant's Despair, Dead Horse, New Haven, Albany, Spokane, Baltimore and many others. The latest hill climb victory was at Pasadena, where the "Forty" won the free-for-all for stock cars.

Owners of the Chalmers-Detroit "Forty" know that it lives up to its public record in private life. A thousand owners will tell you it is reliable, quiet, speedy; that it seldom needs repairs; that it is easy on tires; that it does its work on a small amount of gasoline.



"After running one of your 'Forty' cars over 5,000 miles without the slightest mechanical trouble and not one cent paid out for repairs," reads a letter from Mr. Albert H. Inman, of Worcester, Mass., "I know that it's in every way as good a car as you claim it to be. I have other and higher priced cars but none of them show such a surplus of power or get it to the wheels so quickly."

Mr. M. E. Green, 409 North Broadway, St. Louis, Mo., writes: "Not only is my Chalmers-Detroit 'Forty' the most comfortable and easy riding car I have had in five years' experience as an owner, but I have found it extremely cheap in maintenance, getting from twelve to sixteen miles from a gallon of gasoline. Tire expenses are reduced to a minimum, owing to the lightness of the car."

Mr. Robert T. Whalen, 735 Ocean Ave., Brooklyn, writes that he has traveled 12,000 miles over all sorts of road conditions without the slightest bit of trouble and that he finds the 'Forty' light enough to avoid tire troubles.

"This is my fifth automobile and it gives me more pleasure than any I have ever owned," says Mr. Fred H. Clarke, 715 Majestic Bldg., Detroit, Mich. "It will do anything an automobile should do, but the chief pleasure of ownership is owing to the fact that the 'Forty' does not have to be taken to the repair shop."

All that you want in a motor car you get in the Chalmers-Detroit "Forty," at $2,750—speed, hill climbing power, silence, low upkeep, beauty of line, reliability, long life. Please write today for our catalog. We honestly believe that we offer the best value for the money, and all we ask is for a chance to tell you more about our cars.

Chalmers-Detroit "30"—$1500

This is the low-priced car we spent two years in designing and building. It represents the utmost value for the money. It is the distinctive car of the low-priced class. No others near its price have the same up-to-date features. It has an I-beam single piece drop forged front axle, cylinders en bloc, aluminum crank case, strongest possible steering connections, a stronger, cleaner frame than any other low-price car, multiple disc clutch, simple and effective oiling system, unit power plant, vanadium steel springs—¾ elliptic in the rear—annular ball bearings which cost us $103, four cylinder engine, full floating type rear axle, the best grade of material in every part. Five passengers; roomy; beautiful lines. Please write today for our catalog.

Chalmers-Detroit Motor Co., Detroit, Mich.

STERLING TIRES

IT'S mainly the way they are put together that makes Sterling Tires sterling. But the friction we use holds better than any other—"friction" meaning the adhesive mixture that is rolled into the fabric to make the several plies stick together—and it is the adhesion of these plies that gives strength to the tire. It's old Mr. Æsop's bundle of sticks all over again.

In Sterling Tires this adhesion of the friction is made permanent by our "air-bag cure"—and thereby hang these few facts—

After being frictioned, a layer of fabric is fitted over an iron or wooden core, and is inspected—then another is laid on and inspected—then more layers, then the pure rubber cushion, more fabric, and finally the cover and tread—each being inspected as, and after, it goes on. Then the core is replaced by an air bag the shape and size of an inner tube. The compressed air is turned on to 120 lbs. and the tire in its mould goes into the heater for vulcanizing. Heat increases the air pressure to between 300 lbs. and 400 lbs., which thoroughly amalgamates the various layers of the tire.

These are the secrets of Sterling strength—simple to tell about, but requiring constant watchful attention.

We believe no other tire is so carefully built, or so rigidly inspected. We believe no other tire gives, or can give, so much service per dollar of cost.

You will find Sterling Tires as absolutely uniform in performance as anything made of fabric and rubber can be.

Sterling Blue Tubes have no equal—absolutely no equal. They are made blue for a good reason—ask us about it. **"Ask us why they're blue."**

COLLIER'S, 416 WEST THIRTEENTH STREET NEW YORK CITY

$513 Clear Profit in 51 Days from an Investment of $150

Is the result from the operation of one American Box Ball Alley in Sullivan, Ind. Why not go into this business yourself? It is the most practical and popular bowling game in existence. It will make big money in any town. These alleys pay from $25.00 to $65.00 each, per week. This is no gambling device, but a splendid bowling game for amusement and physical exercise. Liberally patronized by the best people of both sexes. Quickly installed, conveniently portable. No pin boy needed. Receipts are nearly all profit. Nearly 5,000 sold to date. We sell on payments and our catalog is free.

Write for catalog. **American Box Ball Co.,** PATENTEES, 301 Van Buren St., Indianapolis, Ind.

Chickering Pianos

THE pre-eminence *of* these instruments is due principally to their exquisite tone. It is peculiar to them. ¶ No other maker, though probably all have tried, has succeeded in reproducing it. ¶ The name guarantees the Highest Quality *of* Workmanship *and* Finish.

Uprights, Chippendale design, $500 - - Quarter Grands, Style R, $600.

Chickering Pianos may be bought of any regular Chickering representative at Boston prices with added cost of freight and delivery. Our literature will be sent upon request.

Convenience

Think of an oven at convenient height to be used without stooping!

Think of a stove that cooks the roast with a heat either moderate or intense, as you wish it!

Think of a kitchen as cool when the roast is done as when you began it!

Think how the New Perfection Wick Blue Flame Oil Cook-Stove does all this and much more!

Note the advantage of keeping things hot on its CABINET TOP—a feature which not only removes the last objection to oil stoves in general, but which also gives a "coal range" appearance to the

NEW PERFECTION

Wick Blue Flame Oil Cook-Stove

Things may be kept hot after they are removed from the blaze. Plates can be warmed and meals served with less effort and more comfort. Made in three sizes. Can be had either with or without Cabinet Top. If not at your dealer's, write our nearest agency.

The **Rayo LAMP** One or more Rayo Lamps will light your house beautifully at very little cost. Much more satisfactory than other methods of lighting. A steady, powerful light under perfect control. If not with your dealer, write our nearest agency.

STANDARD OIL COMPANY
(Incorporated)

PERFECT CLEANLINESS

is easily maintained in a

BOHN SYPHON REFRIGERATOR

(GENUINE PORCELAIN LINED)

¶ No pipes and tubes to clog and become breeding spots for countless germs—no hidden parts difficult to reach.

¶ Every part in sight and easily accessible.

¶ The Bohn Syphon System produces an enforced, vigorous circulation of air in the refrigerator. This condenses all impurity-laden moisture on the ice, which then drains off. It dries the air and produces a temperature 10° colder than in any other refrigerator and thus insures the perfect preservation of the food.

¶ *Adopted by the Pullman Company and all American Railroads as standard.*

¶ *Send for "Cold Storage in the Home." Free.*

Important Fiction Coming

¶ *Collier's has recently made arrangements with four noted writers of fiction to furnish stories during the coming year.*

RICHARD HARDING DAVIS

Has written a new story, "A Wasted Day," which will appear in the course of a few months.

REX BEACH

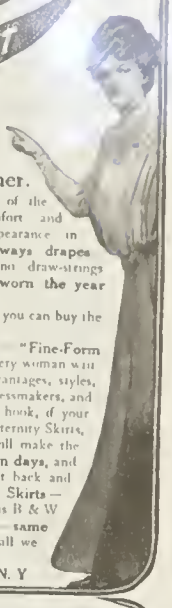
Will write five stories this year, all of which will appear in Collier's.

O. HENRY

Will also contribute five stories.

SIR GILBERT PARKER

Contemplates writing but two stories during the year, both of which have been secured by Collier's.



In Next Week's Issue:

¶ *"The Woman Who Votes," by Sarah Comstock, the second of a series of articles dealing with the actual use of the franchise by the women in the suffrage States. The article describes—as only a skilled writer of fiction can describe—the scenes, incidents, and the atmosphere of election day in Cheyenne, Wyoming. It makes an interesting picture—the streets filled with carriages and automobiles bringing the women voters, and often including the children, to whom the free ride made a strong appeal; the social-function aspects of the polling places the last half hour before closing, the gallantry of the men, the zeal of the women, the enthusiasm of the girls of twenty-one casting their first ballots, and the thoroughness with which the feminine vote was gotten out. But it is more than a picture—it is a pictorial presentation of facts and conditions upon which those seeking to form a true judgment of the suffrage question can base their theories and conclusions.*

¶ *It is hard to dispel from one's mind the conception of the Chinese army as a crooked line of hatless men with breastplates and spears, and to substitute a regiment in uniform not unlike that of the best trained armies of Europe. But that is the change one's mental picture must undergo to keep pace with the radical improvements of the Chinese army since the introduction, within the last few years, of foreign military ideas. Next week we shall print a double-page of photographs which will help to revise the popular impression.*

¶ *"Life in Layers," by Eugene Wood, is the second instalment of "The Wicked City," the first of which appeared in the issue of April 3. The author calls back to your mind the first time you ever visited New York, and how it seemed to you, and how you seemed to it. You remember how many comparisons you had to make between the way they did things in New York and your home town, and how many times the odds were in favor of your own town—at least, so you then thought. You are also called on to remember the ambition you had when you came to New York, and how you were compelled to revise your viewpoint.*

Fine-Form TRADE MARK **MATERNITY SKIRT** Registered in U.S. Pat. Office

of great interest to
Every Prospective Mother.
Something new — only scientific garment of the kind ever invented. Combines solid comfort and ease with "fine form" and elegant appearance in the home, on the street, and in society — **Always drapes evenly in front and back** — no bulkiness — no draw-strings — no lacing — no ripping or basting — **Can be worn the year round.**
Made in several styles, and at prices lower than you can buy the material and have them made at home.
FREE Send for our **Fine Illustrated Book — "Fine-Form Maternity Skirt"** — It's FREE to every woman writing for it. Tells all about these skirts, their advantages, styles, material, and cost. Gives opinions of physicians, dressmakers, and users. **10 Days Free Trial.** When you get our book, if your dealer has not yet been supplied with Fine-Form Maternity Skirts, make your selection of material and style, and we will make the garment to your order. When you get it, **wear it ten days,** and **if you don't find it exactly as represented,** send it back and we will cheerfully **refund every cent** paid. Other Skirts — If not in need of a maternity skirt, remember our famous B & W dress and walking skirts will positively please you — **same guarantee** — Illustrated book free. Which book shall we send? Write to-day to
Beyer & Williams Co., Dept. 51, Buffalo, N. Y.

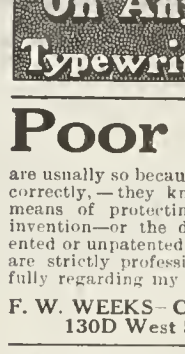
WARNING
To protect you against disappointment we caution you that the **Fine-Form Maternity Skirt** is the only "Maternity Skirt" on the market, as it is the only skirt which can always be made to drape evenly, front and back—all substitutes offered will rise in front during development—a fault so repulsive to every woman of refined tastes. No pattern can be purchased anywhere for this garment. Its special features are protected by patents.

CONCRETE HOUSES
Cost Less Than Wood
More handsome than Brick. Durable as granite. A Pettyjohn $35.00 concrete block machine, sand, gravel and cement are all that is needed. **Simple, easy and quick.** We furnish full instructions. Save money for yourself or make money by selling blocks.
Write for catalog and suggestions
THE PETTYJOHN CO., 646 N. Sixth St., Terre Haute, Ind.

The "SIMPLO" Automobile

Solid or pneumatic tires. High or low wheels. The one Automobile at a **Low Price** that is always ready to run. Handsome, Stylish, Simple, Reliable; Economical to operate. Safe and Sure. A Hill Climber. Biggest **Automobile Value** in America. 1909 Catalog FREE. Address
Cook Motor Vehicle Co.
1062 N. Broadway
St. Louis, Mo.

GET IT My Great Buggy Proposition— IT'S NEW.
Positively best ever made by any factory.
GALLOWAY
Saves you 33⅓ to 50% lowest prices, best proposition ever made in buggy history. Get it before buying a buggy of any kind. It helps you pay for buggy. Also harness, wagons, implements, etc.
WM. GALLOWAY CO.
1866 Galloway Sta. Waterloo, Ia



I Save You **$28 75** on this Job

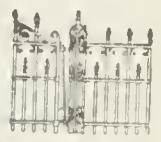
Poor Inventors
are usually so because of poor advice. Specialists advise correctly,—they know.—Expert advice as to the best means of protecting and perfecting your incomplete invention—or the disposal of the one completed, patented or unpatented, is what I specialize in. My Services are strictly professional. Upon request, will write you fully regarding my methods. Address,
F. W. WEEKS—COUNSELLOR TO INVENTORS
130D West 57th Street, New York City

Ask Your Dealer for The Hercules Purse

Practical, indestructible—holds $4 in silver—retails everywhere at 25 cents. Every Purse stamped with our trade mark. If not obtainable from a dealer, send direct to
TRADE R MARK
C. F. RUMPP & SONS
128 North Fifth St., Philadelphia

The Jubilee Self-Heating Flat Iron



You would have one in your home before this week ends if you realized **How Good, How Much** and **How Comfortable** you can Iron with it. **How Easy, Speedy,** and **Inexpensive to Operate.** Not Complicated you learn in one ironing how to handle it. **Don't Heat Up the House to Iron—Use a Jubilee this Summer.** Write for free Booklet.
JUBILEE MFG. CO., Desk 2, 416 S. 14th St., OMAHA, NEBR.

Ornamental Wire and Steel Fence

Cheaper than wood, combining strength and art. For lawns, churches, cemeteries. Send for FREE CATALOG. Address
The Ward Fence Co.
Box 693, Decatur, Ind.

SQUAB 1909 **BOOK FREE**
Mated pair billing, or kissing.—From eggs to squabs in 4 weeks.

Write for our handsome 1909 Free Book, telling how to make money breeding squabs. We were first, the originators. Cloth-bound book now 303 pages, 114 illus. It's great.
PLYMOUTH ROCK SQUAB CO., 325 Howard St., Melrose, Mass.

Drink and Collier's

MORE OPINION is vented on liquor than on any other topic at present occupying the confused intelligence of man. An individual who subscribed to a clipping bureau received 12,000 newspaper extracts in a month, and only one newspaper in every five was read in order to make this choice collection. Our own outlook upon alcoholic beverages is described by the "National Prohibitionist," after due reflection, as "pig-headed." The brewers, after as careful consideration, call it "biased." It all depends largely upon one's emphasis. "Man," said BYRON, "being reasonable, must get drunk." Also spake the same great poet thus: "There's naught, no doubt, so much the spirit calms as rum and true religion." To these virtues of the alcoholic habit we have never accorded serious attention. With the philosophers, on the other hand, we do agree, when they attribute to drink a large part of humanity's waste and crime. It is the builder of asylums, jails, hospitals; the cause of poverty, inefficiency, cruelty, and short life; the backbone of corrupt politics, gambling, and prostitution. As long ago as BACON'S time that observer said:

"All the crimes on earth do not destroy so many of the human race, nor alienate so much property, as drunkenness."

This high cost being realized, regulation and suppression are eagerly discussed. Some individuals still think their fundamental liberty interfered with by regulation. In general, however, the conception of freedom grows more social. Twenty years ago there was much talk about "liberty of contract" between laborer and employer. Now we prefer a freedom of the laborer from danger and oppression. Parents once were free to keep their children out of school, and freer than now to have babies labor in the mills. We were all freer to keep as many rats as we chose in time of plague; to go unvaccinated; to run insurance companies according to choice; to eat cocaine, and put fiction on the label of food or patent medicine. This liberty argument is now seen by most of us as CARLYLE saw it many years ago:

"No man oppresses thee, oh free and independent franchiser! but does not this stupid porter-pot oppress thee? No son of ADAM can bid thee come or go; but this absurd pot of heavy-wet, this can and does! Thou art the thrall, not of CEDRIC the Saxon, but of thy own brutal appetites, and this scoured dish of liquor. And thou pratest of thy 'liberty,' thou entire block-head!"

Certain other arguments about drink are rapidly passing likewise. An absurd economic thought put out by the brewers is that rum pays taxes, therefore it helps the community; which is as if one should say rum destroys a large part of man's efficiency, wealth, and happiness, but while he is thus destroying himself he pays taxes over the bar, instead of paying a smaller tax some other way. One more passing argument is that man needs stimulants. Experience in athletics, armies, navies, business, and medicine is rapidly diminishing the force of this objection. Doctors find better drugs, employers won't take drinking men, abstemious athletes win, and fresh air, conversation, music, and travel furnish stimulation at less cost.

Why, then, do we refuse to join the Prohibitionists? That question is what puzzles the national propagandists and makes them select finally the word "pig-headed." They believe that whatever is good for man should be ladled out to him. If he ought to bathe, have a policeman wash him. If he eats too much, stop him. If tobacco does harm, prohibit it. If sleeping on the side is healthier, prevent sleeping on the back. The truth is, of course, that law can successfully enact only the strong convictions of a strong majority. Many of us have multitudes of convictions which we are not stupid enough to press with force. The world one day may or may not abolish drink. All that can be said at present is that sweeping measures fail. Prohibition succeeds in districts, mostly in the country, where opinion is overwhelming. It has proved impossible in great cities. It works indifferently in States like Maine, where opinion is divided closely. Even prohibition on one day in seven fails in most big towns. The topic is absurdly large for universal dogma, and therefore the old moralistic Prohibition Party failed. The present wave is the spread not of a dogma, but of experience, and just as there is a tendency toward prohibition in homogeneous rural districts. West and South, so there is a tendency toward legalized Sunday opening in big towns. The subject is one for patience, study, and experiment. Only limited points are distinct. The rest is fog. We take the risk, for example, of the following propositions:

1. JOE CANNON is perpetuating a gross wrong on a free people when he refuses to allow Congress to vote on the bill prohibiting shipments of liquor by express companies into prohibition States.

2. Prohibition is a failure whenever a State or county attempts to coerce a town or city in which public sentiment is against prohibition.

3. There are too many saloons. Licenses ought to be granted from the point of view of order, not of income. From various foreign systems we have much to learn.

4. Amusements for the people must be encouraged, to supply the social features of the saloon.

Another Pension List?

IN THE IMPORTANT COUNTRIES of Europe it is now a recognized function of the State to meet a certain kind of expenditure quite unfamiliar on this side of the water. Each of the leading Governments over there pays out large sums of money every year to members of the laboring class. Sometimes the laboring people contribute, sometimes their employers, the amount being settled by the State. This insurance is against old age, unemployment, sickness, or accidents, and it may take the form of an annuity or a single sum. In some countries it is compulsory, in others voluntary. England's Chancellor of the Exchequer must raise about $43,000,000 this year for the purposes, and the Finance Ministry of France is confronted with the probability of having to produce about $38,000,000. How soon will State Insurance be discussed as a national question of the day in the United States? Viewing the size of our population, our wage scale, our standard of living, and our fashions of lavish liberality, we are likely to find this proposal meaning here as much as our other pension list of $150,000,000. The most promising barrier against it is the Massachusetts system of savings-bank insurance, and it is a deep satisfaction, therefore, to find that system becoming more successfully established every month.

The Cat

SATISFACTORY ADVICE on the subject of kindness is contained in the brief classic:

"Kick the stranded jellyfish back into the sea;
Always be kind to animals wherever you may be."

A lady was bitterly disappointed the other day because we could not print a 50-line production in blank verse which urged householders to provide for their cats when they board up their front doors and go away for the summer. Another correspondent, on the contrary, thinks the noiseless gun may be made a blessing. Every city and town is more or less overrun with stray cats, who drag out a miserable existence and keep us awake with their howlings in so-called cat-fights, which are in general only encounters where a long-reach cat gets a smaller one in a corner and tortures him. Or a strong, well-fed creature corners a feeble, half-starved one, scratches open his half-healed wounds, and covers him with new ones. Every morning countless thousands of people go forth to their affairs in bad condition to remain so all day because of loss of sleep inflicted by cats. Our friend suggests that certain members of the police force be supplied with noiseless revolvers and all cats without collars be deemed strays and sent to a less complicated universe. These suggestions, opposite in feeling, do not conflict. Perhaps both might be adopted.

Lldyffllanllraethll

IT HAS TAKEN a tiny local earthquake to reveal one of the world's most extraordinary words. A very minor seismic shook and rattled and tumbled the homes of those that dwell in Lldyffllanllraethll. Lldyffllanllraethll is a town in Wales—where else? The piteous disaster can not blur the amazement with which we face the name of that town and wind our tongue lovingly about its labials; lapping up the consonants, as the Great Ant-Eater of Australia collects on his gummy tongue the little angry red ants that lie in his path. There has been no such name cast up in the face of the public—eight l's, sliding off into y's and ff's with the grace of the late Mr. SWINBURNE'S saccharine sonnets—since the Greek dramatist affronted his Athenians with the word that played with the "Kappa's" till the line overflowed.

Actors Gone

THEY CROSSED THE RIVER almost together, SONNENTHAL and MODJESKA. He was probably the most complete and powerful actor in either of the great German countries, which have more really high-class theaters than the rest of the world combined. When TOMMASO SALVINI was once talking to the writer of these lines about acting, he said, what is the general opinion of the best-informed, that Germany might fall below Italy in native individual inspiration (in genius, SALVINI put it), but that in intelligence, in thoroughness, in balance, in justness of effect, no other country could compare with her—Austria, of course, being included with Germany in this comparison. To stand at the top in such a civilization meant much, and SONNENTHAL was a man of refinement, taste, and understanding, as well as of natural graphic quality and the soundest training. Although MODJESKA was most distinguished for delicacy and sweetness, she was capable of strength also, and she had the training to make effective her exquisite and always lovely spirit. Of the world's foremost actors a large part have been swept down of late; SALVINI is in retirement; ELLEN TERRY has not the steady glow of other years; DUSE is tired; and the marvelous BERNHARDT seems to live in the pace of early days, never weary, never at a loss, likely to meet the hereafter, when her time is done, with one unhesitating, sudden bound.

An Expert's Thought

HE RETURNED at last to the country of his labors. It seemed so long, his absence. It was a whole month. Said he:

"The performances we witnessed were profitable from the standpoint of showing us what to avoid."

Did he not know already what to avoid? Successfully has he not shunned all that draws the educated and the intelligent into the theaters of Vienna, Paris, Berlin? More also he said:

"I have come back more convinced than ever that our stage has advanced over that of Europe to as great an extent as our commerce."

ERLANGER goes abroad. What he sees convinces him of the wonder and glory of his own hands. One more gem we must crowd in:

"The theater in America is a great institution. In Europe it is simply a means to kill time between dinner and supper."

Honestly, can you beat it? Talking about the men who have been controlling American drama, can you find in any dictionary words which at all do justice to the emotions which you are struggling to express?

A Slate

MR. TAFT'S COURAGE has received dramatic proof. FULTON'S record was set forth in such a light that the people of Oregon refused to allow him to represent them further in the Senate. Mr. TAFT'S opinions and reasons, however, are his own. He offered to Mr. FULTON the ministry to China, even although it was necessary to withdraw a man so well equipped as Mr. ROCKWELL. When the rumor started that Mr. FAIRBANKS was to have the ambassadorship to England, if President ELIOT refused, we suspected at first the work either of a joke factory or of one of those clipping bureaus which the former Vice-President has found convenient. The Fulton idea, however, made the Fairbanks rumor sound rational enough. Not to intrude, but merely to help toward harmony, we suggest:

Ambassador to France, JOHN F. DRYDEN of New Jersey.
Ambassador to Germany, LEVI ANKENY of Washington.
Ambassador to Russia, ALBERT J. HOPKINS of Illinois.
Ambassador to Italy, JOHN RAINES of New York.
Ambassador to Austria, ABRAHAM RUEF of California.

A tale was published that Ex-Senator FULTON preferred to be a Federal Judge. He would, no doubt, be an ornament to the Supreme Court of the United States, but if ministers with excellent records are to be removed no man, not even FULTON, is too good to be drafted to the foreign service of his country.

On the Coast

CALIFORNIA HAS JOINED the States which have adopted direct primary laws, though the law has been mangled by the agents of the Southern Pacific political machine. The work of the Lincoln-Roosevelt League and the League of Justice is bearing fruit. The present Legislature has tried hard to break with the old machine, though unsuccessfully. The California bill, as originally introduced, provided that each candidate for the Legislature should take a pledge to follow the advice of the majority of his party in the State on the Senatorship. The machine men in the Legislature substituted a provision that each candidate for the Legislature should be advised on the Senatorship by the majority of his party in his own district. This would put forward any number of "favorite sons," none of whom could probably be elected, and leave the legislator finally to vote for the machine candidate. As the bill was finally adopted, the legislator is free to take the advice either of the majority of his constituents in his district or of the majority of his party in the State. The most vicious feature of the bill seems to have been overlooked. Whatever good government California has so far achieved has been through the coalition of the law-abiding element of the different parties. Such coalition is expressly prohibited by the present law. No good can thus come of any political party in California other than the Republican. That party is overwhelmingly dominant and is as overwhelmingly controlled by the Southern Pacific forces. If the League of Justice forces do not eventually win, history will at least give them credit for having compaigned with credit against a force which has behind it thirty years of strong entrenchment.

A Museum of Security

MORE THAN 500,000 AMERICAN WORKERS were killed or injured last year in the regular course of our industrial operations. This is a bigger casualty list than is credited to the recent earthquake in southern Italy and Sicily. Sixty per cent of the time of all the courts of New York State is taken up with the trial of negligence suits. Ninety per cent of these suits fail on the theory of our courts that the employee mustn't "monkey with the buzz-saw." The State Legislatures are passing increasingly stringent laws intended to shift on to the employer the responsibility for accidents and bad sanitary conditions. There exists in this country to-day no agency or institution where an employer may find out how to erect the best sort of factory building or get the best devices for protecting the worker from the peril of machinery. There are in Europe ten "Museums of Security," supported enthusiastically for the economic saving they effect. A few men have lately organized in this country, with headquarters just now in the Engineering Building in New York City, to build a museum of safety and sanitation. (They would be grateful for one word to take the place of "Safety and Sanitation" in the title.) These men would like to hear from everybody interested in cutting down our industrial death rate, lessening damage suits, and relieving the friction between the employer, willing to save but ignorant of methods, and the employee who reasonably insists upon a chance to survive. It is one of the subjects in which the country has something real to gain from thorough discussion and comprehension.

Journalism

RECENTLY A CRIMINAL was tried, condemned, and executed. The murder was of the most cold-blooded, without extenuation. There was no shadow of pretext upon which a pardon could be justified. In an editorial on the day of the execution the New York "Evening Journal" published the following sentences:

"This shameful crime against humanity was committed with the consent of Governor HUGHES. . . . The crime which he allowed to happen ought to disturb even his cold, methodical, and selfish nature. . . .

"But he had the cowardice, the smallness, to allow the thing to HAPPEN. . . .

"Why did he do it? Because he knew that ROOSEVELT had done the same thing. Mr. HUGHES wanted to show that he had the fine courage of ROOSEVELT. Mr. HUGHES hoped to arouse admiration. As a matter of fact, when he imitated ROOSEVELT in this case of killing a woman, he was like some dunghill rooster imitating a gamecock."

The Hearst papers helped to finance the prosecution of Mr. JEROME. They told Governor HUGHES to remove the District Attorney. They are now seeking their revenge, but what awful slop to inflict upon us in that great cause!

Grandfathers

A MAN, dying by suicide, left behind a written statement which began: "First, I am a lineal descendant of PEREGRINE WHITE, the first white child born in America, just before the landing of the *Mayflower* at Plymouth Rock." He enumerated other of his forefathers who had been important, and ended with the complaint: "Do you not think I should be entitled to work for the Government?" PEREGRINE WHITE, who was born on the *Mayflower*, was a half-brother of JOSEPH WINSLOW, the first native governor of Plymouth Colony. He himself held several military and civil offices. Nothing is recorded against his character. He came into this world in 1620, which, according to the accepted formula, is ten generations back. Take the man who killed himself, and see how many progenitors he had ten generations back. Here is the result: Two parents, four grandparents, eight great-grandparents, sixteen, etc., thirty-two, sixty-four, one hundred and twenty-eight, two hundred and fifty-six, five hundred and twelve, one thousand and twenty-four. So PEREGRINE WHITE was one out of one thousand and twenty-four of that time who contributed to the body and mind and character of the late deceased. Who were the other one thousand and twenty-three?

Looking Forward

ON MAY 1 Dr. CHARLES W. ELIOT will retire from the presidency of Harvard University. With quenchless enthusiasm he has, for five and seventy years, culled from life those things which are of most worth.

"Thanks in old age—thanks ere I go,
For health, the midday sun, the impalpable air—for life, mere life. . . .
For beings, groups, love, deeds, words, books—for colors, forms,
For all the brave, strong men—devoted, hardy men—who've forward sprung in freedom's help, all years, all lands,
For braver, stronger, more devoted men."

Dr. ELIOT has seen his inspiration and deeds bear fruit in the lives of his fellows. The nation shows its estimate of him by seeking his services in other fields, and perhaps even for a quarter of a century he may add to the force and wisdom of his native land.

The Lower House and Standard Oil

The Attempt and the Failure to Keep a High Duty on Oil and Its Products—Chaste Diction from "Uncle Joe"—Forty-seven Stalwarts

By MARK SULLIVAN

THIS is the history of the effort made by the Republican organization in the Lower House of Congress—and especially the dominant group within that organization, led by Cannon and Dalzell—to put a very heavy duty upon crude oil, refined oil, and the two hundred products of oil.

The old tariff—the Dingley tariff under which we are now taxed—was written, "with privy paw," by the powerful interests whom it enriches. How the tariff on some grades of manufactured wool was secretly written by William S. Whitman—the story of the conspiracy between Whitman and Senator Aldrich, by which Whitman's lobbyist, S. N. D. North, became the confidential clerk of the Senate Committee on Finance—that story is now public property, thanks to a libel suit, in which the defendant, Frank P. Bennet, publisher of a Lynn (Massachusetts) paper, compelled Whitman to produce his letter-files. The part that the Standard Oil Company played in making the Dingley tariff is still a matter of dim half-lights—the public knows no more than that three United States Senators were, about that time, in the pay of the corporation. Anything more is surmise.

What Constitutes a "Joker"

CERTAIN it is that the heavy oil duties appeared in the present Dingley bill as the result of a trick—"joker" is the word used in the debates. In the body of the bill, oil stands boldly forth on the free list. Most of the members of Congress, when the bill was passed in 1897, believed that oil was free. Henry A. Cooper of Wisconsin, then and now a member of the House, and then and now an "insurgent," vigilant to see that oil was not protected, was so sure of oil's presence on the free list that he went on the stump and, for several months, proclaimed the fact as one of the virtues of the Republican Party. Congressman Gustav Küstermann of Wisconsin and Congressman John Wesley Langley of Kentucky say they thought oil was free, and said so on the stump. The clause which gave the Standard Oil Company the benefit of a three hundred per cent duty was hidden away among the countervailing provisions.

Vreeland of New York Gets Busy

THE present Ways and Means Committee, in making up the new tariff, did not put any duty on oil and its products. Whether they realized its injustice—or merely its unpopularity—doesn't matter. But before the bill was introduced they were persuaded, against their better judgment, by Congressman Edward Butterfield Vreeland of New York, to put in the Payne bill exactly the same countervailing duty that was in the old Dingley bill.

When the bill appeared on the floor of the House there was a storm. Champ Clark and many other Democrats attacked the provision. Several Republicans, especially Gustav Küstermann of Wisconsin, made speeches against it. Several other Republicans, including Vreeland of New York, Campbell of Kansas, Dalzell and Burke of Pittsburg, and Sylvester Clark Smith of California, defended the duty. (Smith was quite frank. "I always write protection with a capital P," said he.) Some of these defenders claimed they were acting, not in behalf of the wicked trust, but to help the trust's long-suffering rival, the independent producer. (Cannon came down from the Speaker's chair to resent the imputation that he was acting in behalf of Standard Oil—he was working, he said, in the interest of three thousand independent producers, all doing business in his own—Danville, Illinois—district.) To the end of the debates those who defended the duty disputed the theory that a duty on oil and its products is a duty in favor of the Standard Oil Company. Some of them may have been disingenuous, some may not; in any event, the United States Commissioner of Corporations, in his formal report, says that the countervailing duty permits the Standard Oil Company to charge the people of the United States three cents a gallon more for oil than they otherwise could, and that they sell oil cheaper abroad than in the United States. The Commissioner of Corporations is at least as unbiased as any of the Congressmen fighting to retain the duty. Anyhow, take Vreeland at his own word. "I speak," he said, "for five hundred thousand producers of oil, who are taking half a million dollars a day out of the ground." Standard Oil or no Standard Oil, ninety million consumers of oil and its products ought not to be taxed for the benefit of half a million producers; and if there is any group of persons who are wealthy as a whole, and free from the conventional protection bogy of pauper labor, it is the men who own oil-wells. They get their money with reasonable ease.

A Rapid-Fire Fight

GEORGE W. NORRIS of the Fifth Nebraska District, Republican insurgent, offered an amendment reducing the duty on oil and its products to a nominal one per cent. This amendment was instantly attacked by the Republican organization, led by Vreeland and Dalzell—not on its merits, but on technicalities of legislative procedure.

This is where Dalzell shines, where his long experience and his familiarity with the complicated rules enable him to serve efficiently the interests he represents. Four pages of the Congressional Record are dotted with points of order and parliamentary inquiries. Finally the chair ruled against Norris's amendment. Champ Clark appealed from the chair's decision. There was more parliamentary wrangling. In the end the chair's ruling was voted down by 174 to 162. (Unfortunately, no record of individual votes is kept when the House is in committee of the whole.) Dalzell didn't give up. He demanded tellers. They reported a majority of 168 to 136 against the chair's ruling. Then the debate turned on the merits of Norris's amendment. Campbell of Kansas held out for a high tariff on oil. Fitzgerald of Brooklyn made a speech which was interesting for several reasons—it expressed the view of a man of high intelligence that the Standard Oil Company will be hurt by lowered duties and recognized the habit of members to go on record one way in the public press and then dodge a record vote in Congress.

"An amendment is now pending that, whatever else its effect will be, will, in the opinion of many who are informed on the subject, seriously cripple the ability of this giant corporation to continue to fleece the American people. I am glad of this opportunity in my place as a Representative, discharging my duties in a conscientious manner, to express the hope that this amendment will be adopted by this House. . . . I have never failed to meet any question that came before this House and to place myself squarely on record upon it. I have never attempted to place myself on record in the public press and then to dodge a record vote upon questions in this House. Lest there should not be an opportunity to place ourselves upon record on this question, where it will be forever preserved in the permanent records, I desire this opportunity to let those who know me see that I have not deviated from that path which I have marked out since I have been a member of this body. . . . Mr. Chairman, I repeat again, in order that it may be reiterated in the Record, that I am heartily in favor of this amendment and that I shall vote for it both in the committee, where there will be no record vote, and in the House, where I hope there will be a record vote."

Plain Talk from "Uncle Joe"

SPEAKER CANNON left his chair to speak. His remarks illustrate at once his judicial temperament and his chaste diction:

"Mr. Chairman, I hope I may have without interruption the five minutes allotted to me. I happen to be the Speaker of the House, but am yet a member of the House. Rarely does a Speaker take part in a debate. I am compelled, at this time, as a Representative to say a word. In my Congressional district a new oil field has developed in the last four years. . . . There are said to be three thousand owners of the soil receiving royalties. Eighty to ninety per cent of that production is by independents. The Standard Oil, I am informed, has a line from that field to Whiting, Indiana. I am glad there is a line. My constituents would fight anybody who would tear up that line. . . . Yet if you were to listen to some gentlemen upon this floor it would seemingly be a felony for anybody to ship a barrel of oil through that wicked company's pipe line or sell oil to its owners. Now, what is this proposition? It is to put oil upon the free list. . . . Well, now, passion—misrepresentation, perchance; I do not know or care—makes this exception. To punish whom? The wicked Standard Oil. Gentlemen, is it not well enough to see, when you seek to punish somebody whom you claim is bad, that you do not, like old Samson, pull down the pillars and have the temple fall upon yourselves. . . . Still the gentleman from Wisconsin (Mr. Cooper) and others flap their wings and crow and crucify the people while they demagogue in denouncing this wicked Standard Oil. If the Standard Oil, a creature of the law, transgresses the law, the courts are open. . . ."

Immediately after Cannon's speech a vote was taken, and Norris's amendment, reducing the duty on oil to one per cent, was adopted.

Forty-Seven Faithful for the Duty on Oil

TWO days later the fight came up again. Between Wednesday and Friday the Republican organization made a complete about-face. On April 7 they had fought tooth and nail to retain a duty of twenty-five per cent and upward on oil and its products. On April 9 they went Norris one better, and Payne, the author of the tariff bill, introduced an amendment reducing the duty on oil from one per cent to nothing. In the final vote on this the record was kept. When it came to a public showing of hands, three hundred and twenty-two members of Congress voted for free oil; forty-seven voted against. There was something of braggadocio in the votes of these forty-seven faithful. They knew in advance they would be hopelessly beaten. They deserve credit for courage at least. The forty-seven were:

D. S. Alexander, John E. Andrus, George N. Southwick, and E. B. Vreeland of New York.

Andrew J. Barchfeld, Charles F. Barclay, Arthur L. Bates, James F. Burke, John Dalzell, William H. Graham, George F. Huff, J. N. Langham, George D. McCreary, Reuben O. Moon, John K. Tener, and Nelson P. Wheeler of Pennsylvania.

Ralph D. Cole, Herman P. Goebel, David A. Hollingsworth, Adna R. Johnson, and W. A. Thomas of Ohio.

William F. Englebright, Everis A. Hayes, Julius Kahn, Joseph R. Knowland, Duncan E. McKinlay, James McLachlan, and James C. Needham of California.

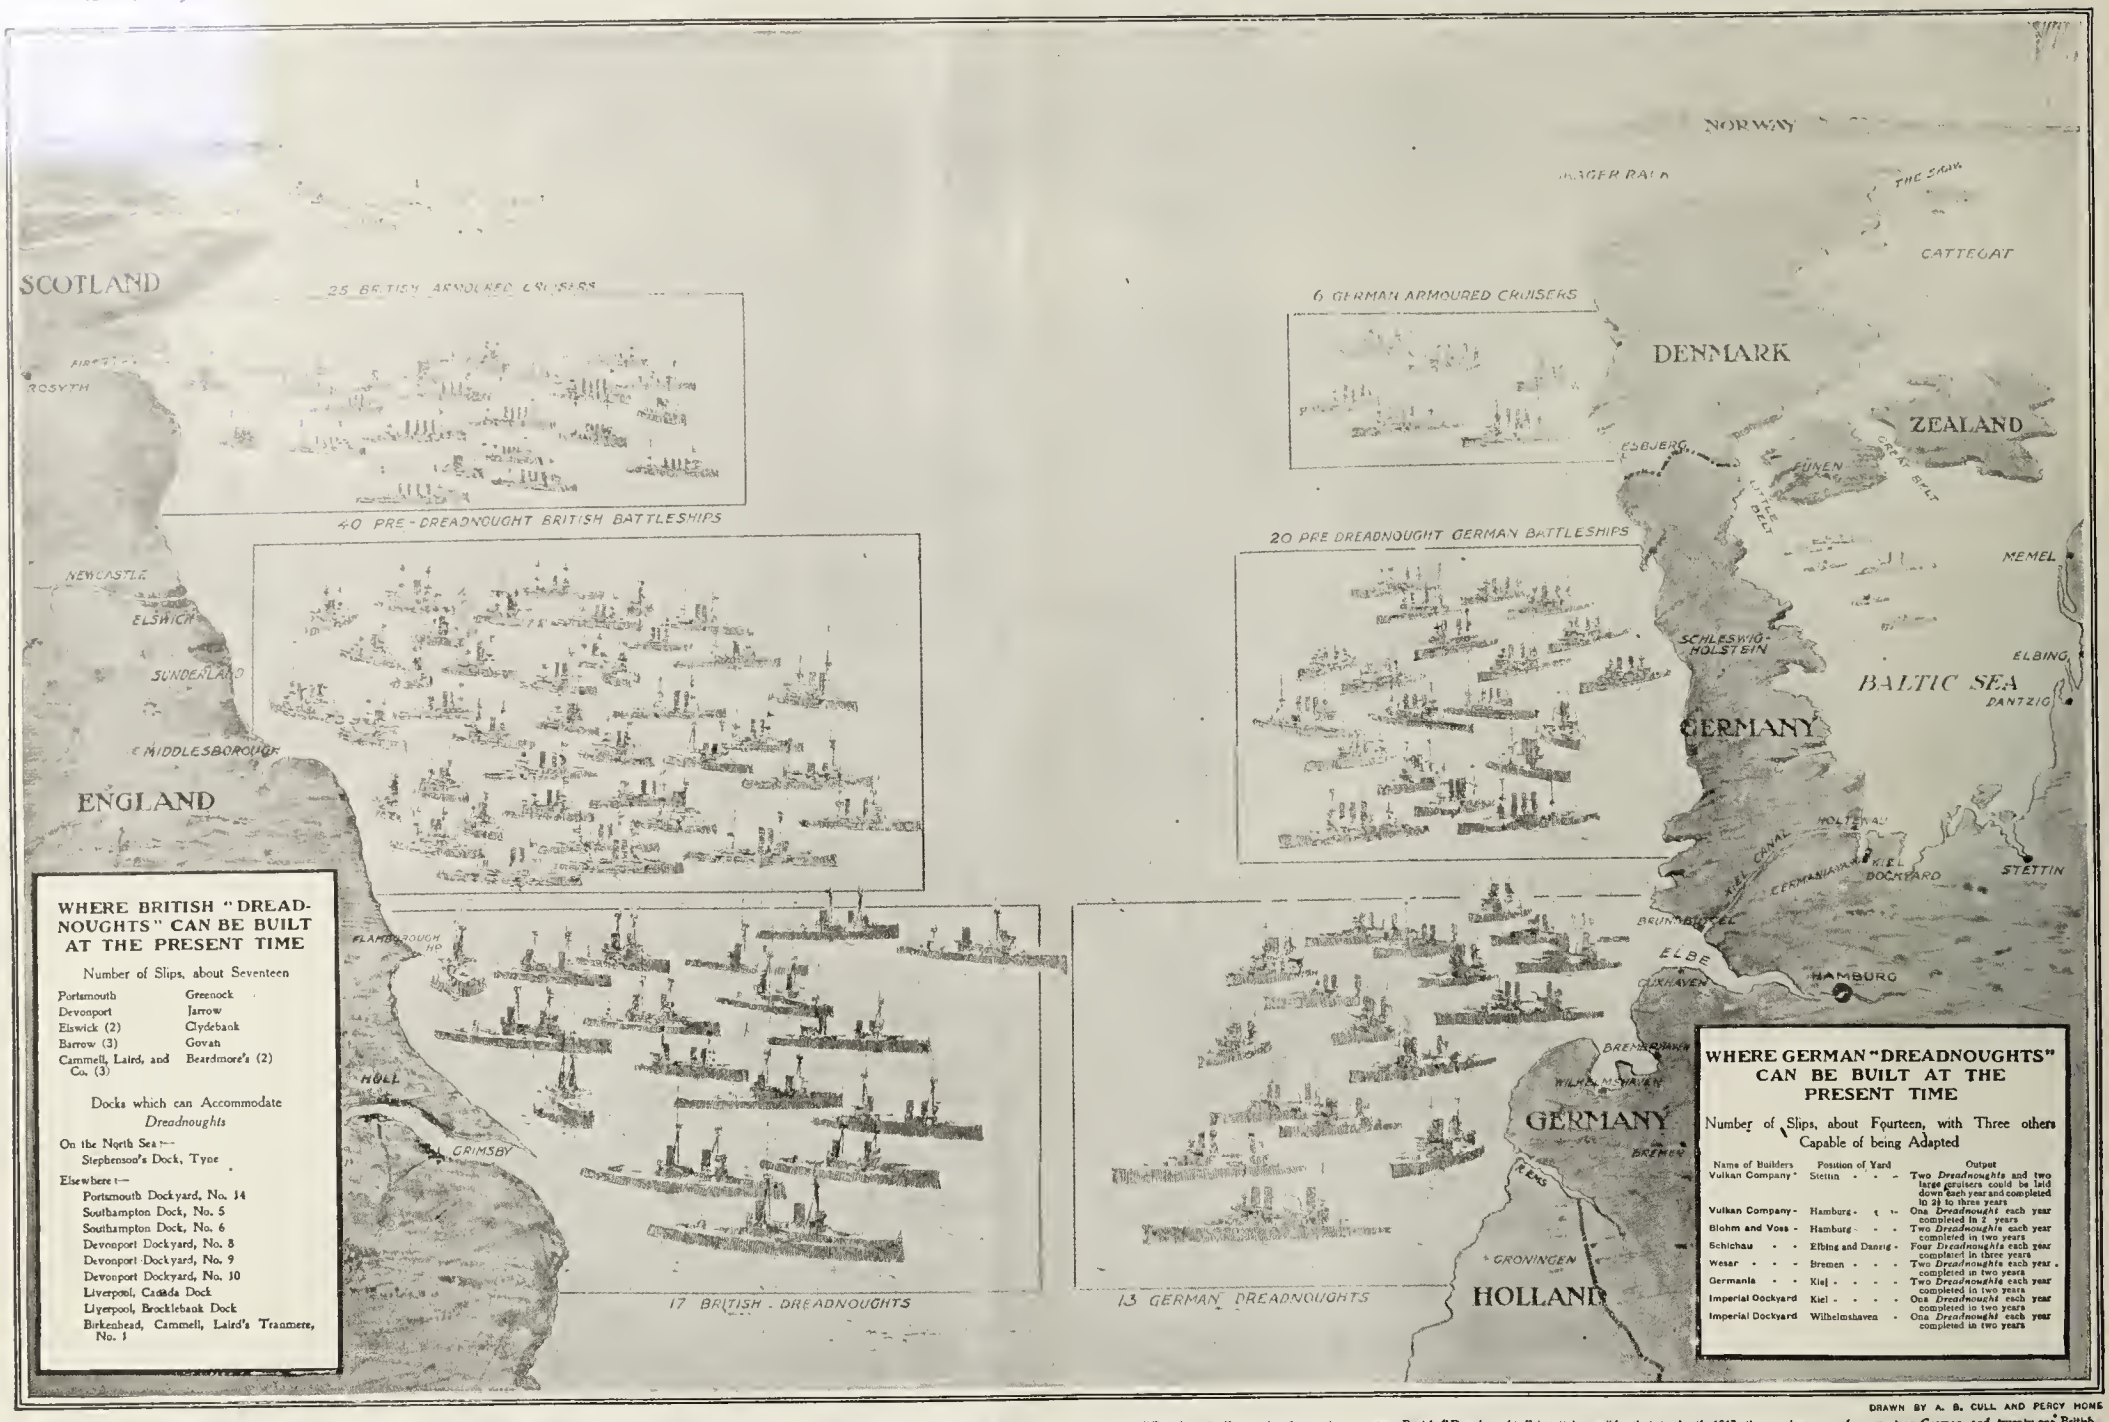
Joseph H. Gaines, William P. Hubbard, James A. Hughes, George C. Sturgiss, and Harry C. Woodyard of West Virginia.

Joseph B. Bennett, John W. Langley, and Don C. Edwards of Kentucky.

Charles E. Washburn and John W. Weeks of Massachusetts.

William Lorimer, James R. Mann, and Speaker Joseph G. Cannon of Illinois.

Richard W. Austin of Tennessee, Charles E. Creager of Oklahoma, John G. Grant of North Carolina, Joseph Howell of Utah, Frank W. Mondell of Wyoming, and H. O. Young of Michigan.



Real Opinion About Civil Service

THOSE who complacently hold the belief that the civil service is a permanent and accepted thing in this country should read these extracts from recent debates in the Congressional Record:

Senator Nathan Bay Scott of West Virginia: ". . . As far as I am personally concerned, I would hope that the whole matter (putting census appointments under Civil Service rules) would go out, and that Representatives and Senators would be given the privilege to name good clerks to do this work. . . . I am opposed to having them examined by the Civil Service Commission at all."

Senator Jacob Gallinger of New Hampshire: ". . . In my opinion, Civil Service has run mad in this country—literally run mad."

"APRIL, 1912"—A Glimpse of the North Sea Three Years Hence with the Fighting Ships of Germany and Britain.

DRAWN BY A. B. CULL AND PERCY HONE

This bird's-eye view gives an idea of the fighting values of the German and British fleets as they will be in April, 1912, the date which has suddenly assumed so much importance. Thirteen German "Dreadnoughts" are placed opposite seventeen British "Dreadnoughts," but it is possible that in April, 1912, the numbers may be seventeen German and twenty-one British "Dreadnoughts." In addition to these giant vessels there will be the British fleet of forty pre-"Dreadnought" vessels faced here by a fleet of twenty German pre-"Dreadnought" battleships, and British armoured cruisers would number twenty-five to the German six

Germany's Naval Ambitions

Some Reasons Why the United States Should Wake Up to the Facts About the Kaiser's Battleship-Building Program—Great Britain's Danger Exaggerated, But Not Her Fright

By CAPTAIN A. T. MAHAN

THE recent scare in Great Britain over German naval rivalry has been duly recorded in the American press as a matter of current news; but it seems scarcely to have received the attention, or the perspicuous application to ourselves, that the circumstances require.

The German naval program has been known for some time. To cite the head of the British Admiralty, speaking in Parliament, "when all the ships under it shall have been completed, they will constitute a navy more powerful than any now in existence." What was unknown until recently to the British Admiralty, the admission of which has caused the alarm, was the immense, rapid, but unnoted, growth of facilities for quick building that has taken place in Germany. The Admiralty not only was unaware of what was passing, but a year ago had assured the public, officially, that the rate of building was so much in favor of Great Britain that she could always keep ahead of the development of any other country. Meanwhile, Germany not only was proceeding with actual building, but was developing simultaneously her means. Said the British Secretary of the Navy in Parliament: "Two years ago I believe that there was in Germany, with the possible exception of one or two slips in private yards, no slip capable of carrying a *Dreadnought*. To-day they have no less than fourteen such slips, with three more under construction. Two years ago any one familiar with the capacity of Krupps and other great German firms would have ridiculed the possibility of their undertaking the supply of all the component parts of eight battleships in a single year. To-day this productive power is a realized fact." The same power of production has been provided for guns, gun-mountings, and armament in general. Without further elaboration of detail, Germany, granting the mechanics and the money, can build now as many and as fast as Great Britain herself. How about America?

Further, the German Government has the resource of anticipating votes of supply. That is, having adopted a program which extends over many years—a thing which neither Great Britain nor the United States does, nor, I apprehend, constitutionally can do—orders are issued from time to time to manufacturers in advance of the money being voted. No difficulty is made by German builders or financiers in meeting and providing for such orders. Thus the parts of several great ships are being turned out a considerable time before that which would be anticipated by outsiders, looking only at the program, or at the proceedings of the German Legislature. This turning out of the parts escapes the attention which sees only in the laying of the keel the moment of initiation; but it is evident that it is an immense stride toward ultimate completion. It is also evident that by this method work may be so apportioned, and so assured to the manufacturing establishments, as to secure them steady employment, and to enable them to develop their plant with confidence of returns; the certainty for which commerce always longs.

By this development of building facilities, anticipation of votes of supply, and preparations before keel-laying, Germany has stolen a march upon Great Britain in two respects. She has advanced toward the fulfilment of a program which contemplates a navy stronger than the present British, with a stride far beyond what the British Government a year ago thought possible; and, further, she has created, unseen, facilities which enable her to maintain this gain, for she can now go on building as rapidly as her supposed rival.

After reading the most notable recent speeches in Parliament upon this topic—a trouble, I fancy, few Americans have taken—I incline to think that the situation as regards Great Britain, though embarrassing to that country, is less immediately menacing than pessimists assert; but I believe, none the less, that an extraordinary situation has been created, and that henceforward, if Germany so will and can find the money, the two-power standard of the British fleet, accepted by Liberals as well as Conservatives, can not be maintained. The two-power standard, it may be explained, means that in predominant British opinion the British navy should equal in power the combination of the two strongest foreign navies, plus a margin of safety of, say, ten per cent. By some the United States navy is not included in such possible combination.

In the London "Times" for March 24, the editor of the British "Naval Annual," who for twenty years has been accustomed, in the interests of his periodical, to keep track of the progress of all navies, contributes the following table as to the strength of the British and German navies, in battleships of the heaviest class, at the end of three approaching years:

	GREAT BRITAIN	GERMANY
1910 (end)	10	9
1911 "	16	13
1912 "	20	17

Mr. Balfour, the leader of the Opposition, rates the

German numbers higher, upon information in his possession; but I prefer to adhere to the more moderate calculation, as made by a man not in the heat of controversy, and moreover a specialist in such estimates.

I fear that the people of the United States are less concerned than their interests should prompt them to be by this menace to another English-speaking community, in the welfare of which we have a great stake; but I trust that self-interest may arouse them to the fact that a portentous international fact, and factor—that is, maker of further facts—has come rapidly into existence, as well as been suddenly revealed. Granting that Great Britain still has a day of grace, in which, by strenuous effort, she can yet assure her naval supremacy, Germany can now put afloat a fleet without any other equal than that of her neighbor.

The suddenness of all this recalls other historic instances. Austria, in 1866, and France, in 1870, had awakenings similar to that which Great Britain has just undergone; only theirs was in the clash of arms, with the realized result of dire disaster. Many of us still survive who remember the unexpected wonders of the needle gun. The first Napoleon, after Jena and Tilsit, exacted a limit to the numbers of the Prussian army; he failed, however, to note that that army was being changed in composition year by year, so that by relays of training a nation of soldiers was created imperceptibly but swiftly. He met his surprises in the battlefields following 1812, ending with Waterloo.

"Our Needs Are Our Business," Says Germany

THE new conditions are of very grave concern to the United States. Let it be observed that the question is not one of a particular external object quietly aimed at by the German Government. In the late naval debates the British Prime Minister said: "The question has been raised more than once by the British Government, with a view to ascertaining whether any proposal for mutual reduction of expenditure for naval purposes would be accepted by the German Government; but we have been assured more than once, in the most formal manner, that their naval expenditure is governed solely by their own needs, and that their program does not depend upon us."

There is here no explanation of what Germany considers her needs, which compel the building of a navy that, when complete, "will be more powerful than any now existing." The reply, in terms unobjectionably civil, is virtually: "Our needs are our business, not yours." No offense can be taken, and outsiders are driven back upon the legal maxim that intention can only be inferred from action. Nor need they speculate overcuriously as to intention. As the British Foreign Minister has recently said: "Foreign governments and our own Government live from hand to mouth, and have fewer deep plans than people might suppose;" and he remarked that half the difficulties of foreign policy may arise from the exceeding ingenuity of different countries attributing motives to each other's governments. What other nations have to do is not to ask what Germany means, but to consider what effect such a fleet as she now contemplates must have, as an international factor, upon international questions should they arise.

The Peril of the Monroe Doctrine

IT IS, perhaps, hardly necessary to represent to Americans what the effect on their commerce and finance would be if Germany in a war should seriously impair the financial status of Great Britain; but it is surely incumbent upon us to recognize that there is now visible in the near future a foreign fleet decisively superior to our own, in the class of vessel accepted at present by preponderant naval opinion as the determinative factor in naval war. Great Britain also will have such a fleet, and superior; but a long history of international contention—together with the exposure of Canada—not to speak of kindlier relations and recent memory of good offices done us, make as sure as anything future can be, that Great Britain can have no wish to contravene our historic policy known as the Monroe Doctrine. It is, indeed, unthinkable that Great Britain now, any more than in 1823, can wish any change in the political dependence of tropical America.

Germany's action as regards the Monroe Doctrine has also been scrupulously in accord with our position; and for that reason no one has a right to suggest any purpose to the contrary for the future. But we must look facts straight in the face, and see that, in case of future offense given by some future Castro—a condition almost sure to arise—such superiority at sea as Germany is now establishing puts in her power to exact whatever reparation she may please, irrespective of the Monroe Doctrine.

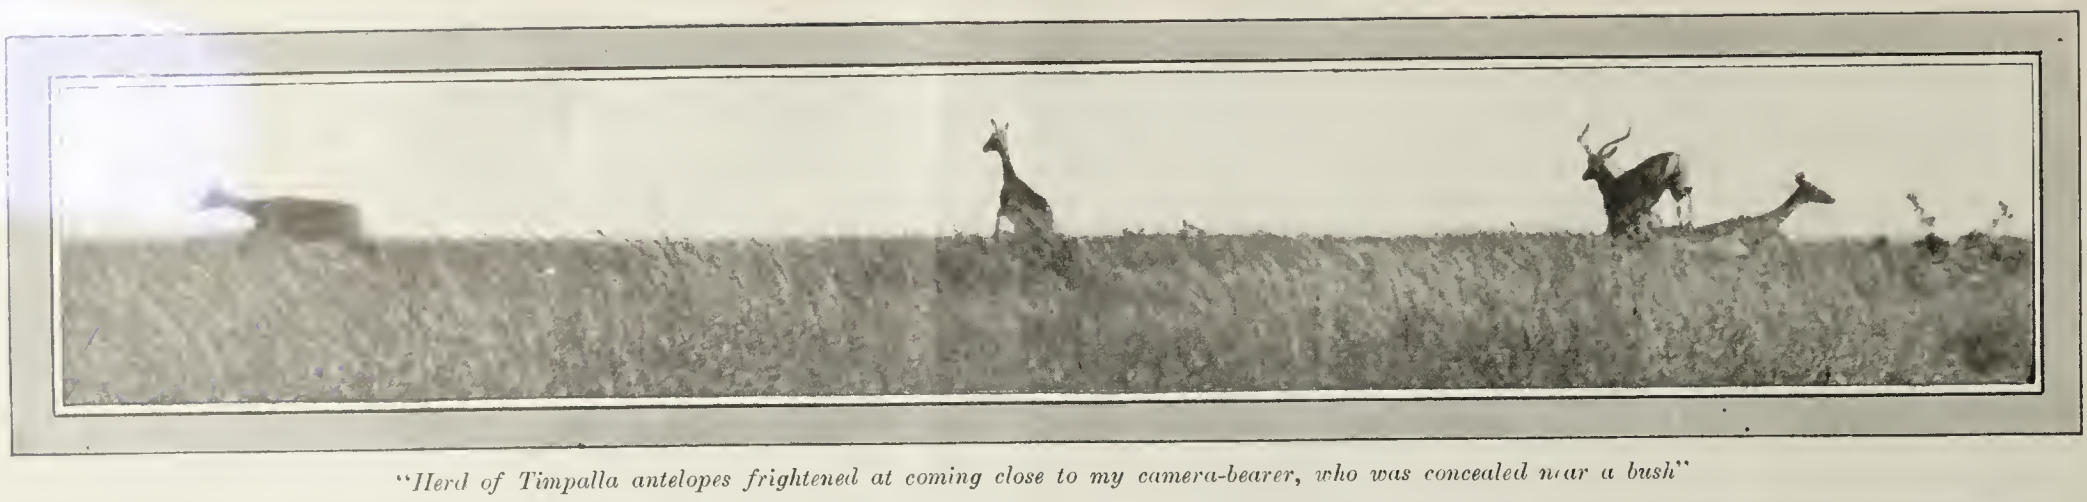
Having advanced, through eighty years of consistent contention, to the position we now hold with regard to European interference on this continent, are we willing now to leave a permanent element of national policy dependent upon the uncertain indulgence of a foreign state, which is notoriously thirsting for colonization in the supposed interest of racial development? The recent decision of Congress to vote only two of the four *Dreadnoughts* asked by the late President was probably in ignorance of the grave future of international balance constituted by this action of Germany, so suddenly revealed to the British Legislature.

Should such unhappy conjuncture arise, only naval power can control the issue. If the United States should find herself decisively inferior on the sea, she either must acquiesce without resistance, though not without remonstrance, or, resisting with inadequate means, be not only beaten on the main issue, but her commerce strangled by blockade. It may be apprehended, too, that, following recent experience, she may have to pay the war bills of both sides. It would seem almost better, upon the whole, to spend such indemnity beforehand, pocketing the results ourselves, in a navy adequate to prevent such humiliation; the bitterness of which would be provocative of further future trouble. The alternative, of paying later the price of the navy which shall have put you in a hole, does not commend itself as a palatable draft; not to speak of the reversal of a permanent national policy, deliberately adopted, and maintained through near three generations. There is, besides, the question of our property at Panama. Scarcely five years have passed since, after long negotiation, we freed ourselves from our engagements with Great Britain, and obtained, diplomatically, the free management and control of the canal. Control, however, is a mockery in terms when confronted by a superior navy. As toward Great Britain, we have other means of pressure should occasion arise; toward any other European power we have only our navy.

Preparing for Europe's Overflow

FEW persons realize what the appearance of such a navy as that which Germany is building means in international affairs. The question, indeed, is not what she intends; like other governments, she may to some extent live from hand to mouth, though probably not so much so as others. The question is: What will she be able to do with such a force? That is her meaning; the expediency of an unknown future, as yet contingent and impossible to foresee. But though contingencies are beyond our ken, it is perfectly knowable, and absolutely sure, that, should they be unfavorable, she, with a decisively superior navy, will have the whip hand. To cite instances, to illustrate in detail how navies built for one purpose have insensibly been led to assert decisive effect in very different quarters, passes the limits of this writing. Thus it was, without malice prepense, that the navy of Cromwell, built for the narrow seas, was drawn, almost despite himself, to the Mediterranean; and there in his strong hands, followed by William III and Marlborough, changed the face of Europe and shaped therefrom the destinies of America. Is there any thoughtful man who does not see that the great international questions of this present day are shaping far outside of the narrow seas, although it is quite possible that they may be decided there? Europe is full—and overflows.

CAN GREAT BRITAIN EQUAL ANY TWO? THE NAVIES OF THE WORLD'S POWERS.



DRAWN BY ALBERT SEBILLE.

THE FORCES THAT HELP TO MAINTAIN PEACE: THE NAVIES OF THE NATIONS—THEIR FIGHTING-STRENGTH AT A GLANCE.

Our Illustration shows the effective fighting-ships of the world's navies, those war-vessels that, according to many politicians, do much to insure the peace of the world. In our Illustration the battle-ships are shown formed in line; the armoured cruisers are shown advancing; in the foreground are indicated dockyards in which are vessels under construction or waiting to be launched. The vessels of Brazil are of particular interest, owing to the statement that Great Britain may yet purchase the three "Dreadnoughts" that are being built for that Power in this country.

A reproduction from a sixteen-page supplement to the "Illustrated London News" of March 27 in which appeared a seven-foot panorama of the British Navy. Both to quiet the present alarm among the people and to warn their Government, English papers do not hesitate to compare their naval forces with those of other powers

"BUCKO"

The South Sea Cruise of the Full-Rigged Ship "Etna"—Shaw Who Tried and Failed, and Noble Who Waited

By

PERCEVAL GIBBON

Illustrated by M. LEONE BRACKER

"Pity some of us wasn't by with a sheath-knife"

EVENING came up in a vast mellowness of coloring over sea and sky. There was scarcely a stir of wind; save for the wake of the tug, in which the *Etna* moved, with all sail set, like something half asleep, the sea was smooth as a floor. Far astern of her, shading into the pale sky, the low lands about the mouth of the Delaware were dimly seen; she was standing out on the first stage of her voyage around the Horn, from Philadelphia to San Francisco.

"Stand by to get the tow-rope aboard," came the order from aft. The sailors, bone-weary with the long day of bending sail and getting the ship ready for sea, crowded for'ard to the forecastle-head, sixteen hard and sullen men, strange to each other and to the ship. They came up in silence and grouped themselves ready to take in the hawser when the tugboat should give them slack. A few glanced aside as they stood to take stock of the second mate—glances gravid with calculation and suspicion, for the man had a name, a reputation current in forecastle and sailors' boarding-houses. Men who had sailed with "Bucko" Logan had a pride in remembering it; they spoke of him with curses, but often. He stood beside them now, ignoring them utterly and watching the towboat, his lean, clean-shaven face, with its hard jaw and its thin, courageous nose, showing no consciousness of their neighborhood. He was tall and long-legged; there was a quality of slenderness and alertness in all his body, a readiness in his attitude; he looked quick and dangerous even as he stood at rest. There were grave faces among those that scanned him.

He was the first to see that the towboat had stopped her engines. He woke to action like a spring released from tension. "Get hold of that hawser," he commanded, and though he spoke quietly, the weary men started to their work with brisk urgency. "Never mind the capstan," he bade; "take her in hand over hand. Heave away, now."

He put no hand to it himself, but stood and watched the bent line of them as they snatched the heavy hemp inboard. The tug had put her helm over and was falling back on the ship's beam; she was like a neat toy on that great shining plain of water. On her little pulpit of a bridge, the captain spun the wheel, leaning aside meanwhile to look over his shoulder at the ship; a couple of hands stood ready at the towing-chock to let go the line, and waved a farewell to the poop; and under her counter there was a bubble from the reversed propeller. Her captain detached a hand from the spokes and waved it. "So long, Bucko," he was shouting, cheerily. Logan gave him no answer. The laboring sailors had no eyes to spare for this little ceremony of farewells, in which no part was theirs; it seemed as though Logan joined them in a deliberate aloofness. The tug cast off the line, and it flopped into the water.

"Now, then," snapped Logan; "lively with that hawser." He thrust himself sharply in front of the foremost man and took hold of the wet rope. "Get a move on," he said, and laid his strength to it, while behind him the sailors hauled with a new energy. Already they had remarked on one thing—that Logan gave his orders without raising his voice to the conventional shout; shouting could have added no emphasis to their curt authority. And he had not sworn; the hawser had been got in by hand with none of that blusterous vociferation usual to such maneuvers. He was among them and close to them while they coiled the line down to dry on top of the foc'sle, swift and brief of speech, full of quick energy; they felt in him, in their dull, inarticulate way, something potent and individual for which they had no name. The need to discuss it made something of a bond between them when they knocked off at last for supper and sat about the narrow foc'sle over their food.

They were of all the races which furnish ships with crews, an all-nation and no-nation crowd gathered together from the world's ports to drive the old *Etna* from the Delaware to the Golden Gate. For them, the spaciousness of the world was no more than a road; every part of it was on the way to somewhere and no part of it was a final destination. English and Americans leavened their diversity thinly. They sat about on their chests and ate and drank absently, eying one another without interest.

It fell to an American to broach the matter which ripened in the mind of each.

"Well, boys," he said, over his steaming pannikin of foc'sle tea; "what d'ye make of Bucko Logan?"

They all turned toward him at the word; a white-haired seaman who sat next to him leaned forward and spat graphically on the dirty deck.

"I'd give a bit," he said slowly, "to ha' been sober the day I shipped for this trip. You wouldn't catch me aboard of here if I'd had my senses."

The Yankee who had spoken first nodded his full comprehension. He had a lean, humorous face, burned to the color of teak by many suns.

"Guess we'll be sober enough by the time he's through with us," he said, slowly. "But say. Did ye see what a style he had on him? As quiet as a funeral."

Another Englishman took up the tale. "That's what's said of him, that is. Don't holler at yer like what an ordinary mate does; speaks as soft as a parson and then hits like the kick of a mule. There was a shipmate of mine in my last ship—Bucko Logan had broke the bone of his jaw for stoppin' a buntline too tight, an' then made him crawl aloft, with his mouth hangin' sideways on his face, to cut the stopper."

There was headshaking over this; the man who stops the gear so that it will not run when it is needed has no friends aboard ship.

"I haf haird," began a plump man near the door, "dat vonce he vos coom into der focksle—"

The white-haired seaman looked up sharply.

"Say, mates," he said, "I didn't notice nobody askin' that Dutchman to oblige the company. There's reason in everything, now ain't there? We may be shipped for a tough passage, but that ain't to say that a Dutchman's to open his mouth here without havin' something shoved into it."

A murmur of agreement threaded its way through those who were not "Dutchmen"; the citizens of the sea acknowledged its code. It served to set them together and somewhat overcome that strange reserve which sailors exercise toward new shipmates. Talk ran more easily while the night darkened without and the loose gear slapped and creaked overhead. All the old tales of Bucko Logan were set forth afresh; his world-wide fame had its due; stories of his fine seamanship, as when he brought the *Soldan* home with smallpox aboard of her and only five hands left to work her up to quarantine, of his ruthlessness, instanced by the case of "a man I was shipmates with in the So-and-so," of his strength, his fighting prowess, his behavior to women, and the rest of the characteristics which had won him a place in the mythology of the sea before he was thirty-five. The dull lamp swung above their heads and cast its meager light over them and over the meanness of their bunks and possessions, and the "Dutchmen," accounted for and accurately placed without their circle, listened in placid silence.

Eight bells put a period to the talk. "Aft all hands," sounded the due order. Watches were to be chosen and set according to immemorial custom. The night was still and splendid with stars; here and there the lights of ships showed near at hand, the traffic of the Delaware mouth.

At the poop-rail the captain with his two mates awaited them; a globe-lamp to read their names by held the three of them in the circle of its radiance. The men, awkward and shy, gathered about the after hatch, staring and breathing heavily. The officers were consulting over the list, and the men made the most of their opportunity to scrutinize their masters. Logan, tall and tight-lipped, was a little in the background. The captain, gray-haired and florid, with a manner of moving his hands as he talked, was accepted as a type; they all knew captains like him. The mate, a stumpy, powerful man, was also nothing out of the way. In contrast with them, Logan stood out like an aristocrat.

Noble's immunity made the others suspicious of him

"All aft?" demanded the captain at last. His voice had a note of petulance; shipmasters are prone to it. "Answer to your names as I call them." This form achieved, the setting of the watches began, the captain and the mate choosing alternately. Noble, the white-haired seaman, found himself in the starboard—Logan's—watch. With him was Fullerton, the American, Shaw, another Englishman, four of the docile Dutchmen, and a stout little Frenchman. Then came the captain's speech.

He leaned upon the rail, the globe-lamp illuminating his round face, and looked down upon his crew. His attitude looked confidential, persuasive, intimate.

"Now, men," he said, in his rather high tones; "here we are: This is a good ship; don't make no mistake about that: A man that can do the work he shipped for's all right; he'll find her a good ship. Let's have quick hands and feet fore an' aft and we'll get on first-rate. But—" he paused, and some of them saw Logan smile behind him—"*but*, if there's any shenanigan, stand by for trouble. You hear *me*. Hell 'll be a summer resort alongside of this packet if there's goin' to be trouble. Now we understand each other, so go below, the watch."

Thus the crew of the *Etna*, full-rigged ship, entered upon their voyage. A crew and a ship are never at one till they are out of soundings; it takes a day or two for the sea habit to assert itself and the vessel to become familiar. Things are stiff at first, like the sheaves of the blocks; officers do not get to close quarters till the ship is clean of the land's defilement. In due season the hands turn out of the foc'sle, holystone and scrub it and make it clean; their bodies are emptied of liquor and the boarding-house languor; they settle down to the routine that will govern and guide them as long as blue water is under them. The starboard watch was quick to find its bearings; its members were alert to avoid collision with Logan. Old Noble, with forty years of seafaring behind him, soon took stock of his position and confided his conclusions to Fullerton. Both men were out on the jib-boom at a piece of work, standing on the foot-ropes while the brisk sea swelled and sank beneath them.

"Say, Jim," said Noble; "I don't see how Logan's goin' to get at you an' me."

Fullerton, pareeling an eye ready for serving, did not look up.

"Same old way, I guess," he replied.

"I don't know," said Noble. "You see, Jim, it isn't as if he wasn't a sailor. Now, you and me—we're up to our work. We can do it as well as him. A man's got to have *some* sort of a reason for startin' to punch."

Fullerton spat. "Oh, hell," he said.

"But he's *got* to have some sort of a reason," Noble insisted. "What I say is—don't give him none."

"It ain't a reason he wants; it's an excuse," answered Fullerton. He looked up. "Don't you never make a mistake?" he asked. "Ain't you never brought a ball of marline along instead of spun-yarn, or something?"

"What about it?" demanded Noble.

"That's excuse enough for him, an' reason enough, too," said Fullerton. "Don't you worry, old chap; what's comin' is comin', and served hot."

He bent again to his work, and Noble pondered. He would have spoken further, but a sudden uproar from the main deck checked him. Both men listened. There were yells, sounds of woful expostulation, and noise as of driving nails with a mallet. The deckhouse stood between them and the cause of it all; they could view nothing of what was happening; but they could see a man on the foreyard looking down aft. Presently, with a last howl, the uproar ceased. Fullerton looked across the boom at Noble.

"Better get on with yer job," he said, quietly. "It's begin. That was one of the Dutchmen—or maybe two of 'em."

It seemed to both of them as though the voyage really

The dull lamp swung above their heads and cast its meager light over them and over the meanness of their bunks and their possessions

started from then, and what had gone before was merely preliminary, like casting off from the wharf and towing down the river. Old Noble, fitting a strop to a downhaul block, bent his head above his task and worked deftly, with all the skill of long eustom, but his thoughts were aft. His years, his eonseiousness of sound shipcraft, and his good record had given to him something like dignity; he was aecustomed to have good work expected of him and to render it, and to enjoy in return a eertain immunity from the lesser form of diseipline. He was uneasily aware that there would be no sueh plea to be won on the *Etna*. There was indignation in his thoughts that he should have eome to sueh a pass. And then he heard Logan's step on the forceastle-head. He uttered a short hiss of warning to Fullerton and worked faster.

The second mate—Noble could see him with the corner of his eye—took account at leisure of the lashings on the anchors and of the jib-sheets. He stood a while with his back to the two men, seanning the gear on the foremast, humming to himself. At last he turned, cast a leg over the rail, and eame edging out on the footrope till he stood at Noble's side.

"How are you gettin' on with that?" he said, in his quiet tones.

Noble shifted to let him see for himself and took a look at him. His hard young face was nonchalant and eomposed; he turned the block over ealmly, eoneerned with nothing else. Only—the hand that touched it had a smear of blood across the big knuekles that whitened under the skin with every movement of the fingers.

"Yes," said the second mate. "That ought to do. Put a seizing on those clip-hooks when you're through. How are you doin' over there?"

He straddled over the boom to Fullerton, looked at the job, nodded, and went inboard again. Both looked at his back as he went down the ladder to the main deek, and then eyed each other in the same impulse.

"That's a terror for you," said Noble, slowly.

"That's so," agreed Fullerton, with a puckered brow. "Darn me if I can make him out. Half kills a man one minute—see that blood on his fist?—and then comes along to look over a job without so mueh as a 'hurry up.'"

"Aye," said Noble. "I wisht he'd curse a bit. It's that deadly soft way of his, as if—as if he knowed he'd got you, no matter how you squirm. That's what makes me itch, that is."

At eight bells they were quickly made aware of what had happened on the main deck. In their bunks in the foc'sle, two of the "Dutehmen" were sobbing over their new troubles. Noble stood up and bade them show their faees; they raised their bruises obediently to view. The old man seanned them, his lips pursed; both men had been sorely beaten.

"Yes," he said, thoughtfully; "you've had the eream of it, you two. What was you doing?"

"Not'ing," eried one of them. "He joost eome up and pooneh us for not'ing."

The other Englishman in the watch laughed shortly.

"That's just what they was doing," he explained to Noble. "I was close by, an' them Dutchmen was soldiering all the wateh. I'd ha' punehed 'em myself if I'd been the seeond mate."

The men started with their dinner in silenee. Noble had a sense of relief at finding that the sufferers after all were Dutehmen; it might have been worse. A man who is hard on such as they may none the less be a good offieer from the point of view of the fo'c'sle. In faet, it helped to identify Logan, to fit him in; this was a recognizable attribute of an energetie second mate. Noble turned into his bunk after dinner with a mind eased of a few of its darker forebodings.

Good winds helped the old *Etna* into the trades; with her easting made, she turned her stout stem to the south and justified her builder. Ineidentally, she most completely justified her second mate. A full-rigged ship, built of wood and heavily sparred, is the true material for fine seamanship, and Logan was a seaman of the highest order. The old skysail-yarder gave him seope; with his keen instinet for a ship's eharaeter, he soon learned just what she could do and how mueh she eould stand. During his trieks at the wheel at night, when the horizon was blotehed with quick squalls, Noble had many oecasions to judge Logan's abilities. "Stand by your royal and topgallant halyards," he would order, as the fresh wind strengthened and a spurt of rain traveled down to them. A word to the man at the wheel, a blink into the binnaele, and then he would take up his position at the weather poop-rail, his eyes aloft on the gear, his every faculty alert, and sail the old ship through the thiek of a squall without starting a sheet. Noble eame to mark sueh ineidents as typical of the voyage. He was an expert judge of an offieer's worth, and rendered Logan the tribute of his unfeigned surprise and admiration. He began to think skeptically of the man's unholy reputation. He tried to express himself to his mate Fullerton.

"They eall him Bucko," he said, "but he hasn't eome no bucko with us. Who's he hit? Only a pair of Dutehmen for loafin', and Shaw a elip on the ear for belayin' the royal halyards with a hitch. And as for bein' a sailor, why, there's admirals eouldn't work a ship the way he does."

Fullerton was not convinced. "It's eomin'," he said, "and when it comes, you stand from under. I guess I know the breed. He wasn't called Bucko for nothing."

The starboard watch had the middle watch that night. The trades were failing, petering out in squalls that kept the hands on the jump and the gear stretehed. When Noble relieved the wheel at four bells the *Etna* was on a bowline, laying her rail well down to the sea that raced past in white streaks from the bows. The captain was on deek, walking the poop with Logan; both were in oilskins. It was breezing up purposefully, out of a sky that shifted from dark smoke-eolor to dead blaek, and Noble eould feel in the heavy helm that the old ship was earrying all she eould stand. He was not sorry that the eaptain was on deek, for Logan alone had a way of carrying on to the last minute which sailors detest. It did not take the captain long to deeide to shorten sail; Logan ordered the royals in and went down to the main deek to see it done. Topgallants, jib-topsails, and flying-jib followed; and Noble had rung one bell, whieh indicates the time to eall the wateh below, before the second mate returned to the poop. The eaptain had already gone below and Logan eame aft and took a look into the binnaele.

He stood at Noble's side for a eouple of minutes.

"Lot too many Dutehmen on this ship," he said at length.

"Yes, sir," agreed Noble; "I've no use for Dutehmen myself."

Logan nodded, still staring into the compass.

"That man Shaw ealls himself an Englishman, don't he?" he asked.

"Yes, sir: Shaw's English," answered the old sailor.

"Pity he don't act like it, then," said the second mate, so quietly that it seemed as though he were talking to himself.

He looked round suddenly at Noble as though he were about to add something more. Then he smiled and stepped a pace away.

"Strike eight bells," he ordered, and walked forward.

The man of the port wateh relieved Noble, and the old man went forward. The night was very dark, and he trod with eare along the wet deeks. At the eorner of the for'ard house, some men were gathered in a knot; a gleam of light from the lamp in the fo'e'sle shone dully on their wet oilskins.

"Ain't you fellows goin' to turn in?" said Noble, as he eame to them.

Some of them turned to see who spoke, but nobody an-

swered. Their interest was focused on a figure stretched upon the deck; two of them were kneeling by it. Everybody was very quiet. A wave of sickness passed through Noble's body. He laid a hand on the arm of the man next to him.

"Is—is that Shaw?" he asked.

The Dutchman—it was one of those whom the second mate had thrashed—looked round to him.

"Yes," he said. "Dat's Shaw."

Fullerton rose from his knees by the prone man.

"Here," he said. "Let's get him in to the fo'c'sle. He's got it bad."

Four men, ungainly in their stiff oilskins, raised him in their arms and bore him to his bunk. The ship was rolling somewhat; they had to balance and poise as they went, and there was a momentary jam in the narrow doorway. But Shaw uttered no sound. They got him into his bunk, and reached the lamp down from its hook to see him more clearly. The hair over one ear was bound into strings with blood, but the face was unmarked. It had the color of yellow clay and seemed to have become sharper and thinner. The lower lip hung down and let the teeth be seen.

Fullerton pointed with a finger to the clotted hair.

"It was a belaying-pin did that," he said, almost in a whisper.

"Logan?" asked Noble, in a whisper.

Fullerton turned on him. "Logan," he repeated. "Who else'd it be? Of course it was Logan—the man-killin', sailor-drivin' dog!"

His voice, wrathful and loud, seemed an offense against the stillness in which Shaw lay unmoving.

"What was it about?" asked Noble hastily.

Fullerton sneered. His face was curiously white. "Who knows what it was about?" he cried. "Whatever he done, he hadn't earned that." Again his pointing finger carried their eyes to the bloody hair. "He was at the fore-to'gallant halyards; the rest of us was on the clewlines. We heard him sing out and curse; we never heard Logan at all—you know the swine's quiet style. An' then there was a sound like splitting a board and we heard him fall, and Logan lowered the yard himself. Aye. Pity some of us wasn't by with a sheath-knife."

The Frenchman was bathing Shaw's face from a pannikin, while the others stood about staring and wordless. Fullerton, having spoken, crossed to his own bunk and began to remove his oilskins. Noble stood a while and looked at the prone man, then turned to the door.

"Where you goin'?" demanded Fullerton.

"Aft," said Noble. "That man might die."

The port watch were at the weather main braces as he passed, the leading man go-ho-ing with vigor. The door of the poop alleyway on the lee side was open, and Noble made for it, meaning to wake the steward. The second mate's room was the first to pass, and, as it chanced, Logan had his door open also.

The second mate was standing in the middle of the room stripped to the waist, and he looked up as the old man appeared.

"That you, Noble?" he asked.

"Yes, sir," said the sailor.

"Goin' to call the steward?" suggested Logan. "It's no use, though; I guess his skull's cracked all right. I sort of felt it give."

He looked enormous in the tiny berth; his shoulders and chest seemed to crowd the place. The little hurricane lamp screwed to the bulkhead was behind him, and let him be seen as a great silhouetted mass.

"He looks bad," said Noble. "I've a notion he's done for."

"So have I," was the answer. "So you might as well come in here and lend me a hand."

Noble knew he didn't want to; at the back of his mind there smoldered a savage wrath against this big young man; but he entered and closed the door as he was bidden.

"Just lift the lamp out of the socket and hold it for me, will you?" directed Logan. "That's it," he said, as Noble obeyed. "Now I can get a look at the damage."

He turned as he spoke, and old Noble uttered an oath of sheer amazement. Half the side and thigh were sticky with blood, which oozed still from a wound low down in the ribs.

"Steady with that lamp," said Logan. His big, spade-ended fingers were busy about the wound, callously stretching and kneading it as though in curiosity. "Ah, here it is," he said suddenly, and picked something forth from it. He swished it in the water of the wash-hand-basin and held it to the lamp.

"See," he said to Noble.

Noble saw; it was two inches of the point of a sheath-knife, broken off in the wound.

"Dirty trick," said Logan, nonchalantly, hitching up his trousers. "I'll get my shirt on and call the captain. You can go and turn in, Noble."

Nobody in the starboard watch managed to retain a clear memory of that event; the implication of it shifted so suddenly. One moment their minds were full of bloody murder, of a shipmate ruthlessly slaughtered in the dark for mere wantonness; the body in Shaw's bunk seemed to cry out upon his slayer. And the next moment the captain was there, shrill and shaking, incoherent with anger, showering epithets on them and on the dead. Shaw's broken knife was found where he had fallen.

"Set of knifing cowards," the captain babbled at them. "Lucky that belayin'-pin was handy, Mr. Logan—the low-down blanky Dagoes. You work 'em up after this, Mr. Logan; keep the stabbin', underhanded dogs on the move, d'ye hear?"

"Aye, aye, sir," said Logan, formally, looking over his head at the bewildered men.

Shaw was buried next morning by the men on the port watch, when they were washing down decks. Noble, sleepless in his bunk, heard the voice of the mate: "Get hold of that corp a couple of you and shove it over." Then came the splash, and that was all. The man who had got the worst of it was disposed of; the incident was at an end. It had not even interrupted the current of the ship's life. The captain, certainly, went about with a face of power, designedly portentous; but Logan, who lived under the scrutiny of cautious eyes, carried no signs of it. He never mentioned his own wound or let it embarrass him in the least; when a foul night thickened to a tempestuous day and all hands were called to shorten sail, he led his watch aloft in superb style and took the bunt of the mainsail as though no blade had broken short on one of his ribs. Never for a moment did he break from his studied restraint of tone and manner; he seemed to live in a tense and significant undertone, pregnant with menace. On the run down to the Horn, he displayed his "Bueko" form more than once; it was the "Dutchmen" that suffered. Noble saw one of them felled one day. The man was smoking during his watch on deck; he was at work under the foc'sle head and Logan came round the for'ard house and upon him suddenly. The man's back was to him, and the second mate, without so much as a frown, tapped him on the shoulder. It was done so quietly, with such a manner of equanimity, that Noble looked to hear a mere word of rebuke and an end to it. The man started round at the touch and let his pipe fall, gaping at the officer; the next instant Logan's fist knocked him breathless across the barrel of the windlass. He had the luck, or the good sense, not to stir for a minute, and Logan, after looking at him thoughtfully, set his heel on the pipe, broke it and turned away. He had not even spoken. The man's front teeth were broken and his lip split through; trembling violently, he swabbed the blood from his face and crept back to his job. Noble saw his eyes were white and wide.

It was a well-trained watch which Logan commanded by the time the *Etna* braced up and made the Horn, a watch that was never a minute late on deck, which put its force to its work with a feverish readiness and never failed to jump at an order. Save only No[illegible] not [illegible] of them but had come under the second [illegible]te's [illegible] hand and had his scars to show. Fullert[illegible] turn had come one night when he was drowsy on the lookout, and Logan had seen a distant light first. The American had taken his hammering standing up and fighting; he had left his mark on Logan's hard face and had been pounded to unconsciousness in return for it. Noble's immunity made the others suspicious of him; they talked with guarded words in his presence, for fear he should be in an understanding with the afterguard.

They saw the Horn, a mere black buttress of rock peering up over chill seas, on a Sunday morning. Somehow, it is always Sunday morning when one sights the Horn. Save for the skysails, everything was set; a quiet wind came out of the southeast and shifted them no more than three knots an hour. That ultimate spire of land, nosing toward the Antarctic, deals only in extremes of weather—in mornings of cool calm and afternoons when the wind spins round to the north and west and blows great guns. The captain, muffled to the eyes, spent the forenoon watch on the poop, alternately peeping at the barometer in the companion and scanning the sky. The wind hauled steadily to the northward, and soon after noon the word was passed for "all hands," and they commenced to strip her. Quick as the starboard watch was Logan was before them; he was at the foc'sle door, urgent and formidable, as they came on deck at a run, hunted them from halyards to clewlines with the menace of his presence, and openly set them to race the port watch, working at the fore. To the rhythm of old Noble's yo-ho-ing, the great structure of sails crumpled in the gear; with Logan at their backs, speaking his quiet "Haul there" into their very ears, the libeled Dutchmen put their useful weight into the work gallantly.

"Now," he said, when all the sails but the lower topsails were clewed up; "two hands to furl that to'gallant; the rest to the upper tops'l. Come along, boys."

Shaw's broken knife was found where he had fallen

The Trouble Hunter

Old Bill Simms and His One-Elephant Circus—The "Daisy D.," the Fiji Sailors, and the Volcano That Broke the Monotony of an Uneventful Forty Years

By

FREDERICK UPHAM ADAMS

Illustrated by DAN SAYRE GROESBECK

"Seems like 'John L.' knowed it was up tew him"

THE proprietor of Simms' International Circus and Menagerie waved a gnarled hand in a sweeping three-quarter circle.

"There they are, Cap'a'n," he announced.

Jed Blont, captain and owner of the three-masted trading schooner *Daisy D.*, gazed doubtfully at the twelve wagons which contained the fauna belonging to old Bill Simms. Then the eyes of the sailor wandered to the gigantic form of the lone elephant who lent a shade of real distinction to the aggregation. This enormous brute was contentedly extracting wisps of hay and hoisting them into his triangular mouth, pausing occasionally to sweep from his leathery back and flanks a swarm of Fijian flies. The Simms International Circus and Menagerie was closing a successful engagement in Suva, metropolis of Vita Leva of the Fiji group of islands.

"That's a thunderin' big elephant," Captain Blout said, cautiously moving a little nearer the huge pachyderm.

"Biggest an' best in the world," promptly agreed Bill Simms, grabbing the twisting trunk with one hand and slapping the huge beast in rough affection with the other. "That's no press-agent yarn, neither. Speak up ter Cap'a'n Blout, John L.!" he commanded, pushing up the trunk with all his strength. "Salute the Cap'a'n, you big, overgrown eater of my money! Speak up, you—!"

The monster suddenly reared on his hind legs, swung the tip of his trunk high in air, opened his mouth, swelled his sides, and then gave vent to a trumpet blast which shook every yard of canvas in the tent. Captain Blout instinctively backed away when "John L." poised for this vocal effort, and retreated until he stood less than three feet from the bars which restrained the Numidian lion from devouring an appreciative public.

The echoes of the elephantine salute still crashed through the tent when the awakened lion rose and roared forth a not subdued note. Captain Blout felt the hot and sickening blast of breath on his neck. An instant later the whole menagerie joined in the tumult. Hyenas barked, leopards snarled, tigers threw themselves against their bars, and the deep bass of a grizzly bear mingled in a chorus which welled savagely up from every angle of the canvas enclosure.

Captain Blout was a brave man, but his sky was not the fluttering top of a menagerie tent.

"I'm going to get out of this!" he exclaimed, looking wildly for the exit. "And let me tell you right now that I wouldn't carry this bunch of animals on the *Daisy D.* for all the money you've got! How do I get out?"

Old Bill Simms had reached for a stout stake. With it he gave the Numidian lion a dexterous jab in the ribs, another blow silenced a vociferous leopard, and a moment later he hurled it across the open space and hit the bars of the hyenas' cage.

"Shet up! Shet up; the whole blamed passel of ye!" he yelled, jumping on a barrel and shaking his fists at the occupants of the various cages. "Ye blamed fools, don't ye know you've got company? Stay right where ye are, Cap'a'n! Lord bless ye; if they was all turned loose not a one of 'em would dare come near ye! They're only showin' off; they thought ye'd like it!"

Comparative silence fell in the tent. The elephant complacently resumed his manipulation of the hay, the Numidian lion sorrowfully inspected his bruised side, and only the parrots dared disregard the mandate of their owner. Captain Blout paused in his flight and looked a bit sheepish.

"You can never tell what will happen," he said, still keeping an eye on the lion.

"Happen! Happen!" cried old Bill Simms, viciously punching the projecting nose of the grizzly. "I've been in this business forty years an' not a blamed thing has happened. It's like herdin' a flock of sheep. You see that lion? Well, I can walk right intew his cage an' pull what few teeth he's got left, an' he wouldn't lift a paw in anger. Why, Cap'a'n, I own him an' can lick him, an' blamed well he knows it!"

"Every man to his trade," muttered the captain of the *Daisy D.*, "but I don't believe I want to freight 'em on my ship."

"Yes, ye dew," eagerly insisted Bill Simms. "Cum right over tew the company tent an' we'll talk it over."

Possibly a desire to exact higher rates may have influenced Captain Blout's hesitation, but he finally agreed to transport the effects and employees of the Simms International Circus and Menagerie from Suva to Sydney, Australia—some seventeen hundred miles of island-dotted waters—for a fee more than old Bill Simms had suggested, but which was considerably less than that demanded by the steamship company.

"Of course," commented Bill Simms, as he scrawled his name to the contract and handed over a part of the stipulated amount—"of course I lose some time, an' time runs mighty fast intew money fer salaries and fer feed tew the animals, but still, somethin' excitin' may happen. If somethin' worth seein' would only happen I wouldn't care how much it cost—in reason, of course."

"What do you want to happen?" asked Captain Blout, carefully stowing the bills in a well-worn wallet.

"Any old kind of stimulatin' trouble," slowly explained the circus man.

"Don't you go pullin' for any trouble on the *Daisy D.*," growled her commander. "If that's what you're looking for we'll call this deal off right here!"

"I don't mean disasters," hedged old Bill Simms. "I've just got er hankerin' that this here trip might turn up somethin' tew break the deadly monopoly—as my daughter Sally would say—of keepin' a boardin'-house forty years fer a passel of mangy animals. That's all I mean, Cap'a'n. I ain't lookin' fer much; a small hurricane or an attack by a few cannibals would help perk me up er lot."

Three days later the menagerie was snugly stowed away in the second deck of the *Daisy D.*, and cramped accommodations found for the employees and performers.

For months the weather had been ideal. Day after day the thermometer had stopped short of eighty. Occasional showers had freshened the tropical vegetation, the winds had the proper force for full sails, and the nights were cool and delicious. Such were the conditions when the stout little schooner trailed her wake away from the south shore of Vita Leva.

Simms and Captain Blout went below to inspect the menagerie. The wagons were closely arranged in the forward part of the second deck. The elephant was housed in a barricade constructed of heavy uprights, in front of which was an inclined walk which took the place of the companionway.

A group of Fijian sailors clustered in this passage and gazed with open mouths and eyes as Bill Simms thrust his hands through the bars and familiarly greeted the lion, the tigers, leopards, and the snarling hyenas. The men began jabbering to one another, and as they talked their excitement grew. Captain Blout caught the drift of their comments, shouted a command to them in their native language, and they scuttled to the deck.

"What was them benighted heathen sayin'?" asked Bill Simms. "What in tarnation's worryin' 'em?"

"They say that you're a devil, and that you have bewitched these beasts," frankly explained the captain. "They are afraid that you have hoodooed the ship."

Bill Simms leaned back against the cage of the grizzly bear and laughed long and loud.

"Them poor pagans don't know much erbout me an' this here collection of man-eaters," he said, wiping his eyes on a red bandana handkerchief. "Sit down, Cap'a'n, an' let me unload some of my woes on ye. A ship that carries me an' this bunch of critters surely don't need tew take out no insurance. The Lloyds should hire me tew sail steady on ships which are supposed tew take risks. Why? Because nothin' ever happens tew that ship. I'm the opposite, as 'twere, of the Flyin' Dutchman. My jest bein' on board breeds good weather an' steady breezes. Me an' these here animals soothes nature an' stills the savage passions in the breasts of men. Darned if it ain't er fact, Cap'a'n! My daughter Sally—who lives in Boston and knows a lot—she says I'm the harbinger of peace, an' I reckon she has it sized up erbout right. It makes me plumb disgusted—it shure dew!"

"What makes you disgusted?" asked the puzzled seaman.

"My fool luck," growled old Bill Simms. "Here I am sixty years old—an' nothin' has happened tew me yet. I come from a venturesome an' enterprisin' family, Cap'a'n. My father was shot up five times before he was forty-five. He participated in a flock er shipwrecks, he got smashed up in railroad accidents, a crocodile bit off two of his toes before he was married, he dropped a hundred feet outer a balloon—say, Cap'a'n, it would take me a week tew tell ye half the amazin' things that happened tew my dad—an' he's alive yet, an' well, or was when I left Frisco."

The old man paused and relit his pipe.

"Then look at me," he continued. "I started out tew keep up the family record. I looked 'round fer some dangerous occupation, an' finally picked out animal trainin' an' the circus business. It looked interestin' and was reputed tew be hazardous. Cap'a'n, if ever a man deliberately insulted lions and picked trouble with tigers, leopards, an' other big cats, I'm that man—an' after forty years of it darned if I've got er scratch more'n half an inch deep! Fact! No gang of toughs ever gave me a fight worth thinkin' erbout; none of my performers ever got killed; none of my animals ever escaped an' attacked the audience—not a dodgasted thing has happened worth puttin' in the papers. I tell ye, Cap'a'n, it's mighty tough on a man who's honestly tried tew hunt up excitement."

The captain seemed unable properly to express his sympathy.

"So I have made this here final effort to change my tough luck," the circus man went on. "I had quite a wad of money, an', thinks I, I'll take this blame' circus part way 'round the world an' see if anythin' will happen. Says I tew myself, I'll butt intew savages, run afoul er cannibals, get in the path er hurricanes, monkey 'round where there's apt tew be earthquakes—lose money, perhaps, an' perhaps my fool life, but I may strike sumthin' worth while. Dew ye know, Cap'a'n, I've toted this circus an' menagerie clear 'round South America, an' not a blame' thing has happened yet. It was tame as a Sunday-school picnic. So when I saw this little tradin' schooner of yours back there in Suva harbor, I says tew myself that on a slow voyage tew Australia, duckin' in between them islands on the map, perhaps we might bat intew sum kinder interestin' rumpus, but I ain't got much hope, Cap'a'n; I've erbout given it up. Funny thing is that instead of losin' money, as I naturally expected, we've made money every place we've stopped."

Old Bill Simms returned to the deck, looked with disgust at the cloudless sky, and then began the seventh rereading of "Foul Play."

On the third day out the *Daisy D.* encountered a head wind, but otherwise the weather continued perfect. This wind gradually died away, and finally the schooner rolled lazily on a glassy sea. The blue peaks of distant islands lifted themselves above the horizon, a full moon made the nights glorious, but these placid beauties of nature had no charm for old Bill Simms.

"I've never seen anythin' else," he repeatedly complained to Captain Blout. "Lord, how I wish it would blow er dew somethin'!"

"Unless the barometer lies you'll get a bellyful of that wish," was the grim response of that mariner.

"I don't believe it," said the dejected Simms. "The only hurricanes an' typhoons I'll ever see is right here in this book. Hurricanes, earthquakes, pirates, cannibals, etc., are only in novels. I don't believe this old mill-pond ever kicked up a sea," and he buried his wrinkled face again in the pages of "Foul Play."

Four hours later it began to blow, and the end of the afternoon found the *Daisy D.* scudding along under bare poles. As the gale increased a fierce joy possessed old Bill Simms. Hatless and coatless, he clung to a stay and shouted at the wind-torn crests which swept past the schooner.

"Blow, darn ye, blow!" he yelled, bracing himself against each fiercer blast. "Is this the best ye can dew? Darn it: I've seen it blow harder than this up in old Vermont! Dew ye call this a real hurricane, Cap'a'n?"

That officer paid little attention to him. Not so the Fijian sailors, who glowered at him with frightened or angry looks as they brushed past. They translated his cries as an invocation to their Storm Devil and Captain Blunt finally told him so.

"Stop that fool yellin' of yourrs!" he ordered, shouting in Simms's ears. "Don't you know that my men are afraid of you? They think that you brought on this storm. You'll get enough of it before morning! Go below and look after your confounded menagerie."

Until midnight the storm was nothing more serious than a stiff gale, then the *Daisy D.* entered the zone of a well-developed typhoon. Long, black fingers of cloud lifted themselves above the horizon and sped with inconceivable rapidity to the zenith. To add to the horror of the spectacle the moon would at intervals suddenly burst forth and cast a fleeting and uncanny refulgence on this toy of a ship tossed on a lacerated sea beneath a crazy sky. Simms lashed himself to a stanchion near the wheel. Fear had not yet stricken his stout heart, but awe had crept into his brain.

"Be there any islands ahead of us, Cap'a'n?" he asked.

"If there are, we're due to bump 'em," was the gruff response. "This ain't a steamer, and where she blows we goes!"

Half an hour later a furious squall ripped away the foretopmast, and it carried with it a poor wretch of a Fijian sailor, who gave one shriek of despair and was seen no more.

"Ye can call this hurricane off any time ye like, so far's I'm concerned, Cap'a'n," old Bill Simms said in the slight lull which followed this tragedy. "I'm not altogether selfish in matters of this kind, an' I'll take yer word fer it that it can blow harder! Gee-whilikins! What's comin' now?"

A flash of moonlight revealed the jagged and writhing base of a waterspout not a quarter of a mile ahead of the plunging bow of the *Daisy D.!* A second later a solid wall of rain cut it from view. Captain Blunt threw his weight on the wheel, and for two awful minutes the schooner lay half-smothered in the trough of a maddened sea. They missed that waterspout by a few rods!

It was four o'clock in the morning when the rain suddenly ceased, and later the wind dropped a bit. Bill Simms peered anxiously ahead, scanned the scudding clouds and drew a long breath.

"Thank God! She's done her worst!" he said fervently. "I'm through pullin' fer hurricanes, Cap'a'n, an' if ye think I'm anyways ter blame fer this here one, why, I apologizes. Guess I'll mosey down below an' see how the menagerie has stood the racket."

He cautiously loosened the lashings, stretched his long legs and arms, and waited for a chance to make the dangerous dash for the companionway.

At that moment the sky was illumined with an unearthly glare. For an instant the watchers thought it lightning, but only for an instant. The entire firmament flared and pulsated in its weird glow, but the source of this eruption of light seemed to be directly ahead of the path of the gale-driven schooner. The first burst was of a tawny yellow; then came vivid flashes of violet and green, and throbbing pulsations of other colors. Simms gazed at it for a minute in silence.

"What in thunderation is it?" he finally demanded.

Captain Blunt shook his head.

"If I was on shore," volunteered the circus man, "an' saw a thing like that I should make up my mind that hell had broken loose, or that the biggest chemical shop on earth was on fire an' that the firemen was squirting oil on it. Great Scott! Look at it now!"

"The savage cannibal king gave one yell, an' the whole outfit hit the jungle"

"That intelligent elephant beat it along the beach, the big cats jouncing up an' down on his back"

There came a blinding glare of light as if the writhing clouds had burst into dazzling flame.

Simms remembers that the rigging of the schooner was sharply silhouetted against the celestial conflagration. He recalls that the awful light was so diffused and all-pervading that it cast no shadows; he saw the agonized faces of the Fijian sailors as they knelt on the deck of the *Daisy D.* and wildly invoked their heathen gods to save them—and then he remembers hearing a moan in the air, of feeling the lifting of the schooner to an incredible height, of resisting a rush of something which seemed to deaden his faculties—the universe rocked in a cataclysmic explosion, and then he felt himself picked up and hurled into space.

Simms was stunned only for a moment. Half strangled by a wave which had swept him fifty feet along the deck, he clutched a stay, staggered to his feet and came back, not to earth, but to Inferno.

It was hailing meteors. Not the fuzzy strings of white across a peaceful sky; not the silent "shooting stars" with which he had been familiar for nearly threescore years, but huge masses of sizzling and white-hot rock which hissed and screamed overhead, and which exploded with deafening roars and clouds of steam as they hurled themselves into a sea which looked like nothing else save boiling gold. There were thousands upon thousands of these meteors, some of them no larger than a hat, and others bigger than his village church back in Vermont. One of these huge masses of burning rock came so near the schooner that its heat blistered Simms's face and singed his thin gray beard.

Terrific detonations deafened him; the air was choked with particles of dust which glistened like gold, and was rank with the stench of sulphur and unknown chemicals. It distressed old Bill Simms to realize that an irreverent thought possessed him in this awful and probably final moment.

"We surely have located hell," he muttered to himself over and over again, "an' it looks just erbout like I thought it did."

He had resigned himself to his fate when he heard the crash of splintering wood. He looked and saw the huge hatch, which had been battened over the menagerie companionway, rise in the air, and as it fell to the deck he saw the unwieldly form of "John L." He looked a glorified elephant. The burnished heavens turned his ugly hide to layers of overlapping and undulating gold.

The elephant steadied himself by a massive effort, raised his trunk and added to the universal din one defiant blast, and, as if that were the signal, the Numidian lion, the two Bengal tigers, the spotted leopards, the laughing hyenas, and most of the other animals belonging to the Simms International Circus and Menagerie scrambled up from below and instinctively clustered around the swaying and slipping "John L."

Bill Simms was of the good old Yankee type which believes in conserving personal property rights until the last breath is drawn. It was not a dead sure thing that the end of the world had come, but it was an absolute certainty that his menagerie was in danger.

"Things surely are happening fast enough now," he gasped as he dashed forward.

He had grabbed "John L." by the tip of his trunk, when something else happened. A wall of water rose high over the port quarter of the schooner, and when that stout craft had finally struggled up from beneath it, Bill Simms and most of his menagerie were in the spume of the South Pacific Ocean. Captain Blunt caught one glimpse of the elephant as a surge lifted his bulk on its crest, and he thought he saw old Bill Simms, but the master of the *Daisy D.* had work other than a vain attempt at rescue cut out at that moment.

It is well to give the later experiences of Mr. William Simms in his own language. He has told it many times, and his account never varies—fairly conclusive proof of its approximate truth:

"It's a funny thing," so he relates, "but the minute that wave tumbles me an' 'John L.' an' the rest of my menagerie intew the ocean I savays what was happening. We had been headin' fer one of them tropical islands with a live volcano on it, an' the old mud drum had just turned loose with a select assortment of eruptions, earthquakes an' other things such as hot rocks shot outer its crater—which I had mistook fer meteors. I know it made me kinder mad as I come tew the surface tew think that I hadn't thought what was up before.

"I don't rightly know whether I saw 'John L.' first or if he saw me, but we come together like two long-lost brothers. He grabbed me with his trunk an' was for puttin' me on his back, but I dissuaded him from that, an' took a tight grip on a leather collar 'round his neck. Just erbout that time, Prince, my Numidian lion, hove inter view, an' he was makin' bad weather of it. Elephants is wonderful swimmers, but paddlin' in the water ain't no specialty of lions, tigers, an' the like.

"Seems like 'John L.' knowed it was up tew him. He slowed down er bit an' let Prince come alongside. The next wave lands him on that elephant's back, an' a minute more I'll be blame' if one of the tigers an' both the leopards didn't get aboard. The hyenas was able to take care fer themselves, besides they couldn't stick on an elephant's back nohow. One of the acts in the circus was tew have 'John L.' tote a lot of them eats 'round the ring, so it came natural for 'em to perch there.

"There wasn't room fer all of 'em, an' they kept knockin' each other off fightin' fer a place, or was washed off by the waves, but these temporary restin' spells helped 'em a lot. They scratched 'John L.' up pretty bad, an' once in a while he'd let out a roar an' swat 'em with his trunk, but I suppose he knowed it was hard work fer them poor beasts tew hang outew his roof without sinkin' their claws in, so he made allowances.

"'John L.' seemed to know what he was erbout, an' headed a straight course for some spot he seemed tew have in mind. At times the water was boilin' hot where them blazin' rocks had dropped, an' 'John L.' had tew swim 'round 'em. In erbout ten minutes the waves got lots smaller, an' it seemed tew me that the wind died down complete. All at once we struck almost still water, an' the first thing I knew 'John L.' began tew rise up, an' blame' if I didn't reach down and strike my feet on a sandy bottom. We was saved!

"Well, sir, sometimes I almost weeps tew think that nobody was on the shore of that tropical island with a camera tew take us when we landed. 'John L.' reached out an' picked me up when he felt solid ground under him. He gave one snort of joy an' tossed me up where I've been many a time before an' since, right in back of his ears.

"A heap of things had happened—or rather had quit happening while we was in the water. In the first place, the gale stopped erbout the time we went overboard, an' a smart breeze sprung up from another direction that blowed the smoke an' dust of that volcano away. The worst of the eruption was over an' no more hot rocks fell. The sun also was comin' up, an' when we went ashore that mornin' hell was stopped up an' things took on a mighty heavenly tinge.

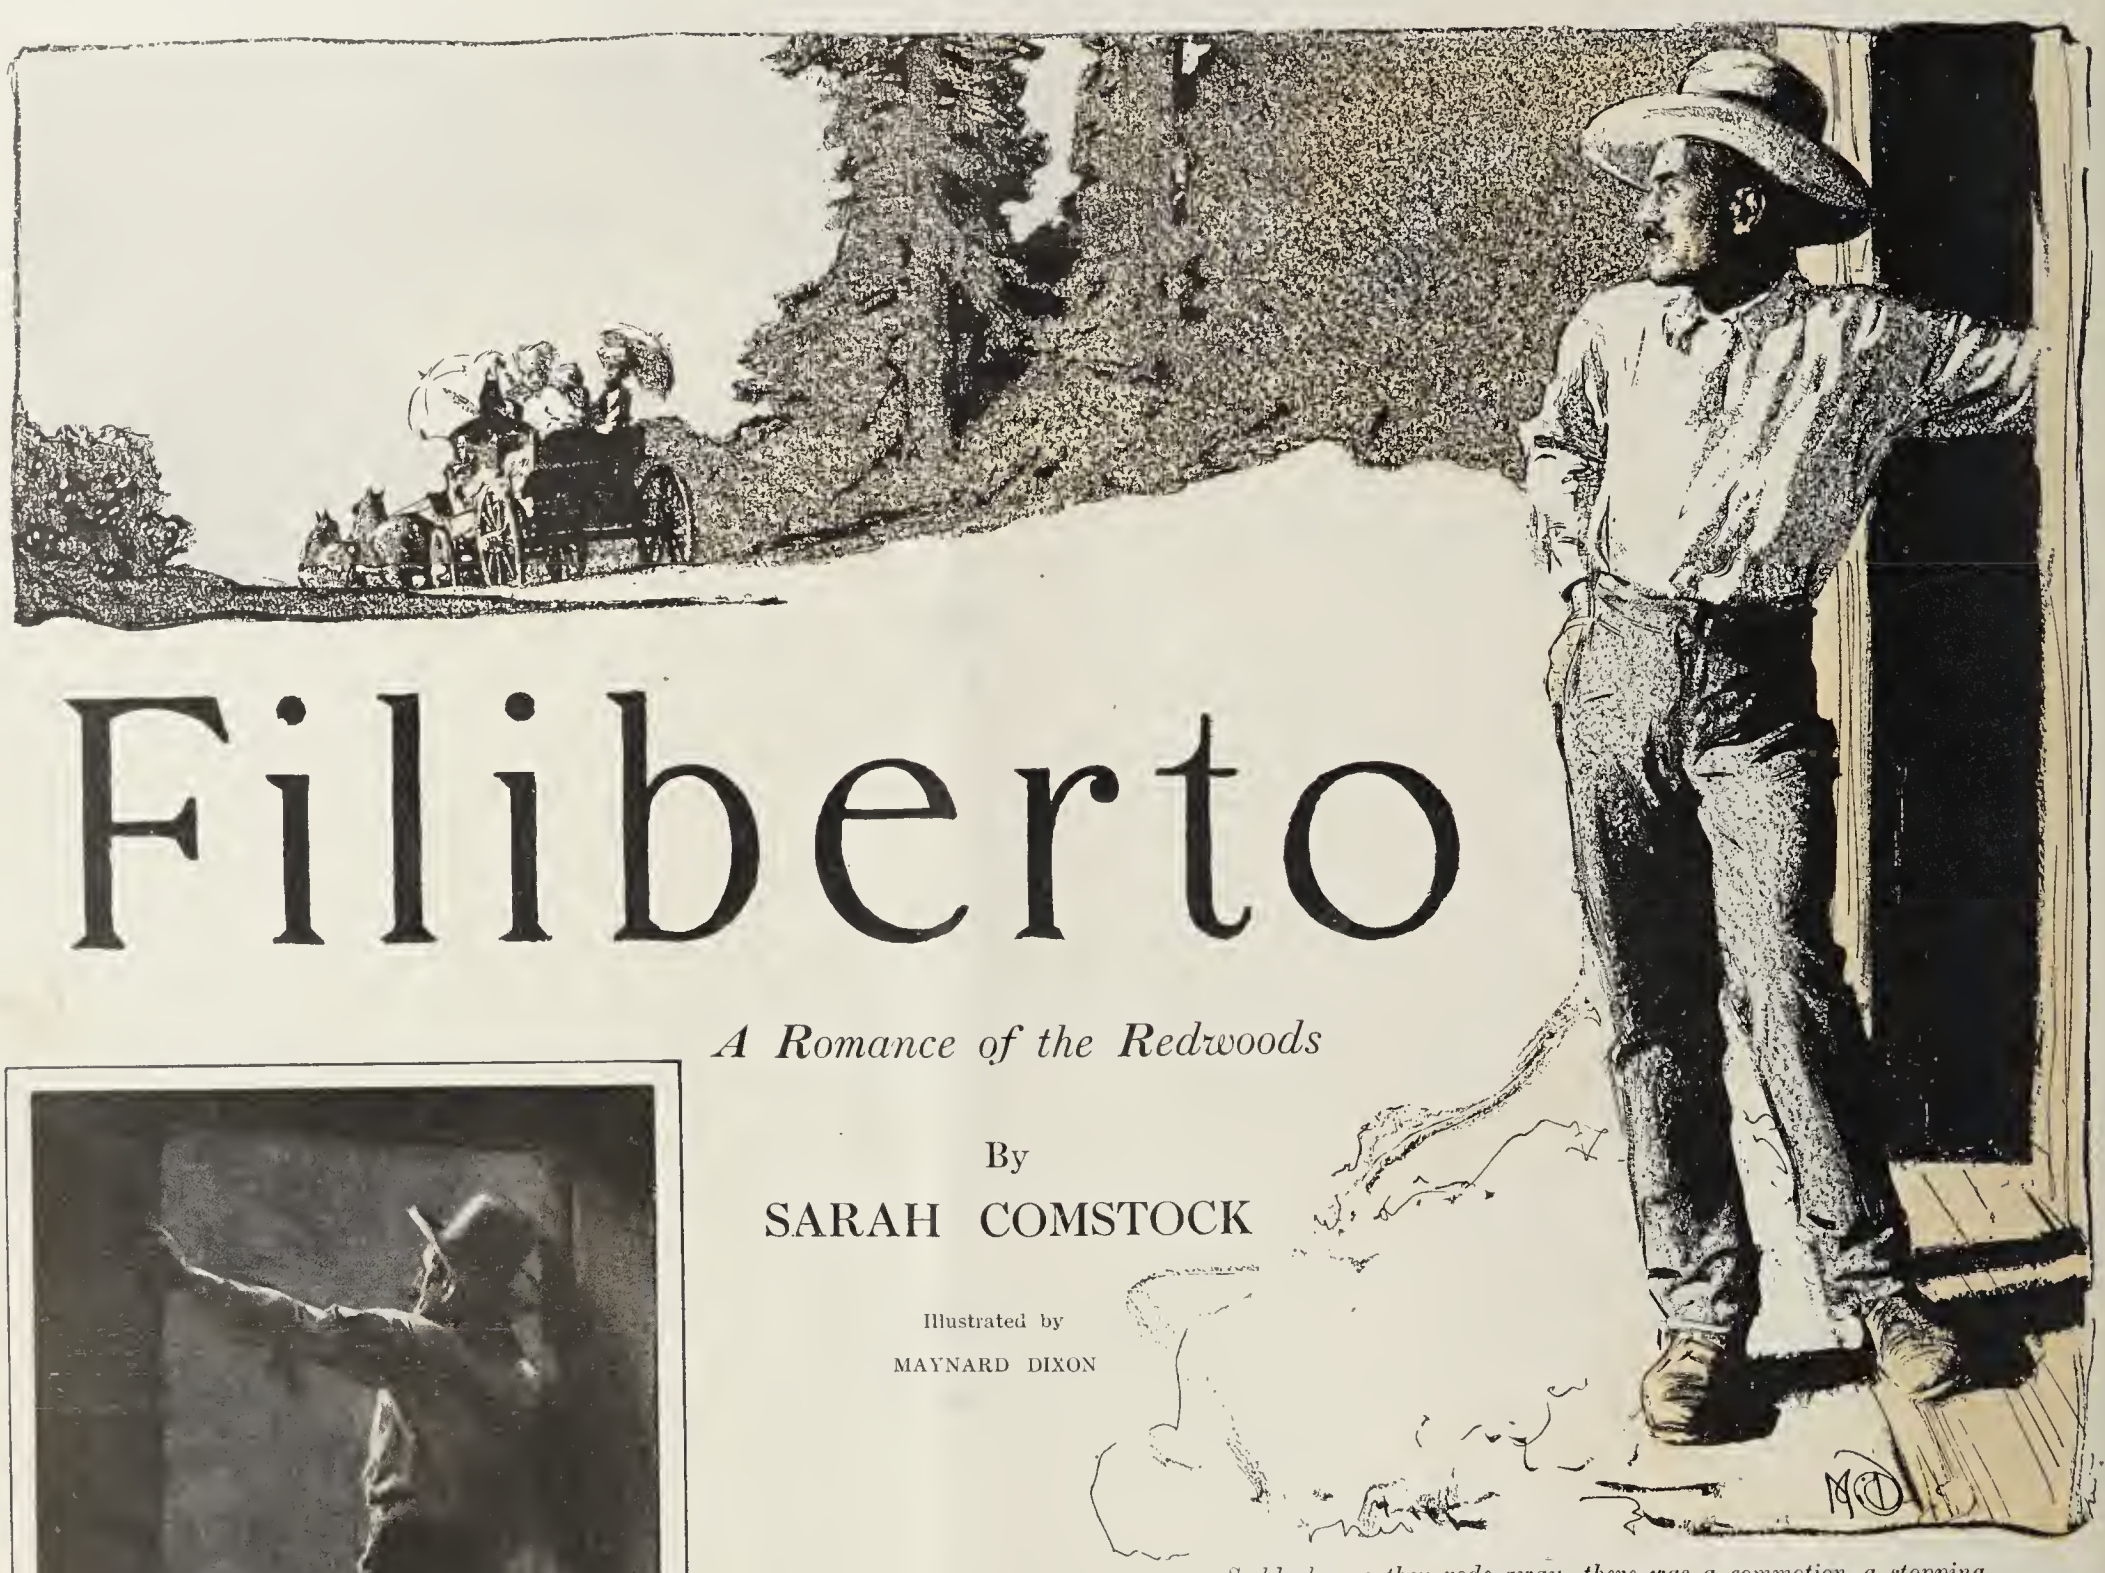
"I wish you could have seen us that lovely mornin'—me, who had been kickin' an' beefin' all my fool life because nothin' excitin' would happen—you should have seen me on the back of that clawed an' happy elephant as we riz up outer the storm-tossed ocean an' hit the sandy shore of that tropical South Sea island. I should explain that 'John L.' had swum intew a sorter cove-like place, an' that was why there was no waves tew amount tew anythin'. He was bleeding some, but elephants don't mind little things like that.

"That intelligent elephant beat it along the beach, the big cats jouncing up an' down on his back, an' me swayin' an' shoutin' fer joy on the post of honor on his noble forehead. In our rear howled the hyenas, and the parade was later joined by the sacred ox, three Angora goats, an' two drippin' Siberian bloodhounds. The rest of the show had managed to stick tew the schooner.

"I was some dazed, of course, as was natural. Things had been comin' rather precipitate fer a man who had always led an uneventful life, so I let 'John L.' have his own way. He acted as if he had returned to [illegible] home. Finally he turned intew a sorter tran[illegible]

an' the first thing I knowed he plowed plumb [illegible] native cannibal village. The king was goin' [illegible] breakfast served when we unexpectedly arrove.

Perhaps the eruption had made the old guy an' his [illegible] a leetle nervous, an' then again mebbe he'd never [illegible] bunch er tigers, lions, an' leopards displayed on the back of a thumpin' big elephant, an' I also persumes our advent was more or less unconventional an' informal —as my daughter Sally would say—anyhow, that savage cannibal king gave one yell, an' his loyal subjects an' queens squelled out some more, an' the whole outfit hit the jungle, an' they're there yet fer all I know or care.



"'John L.' shook them cats off his back an' I herded 'em up in a stout hut where I persume the cannibal king kept his prisoners before fattenin' an' eatin' 'em. Then 'John L.' an' I foraged fer grub. There was somethin' stewin' over a fire in front of the royal palace. It smelled good an' tasted good, an' I hope it was all right, but of course I don't know. Anyhow, I ate a lot of it an' fed the rest of it to the menagerie, an' I never saw 'em enjoy anythin' better.

"Two hours later 'John L.' an' I went back tew the beach, an' the first thing I saw was the *Daisy D.* anchored out in that cove lookin' as peaceful as a canal-boat froze in a slip. Cap'a'n Blout was swearin' pleasantly at them Fiji sailors who was fittin' in a new topmast. 'John L.' an' I yelled at 'em, an' the cap'a'n seemed mighty glad tew see us.

"I reckon that's all there is worth tellin'. How did the animals get out on deck? Why, them locoed heathen sailors just naturally let 'em loose when my men wasn't watchin' 'em. Those Fijians thought that me an' my menagerie brought on the hurricane, the eruption, meteor shower, an' them other frills of nature, an' I suppose they figured it would let up when they got rid of us —and I'll be blamed if it didn't!

"The way we happened tew be washed overboard was explained later tew me by Cap'a'n Blout. It seems that just as I ran forward tew look after them animals the cap'a'n caught sight of the cliffs of that island. So he brought the *Daisy D.* up sharp tew port, an' one of them big seas swept plumb over her forward works, an' me, 'John L.,' an' the rest of us just naturally went swashin' tew starboard an' intew the briny. Then the *Daisy D.* slid intew the lagoon an' was saved, and 'John L.' swum after her as fast as he could.

"Lots of interestin' things have happened tew me since. That was the breakin' up, as 'twere, of my uneventful career, but nothin' has left such a sharp impression on my recollections as when me an' my menagerie was dumped intew what I thought was the middle of the South Pacific Ocean at a time when important things surely was happenin', an' happenin' in a hurry."

Filiberto

A Romance of the Redwoods

By

SARAH COMSTOCK

Illustrated by

MAYNARD DIXON

Suddenly, as they rode away, there was a commotion, a stopping

He stood looking into the now blue-black distance

FILIBERTO paused on the steep road which led to his cabin in the redwoods, and drew a long breath. It was a magnificent breath: unlet, unconscious, heaving the blue shirt like a giant billow. It was the sort of breath that men of a more complex and trammeled world rarely draw. It suggested a primitive power; a relationship to colossal, simple things—such as the redwoods themselves with their full-chested heavings.

Beside him where he stood grew a clump of manzanitas. At first he did not notice them; when at last their presence reached his consciousness he started. It was *the* clump. Never, it seemed, could he pass this but it must arrest his attention, must force that old picture upon his vision.

He saw it now as always. Night—he himself riding home to his cabin—and then that glimmer which the starlight had showed him in these shrubs, a mere something white beside a shadow splotch of the redwoods—and it had turned out to be a girl, lying half-dead here on the cañon brink. He had torn her from the branches, the stain of her own wounds and the hurt berries bloody upon her dress, a broken spray of the red fruit tangled in her hair. Her horse had disappeared. Filiberto had lifted her to his own horse and carried her to his cabin.

The story always insisted upon retelling itself every time he passed this clump. He recalled how he had gone for Lucetti's wife to nurse the girl—for a night and a day she could not remember that she was the daughter of the cherry rancher in the valley below. And then had come those days when she lay slowly recovering, her sister Cassie, fat and wheezy, hovering over the rude bunk, Filiberto exploring the cañon for huge fronds of woodwardia and branches of red berries to deck the cabin. And then—the old Portuguese priest of the little whitewashed church on the mountainside had married them—and they had gone to live on the cherry ranch—and then—

It had always been to Filiberto what drink is to some men—this vagabondage. Now it was the wheat fields of the north would beckon, again the mines of the mountains, next a tropical island. The ends of the earth have surprises—a cherry ranch never has. On the ranch there would be first blooms driving over acres like a northern storm, then corals flashing through leaves, then an army of blue-bloused Chinamen clutching for the corals with swift claws. Always the movement was in the same circle—the flower blizzard, the corals, the blue-bloused Chinamen . . . eventually a circle becomes maddening. . . .

Again Filiberto's eyes fell upon that clump of manzanitas, and again there was that white glimmer, then the form revealing itself—wilted, bruised, helpless, exquisite—

Of a sudden a rage seized him. Never again should the knot of bushes have the power to force that picture upon him. He had his ax, for he had been chopping wood for Lucetti. Angrily he snatched it, raised it, and, with a Titan's stroke, swung it down upon the manzanitas. Over and over he cut, savagely, wantonly, until only bleeding stumps were left; the lopped branches he flung into the cañon below.

Now, his ax upon his shoulder, he went on, a sense of complete freedom filling his lungs. There came to his nostrils a delicious, living odor—the odor of spring —something which he perceived, drank in, did not attempt to resolve into its elements of newly pungent redwoods, moist earth, upspringing green things.

Yes, it was spring. There were infant ferns, light green and woolly, curled like snails along the cañon's edge. That burning flake at a brown tree-root must be a mariposa lily. It was time to be off. In the intervals of vagabondage he always wandered back to the old cabin, by what impulse psychology alone can tell. But when that spring smell came he always started. Yes, he would pack the old canvas telescope which had almost circled the globe, and off the two of them would go again.

He had reached the cabin now, and he flung down his

ax. The silence, ruffled by the ax's fall, smoothed itself as hastily as a cat and lay in serene orderliness. Filiberto stood gazing lazily down the road; all at once, through the silence, a small sound, creeping up the cañon, picking its way between redwood boughs, reached him. It was the sound of wheels.

He listened with alert wonder. These were neither the rural free delivery wheels nor those of Lucetti's vineyard wagon. And, as they progressed, he realized that they had passed Lucetti's moss-swathed gate which was as far as wheels ever came. They approached—nearer—they were in sight. The vehicle was Old Handy's three-seater and it contained Old Handy and five ladies.

Filiberto knew the three-seater well. It was—is, for that matter—a vehicle ever at the disposal of the California tourist. Year in and year out Old Handy waits at the railway station in the valley, and every cravanette-clad, kodak-laden figure that arrives is fish to his net. He will show you the famous hotel, the violet ranch, the winter residence of the tooth-powder magnate, the palm boulevard, and the Chinese vegetable gardens, all for a dollar. Four bits more, and the Mission. The above-named sights had charted out Old Handy's fixed route for a decade or more; what had drawn him from his beaten path, led him to make the difficult ascent to Filiberto's solitude?

"There—right ahead, ladies," Filiberto heard him say. "You see the young hero jest as he's described, among his na-tyve redwood trees. Ain't he a supperb pickcher?" The ladies uttered a chorus of exclamations.

"There! The real Ramon!"

"And the cabin where he sheltered her!"

"You can see plainly the Spanish strain."

"What a profile! What shoulders!"

"Oh, I must get him just as he stands there!"

Filiberto stood dazed in the midst of the chatter, the cries, the queries, as the tourists alighted. Bustle, confusion had burst upon his silent place. It was as if a flock of birds had flown up from the poppy meadows below, bringing their label with them. The five appeared fifty; they darted about, pointing, exclaiming, peeping into the cabin, adjusting films, above all, inspecting *him*. Dazed as he was, Filiberto realized this: that he was the journey's goal, the cause of all this excitement.

"What's it all about?" he demanded of Old Handy.

Old Handy contracted one eye in a wink of ponderous significance, and drew Filiberto aside while the visitors were inspecting the cabin.

"Easy money," he then informed the bewildered Filiberto. "All you have t' do's t' let tourists take pickchers of you. All I have t' do's t' bring 'em up here. Say, we'll talk over the divvy later. The tooth-powder house an' the Chinee garden ain't in it, with you."

"What do they want to see me for?"

The chattering five had left the cabin and were approaching.

"Ladies," said Old Handy, "This here Filiberto, alias Ramon, don't know what you're all here for. He ain't so much as heard they's been a book wrote about him. Now what d'you think o' that? Ain't that a na-tyve son o' the forest for you?"

The ladies burst into another chorus.

"Delightful!"

"How naive!"

"Fancy—famous, and doesn't know it!"

"Never dreams that he is talked of wherever Breck is read."

Breck—Filiberto knew that name. Breck was the writing man who had camped up there the year before. He had gone about with a note-book like a set trap in which he was continually "catching" something—a cañon glimpse, he would explain, or the cuddling, tired noise the stream made, or a gesture, a phrase of the Italian vineyard girls. What use he made of these catches Filiberto knew little and cared not at all, which, of course, seems strange enough to those living in a world which recognizes that small, shabby note-book of Sheldon Breck's to be the one trap which has at last caught the West alive.

"Here's how 'tis, Fil," continued Old Handy. "Mr. Breck's wrote a book called—"

"'The Story of Ramon,'" prompted one of the visitors.

"That's right. It's a grand piece. An' it's all about you, only you're called Ramon 'stead o' your real name. It's all about the time you found Bess where her horse'd throwed her, an' carried her up to the cabin, an'—all the rest of it." With another ponderous wink, this time to the ladies, Old Handy broke off.

"You said he really married her and then they separated, didn't you, just as Breck has it?" one whispered to the driver.

"Yes. But I reckon he wouldn't care to talk much about the separation."

"What ever became of her?" Filiberto caught this whisper; he desired not to hear the answer, yet he listened for it intensely, breathlessly.

For an instant he did not realize . . . then, dumbly, he took it and stood there with it in shaking arms

But, "I never did hear," was all of Old Handy's reply.

Another spoke aside. "Isn't it unfortunate—if only he could have returned to her in real life just as he did in the story!" The lady turned to Filiberto and raised her voice. "The book is a sensation," she said. "Everybody's reading it. And to think that we are the first to ferret out the original Ramon in his cabin among the redwoods! How does it feel to be suddenly famous?"

Filiberto showed no pleasure. "Don't see as Breck had any call to write about me," he said sulkily.

Glances were exchanged. "A sore subject, no doubt," some one whispered.

"But Mr. Breck describes you as so brave, so heroic in rescuing the beautiful girl."

Filiberto was not to be flattered. Evidently the fact that Breck had temporarily immortalized him gave him no pleasure; the whole affair seemed, as had been said, a sore subject. He was annoyed at the intrusion. The ladies buzzed about, pointing out his profile, his height, his Spanish eyes, as they would have pointed out the features of a palm boulevard or a violet ranch. They clamored for souvenirs, seizing upon the horsesh[illegible] over his door and the bandana handkerchief lying on [illegible]'s head. Sullenly, not knowing how to refuse, he submitted to being snapped in a score of positions, and at last with relief he saw his visitors climbing back into the three-seater.

He spoke aside to Old Handy. "You neenta bring no more up here."

"Don't be a fool, Fil. What's that you got in your pocket?" Filiberto was absent-mindedly jingling a goodly number of sizable coins.

"All the same, you neenta bring no more, I say. Breck's got no business to tell about me and Bess."

"I say don't be a fool. The horse you rode on that night's dead, ain't he?"

"Yes."

"Well, you get that horse so it can have its pickcher took before I come with another load. Savvy? I know the one for you. Belongs to the winery man. Coal black, like Breck tells. They call it Pete the Coon, but you change its name to Friego to match the story. An' I'll fetch you some suvvyneers. Le's see; you had on Mexican spurs. I reckon we could sell them spurs about fifty to a hundred times before the season's over."

Filiberto turned away growling like an oncoming storm. "I'm goin' again in a week or so. 'Twon't do you no good to bring 'em up here." Sulkily he touched his hat to the ladies as they called their good-bys to him.

Suddenly, as they rode away, there was a commotion, a stopping. "Yes, I've got a copy. Do you think he'd like it?" "Can he read?" "Ask him," they said.

One of the ladies held out a small volume. "Can you—I mean, do you like to read?" she asked Filiberto.

He nodded and muttered: "Yes."

"Then wouldn't you like to have the story? You can read all about yourself—and learn what a hero you are."

He hesitated. Then, "Thanks," he replied ungraciously, and took the book.

At first he did not read. He fingered it with some curiosity: turning over the pages, he caught the names "Ramon" and "Molly." The latter, he judged, was the author's name for Bess.

He threw the book down. Reading had always been hard. He had never gone to school much—even then, this vagabondage had been like drink to him, and he had broken away from home and school to try the sea, the harvest fields, the mines, the ends of the earth.

The rumbling of wheels vanished gradually, the place became again a house of vast silences—each bird note, each branch's rustle being a partition which divided one silence from the next. Again there came to his nostrils that delicious, living odor—the odor of spring—of newly pungent redwoods, of moist earth, of upspringing green things. It became more than an odor—it was a potent drug, tingling through his veins, blazing in his brain. . . .

Yes, he would go at once. And thus he would escape further hungry packs of the curious. This thought decided him. By to-morrow, even, Old Handy might arrive with the souvenirs and a load of prying tourists.

He seized the worn old canvas telescope. He flung into it a few garments, a few worthless treasures. Among them he seized the book and was about to fling it aside.

But curiosity rose again. This was a story about *him*—the personal element was irresistible. Leaving off his packing for the moment, he sat down in the cabin door to glance at the story.

One of us, of course, would devour that too-brief volume in an hour or so. But Filiberto was obliged to read with his forefinger and it progressed slowly. The sun was poised like a platter on the finger-tips of the redwoods when he began. It had slipped into the cañon when he laid the book down.

Up to the last act of the story Breck had kept almost without deviation to the facts. These he had gleaned from talks with Filiberto himself, and with others living thereabout; and where there were missing links, the clairvoyant powers of the trained imagination had supplied the truth. As Filiberto read he lived it all over

An Unusual Chum

by J W Foley

HENRY BLAKE'S *father goes fishing with him,*
And goes in the creek so's to teach him to swim;
He talks to him just like they're awful close chums
And sometimes at night he helps Henry do sums;
And once he showed Henry how he used to make
A basket by whittling a peach stone and take
The bark off of willows for whistles although
He hadn't made one since a long time ago.

HENRY BLAKE'S *father is just like his chum,*
And when he goes fishing he lets Henry come;
He fixes two seats on the bank of the brook
And shows Henry how to put frogs on the hook;
And sometimes he laughs in the jolliest way
At some little thing that he hears Henry say,
And dips up a drink in his hat like you do
When only just boys go a-fishing with you.

HENRY BLAKE'S *father will take him and stay*
Somewhere in the woods for a half holiday,
And wear his old clothes and bring home a big sack
Of hick'ries and walnuts to help Henry crack;
And sit on a dead log somewhere in the shade
To eat big sandwiches his mother has made;
And Henry Blake's father, he don't seem as though
He's more than his uncle, he likes Henry so!

vividly even ... it him- ... the mastery of ... marvelous ... gave the truth ... made it in ... The white ... in the bushes — the ride — the week in the poor little cabin, turned into a bower of berries and ferns—the wedding—the droll old roly-poly Portuguese priest—and then the cherry ranch, always moving in maddening circles: flower blizzard corals, blue-bloused Chinamen. And at last the lure again—the beckoning of the ends of the earth.

So far Filiberto had followed rigid, wide-eyed, marveling. It was as if Breck had been inside him. Filiberto, during all that period. But suddenly there was a break in the wonderfully wrought chain. Filiberto started: all at once fact ended, fiction began. For you remember that Breck goes on to relate how Ramon, having wandered aimlessly, returns at last to the cabin for a space before wandering again; finds that its every log reminds him of Molly; at last, drawn irresistibly by the old emotion, he sets out—not for the ends of the earth, but for the cherry ranch in the valley.

And then that little scene, done as only Breck can—where she comes to the door of the ranch cottage, refuses to listen to his pleas for forgiveness. "Why, I ain't never been angry," she says. "I never thought of anything but just to wait. I didn't know when you'd come, but I was just to wait."

The night was falling, the book was done. Filiberto laid it down.

He rose, and stood looking down the road with eyes that saw beyond it. He seemed under a spell: he was no longer Filiberto, he was Ramon.

Through every detail the story had moved side by side with his own experience up to the point where the vagabond returns. So far as he had been one with the hero, had felt himself that being, moving through the pages of the book; but at that point . . .

He stood looking into the now blue-black distance. You remember what Breck says of the night upon which Ramon decides to seek Molly—

"Up in the mountain the redwoods, mystic priests, chanted their eternal monotony of 'Om! Om!' in the night wind. The chill of spring was in the air. Below in the valley, Ramon knew, the cherry blooms were falling now."

Filiberto listened. Yes, the redwoods chanted. A chill had sprung up. And it was the time for cherry blossoms to fall.

His eyes roved back to the cabin. There lay the old canvas telescope, companion of his wanderings. It was already packed, filled with his few little possessions, ready to be strapped and slung over a shoulder —then off again—rovers ever, the two of them—

It was curious, but he could not get that sound out of his ears—that "Om! Om!" He had never heard the trees chant it before, but chant it they did now, just as Breck had said—and that picture of the cherry blossoms falling—he knew how they looked to-night, just as Breck had described—

Call it hypnotic suggestion, if you will —or the workings of a superstitious imagination tinged by the heritage of an emotional race—or, after all, is there any disproof of a Force which leads a man forth to meet himself when he is shown that self ennobled, idealized, transmuted? Whatever the cause, a compulsion seemed suddenly laid upon Filiberto. Beyond questioning he knew, as if Fate had decreed it, that he must finish the story as it was written.

In the woodsy chill of that spring night he set out. It was all as Breck had pictured it—the moon was coming up, there was a taste of far-away rain in the air, the creek was noisy. He had a sense of mechanically fulfilling a prophecy, of irresistibly obeying Fate.

Step by step he found himself completing the story. At last he reached the cherry ranch: it was as Breck had described it. Acres lay white in the moonlight as if swept by a northern storm. Here was the silence and the melancholy of snow: the consciousness of death, the perishing of the flowers, which even the prophecy of a renascence can not make less melancholy.

He entered the path which led to the house. Here, as it was written, the moonlight caught every whiteness and rendered it ghostly: the unlighted, whitewashed cottage; a billowing curtain; beyond, the melancholy acres of white desolation. Nature's wanton waste of the blossoms for her undeviating purposes. His feet trod through a drift of them, and from their bruises came a familiar fragrance.

He paused at the steps of the ghostly house. He felt no surprise that the curtain was billowing in an open window, that the bark of the rancher's dog cut the silence, that a clattering buggy passed along the deserted road—all as Breck had foretold. Born and bred to superstition, he was completely possessed now by the sense of destiny—and the marvels of coincidence are so great that most of us secretly rebel now and then at the term. He had ceased to feel himself a chooser. His path was marked out.

Where once he would have been held by a terror lest Bess refuse her forgiveness, lest she turn him away, he now felt no doubt. He paused only to recall more clearly Breck's picture. Bess would answer his ring: she would open the door, then, without a word, without a cry, without surprise, open her arms to him.

He rang the bell.

There was the sound of a door opening within the house, he saw a light advancing, shining through the transom, he heard the soft tread. His breath stopped, his throat seemed clutched. So it was written—the light shining suddenly from within, the woman's tread—there was a curious instant in which he seemed to be standing off and watching as one watches a drama whose dénouement he knows—and then, as she struggled a moment with the lock, he was once more the actor in the drama—

The door was opened. "Bess!" he cried from a parched throat. But it was not Bess. It was her sister Cassie. Cassie was still fat and wheezy, and carried a baby on her arm as always.

"Oh!" Cassie cried, looking at him as if he had been from the dead. "You!"

"Yes, it's me." He only whispered it. The break in the chain of events left him stunned, doubtful of his own identity. When at last he summoned his voice: "Where's Bess?" he asked.

"Dead."

He stood staring at the woman and she at him while the baby whimpered in the draft. At last it fell silent, awed by their silence.

"When?" he asked at length.

"November. She got grippe, the doctor said, 'cause he couldn't find nothin' else to call it. But I always said, an' I say it now, she'd 'a' lived if she just hadn't been so unhappy; she couldn't pull up again." The woman had overcome the shock of surprise by, now; she ran on vindictively. "Yes, she tried to pull up, an' she kep' sayin': 'He'll come back, oh, I know he'll come back, an' I've got to live for him.' But you can say that kind o' thing an' hang onto it while your heart's breakin' all the same. Yes, it was unhappiness killed her, that's what it was," the woman persisted, still more sharply. The baby began to wail and she hushed it, pressing her lips against its fuzzy head. "There, there, never mind," she said over and over into the fuzz. Then she raised her head and looked straight into Filiberto's eyes. In the moonlight her face was white and stern. Somehow, for all her fatness, a dignity seemed to rest upon her now.

"If I was to tell you what I think of you I never would get done," she said, but quietly. "But it ain't for me to judge, for one thing. An' another thing is, I've got a promise to a dyin' woman to keep. I promised to tell you, if you ever come back —*when* you come back, *she* said—" Cassie paused, struggling with a sob. Filiberto stood with eyes riveted upon her, his great frame shaking like a sick man's. The woman set her lips, drew a choked breath, drove herself on. "I was to tell you—that —that—she said there never was a day she didn't forgive you an' pray for you, wherever you was—an' I was to—to—" Her voice failed, she pressed her lips violently against the fuzzy head. "Oh, I can't give you up," she sobbed to it. Then she looked up: her tears were streaming, but to the dignity was added now an infinite tenderness. "I was to tell you that she said she trusted you to raise your son to be a good man." She held out the baby to Filiberto and turned away, overwhelmed by her sobs.

For an instant he did not realize . . . then, dumbly, he took it and stood there with it in shaking arms. It did not cry. It looked long at him, then a small hand like a starfish began a tour of investigation over his face.

He sank upon a bench. Little swirls of petals blew about them, and he drew the baby behind his coat to shield it from the breeze. All that Filiberto heard now was the sound of long, relaxed breaths—the breaths of a child asleep and content.

Two and a half months after—Erecting in the suburbs of Messina the temporary wooden houses sent to the scene of the earthquake from the United States

After the fire of April 3 at Fort Worth, Texas—Seventeen blocks were destroyed in the southern section of the city, and the loss amounted to more than $2,000,000

The funeral of Joseph Petrosino just after leaving the Pro-Cathedral in New York on April 12—Petrosino was assassinated March 12 at Palermo, Sicily, where, as head of the Italian detective force in New York, he had gone to get evidence to be used in stamping out the "Black Hand" organization in this country

Messina to Texas—News Photographs

A Railroad and Its Makers—the trainload of Northern guests who came to Norfolk for the opening of the Virginian Railway, built by Henry H. Rogers to handle coal from the mountains to the sea. The left-hand photograph shows the pier of the railroad, and the apparatus for loading

What the World Is Doing

A Record of Current Events

Mr. Roosevelt on Sea and Land

MR. ROOSEVELT'S voyage from New York to Naples was only saved from tedium by the energy and good-humor of the distinguished passenger. In spite of many columns of wireless, headed up in red ink and sold as extras by our rather easily stampeded newspapers, literally nothing happened either on the deep sea or at any of the four stopping points. The trip by boat was characteristically summed up by Mr. Roosevelt when he said:

"I don't like life aboard ship. Confinement frets me. I do not need rest, I do not want to rest."

The *Hamburg* touched at Fayal and San Miguel, two islands of the Azores, and then at Gibraltar. In Naples Mr. Roosevelt spent seven hours on shore, calling on the Duke and Duchess of Aosta. The Duchess has an African record for big game killed, and was pleased to give the ex-President some jungle hints. One newspaper described him as "delighted with Vesuvius." The city of Naples was stirred by his visit from the moment when the *Hamburg* swung around Capri into view of the clamorous, crowded shores till the *Admiral* steamed out of the bay. The harbor craft were vivid with flags and bunting. Neapolitan songs were sung to him by guitar and mandolin.

The King and Queen of Italy received him at Messina, on April 6, on board the battleship *Re Umberto*. Later, Mr. Roosevelt walked through the ruined city.

H. H. Rogers and His Virginian Railway

SOME of the Southern cities have been banqueting Henry H. Rogers of the Standard Oil Company. It was the opening of the Virginian Railway that called him South. At a cost of $40,000,000, he built the railroad which makes accessible a million acres of coal lands. A reception was given to Mr. Rogers and his friend, Mark Twain, at the Norfolk, Virginia, Board of Trade, and many of the two thousand guests mistook Mr. Clemens for Mr. Rogers and congratulated the author on his 446 miles of construction. Later a dinner at twenty dollars a plate was held in honor of the coal road opening. As Roanoke was later to entertain the financier, the "Times-Dispatch" of Richmond grew anxious as to which would win out—Roanoke hospitality or her dislike of vulgar display. "Three a plate is, we believe, the regulation price for what is known as the best 'swell banquet.'" The road is a fine piece of constructive engineering, connecting a mountain system with the sea, and leaping from mountain-top to mountain-top by means of towering spans, with no grade at any point severer than one per cent.

Dr. Blue, Who Chased the Rats

THE State of California and the city of San Francisco joined in giving a large banquet and a regretful good-by to Dr. Rupert Blue, the Federal surgeon who directed the anti-plague sanitation campaign in San Francisco. The evening, March 31, was also the announcement to the United States that San Francisco had cleaned up her rat retreats and fought away all danger of the plague. With the celebration the Citizens' Health Committee, appointed in January, 1908, ceased to exist. It has been estimated that two million rats were killed during the sanitary war.

In submitting its report to the Mayor the committee says:

"That San Francisco made a new record in sanitation, that the plague ceased and no trace of it can now be found on this peninsula, are sufficient evidence that, with the help of the public, the committee discharged the obligation laid upon it; for, without that concerted action of the whole people of San Francisco, which this body was appointed to promote, no such fortunate outcome would have been possible.

"The people of San Francisco have the satisfaction of knowing that they protected not merely their city, but the country at large. Had anti-plague measures failed here the spread of the disease would have been extremely difficult to control. Therefore, the cities and States of the Union should, and we believe do, join with us in gratification at the happy outcome."

Mayor Edward R. Taylor said:

"We must continue this rat fight. We must starve them out and build them out. It is the only way to get rid of them. We should amend the charter so that we can provide for a permanent sanitation fund just as we do now provide for a permanent park fund. We must also keep our streets clean. That will help us to get rid of the rodent."

The banquet itself with grim playfulness symbolized the now historic fight of 1908. Ice-cream was offered up in the shape of a mouse-trap, with the head of a rat poked out at the bottom. The punch tinkled in tiny garbage cans.

Toward the close of the evening Dr. Blue uttered a note of warning, saying:

"It behooves all our seaport cities to look well to their sanitary defenses, for there is where the disease enters."

Sully's Anti-Speculative Scheme

THE cotton-growing South has been thoroughly interested in Daniel J. Sully's plans for its future. Some newspapers have been skeptical of his freedom from the personal bias in his schemes for restoring the commercial supremacy of the Southern tier. He wishes to save the cotton farmer $150,000,000 to $200,000,000 a year by giving control of the market to the planter instead of the speculator. His plan is the erection of a chain of bonded warehouses wherein the farmer may place his cotton, retaining absolute ownership and receiving a negotiable certificate. Mr. Sully has long been eminent as a cotton speculator. A member of the Savannah Cotton Exchange says:

"How edifying it is to hear Mr. Sully, with his profound and inborn hatred of speculative manipulation, talk to the farmers about 'relieving the market from the attacks of manipulators, and leaving the gigantic monopoly of this section to respond, unembarrassed and unrestricted, to the legitimate laws of supply and demand'!"

The Duel of "Dreadnoughts"

THE same causes which started the German war scare in England might produce similar results here were we anywhere near so touchy on the subject of invasion. If Germany is strengthening her navy with the definite purpose of fighting England—and this is what even the most conservative English papers quite solemnly maintain—it is scarcely less reasonable to assume that she might also use her ships to interfere in South America or the West Indies, where economic control is already hers. Indeed, it is now gravely asserted in England that the Brazilian *Dreadnoughts*, whose purpose none could explain last year, and for which there was little but ridicule, were ordered for the specific purpose of meeting German invasion, and that this was probably done at the quiet suggestion of the United States! When one is bound to be suspicious or afraid, it is not hard to find a cause.

One of the oldest jests in comic opera is that in which somebody challenges somebody else to a duel with swords at fifty paces. It is difficult for those so far from the center of excitement as ourselves not to view the present scare in some such light. It no longer seems to be a matter of fighting because there is a reason for fighting. It is a matter of building ships for the sake of building ships. Englishmen fear Germans not because the latter are stronger or more intelligent men than they are, but because German shipyards, working night and day, seven days in the week, can turn out ships faster than they can be turned out in England.

The two nations separated by the North Sea are like the duelists separated by their fifty paces, the one able to make the fastest motions being, as it were, declared the victor.

Ten Million a Vessel

BRITISH newspapers are, of course, correct in declaring that the expense of laying down eight *Dreadnoughts* at once is small compared to what the cost of war would be. The expenditure of materials and human energy, in order to keep the British navy twice as strong as any other—provided Mr. Balfour's prophecy is correct that Germany will have twenty-one ships of the *Dreadnought* class in 1912—is appalling enough. A capital ship of this class costs in the neighborhood of ten million dollars. This is more than the entire endowment of Yale University, more than is spent on our Department of Agriculture, including the Forest Service and all the department's work in protecting people against impure food, insect pests, and in developing improved methods of farming. Two 12-inch guns of the type put on the United States ship *Delaware*, for instance, would, indeed, almost pay the net cost of caring for all our national forests for a year.

Congress refused two winters ago to appropriate three million dollars for the establishment of the Appalachian and White Mountain reserves, which would save thousands of square miles of land from desolation. Every *Dreadnought* costs as much as some forty model tenements, or two thousand village schoolhouses, or all the school buildings of Baltimore and Cleveland put together, or of all the fire-fighting equipment in forty-three important American cities, or all the municipal asylums, almshouses, and hospitals in all the 146 cities of from 25,000 to 300,000 people. The ingenious Mr. Chesterton suggests that the trouble between England and Germany is that they agree on the unimportant thing—ships; and disagree on the important thing—beliefs. In the things of life and love they are separated, in the things of death and blood they imitate each other. Of course, as he points out, they can not combine on mere peace; there must be some affection or creed on which to combine.

"Wets" and "Drys"

IT HAS been a mixed week in drinking circles. The "drys" made April 5 a memorable day in Michigan by winning in nineteen counties out of twenty-seven. In that State five hundred saloon-keepers will look for other kinds of work after May 1.

On Long Island, New York, the license party took the victory in Nassau and Suffolk Counties, and extended the drink belt from Jamaica to Amagansett. A novelty of this contest was the enthusiastic campaigning in behalf of the saloon performed by the Rev. Dr. William Wasson of the Episcopal church in Riverhead, Long Island. After the victory had been won, Dr. Wasson was serenaded and cheered. He is reported to have said that it was a source of gratification to him to have not one spot in Suffolk County where a man who wanted a drink could not go and get it without having to resort to subterfuge and lying. In his somewhat unsavory pro-liquor activities this clergyman has for many months annoyed the public and amused some, at least, of the brewers.

In Wisconsin's election of April 6 the "wets" had the best of it. About two hundred cities, towns, and villages voted on local option, the larger towns mostly going "wet" and the smaller places "dry."

Modjeska

HELENA MODJESKA, one of the loveliest of modern actresses, died on April 8 at her island home in Bay City, California. She was sixty-three years old, and for thirty-three years had made the United States her home. Helena Opido was her name, and she was born in Cracow, Poland, the daughter of a poor musician and the sister of a large family. At the age of sixteen years she was married to her guardian, one Modrzejewski, whose name she later contracted into Modjeska for stage purposes. She began her career in a company of strolling actors. In 1865 her husband died, and three years later she was married to Bozenta Chlapowski. She acted in the Cracow Theater and in

Come Into the Light

There are better ways for baking beans than you can employ at home. Ways that make beans more delicious, more digestible. Ways that save you trouble.

We are not rivals, madam.

There are some few foods which must be factory cooked, because no housewife has the facilities.

Crackers and beans are among them.

Beans baked at home ferment and form gas. You know that. It is because they don't digest.

Beans baked at home are mushy and broken—crisped on the top and half baked in the middle.

You can easily prove that every soul at your table prefers to have beans nutty, mealy and whole. Give them their choice and they will all take Van Camp's.

Yet the trouble is not due to your lack of skill. It is due to your lack of facilities.

We employ steam ovens; you must use dry heat. We can heat our steam ovens to 245 degrees without bursting or scorching a bean.

We bake in small parcels so the full heat goes through. Some of your beans get but 100 degrees.

Our beans are all baked alike—baked until they'll digest. So our beans are not heavy. They don't ferment and form gas.

We bake our tomato sauce into the beans, and get a delicious blend. The result is, a dish of superlative zest—nutty, mealy and whole.

Such beans mean more than you know.

Beans are 23% nitrogenous—84% nutriment. They contain more food value than the choicest beef, yet they don't cost one-third as much.

They are appetizing, hearty and economical. All people like them and want them often. They can be served in a score of ways.

And they are ready to serve. No work and no waiting. Every can in the pantry means a hearty meal—fresh and savory—to be served steaming hot in ten minutes.

Don't you think it worth while to serve a can of Van Camp's, and learn if these claims are true?

Van Camp's

BAKED WITH TOMATO SAUCE

PORK AND BEANS

Don't judge Van Camp's by other baked beans, for the difference is vast. No other brand controls one-tenth so much trade. None is one-half so good.

We buy only the choicest of Michigan beans. Then we pick out by hand the whitest and plumpest.

We pay $2.25 per bushel for these premier beans, though we could buy beans for 30 cents.

We make our sauce from whole, ripe tomatoes, picked when the juice fairly sparkles. We spend to make it five times as much as some ready-made sauce would cost.

No tomatoes picked green, no scraps from a canning factory. That is the secret of Van Camp's flavor and zest.

Don't expect cheap beans, poor sauce and wrong methods to make such a dish as we make. Don't let someone spoil for you Nature's choicest food.

Insist on Van Camp's and know, for your own sake, how good beans can be.

Three sizes: 10, 15 and 20 cents per can.

Van Camp Packing Company, *Established 1861* Indianapolis, Indiana

Greater Value in Men's Clothes–

It isn't what you *pay* that makes value—it's what you *get*—and the kind of service and satisfaction it gives.

When you buy a suit of clothes a large part of the price you pay is for fit and that subtle something called *style*. This you will admit is true.

In this connection here's a point to consider:

In the ordinary suit, style and fit disappear with the first shower. The dampness shrinks and wrinkles and warps the garments all out of shape. The money paid to secure style and fit has been wasted.

This is true regarding most clothes. In

Kaufman "Pre-Shrunk" Garments

style and fit is permanent. Because every bit of the shrink tendency is removed from the cloth by our exclusive Kaufman "Pre-Shrinking" Proeess before the goods are ever touched with the shears. So there is no shrink tendency left in the garments afterwards to eause trouble and dissatisfaction.

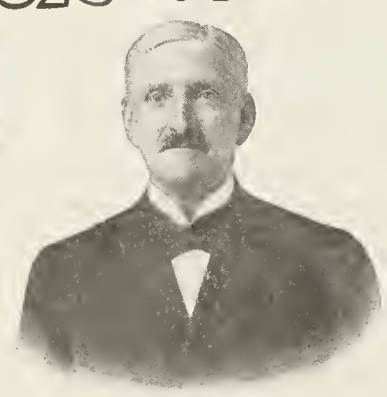
Beeause of our "Pre-Shrinking" Process, all of the style, distinctiveness and eleganee, which you note as you view yourself in the clothier's glass, *is there to stay.*

Beeause of this "Pre-Shrinking" Process, which keeps Kaufman garments shapely and pleasing for months instead of days, we are able to *guarantee satisfaction* in every garment we produce.

Every Kaufman dealer has our authority to make this guarantee in our name:

"If any garment bearing the Kaufman label is not satisfaetory it may be returned and money refunded."

We do not know of another clothes maker who would make such a strong, binding guarantee. For it goes without saying that a garment which is ill-fitting and out of shape after the first shower can never be really satisfactory.



We frankly admit that we ourselves would not care to make sueh a guarantee were it not for our "Pre-Shrinking" Proeess, which alone makes it possible.

Your dealer will gladly show you Kaufman "Pre-Shrunk" Garments in any of the popular fabries for Spring and Summer at $12 to $30 the suit.

Our handsome *Style Book* will post you on the correct styles for Spring and Summer. Ask your dealer for it—or send to us direct, if you prefer. It's FREE. You should have it before deciding.

Chas. Kaufman & Bros., Chicago

I Will Be Glad To Send You a Fox Typewriter for Free Trial

W. R. Fox, President
Fox Typewriter Company

I know this—

That no advertising word of mine will **mean** half as much to you as the real test of a Fox Typewriter in your own office.

So I say—let me send a Fox machine absolutely free, for trial and examination.

I pay the expressage and all expenses, and there is no string or obligation to my offer.

I know typewriters. I studied every one on the market before I invented and made mine—the Fox.

I steered clear of their every fault and weak point—of every defect, every disadvantage. Beside this, I gave to the Fox many splendid new features—not **then** or **now** found in **any** other typewriter. It looked like an up-hill proposition to make and sell typewriters in competition with the Trust. But I succeeded, simply because business men know **merit,** and the Fox Typewriter is now sold by the thousands all over the world. You know how important the type bar and hanger of the typewriter are. On the Fox the bearing is wide and the bar heavy, and will stand years and years of hardest work.

A single Fox machine will do all kinds of work: letter writing, invoicing, billing, tabulating, figures, stencil cutting, and heavy manifolding. Anything any typewriter **can** do the Fox **will** do—and more. You can buy two carriages—different lengths—and use them interchangeably. The Fox is a two-color writer, and there is no inking your fingers handling it. But the proof of all this is in my offer to send, or have my representative dealer deliver, a Fox Typewriter to your office. Put it to every test, and if you decide to buy, I'll make favorable terms and allow liberally on your old machine. Simply fill out coupon and mail it to me, while you think of it.

W. R. Fox, President

Fox Typewriter Company

1204-1214 Front Street, Grand Rapids, Mich.

Collier's

the Imperial Theater of Warsaw. For seven years in Warsaw she perfected her art, creating nearly three hundred parts. Political troubles drove Modjeska and her husband from Poland in 1876, and they settled on a ranch near Los Angeles, California. She partially mastered the English language, and on August 20, 1877, she appeared at the California Theater in San Francisco, and from that time on for many years she continued to act in English both in the United States and in England. Among the parts in which she won both public and critics were Rosalind, Queen Mary Stuart, Viola, Isabella, Juliet, Beatrice, Imogen, Queen Katharine, Lady Macbeth, Desdemona, Portia, Ophelia, Cordelia, Adrienne Lecouvreur, Marguerite Gautier, Gilberte Sartorys, Magda, and Odette.

Modjeska attacked the Russian Government for its treatment of Poland, the occasion being a woman's congress at the Chicago World's Fair. Her words penetrated to St. Petersburg, and the decree later went out that she might enter no part of the Russian dominion.

As an actress, her fame is but little impaired by the passage of time. Her appealingly broken English, the curve of her voice, and a wistfulness of demeanor that seemed to her audiences to be expressive of the pathetic history of her native country and of her own personal exile—all these attributes of charm were rendered by an art that knew both its power and its limitations, and that moved to its own gracious consummation without strain. In Lady Macbeth, the moan and plaint of a lady ridden by the memories of an aet too gross for her nature were easily within the scope of Modjeska's power. Some of the traditional Siddons fire and menace were perhaps absent.

A "tragedienne" Modjeska was, but interpretive of the tender and more appealing elements of the characters that went down in death, leaning always to whatsoever things were pathetic in their destiny rather than to the stern and murderous.

Her Rosalind in "As You Like It" is an incomparable memory to many playgoers. She played the part with a gently diffused sadness, never insistent or forced, but pervasive throughout the rendition—sure sign of the presence of beautiful creative work.

"High Finance" in Action

ONE more of those cloudy proceedings that at times hang around the peaks of high finance is that of the $692,292.82 which the Metropolitan Securities Company paid certain men for the Cortlandt Street (New York) Ferries franchise in excess of the sum for which those men secured the franchise from Anthony N. Brady. That exeess money has just been paid back by Thomas F. Ryan, Peter A. B. Widener, Thomas Dolan, and the estates of William C. Whitney and William L. Elkins to the Metropolitan Securities Company. The three financiers concerned who are still alive aver that the nearly seven hundred thousand dollars returned to them was what they had advanced to the Metropolitan Railway Company.

The New York "American," prompt to sit on the trail of the well-to-do, sums up the whole transaetion by saying: "Restitution is confession." The New York "Evening Post" is a little more lenient, but is also visibly displeased.

Tips

CUSTOM-HOUSE inspectors have fallen into the way of accepting tips. Expensive gifts of cigars and liquors were added by the steamship companies to the regular free donation of breakfast, luncheon, and dinner for whatever time the vessel was fast to the pier. One steamship company had been paying out $12,000 a year in after-dinner accompaniments to its warm friends, the visiting inspectors. Some of the inspeetors, flushed with a sense of duty done, would frankly ask for a box of perfectos.

Inspectors received tips for another service, too. Some of our navigation laws stand written to-day with the wording of 1789, when sailing vessels plowed the main. Those laws practically sealed up a vessel from sunset to sunrise, if she had the ill-luck to be entering the harbor at nightfall. It became the habit to pay out a gratuity for a night inspection, and this informal custom was carried over, along with the obsolete law, on board the modern steam craft. Vessels have been paying $25 apiece, and sometimes more, for the privilege of being inspeeted when they make port after sundown. One steamship company had an annual expense of $6,000, as tips to inspectors for the night release, regularly entered on the account books.

The Collector of the Port of New York, his attorney, and the steamship companies held a series of quiet meetings, and all sides have agreed to omit the tip for night inspection and for cigars on board.

More than Merely "Guaranteed Hose"

Everwear Hose are made for EXTRA EASE as well as EXTRA WEAR. They retain their shape and hold their color through all their long wear and many washings.

You should remember these particular advantages, and the name EVERWEAR, when buying hose. For it's so easy to make a mistake in purchasing — So easy to become confused in names.

So always look for the name EVERWEAR on the Hose. Examine them closely—see that they have that smooth, soft texture: the neat shape and the fine finish found only in Everwear.

Everwear TRADE MARK **HOSIERY**

For Men and Women

We guarantee six pairs to wear six months—and we give new hose FREE if they show a hole, rip or tear within that time.

Order six pairs from your dealer today. If he hasn't them, we will send them express paid to any part of the United States. Send for our free booklet—"An Everwear Yarn."

Six Pairs of One Size in a Box—Solid or Assorted Colors

SILK LISLE

Men's—$3.00 a box. Colors, black, tan, champagne, burgundy, lavender, light and dark shades of blue, gray, and green.

Ladies' $3.00 a box. Light weight. Colors, black and tan.

EGYPTIAN COTTON

Men's—$1.50 a box. Light or medium weight. Colors, black, black with white feet, blue, green, and burgundy, light and dark shades of gray and tan.

Ladies'—$2.00 a box. Colors, black, black with white feet, and tan.

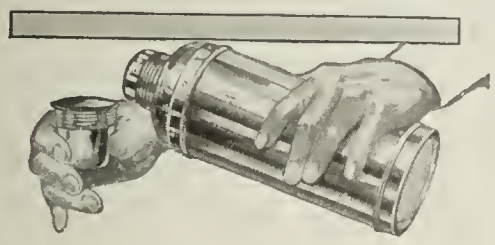
A Thousand and One Uses for

THERMOS THE BOTTLE



Think what the Thermos Bottle means to **you!** —an ice-cold drink—a steaming-hot drink—whenever you want it—wherever you want it.

When traveling—camping—picnicking—motoring—yachting—in your home—at the office.

You need it—the Thermos Bottle. You can't afford to be without it.

Pour ice-cold liquid—milk—water—lemonade—anything—into the Thermos Bottle. *And it will stay cold,* without ice, for 72 hours.

Pour steaming-hot tea—coffee—milk—cocoa—into the Thermos Bottle. *And it will stay hot for 24 hours,* without heat.

If there is an invalid or baby at home—don't get up during the night to heat milk—water—broth. Heat it as hot as you like before going to bed. Put it into the Thermos, and it will be piping hot whenever needed.

These are but a few Thermos uses. Your dealer will tell you of countless others.

There is convincing proof of the thorough practicability of the Thermos Bottle, in the fact that Theodore Roosevelt included the Thermos in his South African equipment.

In the New Model Thermos Bottle, the inner bottle can be easily and cheaply replaced in case of accidental breakage. The Thermos is the only Bottle in which this separable-case feature has been patented.

Don't buy an imitation of the Thermos Bottle. You'll be throwing away your money. Get the genuine—see that "THERMOS" is stamped on the bottle.

American Thermos Bottle Company
1175 Broadway, NEW YORK CITY

Demountable rims cannot be depended upon for quick, convenient tire replacements on the road, without a genuine

New Belle Isle Motor Co., Dept. L, Detroit, Mich.

Certain firms, importing foreign automobiles, tell of a secret tariff levied on each incoming car. Certain travelers still tell of meeting the Custom-House official on the morning after the arrival in port with ten stuffed trunks. If all concerned will quit paying and receiving pay for transacting Government business, nobody's feelings will be hurt and we shall be blessed in one more noiseless betterment.

✣ ✣ ✣

"Bucko"

(Continued from page 17)

He gave them the lead himself: his vigor infected them and they went aloft at a run. With Logan at the bunt, they had the topsail furled as soon as the topgallant. He was an inspiring leader at such a job: his call to haul up to windward summoned all their power and his own great strength, and the fierce energy and speed with which he worked kept them strung up to their utmost endeavor. From the main to the mizzen he swept them in a paroxysm of haste and labor; and when all was done he was the only one of them to land on deck again without quickened breath and aching muscles.

All that afternoon it breezed up with growing force in the true Cape Horn style, raising a strong running sea. The second dog-watch saw the first of the snow; by eight bells they were in the thick of it and all hands were resigned to stand by all night. The men gathered at the break of the poop, bundled in their thickest clothing, with oilskins over all, dodging the wind that carried the chill of ice down on them and watching the snow as it drove over them in thickening clouds.

The *Etna*, under three lower topsails and a staysail, labored to keep her head up to the wind, and where they stood the men could hear the green water piling over the rail for'ard and see the white water dash aft along the scuppers. She was always a wet ship for'ard; and now, with much worse to come, she was already scooping the sea in by tons over both sides and the bow. Sometimes, when her bows lifted on a sea and swung up to windward, the fore-tops'l leach flattened and filled again with a bang like a gun, and she would heel giddily with the impact and trail her lee rail deep under the mounting seas. Every movement of her, every voice of all the voices that spoke from her strained and overtried gear, had its plain significance for the men; they saw and heard and judged her, frowningly attentive to all she did, only idly concerned for their own share in her fortunes.

Old Noble, braced against the lee poop ladder, had Fullerton next to him. Since his fight with Logan, the American had scarcely spoken to any one. Noble glanced covertly at his profile, set hard and staring unwinkingly into the darkness ahead, and felt a vague trouble at the man's aloofness.

"Time them tops'ls was in, Jim," he said, tentatively.

Fullerton nodded without turning his head. "Aye," he answered shortly.

"Cold job furlin' 'em," tried Noble again. "It's playin' with men's lives to hang on in weather like this."

Fullerton laughed shortly, a mere bark of bitter mirth. Playin'?" he said. "They're not playin'. It's their trade, murdering sailors."

There was a pause, while both of them stood gazing into the night and the crisp snow that blew out of the darkness to windward and vanished in the dark to leeward. Where it touched their faces, it stung like a burn.

"Jim," said Noble again.

"What?" demanded Fullerton.

"You ain't got anything up against me, have you, Jim?" asked Noble.

"No," said Fullerton, shortly.

"'Cos we ain't had much to say these last days," explained Noble. "Those Dutchmen have a notion that I'm standing in with Logan. You wouldn't think that of me, would you, Jim?"

"No," replied Fullerton again. He shuffled his feet and spat. At last he turned toward Noble.

"I'm nobody's fool," he said. "I know a straight man when I meet him; I never thought you was carryin' tales to Logan. Only, somehow, I sorter can't make out to be sociable since you all saw me get that hidin'. I don't feel square about it; I'd ought to have another chance at Bucko, an' I can't get it. I reckon you think I'm crazy, eh?"

Noble touched his arm a moment.

"No, Jim," he said. "I know how you feel. But none of you don't know how I feel about it."

"What d'ye mean?" said Fullerton.

Noble shook his white head. "It's no good sayin'," he answered. "You sort of forget I'm an old man, don't you, Jim? Well, that's what I am; forty-seven years

As The Master Would

You have certain enjoyment in music

You appreciate good piano playing.

Maybe you sometimes envy a good performer's mastery of the technical difficulties—his creative power.

You'd like to play as he plays—you'd like to trill and perform difficult passages with the same ease, the same nerve and dash.

You, Mr. Business Man, or Mistress Housewife—you'd like to do these things whether or not you've had any previous experience or instruction.

* * * *

To you there is a means of gratifying your musical ambition—your joy of sound creation.

The Cecilian Player Piano.

And the Cecilian for the reason that it enables the most nearly perfect control of sound production at the least effort.

You can Produce gradations of touch on a single note on Cecilian Player Pianos.

You can make a solo sing out melodiously above a soft accompaniment. You can accent individual notes or chords.

You can alter the tempo.

You can secure the same effects the human performer obtains—without having to fuss with levers, push buttons, screws, or other appliances that fairly bristle on the ordinary player piano.

And above all things, you won't murder a composition, as ordinary 65-note Player Pianos do, for Cecilian Player Pianos play the entire key board of 88 notes. They play a composition as it is written.

One point more—the construction of the Cecilian being metal—non-affectable by climatic or atmospheric changes—and not wood; liable to warp, twist and get out of order—the Cecilian Player Pianos last longer than the ordinary Player Pianos.

Prospective Piano Purchasers
Free Brochure

If you are considering the purchase of a Piano—or of a Player Piano—please send coupon today for our handsome art brochure. You will receive information of vital importance to you, free of charge. This booklet gives you piano information you could obtain in no other way. Please fill out the coupon today—now—and send to us immediately.

Cecilian Player Pianos play the entire key board of 88 notes, not merely 65.

Try this $8 Cigar Value If they please, send $3.75

WE want every man who knows and appreciates a good cigar to try 100 *"Baby Grands"* at $3.75.

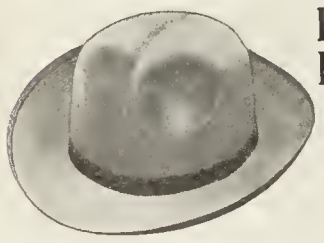
It's mild, mellow and rich, pure Havana—cleverly blended to the American smoker's liking. It's "soft" and "smooth" at all times. It's a cigar you will never tire of. *"Baby Grand"* is medium size (4 3-16 inches long), full weight, good to look at—better to smoke.

It's the regulation "3 for a quarter," 10 cent straight quality, according to the over-the-counter method of retail cigar selling. Yes, it's an $8 value—but *our* price for **100 "Baby Grands"** is just $3.75, because we eliminate the expenses and profits of salesmen, jobbers and retail dealers. You know the La Reclama Cuban Factory is the largest in the world selling fine Havana cigars direct to the smoker by mail.

WE'LL SEND you 100 "Baby Grand" La Reclama cigars on **FREE** trial, because we have every confidence that you will like them and keep them. **Because** when once you try La Reclama cigars you're bound to realize the great saving you make through our "factory-to-smoker" method of selling. **We send them to you without a cent in advance, express prepaid. Merely write us your order on your business letter paper** and we will ship the cigars and *let you be the judge.*

EXACT SIZE — SEND TODAY — EXACT SIZE

We let you TRY before you buy, and if you like them, send us **$3.75 within ten days.** If for any reason you do not care for them, return the balance within that time, express collect, and we will make no charge for the few consumed in testing.



We sell our cigars entirely on their merit. We work no premium schemes to get your money in advance; we have confidence in you and our cigars. **Just tell us right away that you would like to accept this free offer.** State whether you want them mild, medium or strong, and we'll ship you the cigars **prepaid.**

Catalogue which shows cigars in various shapes, sizes and prices sent free on request.

since I started goin' to sea; an' it takes an old man to feel the way I do."

"Oh, hell," said Fullerton, awkwardly. And, in the vernacular of the foc'sle, he could have said nothing more adequate.

A barometer is by no means so sensitive as that bundle of nerves, memories, and intuitions which constitute the weather-wisdom of a good sailor; and the captain, who believed in his barometer, was late in waking to the fact that three lower topsails and a staysail were too much for the *Etna* to carry. This fact he realized at that particular moment when all possibility of handling the topsails was definitely past. The sky to the northwest seemed to open and a dull light to show through, the Horn's authentic ensign of wind in reserve, of reenforcements of tempest advancing to the attack. He popped his blond head in at the companion and consulted the barometer; then scuttled back to where his two mates were together behind the weather-dodger.

"Gosh," he said, in tones of protest; "it's still falling."

"Yes, sir," answered Logan; "there's a lot more coming."

The captain twisted inside his clothes uneasily and put his hands up to shield his eyes from the driving snow while he looked for'ard. The *Etna* rose just then to a sea, rolling to leeward as she did so, and again the foretopsail flattened and filled again with a jolt that shook the ship.

"Mind your helm, there!" roared the captain over his shoulder to the two men who strained at the kicking wheel.

He stepped under the shelter of the dodger again, eager to be out of the wind.

"We'll have to get them tops'ls off her," he said, and hesitated. "I suppose we can furl 'em?" he asked.

The mate grunted doubtfully. Logan, who had not ceased to keep his lookout to windward, turned.

"No," he said. "You'll have to lose 'em, sir."

The captain stared at him. "Eh?" he cried. "What d'ye mean? Ain't you got your chaps in shape yet, or what? Tops'ls must be mighty cheap where you come from, Mr. Second Mate."

He could see that Logan was smiling at him. "Yes, mighty cheap," he repeated, shrilly.

"They're cheaper where they're going to," answered Logan. "Look what's coming."

The captain looked. The dull light to windward had brightened, so that its reflection was seen on the sea. It was a pale opalescence lying low on the horizon.

"See?" said Logan, with a thrill in his voice. "Shall we start the sheets now?"

The captain's fingers plucked at his lips.

"Ye-es," he said. "Start 'em."

Logan crammed his sou'wester down on his head and sprang to the ladder with the mate at his heels.

"Tops'l sheets," he roared, vociferous at last, and in the same breath: "Hang on all! Hang on!"

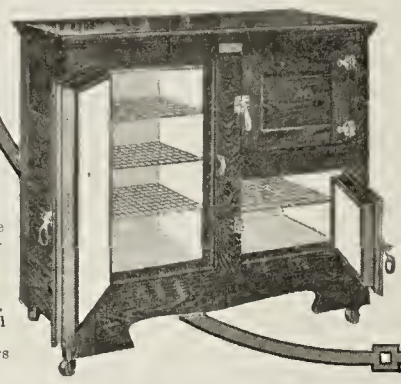
It was as though some conscious and infinitely hostile force had gathered its strength for a single blow. The wind lulled for a moment as though it drew breath; from the main deck the hands in a troop clawed their way to the refuge of the poop. Then, out of the darkness, in a single vehemence of power, the wind smashed down on them. The ship stood on the impact as though she had struck ground, and with a rending noise the mizzen topsail blew from the bolt ropes. Seas climbed the rail to thunder down on the deck in a quick succession of staggering blows, and the *Etna*, straining and shivering, laid her long side down, canted her deck till they thought she was going over for good.

Logan reached out a long arm and snatched the captain down to him. The wind half-strangled him as he shouted in the other's ear.

"We got to start them tops'ls," he cried. "We got to do it."

The captain answered something; the wind snatched the words from his lips and strewed them forth soundlessly. Logan, sliding and crawling, arrived among the men who crouched on the other side of the deck.

"I want one man," he cried. "One man to lend me a hand with them sheets."



He turned forthwith and made his way to the ladder, conscious that a man in oilskins was following him. The main deck was a mere trap of tumultuous water, raving and tumbling. With a quick eye to his opportunity, he leaped from the foot of the ladder to the after hatch, scrambled along it and on to the after house. The man who followed him came at his heels, never more than a yard behind. Again, choosing their moment, they let themselves down on the main fife-rail; and in another moment the sheet was cast off and the main lower tops'l was sailing to leeward in extravagant rags. No time was theirs to exult, though; a towering sea drenched them even as they climbed to the top of the house again,

This is a Really SAFE Refrigerator

THE HEALTH of yourself and family is surely worth the price of a strictly sanitary refrigerator.

The Monroe is the *only* solid porcelain refrigerator. The inside is one solid piece—a "china dish" with walls an inch thick. Most other refrigerators have cracks and corners which can never be really cleaned.

The Monroe can be sterilized and rendered *germlessly* clean in *every part* in *an instant* by simply wiping it out with a cloth wrung from hot water. This is not true of most refrigerators—no matter what is claimed by the makers.

NOTE You cannot buy a Monroe Refrigerator from any dealer. We sell direct to users only.

This is why The Monroe is installed in the best flats and apartments, and why The Monroe is found today in a large majority of the very best homes in the United States.

And it's why *you* should have The Monroe in *your* home—for the sake of knowing your food *is clean*, and to protect the family's health at the same time. Read *our liberal offer:*

The "Monroe"
Is Sent to You, Anywhere, on 60 DAYS' FREE TRIAL
Lowest Factory Prices. *We Pay the Freight.*

Write *today* for The Monroe Catalog. Pick out the size and style refrigerator you wish to try, convince us in your own way that you are entitled to our trust and confidence, and we'll send you a refrigerator at once, all freight prepaid. Use it in your *own home* 60 days, and prove to yourself that The Monroe is all we claim. Then decide whether you wish to keep it. Remember, all risk and expense is *ours*. Write today.

MONROE REFRIGERATOR CO., Station L, CINCINNATI, O.

New Front Cut Lawn Mower

Cuts in front—not in rear. Does not roll the grass down. You know how old-style mowers leave ridges of uncut grass which must be gone over the second time. You know how difficult, or impossible it is to cut down the tall grass.

The Clarinda Lawn Mower

overcomes these and many other objections. (Fully covered by strong patents). **No scythe or sickle needed** where you have a Clarinda. Cuts long grass as well as short. Self-sharpener. Mows on uneven ground as well as level. Mows dead grass. Will mow your terrace. Cuts close to trees, etc. So many advantages, there's no comparison with ordinary mowers. Ask your dealer, or write for pamphlet, giving name of dealer.

Dealers should order sample on trial (prepaid); if not a great improvement over all other lawn mowers return at our expense.

Clarinda Lawn Mower Company Dept. J, Clarinda, Iowa.

Economy in Leather Belting

Whether your leather belting costs much or little per year, it's an expense that you want to cut down as much as you can. It makes no difference how hard you work your belts or under what trying conditions—you will have the most economical belt you can buy if you use

Sea Lion
Guaranteed Waterproof
Leather Belting

Made especially to run under the most adverse conditions, such as severe weather, under a broiling sun in tropic humidity or through a flooded wheel-pit. Subject it to any of the things that work hardship on other belts and you'll still get more efficiency and service out of **Sea Lion Leather Belting** than ordinary belts give under the most favorable conditions.

We also make Reliance, Imperial, Sterling and Dynamo, Leather Belting, each equally as good for specific purposes.

We guarantee every foot of Sea Lion and Reliance Belting perfect and protect purchasers by holding ourselves liable at all times to replace any belt defective in stock or workmanship. A trial of our belting will prove that it saves money. Write us about your belts and we will go into details and send you a book on leather belting.

IN ANSWERING THESE ADVERTISEMENTS PLEASE MENTION COLLIER'S

there to lie and watch for another moment of grace that should let them scramble for'ard. Logan turned and peered into the face of the man who had followed him.

"You, Noble?" he said.

"Yes, sir," answered the old man.

It was chancy work getting for'ard, and once they had to hang on desperately to ring-bolts in the deck while a sea stamped over them and half-drowned them. When they emerged, Noble's sou'wester was gone and his clothes hung on him in rags. A sea racing to leeward across a deck will sometimes strip a man naked. The fore fife-rails were heaped with tangled ropes; they labored desperately before they could clear the sheets ready to run. All the time they could barely see one another, and worked with a fear that a sea might leap upon them and make an end of their striving.

"All clear," cried Logan at last. He had been finding the end of the chain-sheets, and, at the word, Noble slacked off, twisted it from the pin, and let it race aloft, roaring through its sheave. With a sound like blowing off steam from a boiler, the sail tore and the *Etna* rolled back, righted, and wallowed. Noble, with both arms wrapped round the fife-rail, felt the water cascading over him. She came to an even keel and freed him, gasping and weak. Something had floated between his legs. It stirred, and murmured.

"Good Lord!" cried Noble.

Logan panted a little; Noble could only see his face as a pale blot on the wet deck.

"Sheet was round my legs," said the second mate, very deliberately. His voice seemed no quieter than of wont. "Both broken," he added.

"You blame fool!" cried Noble, aghast. "Couldn't you step clear?"

The *Etna* was upright again, and for the moment shipped no water. But the snow thrashed down upon them unceasingly, and the wind sung shrilly in the rigging.

"Drag me for'ard, under the foe'sle head," Logan said.

Noble stared down at him, gathering his wits. "Why?" he asked at length.

"She's falling off," was the answer, still measured and deliberate. "There'll be water aboard again in a minute. Haul me careful, mind."

"I ain't goin' to haul you at all," replied Noble. "Not a haul. Mister Logan."

"Why?" said Logan. It was strange to hear that equable voice speaking up from the deck, in its tones of every day.

"I'll tell you," said Noble. "I'll stay by you till I've told you if I go overboard with you." He was on his knees by the second mate's side, and he still had to shout to make himself heard. "It's your bucko style that don't suit me," he said. "This is the end of it. You're the finest sailor that ever I see, Mr. Logan; but the bucko business has done for you."

The prone man made no answer; his face still looked up.

"You ain't never laid a hand on me," Noble went on. "And why? 'Cos I done my job and done it right and shipshape. But if I was to make a mess of a job, where'd I be? On my back with a broken jaw. An' it don't seem right to me that men before the mast should be pounded like little boys that don't know their book, or like horses that won't pull. If you was to punch here and there when you felt like it, I'd have nothing to growl about; I been workin' on ships since I was twelve. But this punishment game's got to stop."

"I hear you," answered Logan.

"Right," said Noble. "And you get the idea?"

"Yes," was the reply. "Hang on."

"Eh?" said Noble.

"Hang on," said Logan. "She's goin' to roll."

She gave a sickening heave, and Noble had barely time to find a hold and fasten to it when the water came aboard. It thrust him under the fife-rail and against the mast; it wrapped him in rasping coils of rope and pushed his head back like a wrestler. Only the mast to leeward of him saved him; when he was clear again he could hardly stand on his feet. And now he was alone.

Aft on the poop they were seizing a folded awning into the mizzen rigging to bring her head up. He told his news—that the second mate was overboard—and lent a hand with the work. When it was over, Fullerton took him by the arm.

"Say," said the American; "it wasn't you that killed him, eh?"

"No," said Noble.

"If it was," said Fullerton, "I'd settle you. I'd something to say to Bucko before I was through with him."

"I didn't do nothing to him," said Noble, wearily. "But, Jim. The sea's no place for an old man."

THE NATURAL FLAVOR

of the richest and purest cow's milk is retained in Borden's Peerless Brand Evaporated Milk (unsweetened). It is especially adapted for use either plain or diluted on breakfast fruits or cereals. In coffee and chocolate it is much better than fresh cream. It enriches all milk dishes. —*Adv.*

Masters in Art

A Series of Illustrated Monographs

HAVE YOU IN your library any comprehensive authoritative work on art? Is painting and sculpture as well represented on your shelves as fiction, history, travel or science?

Masters in Art

belongs in the library of every cultivated person. It is the most complete, and authoritative work of the kind. Each of the 108 parts complete in itself, adequately and beautifully illustrates and thoroughly describes and criticises the work, and relates the life of one of the great artists of the world. The collected quotations from the most eminent art critics, bring to you the fruit of the world's best judgment which could not otherwise be obtained without laborious and wide research. No publication has ever received more unqualified commendation. Thousands who possess complete sets testify to its interest and educational value. It is indispensable in homes where children are growing up and their artistic tastes are being formed. See this work for yourself. **Send 20 cents in stamps for the part on your favorite artist** containing ten beautiful full page plates of his best paintings; from this, you can clearly judge of the value of the entire work. We will quote you special terms on the entire set handsomely bound in 9 volumes.

For the Reader of Books

"Viva Mexico!"

IN WRITING of Mexico, Mr. Flandrau is neither a hurried journalist nor a red-faced reformer, but an American coffee planter writing home, intimately and with quiet humor, of the country under whose spell he has fallen and where he has lived long enough to feel quite at home, yet not so long as to lose the vividness of his first impressions.

An unusual sort of coffee planter, of course. Mr. Flandrau was at Harvard with a class to which cleverness and a rather precious wit were a sort of religion. He was one of its shining lights, and his "Harvard Episodes" one of its most shining and lamentable results. It is a chastened Mr. Flandrau who writes this little book, one full of kindliness and mature understanding, with just enough willingness now and then to wield the little diamond-pointed dagger to make things more interesting. Somewhat to overstate the case, one is reminded of Mr. Henry James turned Rough Rider—and liking it.

The humors of the voyage to Vera Cruz, the people one meets in trains, hotels, and variegated Mexican society; the life on an isolated coffee plantation; the continuous and startling picturesqueness of the Mexican scene—these Mr. Flandrau tells about with the informality of a returned traveler dining with an old friend in a quiet corner of the club. He never overaccents, and although he has the courage to say that he "lived too long in Boston not to know that charming books might be written by quite odious women," he often betrays a quite Bostonian diffidence before the almost immoral vividness of his own sensations. "The whole landscape," he says in describing his plantation, "is suspended in heat haze (swooning is the word I should like to use, but I shan't)."

Into the work and personality of President Diaz, Mr. Flandrau does not go in detail, although one gets the notion that he thinks his "military Diazpotism" is an excellent thing, on the whole, for the country. Politics and industrial matters, except as expressed in human terms, are very lightly touched on, the lack of a free press and the habit which the Government has of arresting one's employees and putting them to work on public improvements, amuse rather than worry this good-humored spectator.

One chapter is devoted to brief impressions of English-speaking residents—the material for plain tales which, as Mr. Flandrau suggests, Kipling would have lashed to the mast had his hills been Mexican. In the chapter about the Trawnbeighs, the English family who lived on a tumble-down plantation and "dressed for dinner" every night even when they had no dinner to dress for, the author tells a plain tale himself. Of course they had tea in the garden, although there wasn't any garden, only a rustic table, imperfectly shaded by three tattered banana trees. "We love to drink tea in the dingle-dangle," Mrs. Trawnbeigh explained. Here Cyril, the eldest son, in "flannels," fresh from playing a game of tennis with himself because there was no one else to play with, solemnly discussed with "the pater" whether the best place for haberdashery was "the Stores" or a small shop in Bond Street, which conversation Edwina interrupted with an abrupt question. "I say," she inquired anxiously, "has the dressing-bell gone yet?" The dressing-bell hadn't gone, but it soon went. Mr. Trawnbeigh, after looking at his watch, bustled off and rang it himself. And so on—better, really, than Mr. Kipling could have done it himself, for his is another kind of story.

Mr. Flandrau is righteously depressed by the manner in which foreigners who enjoy Mexico, prosper there and adopt many of its customs, stupidly deny its attraction for them when talking to their own people, "take a pride in parading the old tourist dicta that in their cases, one sees at a glance, are not justified by facts." We exhibit the same "impregnable dulness of the normal intellect" toward other Latin Americans. The book is published by the Appletons. A. R.

Mr. Moody's New Play

WILLIAM VAUGHN MOODY had already established a high place for himself in verse before "The Great Divide" made him, at one step, an important playwright. Houghton, Mifflin & Co. now publish "The Faith Healer," which Mr. Henry

Which Man Will You Be?

THE MAN WHO MAKES THE GOODS

The man that works in the factory or store, or keeps the books, or does the office work, is not the one that draws the big pay envelope. It is the man that **sells the goods;** there is no limit to what he can earn.

You Can Be a Salesman

We will teach you to be one by mail in eight weeks and our **Free Employment Bureau** will assist you to secure a position with a reliable firm. We received calls for salesmen from about 3,000 firms last year and assisted many of our graduates to secure good positions where they have increased their earning power many times. We are receiving hundreds of new calls for the summer and fall rush. If you want to enter the most independent, best paid profession in the world, where you can increase your earnings from two to ten times, our free book, "*A Knight of the Grip*" will show you how. Write (or call) nearest office for it today.

151,249 Atlases Sold

Collier's New Encyclopedic Atlas

1909 edition AND GAZETTEER 348 pages

This Atlas is the best value we have ever offered. It is the most complete, up-to-date, popular Atlas ever published, containing 200 new maps and three times as much text matter as any other. We have prepared a booklet showing by comparison its 100 points of superiority.

A Special Price Offer

Our ability to Print, Bind and Sell over 4,000,000 books a year enables us to offer this Atlas, which would ordinarily retail at $5.00, under a most liberal arrangement.

240 pages of the most carefully compiled valuable descriptive and statistical matter ever published in an Atlas.
92 pages of general data on over 13,500 cities, the equivalent of about 190 newspaper columns, giving later population and other statistics than are to be found in any other Atlas.
86 pages devoted to The Physical and Commercial Analysis of the United States and Canada, the productions, resources, population, manufactures, religions, etc.
36 pages devoted to the Physical and Commercial analysis of the world.
25 pages of statistical and descriptive matter, trackage, points of interest, etc.
200 of the latest and best maps, most of them beautifully engraved in colors.
100 handsomely colored maps, a separate map for each State, showing all counties, railroads, cities, and all the nations, all continents, the United States Insular possessions, etc.
58 recent reliable street maps of the chief cities of America and Europe, New York, London, Paris, Chicago, San Francisco, Boston, Buffalo, Cincinnati, Cleveland, Denver, Detroit, Washington, Kansas City, etc.
35 authorized railroad system maps, showing all stations and branches.
12 valuable maps showing the Forest Reserves, irrigation projects, etc.
12 important agricultural maps.

Map and Exhaustive Analysis of the Panama Canal FREE

Also a 34-page Analysis and comparison of contents of Collier's New Encyclopedic Atlas and Gazetteer with other popular Atlases and particulars as to how you may take advantage of our offer.

62½ Miles of Chicago's Fine Flat Buildings Are Heated By

Kewanee Steel Boilers

And more miles than we can count in other cities in the Union

Average cost of maintenance

77 Cents per Year

The renting value of your flat building is increased materially by the presence of a **Kewanee Steel Boiler** in your basement.

If you yourself have no definite information on the boiler subject, ask your architects and heating engineers of repute why **Kewanee Steel Boilers** are being specified for the finest buildings in the world.

Ask why they are preferred over all boilers of cast-iron construction. This is vital information for all builders of buildings and to the people who occupy them. Educate yourselves on this heating proposition and learn why **Kewanee Steel Boilers** mean health, comfort and low cost of maintenance.

Kewanee Steel Boilers are made of the best solid steel plate with a tensile strength of 60,000 pounds. They are put together with solid steel rivets, not molded in sections. They are readily insured by all companies at 65 pounds working pressure, yet they are seldom asked to carry more than 10 pounds. They are rated at their net capacity. All cast-iron boilers are rated at gross and 50% is added **without any reason therefor.**

Get wise on the boiler business before you install your heating plants in large residences, schools, flat buildings, apartment houses, auditoriums, hospitals, assembly halls, clubs, hotels, etc.

Write for our illustrated catalog showing details of steel boiler constructions and other information ***which you ought to have.***

KEWANEE BOILER COMPANY

Makers of brick-set and portable steel boilers and radiators

26 FRANKLIN STREET
KEWANEE ILLINOIS

SAVE 25% ON YOUR RUGS

Why should you pay a dealer's profit when you can buy direct from us at manufacturer's prices, and get equal quality and greater variety? We've been making rugs for a quarter-century, and every one we sell is guaranteed to give satisfaction, or we will return your money.

Hancock Rugs

are honestly made—strong and durable. They wear like oak. The designs are distinguished and the colorings exquisite. They will beautify any room in your home.

We are particularly proud of our **Duchess Tapestry**, 9x12 feet, at $13.50, and our **Gold Medal Axminster** rug, 9x12 feet, at $20.50. We pay the freight east of the Mississippi.

These and other Hancock Rugs from $2.00 to $30.00 are illustrated in colors, and fully described in our handsome free catalogue. Let us send it to you. Write a postal for it **to-day**—right now, before you forget. It will save you money. Also ask for our money-saving catalogue of imported mattings.

Hancock Rug Mills, Dept. N, Philadelphia

Building?

The importance of a waterproof and air tight building paper that blankets and thoroughly insulates your house against cold, dampness and draughts is told in our free booklet, **"Comfortable Homes,"** for home builders. Send for it.

Neponset Black Waterproof Building Paper

Saves its cost in coal the first winter. Specified by architects the country over for twenty-five years.

If contemplating any kind of building, bungalow, garage, poultryhouse, barn, factory, write us what you intend to build and we will send the booklet that tells the story you want.

Paroid Roofing

The roofing of quality that has stood the test of years. Nothing is as important as a good roofing. Before buying write us for free book, **"Paroid Proofs,"** and sample.

F.W. BIRD & SON, Mfrs., 243 Mill St., E. Walpole, Mass.

Grow Mushrooms

For Big and Quick Profits

I can give practical instructions worth many dollars to you. No matter what your occupation is or where located, get a thorough knowledge of this paying business. Particulars free.

Jackson Mushroom Farm, 3209 N. Western Ave., Chicago

Miller has experimented with on the stage, apparently with a view to deciding whether to put it on regularly next season. Guessing at the practical qualities of a drama like this is very difficult, because the dramatic qualities are so inseparable from the mode of presentation. If "The Faith Healer" were played as well as it could be played, we feel sure that it would make a strong impression on the stage, as it does in the reading. It is written with a really superb simplicity, and it masters the reader's attention from the first sentence to the last. Mr. Moody's early work in poetry was full of color, intelligence, music, and brilliant metaphor. Its principal fault was that it was what Lowell called over-languaged. The style of "The Faith Healer" is as chaste as that of Hawthorne, Newman, or Swift. The purer the taste of the reader the more enthusiastic will he be about this play. N. H.

The Five-Foot Library

PRESIDENT ELIOT has aroused so much new interest in the question of the best reading that we publish here some of the lists submitted to us, and shall very likely publish a further selection from whatever our readers may contribute.

"Great books," writes one, "are either great adventure or true psychology. The very biggest—the Bible—is both. The ten books I'd choose to be isolated with, therefore, would be:

The Bible.
Homer's 'Odyssey.'
Malory's 'Le Morte d'Arthur.'
Shakespeare's Plays and Poems.
Goethe's 'Faust.'
Carlyle's 'French Revolution.'
Emerson's Essays.
Browning's Poems.
Dumas's 'The Three Musketeers.'
Thackeray's 'Vanity Fair.'

And, unless I were cast on an island after being wrecked, to find out by personal experience what there is in treasure hunting, I'd insist upon making room for Stevenson's 'Treasure Island.'"

From one letter we clip these sentences:

"What I have in mind to read now is the Fiftieth Chapter of 'Decline and Fall' (spread of Mohammedanism), 'She Stoops to Conquer,' 'Merchant of Venice.' My character is slowly dissolving, I fancy. For instance, I'd just as soon read the Fiftieth Chapter of 'Decline and Fall'—but the whole thing straight off—no. I did the first two volumes, when I was younger, straight off. Doubt if I could now. Recently saw Sothern in 'Hamlet.' Think he makes him too robust, insufficiently neurotic, but a great performance. Bob Davis's play—'The Family'—is, I understand, a hit here. Haven't seen it. Liked your editorial about Mademoiselle Kellerman. She and her sisters ought to be cast for the Rhine Maidens—that's obvious.

"I'm going to patronize vaudeville instead of drama my Wednesdays in town. It is the expression of America, and drama is exotic here."

Another list ran thus:

The Bible.
Shakespeare—Plays.
Goethe—"Faust."
Browning—Poems.
Carlyle—"Sartor Resartus."
Emerson—"Conduct of Life."
Hugo—"Les Misérables."
Thackeray—"Henry Esmond."
Eliot—"Felix Holt."
John Fiske—"Cosmic Philosophy."

The following is one letter:

"It is almost impossible to make a list of the ten most useful books without knowing the special purpose for which the individual intends to use them. A tired statesman may find a dime novel the most necessary thing for him at the end of the day; after chattering at two or three afternoon teas a man might find a plane geometry or an essay on the absolute most helpful in getting him back to normal again.

"It is quite conceivable that the man cast away on the favorite desert island might find that the books most necessary to him in a sophisticated social environment almost lost their meaning when read in the intervals of an arduous, purely physical, existence, such as a castaway might find it necessary to lead—might not feel like reading at all, in short, or might prefer 'The American Boy's Handibook' to 'Vanity Fair' or 'Madame Bovary.'

"If all other books were to be taken away, one would be likely to want specially: (1) a dictionary, (2) a good general history, (3) a good general encyclopedia, (4) a Bible, (5) Shakespeare, probably. With these one could get along, after a fashion, on a desert island or anywhere else. Beyond this, the choice seems to me to be almost wholly arbitrary and a matter of personal taste."

Perfect Soap After 36 Years

After 36 years' experience we have achieved our ideal in a soap.

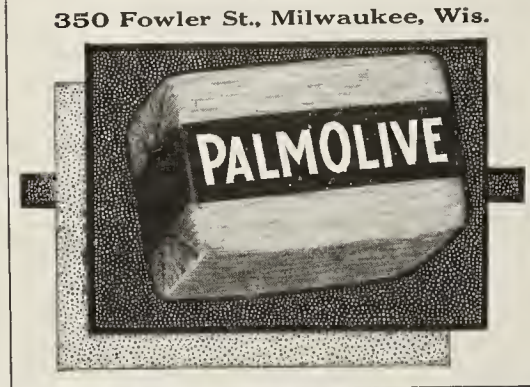
Palmolive is perfect soap.

It is good for a baby's dainty skin, so you know it is good for yours.

It is far more than merely good soap.

It refreshes and invigorates—it brings healthy "glow" to the skin.

PALMOLIVE



We send to the Orient—10,000 miles—for the palm and olive oils, its principal ingredients. The color is olive-green, from the oil. No artificial color.

Never was soap so quick to lather in any water—so soothing—so effective.

Send 4c in stamps for a generous trial cake and our book, *"The Easy Way to Beauty."*

See if you know of another soap you like even half so well.

B. J. Johnson Soap Co.
350 Fowler St., Milwaukee, Wis.

This is the Way AUTO TIRES are Made

Automobile Tires are either "Moulded" or "Wrapped Tread." It's a difference in construction.

The "moulded" tire is built up layer by layer on an iron core. Over it is clamped an iron mould. It then goes to the vulcanizing rooms. Here heat expands the rubber, creating enormous pressure inside the mould, which forces a perfect union between the layers of rubber and fabric which go to make up a tire. This pressure is so tremendous that a 2-inch cube of rubber inclosed in a cast iron mould with walls 2 inches thick will *crack the iron* when subjected to the heat of the curing oven. The weakness of this process lies in the fact that the building up of fabric and rubber piece by piece is an operation requiring skill and dexterity. If the strips of fabric overlap ever so little—there's a ridge. If they fail to meet by the fraction of an inch—there's a hollow. These ridges—hollows—irregularities—multiply themselves in the curing into *hidden* weaknesses and defects.

It is because of these *concealed* faults that one "moulded" tire will last only 1600 to 2000 miles, while its mate stands up perfectly for 12000 to 15000 miles of hard riding.

This irregularity—this inequality of service must always be expected in a "moulded" tire.

The "wrapped tread" tire is built up layer by layer in the same manner. But instead of being cured on an iron core, it is cured on an AIR BAG—an extra strong inner tube. And instead of being clamped in an iron mould it is wrapped about with many layers of strong tape and is then cured (vulcanized) in live steam. The compressed air in the air bags smooths out all irregularities in the layers as your hand smooths out the wrinkles in a garment—there can be no hidden ridges or hollows to induce blow-outs and cut down the mileage. But, it does not get the terrific SQUEEZE that the moulded tire gets—thus lacks cohesiveness and unity—loses durability—and strength.

This is the plain truth simply told. No matter what tire you select—*SAVE ONE*—it will be either "moulded" or "wrapped tread." That one—the Goodyear Quick Detachable, is BOTH. It has all the advantages of each system, with the defects of neither.

It is first put into the Goodyear Hydraulic Press Vulcanizers on the iron core, and clamped in the iron mould, the same as the "moulded" tire, until the rubber has expanded to the utmost—until the SQUEEZE has reached its limit. Then, before the rubber has fully set—while it is still plastic—it is removed from the press, the iron core is replaced by the air bag, the iron mould by the winding of heavy tape and it is put into a vulcanizer and left until the curing process is complete.

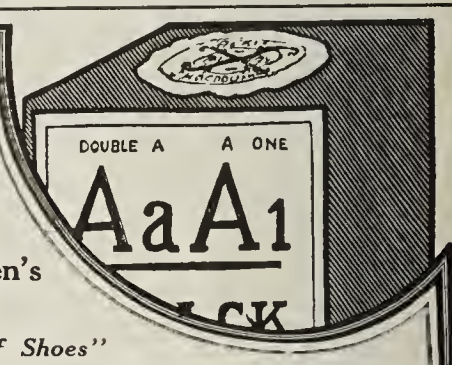
The iron core and the SQUEEZE weld the Goodyear Quick Detachable into an inseparable whole. The air bag then smooths out any wrinkles, furrows or irregularities—which may have been hidden from the inspector's eye. The result is a *PERFECT TIRE*—the Goodyear Quick Detachable. As firmly knit together in all its parts as the best "moulded" tire. As free from hidden defects as the best "wrapped tread" tire.

Every Goodyear Quick Detachable is just like every other of the same size. Its life can be shortened only by overloading, abuse or careless driving. 10000 to 15000 miles is by no means unusual with this royally good tire.

In evidence of this supreme goodness note the result of tests made by these big corporations, who are in business for *revenue only.*

Today, 800 out of the 1000 Taxicabs in New York, operated by several competing companies, have contracted for Goodyear Tires to be used exclusively.

These 800 Taxicabs are doing 60,000,000 tire miles a year—more than 1,000,000 tire miles a week.



We have told you the "Why"—have cited the most practical proof of the truth of our claims—have pointed out how you can keep your tire expense down. In your own interest have the *best* tire equipment on *your* car—*Goodyear Tires.*

PAINT-MAKING EXPERIENCE *vs.* **PAINT MIXING EXPERIMENT**

It doesn't pay to *experiment* with paint—
Because it's always at *your* expense.
Now, every batch of hand-mixed Lead and Oil paint is more-or-less an *experiment*—
You can't be sure of the grade of your ingredients—the raw materials—
And you can't be at all sure of proper *mixing*—It's all guess-work—you can't know whether you've got a good paint until you put it to actual wear and weather test—
Maybe it'll wear—*maybe* it won't—
You simply *take chances*.
But, you don't *need* to experiment—
There's *one* paint that's the result of tried-out *experience*—That's

Lowe Brothers High Standard Liquid Paint

The culmination of thirty-five years of progressive paint-making experience.
It's a paint made by *exact* formulas—
And these ingredients are thoroughly ground together by the best possible paint-grinding machinery—Thus the oil and the pigments are combined into the best paint-liquid—
That's why "High Standard" Paint *spreads* easier—hides better—wears longer, and leaves a better surface for repainting. There's a "High Standard" Paint and Varnish for every purpose—Linduro, Vernicol Enamel White and Interior Enamel are among them, and are just what you need for beautiful rooms.

Write for Booklet, "The Owner's Responsibility."

In the World's Workshop

Devoted to Facts, Observations, and Thoughts Concerning Common Industrial Methods, Products, and Influences

By WALDO P. WARREN

COMMUNICATION

EVERY form of communication has its specific use in business. A letter will often do in six lines a work that an hour of personal conferenee could not do. A telephone conversation will achieve results that could not be accomplished by telegraph, mail, or interview. A telegram will do work that no other form of communication will accomplish. Sending a representative is often more productive of results than for principals to meet. And principals can often, in a half-hour's talk, bring about results that could not be achieved by months of work on the part of two independent organizations. A boy with a letter is often better than a man who knows the inside of things, and the man who knows can often do work that all other means combined could not accomplish. A printed circular or a published advertisement will often do what letters and interviews can not. And a salesman who can meet the objections can get results where all else would fail. A woman can handle some points where a man would spoil the whole thing, and in other cases a man can say the word or strike the attitude that a woman could not do. A casual word from a friend can offset the conclusions of a board of directors. And even a postscript can drop a stick of mental dynamite that would explode in a letter before it was signed.

Every method for the interchange of thought has its place, and none will ever really displace the other. The man who rides a hobby as to a favorite mode may be making stupendous blunders without realizing it. One of the most vital points of a business education is to know when to use one and when another of the various forms of conveying thoughts—and all big business is largely a matter of changing and exchanging thought. How the matter is put to a man largely determines his answer, and by reading between the lines a man's reputation and standing are established.

SALESMANSHIP

A SALESMAN in a furnishing store displayed to a friendly enstomer a gentleman's plain linen handkerehief at five dollars. The man had always thought he was doing well to pay fifty eents, and questioned the salesman about it.

"How can a man figure it that he gets his money's worth when he pays five dollars for a handkerchief? It doesn't serve the purpose any better, and he couldn't afford to tell any one that he was big enough fool to pay that price."

"He gets his money's worth," said the salesman, "from the added force of self-respect that comes with his own personal assurance that he has the best that can be produced. That conviction helps him in urging his point and in swinging the big deal his way, and the five dollars is a mere item of incidental expense."

Ever afterward that customer gladly paid more not only for handkerchiefs but for every item of his wardrobe.

That is salesmanship.

PERSONALITY

SHOULD personality have a conspicuous place in business or should the individual be submerged in the institution?

One reason why this has remained a mooted question is because it has points of merit on both sides which advocates of the other are usually unwilling to concede.

Too much playing up of personality almost inevitably tends to make men "high and mighty," and impairs their usefulness in about the proportion that they think that they are the business. And too much submerging of the individuality takes out of men their legitimate inspiration and causes their minds to accept the place into which they are forced—that of being a mere cog in a machine. Between these two extremes the proper mode of procedure must be found. But when found it will be seen to differ as widely as individuals and institutions differ. There is no such thing as reducing this problem to a cut-and-dried conclusion, and saying that

O'Sullivan's

Heels of Live Rubber

Listen! Have your feet lost their spring? Do you sit down where you used to stand? Do you ride where you used to walk? Are you disinclined to walk? Do you wear the soles of your shoes on the inside? Look to your shoes; look to the heels of your shoes particularly. These symptoms and many others arise from improper attitudes in walking, bringing disproportionate weight on the inner or weaker side of the feet.

The Great Reason. See to your shoes; see to the heels of your shoes; see that the heels are low and long enough to receive a perpendicular line passing down through the center of the ankle on the inside of your foot; see that your boots are fitted with heels of Live Rubber for just one reason, though there are many others which physicians, nurses, teachers, housekeepers, and in fact all sensible people, will offer; and the great reason why you should wear Heels of Live Rubber is that they encourage walking, which is universally conceded to be the simplest and best exercise, and enable you to walk more briskly and farther with the same effort. They do more than that; they help you to walk normally and gracefully.

If all people wore Heels of Live Rubber and had them put on by shoemakers who understood their work, they would be wearing heels one inch high and long enough to receive that portion of the weight which ought to be supported by the breast of the heel and to relieve the strain upon the instep arch.

Resiliency. The resiliency of the Live Rubber Heel induces you to walk normally; that is, to carry your feet parallel in walking. Leather heels are inclined to make you toe out; that is abnormal, ungainly, and tiresome, and results in the afflictions for which instep supports are worn on the inside of the shoes.

Ball of Foot. Provided Heels of Live Rubber encourage walking, and induce normal attitudes in walking, then it follows that they cause you to use the ball of your foot as the fulcrum, and the muscles of your leg to lift your body in walking.

Substitution. If Heels of Live Rubber are helpful along these lines, isn't 50c. a low price for them? Isn't it almost a shame to substitute ash-barrel rubber stuffed with rags when *Live Rubber* is the only article that will fill the mission of the rubber heel? But that is the situation; if you want *Live Rubber* you must demand O'Sullivan's. The few cents more profit that the substitute leaves the dealer explains why he makes his little speech as to why they are "just as good."

Diagram. When you encounter such a condition send diagram of your boot heel and 35c. to Lowell and get your Live Rubber Heels direct from the makers.

Free Booklet. A free booklet on the proper walk and proper walking shoes, written by Humphrey O'Sullivan, expert foot fitter, for the asking.

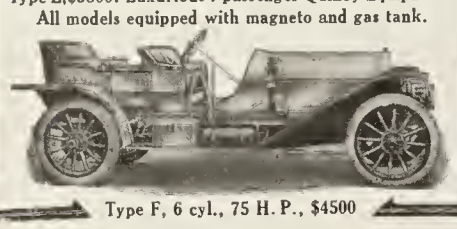
P. F. COLLIER & SON, 412 W. 13th St., New York

PENNSYLVANIA

WHICH appeals to your business sense, to buy a cheap car with its never-ending expense for upkeep, or to buy a good car in the beginning, and enjoy the kind of motoring that is only obtainable with such a car, probably costing you less in the end?



The perfectly balanced, hemispherical motor of four cylinders used in the "Pennsylvania" cars gives more speed and power than can be obtained from six cylinder motors of equal cylinder contents, having the usual valve pockets, because the explosion is concentrated on the piston, and the heat units are not dissipated by unnecessary cylinder walls. By the same token, the ability of the "Pennsylvania" six is of that phenomenal order that makes one gasp in astonishment that so much power can be encompassed in so small a space.

"Pennsylvania" cars have amply proven their ability and dependability by their many winnings during the past season, in speed, hill climbing and reliability contests. In accomplishing these results detailed refinements have not been slighted. The cars are of exceedingly smart appearance, silent, and possess wonderful riding qualities.

It is not possible to get better quality, and only a few cars have equal ability.

RUBBER NECK COAT

The only absolutely Waterproof Coat ever made in the World

A broad statement—yet only the simple truth. **No Rubber Coat that is put on like the ordinary Coat must be put on, can be waterproof.**

Driving against the wind in rainy weather, what's there to prevent the water from beating in all the way down the front of coat, at the neck, at the sleeves, through the button-holes, and even through the **very seams.**

If you want a Rubber Coat that **is** waterproof—as waterproof as a diving suit—get the **Patented Rubber-Neck Coat.** It costs no more than any other, but is worth a great deal more.

It's made with a **one-piece yoke of pure gum rubber** that fits around your neck as snugly as a glove—not a drop of water can ever get in.

From this yoke hangs the Coat of high grade black rubber, **all made in one piece**—without a clasp, or a button, without any opening either in front or back—**so how could the water get in?**

You put the Coat on like you put on a sweater—pull it over your head—and that's all there is to it. The sleeves are protected by waterproof wristlets, so no moisture can reach you there.

The Coats are from 48 to 56 inches long—tell us your chest measure—**and we'll guarantee the fit absolutely.**

The entire Coat comes neatly put up in a small bag measuring only 3x8 inches, just a handy size for your overcoat pocket.

Price, including express charges to any part of the United States **$6.50**

Send us your order today—and if you do not find it the best Rubber Coat you ever saw, return it and have your money refunded.

Sold exclusively by

Saks & Company
Broadway at 34th Street **New York City**

"Everything For The Autoist But The Auto"

whatever conforms with that is right, and whatever does not is wrong. Whenever the problem comes up the things to be considered are the individual, the business, the precedents, the purpose, the alternative, and whether or not the net result in a particular case would be better if arranged the one way or the other. Settling it by a rule may involve a great mistake. And whenever a course or policy is criticized, it should not be criticized by a rule—whichever view you might have adopted—but by a consideration of such facts as would have entered into an intelligent decision in the first place. To overemphasize the importance of an individual is to forfeit the opportunity of placing effective emphasis on other phases of the business. To underestimate the importance of a man to a business is to blind one's eyes to the importance of having the right kind of men, and often to lose the good men already employed.

A TOUCHING TRIBUTE

THE dignity of work well done, and the appreciation which people have for whoever does his work faithfully, no matter what that work is, is illustrated in the plan of the citizens of Montgomery, Alabama, who have undertaken to build a monument to "Old Bob" Goodwyn, a one-armed negro ferryman who recently lost his life in the discharge of his duty. "Old Bob," as he was affectionately called, has saved more than twenty lives on the Alabama River, often at a great risk of his own. Many families are grateful for his bravery and skill which spared the lives of one or more of their circle. The funeral of "Old Bob" was an elaborate one, in charge of his white friends. Now the city officials, business men, and school children are to join in raising a fund for a monument to his memory, Mayor Teague being in charge of the fund.

It is an unusual honor to be paid to a humble worker, but it is honest sentiment, such as people feel at heart for the qualities of fidelity and self-sacrifice, no matter by whom they are manifested.

THE IMPRESSION

GRADUALLY the matter of making an impression is being reduced to a fine art. The latest addition to the rules of the game is for a business man to count sixty before he answers his telephone—after the operator has told you that you are now connected with his private office. We have often wondered why it took so long at times to get an answer, and are pleased to learn that it was because we were in the process of being impressed. It is interesting to know those who feel the need of such aids, as it helps us to know just how violently we should tremble in their presence. Perhaps there may yet be an invention by which the tremble felt by the man at the other end of the line can be communicated to the august personage, whereby the art may be further perfected. It is unsafe to adopt a policy without some means of knowing just how it is working out. The problem is one which deserves attention. Making an impression is an effective way of dominating a situation, and we should reduce it to a science.

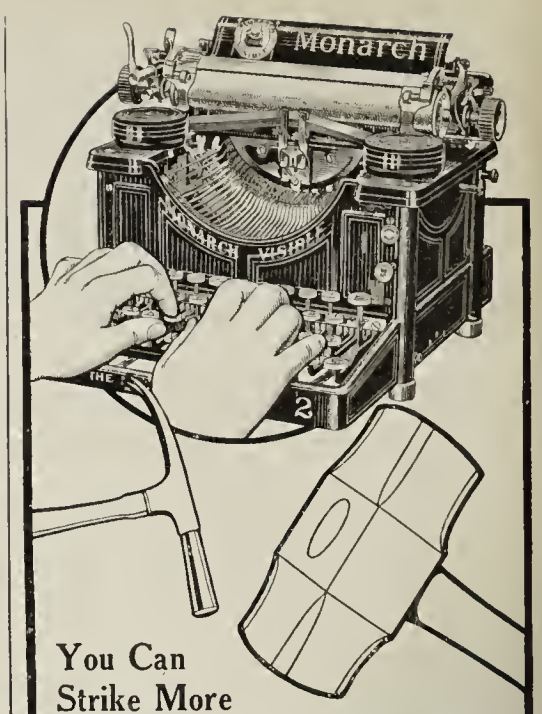
TOUCH-BUTTONS

If you were an employer would you be glad to employ your present self?

Accomplish something every hour and your achievements will make history.

Tact is a mixture of sympathy, common sense, and forethought, with a little dash of make-believe.

Even punctuality may sometimes be purchased at the dear price of a flustered mentality.



Ask yourself: What sort of business would it be if every man in it were just like yourself?

A theme for a book: the ethical obligation and the commercial value of being well dressed.

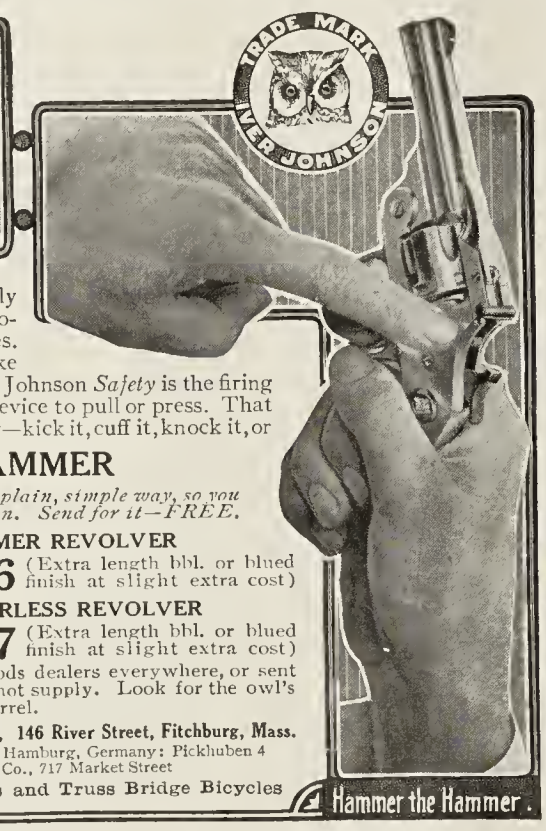
What is your weakest point?

Nothing dulls the keen edge of life quicker than the spirit of "What's the use?" To appreciate the use of little things sharpens every thought.

Set a mark for yourself. It's an old story, but try it. It has been said over and over because men have found that it works.

You Can Strike More Blows in a Day With a Tack Hammer Than With a Sledge

and on exactly the same principle the operator can write more words in a day with a Monarch than with an ordinary heavy-working machine.



Monarch *Light Touch*

the greatest advance in typewriter construction since visible writing, means increased efficiency and greater output per machine, reducing the cost of typewriting to the employer.

Let us demonstrate this and the many other Monarch advantages. Write for illustrated descriptive literature.

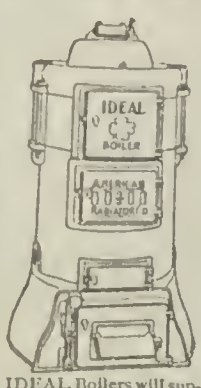
But one royal road to heating

It's a weary, wearing road up and down the cellar stairs traveled by the householder who relies on old-fashioned, extravagant heating methods to offset high winds. It is these needless cares which make life miserable — taking the time which might be given to agreeable duties, and the money which should go for needed comforts.

AMERICAN RADIATORS & IDEAL BOILERS require one-third less coal than the average stove or hot-air furnace. In severe weather no forcing is necessary to send ample volume of warmth to windward rooms, and in mild weather a low fire from a little coal makes just enough comfort—no fuel wasted.

IDEAL Boilers and AMERICAN Radiators act like an automatic servant in silently, steadily meeting the sudden weather changes. No straining or burning out of parts, no rivets to loosen, no thin metals to warp, strip, or rust—fifty winters' use will not wear them out; no repair bills needed. The possible 25% to 50% coal savings, labor savings, and protection to furnishings (no dust, dirt, or coal-gases in the rooms) soon repay the cost; a far better investment than money loaned at 6%. If you are tired of old-fashioned heating with its fire forcing, uneven heating, fuel waste, of strain on patience and drain on pocket-book, let us show you the "royal road" to right heating of your building, whether OLD or new, in town or country.



A No. 2-19 IDEAL Boiler and 315 ft. of 38-in. AMERICAN Radiators, costing the owner $155, were used to Hot-Water heat this cottage.

A No. 2-22 IDEAL Boiler and 405 ft. of 38-in. AMERICAN Radiators, costing the owner $200, were used to Hot-Water heat this cottage.

At these prices the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which installation is extra and varies according to climatic and other conditions.

Our booklets (free) contain complete, valuable information and put you under no obligation whatever to buy.

IDEAL Boilers will supply the necessary heat at night for not less than 8 hours in zero weather with one charging of coal, and there is ample fire to start up for the next day.
IDEAL Boilers are made for use with hard or soft coal, lignite, wood, oil, gas, etc.

Showrooms in all large cities

HARTFORD

Every tire, no matter how poor, has its patrons and its partisans; but the one true tire test is---time and travel.

Find, among your friends, the old and experienced motorists---men who have driven cars for four, five or six years; and tried, perhaps, every prominent tire produced.

In the majority of cases, you'll find them committed beyond the possibility of change to

HARTFORD TIRES

"The Tires that Last"

There's a definite, concrete reason for this---partially expressed in the phrase, "The Tire that lasts."

Hartford Tires do last---because they are designed right to begin with; because the heavy tread is compounded exactly right; because the fabric is specially woven Sea Island Cotton; because the cushion is absolutely pure Para; because Hartford Inner Tubes are made to fit without folding, straining, or wrinkling, which means durability impossible in a tube vulcanized on a straight mandrel.

If you are inexperienced on tires or dissatisfied with your experience, consult those who have driven long and hard—almost inevitably they will direct you to the Hartford Tire—the tire that lasts.

Ask for Hartford Clincher Tires and Tubes on your new car or try a set the next time you renew.

We endorse and recommend all automobilists to equip their cars with Standard Universal Quick Detachable Rims.

"R&W" Cheerful Clothes

The Beginning and the End

"In the Beginning"

That's when "R&W" Clothes cost most.

The best cloth is expensive; the best designers, expert workmen, well lighted shops, cleanliness, convenience, system, and a capital of twenty-three years of experience—all of which we draw on every day—is worth money—cost money.

You obtain the benefit of all this investment when you buy "R&W" garments.

"In the End"

That's when "R&W" Clothes cost least—because the life of an "R&W" garment is long—it wears well and looks well the first time and all the time.

—An "R&W" Suit, an "R&W" Vest, an "R&W" Overcoat, an "R&W" Mackinette—with each it is the same.

Sold by your leading local dealer.

"R&W"

If you will write us we will send you our "Text Book of Dress for Men."

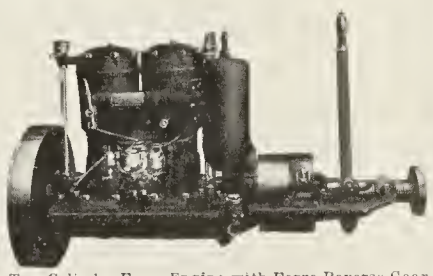
SCIENTIFIC AMERICAN

MUNN & CO., 363 Broadway, N. Y.
BRANCH OFFICE: 625 F St., Washington, D.C.



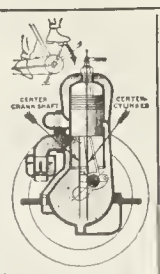
THE Packard Motor Yacht Co., of Cincinnati, O., builders of high-class boats, placed an order for 150 Ferro engines on March 12, for this year's delivery.

You may be sure this was a result of careful investigation and a thorough knowledge of many makes of engines. A boat is no better than the engine, in the hands of the owner. The boat builder must have an engine that gives satisfactory service. Mr. J. J. Beahr, President of this company said: "The Ferro engine is not an experiment and we have quit experimenting." You do not want to experiment; you want a Ferro.

FERRO

Marine Engines

Made in 1, 2 and 3 cylinders from 3 to 25 H.P. Jump Spark Ignition



Two Cylinder Ferro Engine with Ferro Reverse Gear

1 and 2 cylinders, 4 to 15 H.P. Make and Break Ignition. Just the engine for any boat for work or pleasure.

Attractive Prices—Best Quality

Offset Cylinder—

An improvement found in the highest priced automobile motors and Ferro engines. Force of explosion exerts all turning force on Crankshaft. Gives greater power efficiency, reduces and equalizes side thrusts of piston on cylinder walls. Eliminates "knock" which loosens parts.

Ferro Engine Embodies Most Advanced Improvements

Counter Balanced Crankshaft.
Successful Cooling System for any climate.
Positive Pressure Oiling System.
Efficient Ignition—Jump Spark & Make & Break.
Accessibility of Working Parts.
All Parts Interchangeable.
And others too lengthy to mention.

SPECIAL—5000 3 H. P. FERROS AT $60 EACH. Good as money can build. All improvements of standard Ferros, quantity brings down the price. Just the thing for launch, canoe, dingey or auxiliary yacht.

Biggest Value in Reverse Gear on the Market. Ferro Gear gives positive control and a neutral point where engine runs free. Get a catalogue.

Leading Boat Builders use Ferro engines. They must be good. Ask any of the following: W. H. Mullins Co., Salem, O. Outing Boat Co., Kankakee, Ill. Cleveland Auto Boat Co., Cleveland, O. Memphis Boat Co., Memphis, Tenn. Pope Boat Co., Fond du Lac, Wis. Rippley Hdw. Co., Grafton, Ill. Inland Lakes Boat Co., Lake Geneva, Wis. W. J. Hand, New Bedford, Mass. Niagara Boat Co., N. Tonawanda, N. Y. Pioneer Boat & Pattern Co., Bay City, Mich. Packard Motor Yacht Co., Cincinnati, O.

A Practical Treatise covering design, construction, installation and operation of marine motors sold for half the cost—25 cents.

Free Catalogue describing all 1909 models upon request. Write for it.

Remember our New York Office, 44 Cortlandt St. (2nd floor)

A large stock of engines. Experts in charge.

A Floor Finish Which Won't Turn White

Almost any varnish turns white when used on floors. Heel prints sink into it and break the smooth surface—the mark shows white. Heavy furniture is rolled over it—the castors leave an ugly track of white. Moisture soaks into it—then into the floor, and the varnish turns white.

After a few months of use *any* "general" varnish *must* show a network of marks, breaks and scratches—an ugly, scuffed *white*.

And you can't turn back to waxes and wax preparations they are only temporary makeshifts—soon unsightly—always unsanitary.

The right finish for floors has been the problem of the home owner for years. But it is a problem no longer.

We Age Our Oils

After 39 years of experiment we have perfected a secret process that enables us to make a perfect Floor Varnish.

By ageing our oils, we eliminate the "deviltry" which unsuits common varnish for floors.

This new varnish—"*Elastica*"—*does not* turn white under heel prints and heavy castors. Its surface is so flexible that it *gives*. *Elastica* does not crumble and break under pressure—it bends. And when the pressure is removed it smoothes back into its normal position.

Tough, Elastic Varnish

No other varnish for Floors is so elastic or so tough. The elasticity and toughness of *Elastica* have been shown to be over *five times as great* as the average of "general" varnishes.

Won't you send for our book and learn how we have *proved Elastica*.

Settle floor troubles by asking for this book *today*. Simply say, "Send me your book: **The Right and Wrong Finish for Floors.**" Address, Dept. 4, 29 Broadway, New York, 2620 Armour Ave., Chicago, or International Varnish Co., Ltd., Toronto, Can.

Elastica Floor Finish

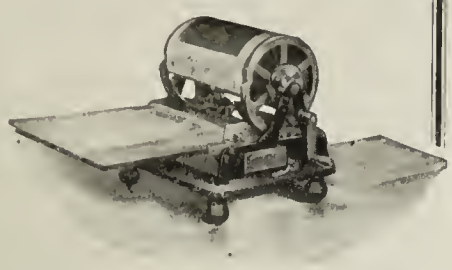
Elastica Floor Finish is made only by the STANDARD VARNISH WORKS
Sold by dealers everywhere

Sectional Bookcases

The Lundstrom Sectional Bookcases are made for and universally used in the finest homes and offices throughout the country.

Artistic appearance, solidity of construction, with the latest practical improvements, combine to make them the leading Sectional Bookcases.

Rigid economy, acquired by the manufacture of a single product in large quantities, combined with our modern methods of selling direct to the user, enable us to offer a superior article at a considerable saving in cost to the purchaser.



ON APPROVAL FREIGHT PAID $1.00 PER SECTION AND UP

Send for our latest Catalogue No. 41 in which we illustrate the different grades from the neatly finished Solid Oak to the highly polished Solid Mahogany cases for the more elaborate library.

The Mimeograph Way Is Quickest

The preparation of the stencil on the typewriter takes but a few minutes. It is an easy operation which does not require the soiling of the hands. The making of Mimeograph stencils is part of the business college training of all stenographers.

Edison Rotary Mimeograph

Write One Print the Rest

From the original stencil the Mimeograph prints 50 to 100 copies a minute. All neat, clear, clean duplicates of the original.

No other process gets results so soon or at so little expense—the Mimeograph half an hour and 20 cents, for what the printer will take a day and $2.00 or more.

And the Mimeograph is a low price machine.

From two to three weeks must necessarily elapse before the change can be made, and before the first copy of Collier's will reach any new subscriber.

ADVERTISING BULLETIN

ADVERTISERS IN COLLIER'S

ADVERTISERS in Collier's are *reliable*. They must be for two good reasons. First, in order to do business with us. Second, in order to do business with you. Both the editorial and advertising departments exercise all the care possible in editing every advertisement large or small that enters our columns. Sometimes we are fooled, but not often, and never more than once by the same people.

When an advertiser decides to spend $10,000, $25,000, $50,000 or sometimes $100,000 in a year's campaign in high-grade weekly or monthly publications (by the words "high-grade" we mean those periodicals that honestly try to protect their readers against quacks and frauds), one of the first things he takes into consideration is—"How can I tell my story in the most convincing manner?" He knows that the readers of the best publications are intelligent and he knows that in most cases the readers believe in their publications.

The average reader would be surprised if he knew the amount of advertising turned down each year by publishers on account of being objectionable in one way or another, and most publishers have not any money to throw away, but they realize that their real asset is the confidence of their subscribers and their households. That is why you can depend on everything you see advertised in Collier's. The largest advertiser we have could not continue to use Collier's if he didn't deal honestly with you. *We believe in them and want you to.*

E. C. PATTERSON
Manager Advertising Department

Baseball

¶ *Every one who is interested in baseball—and who is not?—will find a new form of delight in following some of the games as they used to be played. "Before the Professionals Came," the first of a series of four articles on baseball by Will Irwin, will appear next week.*

After many vicissitudes the game began to take on a more definite shape. Speaking of the early games, such as they had back in the fifties, he says:

"It was a crude game, but merry. In theory, the pitcher was there only to give the boys a chance to 'soak the ball.' 'First bound' was still out."

Had not the pitcher been restricted to an artificial throw, scarce a catcher would have lived to tell the tale. Many catchers took everything "on first bounce," and managed at that to prevent much base-stealing—base-running also was in its infancy.

Yet a few "first things" did appear. In 1848 they changed the method of putting a man out on bases to the present rule—"catch him out at first, touch him out at second, third, and home." When that happened, certain hardy souls took to sliding bases—feet first.

The batter had a right to call for a "high" or a "low" ball, and the pitcher was supposed to deliver according to his request. There was as yet no way of enforcing this rule; it was custom and nothing more. This, as much as anything else, shows what a hit-and-miss affair early-day baseball was.

The first article of this series brings the subject up to the day of the professionals, which properly marks an epoch in the history of the game. The second article will deal with "The Working-Out of the Game," with incidents showing why the rules necessarily gravitated toward the present style.

In the third article "The Art of Pitching" is discussed, while the fourth deals with "The Business Side."

This series bears the distinction of being the first consecutive story of baseball ever written.

Outdoor America

Edited by CASPAR WHITNEY

¶ *The May issue of Outdoor America appears in Collier's next week. The contents of the number include the following:*

Mr. Whitney's Comment—*A Work Only Women Can Do—Take Off Your Coat—There is Yet Time if You Hurry—Canned Baseball—Broaden Out—Turning to the Open.*

PETER FENELON COLLIER

December 12, 1849—April 24, 1909

Collier's

The National Weekly

P. F. COLLIER & SON, *Publishers*
Peter Fenelon Collier—Robert J. Collier, 416–424 West Thirteenth Street
NEW YORK

May 1, 1909

IT WAS MY FATHER'S wish to die in harness, and so it came to pass. His gallant spirit went forth to meet death with the same smile with which he faced the New Country as a poor Irish boy over forty years ago. He worked his way to success with his strong hands (as a carpenter once in Dayton, Ohio, and at other humble, honorable tasks), and with his unflinching courage and with his big, open, boyish heart.

He was absolutely fearless, yet the gentlest, the most easily moved, of men. He had friends in all walks in life, sprinkled all over the world. He worked hard and played hard, and he loved his fellow men, not theoretically, but with a hearty and personal affection.

This business he built, this paper he founded, are now thrust upon my shoulders. It is in memory of the most loving comrade in the world that I dedicate them to clean causes such as those for which he would have had me fight. GOD grant me strength to be worthy of him whom I loved so much.

ROBERT J. COLLIER.

A Mood

THE SEAL designed for Mme. DE BEAUMONT, that tremulous lady of the Reign of Terror, had engraved upon it an oak and this device: "A breath agitates me; nothing shakes me." How would that motto answer for the modern journalist? Moved by the evening's episode, played upon by a hustings excitement or an intricate murder, he discharges all his perturbed impressions into newspaper pages of headlong prose and sleeps well. Next day he is ready to answer to new thrills. He surpasses most men in focusing swiftly on whatever is in front of him, but a swift focus rarely goes with a "time exposure." To the scholar or the man of science, a journalist seems superficial. His glibness jars the finished author. There is all the apparent effect of hitting the mark, and yet it is seldom that he reaches the heart of the matter. That scattering fire of interests, the scurrying figures of his nightly drama, allow him slight time for reflection and mental reactions on the immense field he touches. There is nothing to bind together those alien particles into a life-purpose, like that of the anonymous architects of Gothic cathedrals, some continuing thread of activity that sees each year the stones pile higher. Journalism is a series of thrusts around the compass. It touches life at a thousand points, but does not penetrate the surfaces, and fails of progress in a straight line. The journalist knows pugilists, financiers, statesmen, bosses, actresses, evangelists, detectives, saloon-keepers, social workers, distinguished visiting foreigners, lady lecturers. He is greeted by every sojourner. He enters any town or hamlet a stranger, and within an hour a group of men will be buying him drinks and telling all they know. He is the eternal listener, pulling the inmost out of casual acquaintance, and often cut off from steady friendships. Frequently night hours make of him an Ishmael, eating alone, working alone, and wandering in strange places.

Ebb and Flow

ONE SHOULD NOT BOX if he objects to having counters landed on his jaw. He who is discouraged by defeats is unfit for contest. In the political arena there is no doubt just now, in many places, a strengthening of the lines of the favored interests, a loss of heart in some of the liberal party. These defects are nothing but skirmishes, and the man who can not endure them and yet work on is made of soft material. A State in which the so-called reactionaries have been winning various recent skirmishes is New Jersey. Governor FORT has proved to be a disappointment. His backbone is made of putty. He has removed from the railroad commission the only efficient man on it, Mr. WHITING, and whom do you suppose he has appointed in his place? Why, none other than Senator HILLARY, who, in 1907, introduced the Railroad Commission bill and then, when he saw danger of its really passing, played every trick to beat it! HILLARY has stood, and will stand, consistently against every measure designed in the general interest of the State. He has stood, and will stand, in favor of the special snap. Rumor has it also that the Governor will reappoint DAVID BAIRD, boss of South Jersey, on the board of tax assessors. Apparently he might as well go the whole distance. There is nothing to be hoped of Governor FORT. He is a weak creature, whose little spasm of better effort has seen its day.

Better Late Than Never

READERS of an editorial in COLLIER'S for June 20, 1908, entitled "What is Mr. MCLEAN'S Profession?" will be interested in this announcement which we have assurance will appear in the editorial page of the Cincinnati "Enquirer" during the present week:

"My attention has been called to the character of some of the advertisements appearing under the head of 'Personal' and 'Massage' in the 'Enquirer,' and, as an investigation has shown many of these to be of an immoral nature, I have determined that hereafter none except business 'Personals' and no 'Massage' advertisements, except those found upon investigation to be legitimate, shall appear in the columns of this newspaper. (Signed) JOHN R. MCLEAN."

It is a satisfaction for COLLIER'S readers to know that with the disappearance of this long-established institution, which has been a feature of the Cincinnati "Enquirer" since 1875, the last "Personal" column in an American newspaper has ceased to be.

Pop

ANSON, OLD HORSE, has been observing that all features of the national game have deteriorated sadly since his day, including team play. This looks like old age, but is it? Pop always had his own idea of humor. Once to the writer of these lines, then a boy, there was granted an incomparable experience. He found the whole Chicago baseball nine assembled in a hotel, within speaking distance of himself. To-day nothing could mean so much; not an invitation from Elysium to dine with UNCAS, SHAKESPEARE, CÆSAR, and JANE AUSTEN, One of the players sat with his big head resting in his hands. Him the boy approached.

"Which are you?"

"I am CORCORAN."

"Which is ANSON?"

The red giant pointed to the smallest individual in the group. As alleging the opposite of the fact diverted him when he was king, possibly he was indulging in the same inward entertainment when he told the reporter the Cubs could not play together. It is pleasanter to think this than to believe the old captain able to see nothing but the past. Our guess is, nobody knows better how much the game has advanced in technique since his wonderfully interesting team of players ceased to be.

Professor Münsterberg's Opinions

THE EXPERT IN PSYCHOLOGY at Harvard University has been somewhat misunderstood on the liquor question. Perhaps the way in which he expresses himself at times has something to do with this misunderstanding; but another cause lies in the fact that isolated, startling opinions make better news than those which are set in all their reservations. Professor MÜNSTERBERG spoke in Boston not long ago, and people all over the country would naturally suppose, from the press accounts, that he made an onslaught on Prohibition. As a matter of fact, he merely stated certain considerations on both sides, and also stated other evils, which ought to be taken into account while consider-

on the general subject. In the "Ladies' Home Journal," for March, the professor declared that there was no more degrading and no more shameful insult to civilized life, than the American saloon. He pointed out that it poisoned the social atmosphere of the masses, led the working man to squander his savings, and the healthy man to devastate his energies. He spoke of political corruption and of the thousand paths from the saloon to the penitentiary. He said there might be disagreements as to whether strict prohibition, or education toward temperance, would prove the more reliable method, but that there could be no disagreement about the fact that the saloon must be wiped out. "It is a blessed movement which now turns with overwhelming energy against the horrors of this evil and unites the clean minds of the whole nation in an untiring fight against this source of infection." From which it would appear that supporters of the saloon can derive but little comfort from Professor MÜNSTERBERG.

Studied by Women

FOR THE SENTIMENTAL HARMFULNESS of crusades against experiment upon animals we not long ago held women responsible and suggested that the suffrage organizations show their fitness by opposing hysterical onslaughts on science. Our attention is called to the fact that the Woman's Municipal League of New York investigated the subject thoroughly and then went on record against the restricting bills. As to the existence of the luridly described abuses, the following resolution was the result of a request for information from the League:

"*Resolved*, by the Council of the New York Academy of Medicine, that it is its conviction that, first, the present laws of New York are adequate to confine the practise of animal experimentation to proper persons and to punish all cases of cruelty; and, second, that the wide and full publication, in scientific and medical journals, of the results of animal experimentation, and the free access to the laboratories which custom prescribes for credited and properly interested persons, are sufficient to refute the charge of secrecy in laboratories in which experiments on animals are performed."

Mercedes Julip's Pietertje's Paul, No. 29830

Women who approach in this spirit a conflict between hysteria and knowledge are certainly free from the criticism hinted in our editorial.

A Virginia School

AS SIZE is emphasized, about most things, in a country as large as this, it is interesting to read in the statement of a little Virginia school: "It is not the purpose of this school to become a large institution. A small school providing close and steady contact between teacher and pupil, and doing thoroughly the work which it undertakes—this is the aim at Manassas." Manassas is in Virginia, and it is now seeking a small amount of money for a new trades building. Nothing is of more importance to whites and blacks in the South than sound industrial education for the negroes, and an institution so well conducted as the one at Manassas deserves help from both races. The last conference of the negro farmers of northern Virginia was held at this school, and among the topics discussed were the treatment of worn-out soils, proper management of stock and poultry, rotation of crops, business management of the farm, direct marketing, standards of home life in the rural communities, cooperation of the schools with the farmer, and the share of the wife and children in the farms. It was the general opinion at this conference that the negroes are coming to look upon farm life with constantly increasing favor.

Farms and Immigrants

AMONG THE SUGGESTIVE RECOMMENDATIONS made by the New York State Commission of Immigration, in its bill to establish a State Department of Industries and Immigration, is the one to provide for the development of the industries of the State by directing laborers to them. It would be the function of the Department to learn where laborers were needed, and the kind of labor—agricultural, industrial, mechanical, common labor—and then reach out after the newly arrived alien, and relate his skill to the labor market. "The agricultural districts, which are now sadly in need of labor," says the Commission, "might thus be supplied with the labor of peasants, and these peasants, instead of engaging in the dangerous employment of the crowded factory and workshop, where their strength is sapped by their unaccustomed environment, might develop into self-respecting American farmers." If such a department can make any progress toward harmony between the market and the supply of labor, it will be helping in one of the most greatly needed improvements in contemporary life.

Incitement to Ferocity

"AN ENGLISHMAN'S HOME," as a play, has been already described in this paper. As a tract it will, on at least a certain number of persons, have an effect opposite to that intended by the author. Major DU MAURIER wishes to impress on his fellow-countrymen that, through rejecting the continental idea of military service, they expose their islands to the danger of conquest. He takes, on the one hand, a happy, peaceful, quiet, orderly English household, whose innocent, good-natured members live harmoniously together, speak ill of none, interfere with none, and do injury to none. These people the author regards as ridiculous, because they are indifferent to guns and shooting—because they are "harmless." Contrasting with them, the Major marches in a set of foreign soldiers, rough in speech, abrupt in manner, trained altogether to obeying orders, thoroughly versed in destruction of human life, proving their ability by unprovoked attack and bombardment of the aforesaid home, which they blaze to bits, killing a few inmates. The author invites contempt of those whose home is desolated and whose happiness is ruined. He suggests admiration for the hardiness, valor, and patriotism of the perpetrators. Major DU MAURIER tells the English—and by inference, of course, every one else—that the right thing is to emulate such heroes as Captain Yoland and Sergeant Thol, and to become, like them, efficiently trained at inflicting horrors upon peaceable, tax-paying Browns and Smiths of other countries. Some spectators of this play, as we have hinted, may not accept the proposition of the gallant dramatic Major. They may see in it an argument not for but against militarism. In any case, all powerful nations, including England, have already done considerable bombarding and blood-shedding in the course of history. They have fought often and willingly. They have not greatly needed special incitement to ferocity.

War and Courage

ONE OF the most fertile in idea, among living writers, as well as one of the freshest in vocabulary, is WILLIAM JAMES. Like most men who think well, he has considered the military virtues. "War," he says, "is a school of strenuous life and heroism; and, being in the line of aboriginal instinct, is the only school that as yet is universally available." He can not, however, accept this "wholesale organization of irrationality and crime" as our only safeguard against effeminacy. His suggestion for a moral equivalent is the voluntary acceptance of poverty. Poverty is the strenuous life without brass bands. It may give us "the manlier indifferenec." The so-called better class puts off marriage until a house can be artistic. It fears to have a child without a bank account and therefore possibly doomed to manual labor. Wealth for some helps to ideal energies. In others the desire to gain it and the fear to lose it are chief breeders of cowardice and propagators of corruption. If you are uncertain what to read, procure "Varieties of Religious Experience," and look up "Poverty" in the index, or, indeed, almost any other important general topic in which you may happen to be interested. You will find it treated with sweetness, vigor, imagination, elasticity, and charm.

Justice to a Bull

SOME PEOPLE THINK COLLIER'S is too gallant and therefore inclined to emphasize unduly the virtues of women, hens, and cows. We pause, therefore, long enough to pay tribute to a male, namely, Mercedes Julip's Pietertje's Paul, No. 29830, whose noble features are reproduced herewith. It might indeed have been some such animal that inspired WALT WHITMAN when he sang (or said):

"See you! some are such beautiful animals, so lofty looking;
Some are buff-colored, some mottled, one has white line running along his back, some are brindled,
Some have wide-flaring horns (a good sign)—see you! the bright hides,
See, the star on the forehead—see, the round bodies and the broad backs,
How straight and square they stand on their legs—what fine sagacious eyes!"

The championship of the world can not be determined among bulls so definitely as among the ladies of the race, but this fellow is celebrated and his record is impressive. He has thirty-two daughters of A. R. O. (Advanced Registry Official), which corresponds in the bovines to the 2-minute class in race horses, and a son with fourteen daughters in this coveted division. He is the cousin of Colantha and is held at $20,000. He is great not in himself alone, but in those who are to uphold his name and glory after him—$10,000 has been offered for one of his sons. Paul himself weighs a ton and a quarter.

Comment About Congress

By MARK SULLIVAN

THE income tax should make a distinction between incomes *earned* and incomes *not earned*—between a salary or the profits of a factory or store on the one hand and, on the other, the income of a man who lives in idleness on invested money. A man who builds up a business, in the success of which others share, who works every day as hard as his humblest employee, who contributes his energy to the general industrial prosperity of the country, is in a different class from a man who has inherited his money, who receives his income in the shape of dividends and interest, and whose life is spent in slothful ease at the best, in the selfish pursuit of pleasure at the worst. Both these men, when their incomes are very great, should be taxed; but they should be taxed at very different rates. And a business man should not be taxed on his profits till they reach at least $20,000; while an idle man living on investments might fairly be taxed when he has $5,000 a year.

Are These Men Democrats?

THE Denver platform, the formal statement of principles laid down by the Democratic National Convention only ten months ago, contained this plank:

"We demand the immediate repeal of the tariff on wood pulp, print paper, lumber, timber, and logs, and that these articles be placed upon the free list."

On that platform Bryan stumped the country. On the faith of this particular declaration for free lumber, the Democratic Party won tens of thousands of votes. It is not too much to say that this free-lumber plank may have made the difference of that scant 4,002 votes by which Bryan carried his own State, for Nebraska is of all the States the one where free lumber is a vital issue. Bearing this in mind, compare that plank with the following paragraph:

"708. Wood . . . sawed lumber, timber hewn, sided, squared or sawed and round timber used for spars or in building wharfs, logs and round unmanufactured timber, including pulp woods . . . ship timber and ship planking; all of the foregoing not specially provided for in sections 1 and 2 of this act."

This paragraph and the quotation from the Democratic national platform are, in effect, identical. It is necessary to supplement the formal and elliptical language of the latter paragraph by saying that it was an amendment to the Payne tariff bill, providing for free lumber. It was the amendment which, if adopted by Congress, would have been carrying out the promise of the Denver platform. But it was not adopted; it was lost by a vote of 200 against it to 181 in favor of it. And among those who voted with the Republican machine against this free-lumber amendment were these thirty-eight Democrats:

From Georgia: CHARLES GORDON EDWARDS of Savannah, JAMES MATHEWS GRIGGS of Dawson, WILLIAM CHARLES ADAMSON of Carrolton, LEONIDAS FELIX LIVINGSTON of Covington, GORDON LEE of Chickamanga, THOMAS MONTGOMERY BELL of Gainesville, WILLIAM GORDON BRANTLEY of Brunswick.

From North Carolina: JOHN HUMPHREY SMALL of Washington, CHARLES RANDOLPH THOMAS of New Bern, EDWARD WILLIAM POU of Smithfield, HANNIBAL LAFAYETTE GODWIN of Dunn, ROBERT N. PAGE of Biscoe, EDWIN Y. WEBB of Shelby.

From Virginia: CARTER GLASS of Lynchburg, JOHN LAMB of Richmond, FRANCIS R. LASSITER of Petersburg, HARRY L. MAYNARD of Portsmouth, EDWARD W. SAUNDERS of Bleak Hill.

From Louisiana: ALBERT ESTOPINAL of St. Bernard, ROBERT F. BROUSSARD of New Iberia, JOHN T. WATKINS of Minden, JOSEPH E. RANSDELL of Lake Providence, ROBERT C. WICKLIFFE of St. Francisville, ARSÈNE P. PUJO of Lake Charles.

From Mississippi: EATON JACKSON BOWERS of Bay St. Louis, W. J. DICKSON of Centerville.

From South Carolina: JAMES E. ELLERBE of Marion, ASBURY F. LEVER of Lexington.

From Tennessee: LEMUEL PHILLIPS PADGETT of Columbia, GEORGE WASHINGTON GORDON of Memphis, JOHN AUSTIN MOON of Chattanooga.

From Alabama: GEORGE WASHINGTON TAYLOR of Demopolis, RICHMOND PEARSON HOBSON of Greensboro.

From Florida: STEPHEN M. SPARKMAN and DANNITTE HILL MAYS.

From Pennsylvania: WILLIAM B. WILSON of Blossburg.

From Texas: MARTIN DIES of Beaumont, ALEXANDER WHITE GREGG of Palestine.

If these thirty-eight Democrats had voted with the rest of their party, free lumber would have won by a vote of 219 to 162. Only one of these thirty-eight Democrats comes from north of the Mason and Dixon line. Having read thus far and pondered, grasp the suggestion in this letter:

"DEAR SIR: "PITTSBURG, PA., April 6, 1909.

"It may appear stupid on my part to ask, but, although I have been asking for some time, I can not get a satisfactory answer. Can *you* tell me what is the difference between Republicanism and Democracy as applied to the Republican and Democratic Parties now? Respectfully, WILLIS DE BEAR."

We should be glad to hear from thoughtful persons in answer to Mr. de Bear's letter, and about as to what this whole situation forecasts.

The Hon. Irrigation Bill Reeder Squirms Out

THE exact text of the ante-election pledge made by the Hon. Irrigation Bill Reeder of the Northwestern fourth of Kansas has been sent to us by Mr. Clarence H. Lodge of 618 West Seventh Street, Topeka, Kansas. The promise appeared in the Topeka "State Journal," November 2, one day before the election, which the Hon. Bill won by a scant plurality of 277 votes out of a total of 45,698:

"NOT FOR CANNON

"CONGRESSMAN REEDER ANNOUNCES THAT HE WILL OPPOSE THE SPEAKER

"TO THE EDITOR OF THE 'STATE JOURNAL':

"I learn that the chairman of the Democratic Congressional Committee is telling his friends here that a circular will be widely scattered among the voters just before election making accusations against me, among them reiterating the falsehood started in the primary campaign that Mr. Cannon controls my vote. This is absolutely false, as I have stated in my speeches, made in the presence of this same chairman and Mr. Conely himself, and I have added in these same speeches that I would not only use my influence but vote in the caucus for some progressive Republican for Speaker of the next House as against Mr. Cannon. W. A. REEDER.

"Ellsworth, Kansas, October 31, 1908."

The only matter of interest remaining is whether or not Bill winked when he tucked the three words, "in the caucus," away in the seventh line of his promise. We are now looking for the Congressman who says he made the promise to vote against Cannon with the mental reservation that he meant only any straw vote which might be taken on the sleeping-car on the way to Washington.

"Feeling Ugly"

SUCH readers as find pleasure in puzzles are invited to guess the name of the State from which this telegram came:

"Sentiment of rank and file this State almost unanimous against Cannon. Feeling ugly."

For a puzzle less complicated, guess the name of the State from which this telegram might *not* have come. As a matter of history, it was sent from Des Moines by the Hon. H. M. Byers, Attorney-General of Iowa, to a friend in the Iowa delegation at Washington on the 13th of March, when the fight against Cannon and Cannon's rules was at its height, and one of the exciting uncertainties of the situation was the probable position of the Iowa Congressmen. If there is any community in the United States whose sentiment is not correctly stated in the words of this message, we should like to hear from it. Cannon is a heavier burden than any political party has undertaken to carry during the recent years of this nation. With direct primaries now in operation in more than one-half the Congressional districts of the United States, it is inconceivable that the sentiment of the people shall fail of expression. The present Speakership is Cannon's last.

347 Days

IT IS 347 days from the date of this paper until any community in the United States shall have an opportunity to express themselves on Cannon at the polls. On the second Tuesday of next April occur the primaries in Illinois. (From then until the following November, every week, caucuses and primaries for nominating Congressmen will be held in one State or another.) Every Republican Congressman from Illinois voted for Cannon and Cannon's rules. It is not too early for the people in each Congressional district in that State to begin to look about for men of character and ability.

Character

IF THE people of every Congressional district would choose candidates for the next Congress with a thought for high character and ability, in the way Taft is making his judicial appointments, a revolution would be worked in a single session. There is little use in change without improvement. The turning out of a Congressman as a mere matter of reproof, without being sure that his successor is a man of conviction and character, is profitless. It was of litttle use for the people of Duluth and the surrounding counties to turn out Adam Bede because he was a Cannon lieutenant and substitute such a man as Clarence B. Miller. Of Mr. Miller's votes for Cannon and the old rules, the Duluth "Evening Herald," the leading newspaper in his district, says:

"Mr. Miller, during the campaign, committed himself unreservedly to the revision of the rules. It is impossible for a man to be more rationally zealous for reform than was Mr. Miller during the campaign; yet it is impossible for any man to more thoroughly repudiate reform, root and branch, than did Mr. Miller by his complete and unequivocal alinement with the standpatters in the House. That which he denounced upon the stump he now embraces. . . . When he voted against the revision of the rules which made Cannonism possible, he betrayed the trust reposed in him by the people of the Eighth Congressional District."

Mr. Miller is a young man, self-made through school-teaching, with his career at the bar and in politics just beginning, new to Washington and impressionable to older men with mighty names. Doubtless he already knows that nothing he may have been promised can ever repay him for the forfeited faith of his neighbors. The seduction and betrayal of such men as he is one of the saddest aspects of machine politics. Mr. Miller would have come up for renomination, had he not made that impossible, the last Tuesday in August, 1910. On that day the Republicans of the Eighth Minnesota District will name some one who will perform in Washington what he promises in Duluth.

Again—347 Days

IN THAT long series of local primaries, which continues from the 12th of next April until the following November, the single universal issue will be Cannon. Every Republican Congressman who goes back to ask his constituents for their confidence once more knows that his greatest handicap is Cannon. Every one knows that most of the districts the Republicans lost last fall were lost because of Cannon. Every one knows that yet more districts will go Democratic next year because of Cannon. They say that Uncle Joe is not without pride. That virtue should go with the rugged qualities that those who like him claim for him. His friends say they have his assurance that if the insurgents had won in March he would have resigned. There are yet 347 days of reflection for Uncle Joe. There are eighteen days less than a full year for him to come gently and gradually to the view that thirty-four years in Congress and eight years as Speaker are honors enough for one old man, to grasp with the imagination those advantages which appertain to a serene and contemplative old age passed in the quiet of Danville, Illinois.

Collier's

A King Without a Country

The Fall of Cipriano Castro, the Inscrutable Little Mountaineer Who for Nine Years Held Venezuela Under His Thumb and the Foreign Powers at Bay

By CHARLES JOHNSON POST

Cipriano Castro, the deposed dictator of Venezuela. It is the whole expression—or, rather, the mask-like lack of it—that is most striking. Every emotion is screened until the sense of personality is all but lost. Back of it is a bundle of energy—aggressive, shrewd, brutal—but able

FOR nine years Venezuela rested in the grasp of one man. Not a law was passed, not a man elected or appointed to office without first being weighed in his rapid mind. Tariff schedules, port charges, pavements, plazas, fortifications, press censorship—there was not a branch of governmental machinery with which he did not make himself familiar. He was a statesman—a politician, but no diplomat. In his earlier days he started fanatically a Venezuelan, with ideals: he was loyal to his country and his people, and then slowly his loyalty and his ideals seemed to shrink and fade. Nine years of stress, conspiracy, conflict, and success have left him a true type of a megalomaniac, vain, suspicious, dictatorial, and wanton, with the true measure of his ability swamped under the hatred he has inspired.

What we know of Castro in this country is colored by this hatred. It has denounced Castro in indiscriminate abuse that contributes nothing to our knowledge. This one man from a frontier province held his own against every effort from within to overthrow him, and at the same time defied aggressions from great nations without. He exposed foreign conspiracies and defeated a revolution waged in a foreign interest; yet to-day, apparently, the only facts of public interest are his personal habits and the number of bottles of wine or vintage brandy that goes to his room each day.

Twelve years ago Cipriano Castro was a Diputado—a Congressman—from the Andean foothills on his first visit to Caracas. This was during the time of President Crespo, a curious character from the plains of Venezuela, who had a passion for starting new edifices and then abandoning them.

After his term as Diputado, Castro became the Governor of the small border state, and when Crespo was defeated by his revolutionary successor, Andrade, Castro refused to recognize the revolutionary régime and was forced a fugitive over the border into Colombia. Andrade's Presidency lasted but a year, when Castro marched into Caracas at the head of his own army.

In person he is slight, below medium height, with a wiry, restless, suppressed energy. He is vain in small things, sensitive about his slight size, and the only portrait of him permitted to be sold is a head and shoulders carefully retouched so as to suggest a heavy, thick-set, square-shouldered man, with a massive jaw and a coarse, thick black beard.

As a matter of fact, his features suggest much to the imagination and yield little to description. It is a mask which gives you instantly the curious impression that it is a mask, and that behind, hidden, is the man himself. The eyes are steel pellets that burrow into the subject, but there is never the contraction or the flicker of a muscle. They are as abstract as the eyes of a fish. The brow is straight and motionless, the cheek-bones are large and strong. The nose is delicate; half-revealed by the close-clipped beard and mustache is the straight, hard line of a determined mouth. The jaw is pointed, but heavy and powerful in its angles. His complexion is light, pale in fact. In nothing but the prominent bones of the cheek is there a suggestion of the Indian blood with which he is popularly credited.

But it is the whole expression—or, rather, the mask-like lack of it—that is the most striking. Castro talks rapidly and with an incisive accent—he listens; he interrupts; he gives an order; he is irritated; he is pleased; he is angry; he is worried; he is in a hurry, and every emotion is screened in the mask until the sense of personality is all but lost. Back of it, you feel with an absolute certainty, there is a bundle of energy and tireless will, aggressive, shrewd, politic, brutal, and sensual—but able.

Castro's Work for Venezuela

FROM the earliest days of his ascendency he bent his energies to the building up of a serviceable army. He punished nothing more severely than the graft that affected his soldiers—whether through the army contracts or plundered directly by the officers. He found a rabble of assorted titles and no specific duties; he made it loyal to the Government as it had never been before, by the simple process of paying it what it was promised. It received real money and drew its actual rations. Formerly it was no uncommon sight to see ragged soldiers begging food or carrying a wretched issue of bull-ring beef skewered on a bayonet. It is this army that has responded blindly and loyally to the Gomez administration through his control of the constitutional machinery in the face of the present reaction against Gomez. The Venezuelan army is a blind instrument, built so by Castro, and one that no longer vacillates from one revolutionary leader to another.

During these years Castro's one aim was to make the Government secure and stable. These early energies were all spent on the improvement of the army; then came his difficulties with the foreign Powers of Europe. These broadened his view on the necessities for defense—especially after the bombardment of the Venezuelan coast—and he began storing reserve supplies of rifles and ammunition. In the forts of La Guayra and Puerto Cabello he mounted eight Creusot guns of eight-inch caliber and range-finders. At La Guayra these guns are in two masked batteries behind the hills, and are not, as is generally supposed, in the little yellow stone fort above the town.

During this time he was extending the wagon-roads where there had been only trails and establishing trails where there had been none; he extended lines of communication in all directions, better mail routes and more lines of telegraph. He finished the public buildings that had been begun and abandoned by President Crespo. He completed many of the public works that had been inaugurated by that same President and deserted in the same aimless manner. He established a leper colony on an island near Lake Maracaibo and another to the westward of La Guayra and segregated the leper population. He established a reform school for children taken from the streets, and now, twice each week, this reform school band plays in the Plaza Paez—and plays well. He started a national public Industrial School where the mechanical trades were taught to youths of the working classes. He repaired old aqueducts and began new systems of water supply. He built armories in place of slovenly barracks. He began the repaving of Caracas, so that to-day hard, concrete pavements are the rule, where before there were rough alleys of round river stones. Even the smallest details attracted his energy, and it was he who ordered that the houses of the country should be repainted once each year on the anniversary of Venezuelan independence.

Also at this time he began what was probably his most important work for the Venezuelan future. This was the making of Puerto Cabello a real port of entry. Along the whole coast of Venezuela there has been no proper harbor; La Guayra is an open roadstead fronting on the sea and with only a dock to protect it from the sweep of storms; Maracaibo, the great coffee port, is on a gulf too shallow to admit any but the lightest steamers, and its commerce is principally carried on by means of shallow schooners that transship their cargoes to the deep-water vessels at the Dutch island of Curaçao.

Venezuela was virtually dependent for her commerce on this Holland settlement of brokerage and forwarding houses. And Curaçao and its beautiful port at Willemstad have always been the base for revolutionaries and smugglers, while their disregard of the international amities has for years been a thorn in the side of Venezuela.

So Castro proceeded to make in Puerto Cabello a real harbor. He dredged a channel, built docks, sheds, and wharfs. He erected and installed a machine-shop and navy-yard. He constructed a floating drydock. He was the first President of Venezuela who realized the necessities and advantages of such an enterprise, and, most radical of all, he did not farm it out to some foreign concessionaire and then give him a monopoly of the harbor rights or of the coast. For it was the Venezuelan Government which built the dredges that opened the channels; and the dredges are national dredges; the drydock is a national drydock; the navy-yard, the machine-shops, and the wharfs are national institutions, owned and operated by the Federal Government.

Then came Castro's famous decree of May 14, 1908, practically boycotting Curaçao, and Curaçao awoke to the fact that Castro had placed Venezuela in a position of economic independence. Curaçao has no natural resources; it could not support a population of twenty souls on the products of its barren volcanic soil. It is a community of brokers and forwarders. And it is this fact that made the Dutch Government so bitter and hostile.

It was Castro who set his face against speculative adventurers who came into the country seeking what they might devour. These had been in high favor during the reign of Guzman Blanco, and to-day Venezuela is saddled with absolute monopolies from which she can not escape. To-day in the hatred of Castro, Guzman Blanco's ill-doing is forgotten, and his régime is looked upon as a marvel of prosperity. People will tell you of the high play in the clubs, of sums bet on the turn of a card, of the champagne opened at the hour of the morning cocktail in "La India," as conclusive evidences of the prosperity created by Guzman Blanco.

It was prosperity, for Guzman Blanco and his favorites. And finally in his old age Guzman Blanco retired to spend his remaining years and his percentage of plunder on the cheap tinsel of Paris. There was no more economic prosperity in Venezuela in that day than there is in Monte Carlo.

Blanco guaranteed seven per cent against the cost of construction of one hundred and sixty miles of railroad, and viewed with pride the fact that twenty million dollars were sunk in this enterprise.

He mortgaged the resources of the country to provide plazas, fountains, bronze statues of himself with grandiloquent tributes to his administration bolted to their pedestals, for which the nation paid. Perhaps the best thing in Blanco's career was his encouragement of public education, and probably the worst policy in Castro's term has been the fact that he neglected it, or allowed it to be used for petty pilfering and reward.

What Blanco had done, his successor, Crespo, imitated in so far as his lesser ingenuity permitted, and he is chiefly remembered as the devisor of the present official residence of Miraflores—a monstrous combination of every known species of architecture enclosing a patio and a fountain.

A Feudal Epigram

A SMALL incident in the early months of Castro's success is perhaps characteristic and throws an interesting light on his ability to handle men. Following his capture of Caracas, his army of Andinos, as the inhabitants of the mountainous western portion of Venezuela are called, marched with him into the city. They swaggered into the hotels, ordering as they chose and paying for little or nothing. The dissolute women of their choice were flaunted into the streets and plazas at what had been the hour of the fashionable promenade. They were insolent and brutal, until finally a committee of Caracanians waited upon Castro in the palace to ask for relief. Castro listened in silence.

"Yo no pago para Caraqueno, ni cobro para Andino!"—"I do not pay for Caracanians, nor do I charge for Andinos!"

In other words, "settle it for yourselves, as you choose or can, I will not interfere either way." It was a feudal epigram, or barbaric, if you please, but years of abstract thought could have furnished no solution more popular. The next morning the bodies of eight dead Andinos were found in the streets of Caracas. The succeeding night the number was fewer, and in a very short period the Andinos were dwelling in Caracas along the lines of the more moderate requirements of modern conquest.

For the next few years there were no serious menaces to Castro's Government and administration. Then came the Matos revolution. This General Matos came to New York, and, it is said, hypnotized the New York and Bermudez Asphalt Company, popularly known as the Asphalt Trust, into financing the revolution he was to lead. The trust advanced him upward of $130,000, as they after-

ward admitted on the stand before a court ordered for the investigation of this charge, and for eleven months Venezuela was torn by the bitterest and bloodiest civil war since Simon Bolivar freed the country from Spanish dominion.

At one time Castro was cut off from Caracas, where his reserve supplies of ammunition were stored. He had less than five cartridges per man.

A courier got word to Caracas, and, by Castro's instructions, a trainload of ammunition was made ready. By the same instructions no secrecy was observed; the train was decorated with bunting, and bands played and cannon banged in salute as it pulled out of the station. The guards and soldiers accompanying it shouted: "*Viva Matos, Viva la Revolucion!*" "Matos has won! Down with Castro!" as it rolled slowly through the stations of the towns along the route. A despatch was shown to the Matos commandantes, urging them to assist the train in every possible way, as it contained the supplies for the victorious and loyal Matos forces. It was a triumphal progress, and the train with its invaluable stores rolled unhindered into La Victoria. The next day the battle was fought, and at nightfall Matos and the Asphalt Trust were fugitives.

The Cable Company Dispute

SHORTLY after this Castro found that the French Cable Company had also actively aided Matos by furnishing him with secret military information. He revoked its concession. Later came positive proof of the inspiration and assistance given by the Asphalt Trust, and action was taken through the courts of the country that placed the asphalt deposit in the hands of a Government receiver on the ground of violation of the terms and spirit of the concession.

Another action was instituted by the Attorney-General to recover the cost of suppressing the revolution they had financed and to punish their attempt. It has been the efforts of these two foreign institutions to reinstate themselves in their former privileges that has led to the insistent and hostile complications that have been pressed upon Castro in the last three years, and that have spread before the world the picture of an absurd, blustering creature, without ability or intelligence, whose only characteristic was an insatiate and reckless greed.

But Castro's continuous successes began to have their usual effect. He came to believe in his Star of Destiny, that to disagree with him was to dispute the greatest intelligence and ability in the country, backed by the divine will of Providence. He knew his own sagacity and his own powers, and he had little time to waste in convincing others. He would act, careless whether he had the moral or intellectual support of those around him.

When Castro was ill two years ago, and it seemed a certainty that he lay dying in Maeuto, his officials "absorbed" the two-million-dollar gold reserve that Castro had established in the Bank of Venezuela and had scrupulously kept intact. Castro did not die, and his first act after regaining some measure of his health was to restore this reserve to its former sum—and this may throw some illumination for those who regard Castro as only a grafting chief.

Following the nationalization of the harbor works at Puerto Cabello, Castro became imbued with the idea of nationalizing many lines of industry. There was no one to point out to him the difference between enterprises of public service and enterprises of a purely commercial character. Flattering advisers suggested that the Government should nationalize industries, and offering as advantages the facts that the profits would thereby be an asset of the people and the Government.

The first industry so nationalized was the cigarette industry. Heretofore this had furnished steady employment to some twelve or fifteen thousand people, while almost every class turned to it in periods of financial difficulty as a means of tiding over the stringency. Cigarette manufacture was made an absolute monopoly so hard and fast that no one, with the exception of the monopoly, could buy, sell, or possess any of the articles that go into the manufacture of cigarettes. This one act did much to hurt Castro, and was, in fact, the real foundation for the widespread discontent and hatred of the last two years that existed in Venezuela.

Castro had made a tactical error, and he himself recognized it too late. These were not federal companies, but were private corporations existing under an absolute federal monopoly—a very different thing. The profits were private, and only the evils remained for the public at large.

Other industries were started, and slowly the commercial resources and business of the country began to drift into Castro's control. He owned a railroad, a flour mill, a paper mill, a stearin works and candle factory, a cement plant, the market privileges of Caracas, and finally, most choking of all, the control of the cattle business. Theoretically, any one might sell to the slaughter houses, but, as a matter of fact, those who attempted to sell directly found their cattle so far below the standard requirements that they could get a better price from Castro's cattle buyers, who would then dispose of the same animals to the same abattoirs at a satisfactory price and without difficulty. I have heard Castro's income from this source alone competently estimated at from fifteen hundred to two thousand dollars gold a day.

The Etiquette of Getting Rich

HIS revenue from the privileges of the market in Caracas, which is generally regarded as Doña Zoila Castro's perquisite, was supposed to be five hundred dollars a day. What his revenue was from other sources there is no possible means of computing. The money that he made he reinvested in furthering his commercial projects and monopolizations. He was destroying the industries of the country, but there seems to be no evidence that he ever took his graft raw. He had the greatest contempt for the minds about him, who saw no other way of acquiring wealth except by looting it in bullion from the public revenues.

For Castro is more of a tyrant than a grafter. His vanity was fed on the flattery of those about him. He came to believe in the fulsome editorials that compared him with Washington, Cæsar, Napoleon, Cromwell, and Christ. His continual success in beating down all opposition that had confronted him led him to believe in the Star of Destiny that Gumersindo Rivas suggested was his. He was fearless of assassination, although in the last two years probably no man has had occasion to fear it more. On his last political trip, through a hostile country, he wandered unescorted through the streets or danced carelessly in the *sala*, while the unguarded darkness of the window beyond any bullet could have picked him off. Always he carried a handkerchief in his hand, continually using it in a nervous series of nervous gestures. Men who were close to him state that he developed superstition, and that in this handkerchief were concealed two or three little charms against the evil eye or possible danger.

The Dictator and His Horse

ONE time while riding in the Paraiso—the Riverside Drive of Caracas—his horse, suddenly and without apparent cause, became fractious. He dismounted and shot the horse. At another time, on the same driveway, he went up to a laborer who was repairing the macadam:

"Do you know who I am?" he asked.

"No, señor."

"I am Cipriano Castro. I have twenty-five wives, and I have a child by each." Then he rejoined his party on the sidewalk and continued the promenade.

There are many stories of his heavy drinking, but none of his being drunk. He seemed to have a constitution on which liquor had no effect. In the course of a conference one evening that lasted perhaps two hours, he finished, by himself, a bottle of brandy. It was served in no liqueur glass, but in a goblet, which he would fill half-full, and then empty in two or three gulps, and yet at the close of the conference there was no more indication by its effect of the amount that he had drunk than there was at the beginning.

Somewhere he learned that there are anarchists, and in some way the idea became fixed in his mind that all anarchists are Italians. For the last two years it has been with extreme difficulty that Italian immigrants or travelers could land in Venezuela. The steamer on which he sailed, the *Guadeloupe*, brought twenty-four Italians for Venezuela, and he refused them admission to the country. They were still on board the steamer when he decided to sail, waiting to be carried back to Europe. When he knew that he was going to sail on the *Guadeloupe*, he gave the twenty-four Italians not only permission, but the steamship company orders, to disembark them at once in Venezuela.

There are scores of similar irrational and erratic incidents, but they all seem to show that the Castro of to-day is not the Castro of the first seven years of his administration. The distrust, suspicion, avarice, greed, and tyranny are no substitutes for the abilities that have been destroyed. In the foreign complications that arose during his régime his cause has been so just that, had he followed the suggestions as to methods of procedure made by the real friends of Venezuela, they could not have been overthrown or clouded in the clamor over his abrupt handling of the questions. Nor would Venezuela have so gladly yielded the points of contention, except for the bitter hatred that Castro had engendered and that seeks to overthrow whatever has been done by the object of that hatred.

The Woman Who Votes

The Chaperones and "Workers," Buggies and Babies, and the Supper at the End of a Wyoming Election

This is the second of a series of three articles on the Western woman voter. The first, "Campaign Days in Denver," appeared in the issue of April 17

By SARAH COMSTOCK

PHOTOGRAPHS BY J. E. STIMSON

"DON'T like to promise you too much excitement for to-morrow," a male voter of Cheyenne said to me on November 2. "If I remember rightly, there weren't more than three women killed at the polls last election day."

Now, I am no tenderfoot, and I well know the wildest and woolliest Western life to be found in the periodicals of New York, Philadelphia, and Boston. I did not look to see the slaughter of ladies at the polls; but I confess that I had never anticipated any such amiable social event as the polling turned out to be. The beauty of the high plains was in evidence; every pair of rosy cheeks that could swear to twenty-one years was present. Matrons chaperoned the fair youthful voters. Carriages rolled up to the Capitol basement and the Governor's barn; stylish costumes appeared. Gallantry stepped out of line and let the ladies vote first. Light and ladylike banter was passed. If oaths existed in the vicinity of the polls, they were not audible to the naked ear. I have seen greater disorder at a church strawberry festival.

Emerging from the hotel somewhat before nine on Tuesday morning, I found the streets enlivened by many and various vehicles. There were automobiles and livery "hacks," and sometimes two-seaters and buggies, each flaunting a large canvas encouragement to vote one ticket or another *straight*. As yet the drivers were alone, but the vehicles stirred restlessly through the streets with an air of something about to be doing.

"What are they all for?" I asked a very small boy in a very large cowboy hat.

"Fur de ladies wot goes a-votin'," he told me. "Gee," he added, "wisht I was a lady; I'd get a Democrat buggy ride and a 'Publican one too," with a plaintive sigh for the passing of man's day.

I recalled then the unwritten law of the equal suffrage States: that no woman shall go afoot to the polls unless by her own preference. Each party furnishes a sufficient number of vehicles to carry all its women voters, as well as a corps of women "workers" who make appointments with these voters, escort them to the polls, and explain to them any details they do not understand concerning the rules of the booths and the marking of the ballot.

One of these workers, a little, wiry, capable woman whom I had met the day before at party headquarters, was getting into a carriage at one of the polling places. Seeing me, she flung open the door.

"Come on, get in," she called. "I'm going for the oldest woman voter in the precinct. She's got it into her head that she wants to cast the first vote, and I've promised her she shall. You'll have to drive fast," she shouted to the driver as she slammed me in. "The number's 1911, remember."

Arrived at the modest cottage where the old lady lived, we found her in tears and an apron. "I can't get ready," she said. "Whatever made me think I could? The dishes ain't done yet, and look at me in my apron!"

"Never mind, bring the apron along," I advised in my ignorance. I had yet to learn that voting, to many of my sex, is not only an ethical responsibility, but also a social function. Some go to the polls as to market; others as to a circus parade. In either case you meet the People You Know, and you do not wish to do so in your apron.

Mrs. Cockell knew. She has weathered the whims of many campaigns and has learned that the duties of a party worker are not confined to those officially set down. Within three minutes she had off Mrs. Topliff's apron, had on her best bonnet and cape, had us all slammed into the carriage, and we were off for the Court-house Annex. We reached it on the dot of nine, and a group of impatient gentlemen made way for Mrs. Topliff to pass into a booth.

A little later I strolled up Ferguson Street, where rows of elderly best residences draw back from the youthful impertinence of a trolley line. In the largest and most dignified and reposeful of these—a house that seems by some mistake to have been transplanted from one of the elm-lined Eastern towns and set down in this breezy little city of the plains whose air still holds the tang of adventure's tradition—lives ex-Senator Carey, well known as a champion of woman suffrage.

Mrs. Carey was putting on her street things. "The judge had to go downtown early, but he's coming back for me," she explained. "We're going to vote early. I'll get my hat, then we'll go downstairs and talk till he comes. . . . Oh, do you mean it? Really, do you want to make one side of the bed while I make the other? There isn't a servant of any kind about the place—both my girls gone and I can't get anybody. But Presidential election day comes only once in four years, and I don't think I could be said to be neglecting my housekeeping for politics."

A few minutes later the judge bustled in, big and bluff and twinkling. "Ready?" he demanded. "You see we always go to the polls together," he explained to me.

"And we always vote differently," added his wife.

"That's only because she won't vote my way. She's like all women—she will scratch her ticket."

"Now, you know you don't think such a man as X—— ought to be elected," protested Mrs. Carey.

"That's true. I'm not going to vote for him myself. But women scratch all the way along—"

"But you know that what a man is as an individual counts—"

Then they looked straight at each other in the happy disagreement of mutual respect, and smiled that wise, delightful middle-aged smile that scatters the cynicism of youth to the four winds, and the last I saw of them he was holding open the gate for her and chuckling with her over some bit of news as they started off, already forgetful that there was any issue, even as trifling as politics, upon which they differed.

As yet the carriages were sparsely filled, and I recalled Senator Warren's advice when I had told him that I came to Cheyenne to see women vote.

"Then take an extra nap Tuesday morning," he had said. "Get up for breakfast about noon and stroll forth at your leisure. You will see a few ladies voting. The numbers will gradually increase; about five o'clock, just as the polls are about to close, ladies will come rushing from all directions in a frantic scramble for their last chance."

The Senator was facetious, but there was somewhat of truth in his words nevertheless. The woman of leisure is more likely to go out for calls and shopping in the afternoon, and she defers voting until she leaves home for other purposes as well. The woman who does her own work has the dishes to wash and the floors to sweep and the pies to bake and the birds to feed in the morning. After dinner she can don her best costume and go forth.

Her First Vote

TOWARD eleven o'clock, however, a number of private carriages were seen at the polling places, and the workers, too, captured a good many voters. Sometimes a party rig would make a long trip for a single vote, again it would stop at several houses on the way. I was picked up by an automobile that had gone many blocks for one girl of twenty-one who was to cast her first ballot. She was plainly the victim of stage-fright, and the worker, a man in this case, was adding to her nervousness by the most elaborate explanation of how simple the whole thing is.

She entered the park tool-house and looked anxiously from judge to judge. One of them, a woman, smiled at her reassuringly.

"Right in there. You'll find a pencil inside." And the girl disappeared behind the canvas flap with which the booth was screened.

She came out after a minute or two, flushed and confused. The canvas flap swung and set her hat awry, to her greater embarrassment.

"Never mind, all the ladies are having trouble with their hats," consoled the judgess.

Once more in the automobile and whizzing homeward, the girl suddenly pressed her temples. "The amendment!" she gasped. "Oh, what shall I do? I forgot the amendment!"

At noon came a lull, as the getting of the meal interrupted bank and tariff issues. At the hotel I dropped over to the table where Miss Estelle Reel sat. She lives in Washington for Uncle Sam, who has put her in charge of all his Indian schools.

"Yes, I'm here to vote," she said. "It wouldn't be quite honest to say that I've come all the way from Washington to take advantage of that privilege. But I arrange it so that my other duties shall bring me somewhere near Cheyenne when election time comes around. You see, it would feel odd to miss voting. I've always been used to it. I was brought up out here, and I found myself pushed into office when I was hardly more than a little girl."

Ballots and Babies

MISS REEL took off her coat and leaned back, displaying a heavily embroidered shirt-waist which exhaled an atmosphere of all-linen prosperity. She looked the typical successful bachelor: well dressed, satisfied with the fact that it is her own hard-earned money which buys that pervasive air of prosperity, and, manlike, she was reckoning election day a day of importance to her personally, her vote a matter worth traveling miles for.

But the bachelor of our sex represents only a small element in a State like Wyoming, where ranches and mines do not draw the wage-earning woman as factories and shops and offices do. The fair voter of Cheyenne is pretty likely to have a home and children to take into consideration, and for this reason infancy plays an important part in the drama of election.

Several times during the day, as I toured with one worker or another, we returned to the carriage disappointed because: "I can't go. I ain't got nobody to leave the baby with," or "If you'll come back in about half an hour I'll have him to sleep by that time, and then I can leave him."

But for the most part the future voter goes along with mama and is thus initiated into the mysteries of national politics earlier than in our non-suffrage States. The party vehicle, whether it be livery rig or automobile, is frequently met by a joyful chorus of: "There comes the buggy! Now we're goin' ridin'!"

To many mothers and children this is the only "buggy" ride that the year brings around, and it is looked forward to like Santa Claus's visit. For days, sometimes weeks before, it is talked over and pictured. The custom is not only to carry women and their children to the polls, but also to take them afterward either home again or to market, or to a friend's house, or wherever they may wish to go. Thus the ride is often delightfully long.

By the middle of the afternoon the feminine balloting was in full swing. The street were filled with vehicles whirling in every direction, picking up loads here and there, depositing them at the polling places, loading up again, and dashing off. From Fort Russell carriages arrived bearing army wives and daughters. From the fashionable residence district women drove in their own carriages or walked in calling costume, dropping in to cast their ballot on the way to somebody's house, chatting as they met friends doing likewise. Many came in little knots—a mother and daughters, for instance, two or three neighbors, a group of sisters. Others went with a husband or father, a brother or son. There was no necessity for this, however. All of us need male protection in our New York subway far more than do these enfranchised Western women at the polling places. Occasionally men were seen lounging and

chatting outside, but with no disorder or excitement. They would step aside and make room for women entering. When friends met, there was the same sort of banter that you might hear on a coeducational campus. "We'll see which gets through first," said a woman as she and a man friend entered adjacent booths at the Governor's barn. He emerged and waited for her. "Yes—you beat," she acknowledged. "I see you had it in for somebody," he responded. The atmosphere on the whole suggested that of college life: fun on top and an underlying seriousness of purpose.

The places chosen for voting were chosen with the women voters in mind. Public halls were used, two well-groomed barns, the Court-house Annex, and so on. As I approached the South Side polling place in the district where humble homes of the mechanic class predominate, I caught the word "SALOON" in large letters upon the building.

"There," I triumphed. "We have always maintained that the polls are no place for a woman."

But upon reaching the building I found that it had long ago been abandoned for saloon purposes and is now a public hall, such as might be used for a political address or an evangelistic meeting.

Teddy Bears and Dolls

IT WAS in the midst of the afternoon's bustle that an automobile drove up to the Governor's barn with five women and six children, besides the worker and chauffeur. The women evidently wore their best dresses and hats, the children were in a state of hysterical joy, Teddy bears and dolls were being waved wildly by any available arm or leg. Then began the process of unloading.

"You stay in the auto, Annie."

"No. I want to go in with you."

"Take her along. I'm going to take Jimmy."

"You play outside and be good children."

"I don't want to be good children. I want to go in and vote."

In the end three of the voters-to-be were left to play in the car in charge of the worker, one of whose duties this is; the other three accompanied their mothers up the driveway to the barn.

"Now you stay outside while mama goes in," the argument was resumed.

"No-o-o."

A gentleman stepped forward. "Let me keep him while you go in, madam," he offered gallantly. "Come, you'll show me your bear, won't you?" he coaxed.

"No-o-o."

The mother opened her shopping-bag. "This'll keep him good," she said, producing a stick of striped candy. "I always bring candy along every election day. You'll stay with the nice gentleman now, won't you, Everett?"

And Everett was content. If we are ever required to vote in the other forty-two States we may as well profit by the experience of these older citizens and remember the stick of striped candy.

The other two children entered the barn, and while their mother registered her choice in one booth they occupied two others, peekabooing at each other around the partition. Thus satisfaction was maintained throughout the party and reached its climax in the little girl, who announced: "I voted for Bryan with Aunt Mamie this mornin' and now I've voted for Taft with mama."

I dropped in for a little chat with Mrs. Cook, wife of Cheyenne's mayor. He was again candidate for the same office.

"I took our daughter to the polls myself," she said. "You know she came twenty-one just in time to vote for her father's reelection and she was so delighted over it. But when the day came she was a little nervous, never having voted before, and she wanted to stay at home.

"I said: 'Come on, and I'll buy you those beauty pins you've been wanting after you've cast your ballot.'

"I bought her the prettiest set, her own choice, and when we were all home for lunch together I said to her father: 'You owe me the price of a set of gold pins. I had to offer them to get Bessie to go and vote for you.'

"'Not much,' he said, 'I'm not buying votes. If you are, then you pay the price.'"

Mrs. Gibson Clark, who is vice-president of the State Federation of Women's Clubs, had cast her vote early, I found. "Just as soon as breakfast was over and the dishes done my cook and I put on our hats and went to the polls together," she told me.

Again I saw an instance, as I had many times during the day, of that harmless kind of teasing and joking which enters into this coeducational system of politics and differs so in its manner from that where woman plays no part. Mrs. Clark was telling me about an issue for which she and many other women of Cheyenne had been fighting regardless of party.

"I met a man I knew yesterday and I said to him: 'Remember, you're not to vote for Y——.'

"'Yes, I've decided to do so,' he replied seriously. I was so disappointed at losing even one vote which I had thought secure, for the issue is so important from the standpoint of morality and I had worked so hard for it. But nothing I said availed.

"This morning his wife called me up on the 'phone. She was laughing. 'John's just been telling me how he teased you, saying he was going to vote for Y——,' she said. 'He's not, though. It was all a joke. I told him it was a shame to tease you so.'"

Whether They Would or Not

IN THE shopping district I met one who belongs to a very small class in Wyoming; the women who do not believe in their own suffrage. In this pioneer suffrage State it is forty years old, it is an accepted fact, not an issue. It never was battled for; it was put through almost without opposition and largely as a joke, so the story goes, by William Bright out of gratitude for a great service rendered to his wife by Mrs. Esther Morris. "What can I do to thank you?" he asked her. "Put through a bill for woman suffrage," the lady replied, and it was promptly done, and the women of Wyoming found themselves voting whether they wanted to or not. Mrs. Morris, known to tradition as "The Mother of Suffrage," was made justice of the peace and tried between thirty and forty cases in South Pass City in the famous old Sweetwater Mines country.

And so the Wyoming woman knows but one way of settling a political question, and that is to take a hand in it herself. But for some reason Mrs. Freeborn is firmly opposed to the system.

"What is your objection?" I asked her.

"Well—I don't think it's our place."

"And have you stayed away from the polls today?"

"Oh, no. I always go, because I think it my duty. But I don't believe in the law that makes it our duty."

"Then you went merely as a matter of conscience—you had no desire to cast a ballot?"

"Well—" She laughed. "I suppose when your husband is running for office you're not altogether sorry you have the right to vote for him."

It was late in the afternoon when I once more joined the bustling little worker who had given me my first political ride that morning.

"I'm after a sick woman now," she said. "She's in bed most of the time, but she thinks she can manage to get to the Court-house Annex. She wants to cast a vote for Z——."

Her Last Vote

THE woman was found near the gate of her dreary little house. She was taking the air, supported by a friend on each side. She was ghastly and she tottered at every step.

"I can't—oh, I can't go any farther," she panted. "But I want—I want to vote for Z——."

She was helped into the carriage, three of us going with her while the worker mounted beside the driver.

"I couldn't register—I was too sick," the woman explained in gasps as we drove rapidly toward the court-house. "But I've got the doctor's certificate. They'll let me vote, don't you think they will?"

She tottered, assisted, into the polling-place, thrusting forward the blue certificate. The judge shook his head. "Won't do," he said. "Got to have two people who have personal knowledge that you were unable to register."

The two were found, their oaths taken, and the woman tremblingly entered the booth, afraid to take a step unsupported. She almost fell into her friends' arms as she emerged.

"It's the last vote I'll ever cast," she said. "But I've voted for Z——."

Five o'clock had fallen, cutting off the tardy from their privilege, when I returned to the Capitol basement. Judges and clerks, two or three women among the number, were stretching and shaking themselves out after their eight-hour tension. From an adjoining kitchen issued odors that comfort the weary: the steam of beans in the pot and the gusts from an oven door which is opened upon a roast.

"Must they stay here for dinner just as they did for lunch?" I asked, looking at the tired officials.

"Dear, yes, and maybe till four in the morning," some one replied. "Meals are brought to them and they're caged here till the count is finished."

"It's pretty hard on the women," I remarked.

A woman clerk overheard and smiled at me cheerily. "We don't mind," she said. "Election doesn't happen often."

"The only thing they'd mind would be not getting the appointment," said a bystander. "This is one of the privileges that go with suffrage." And then in came the steaming beans and the fragrant roast, and the picnic table was spread, and I read in the women's faces that it was all a part of the lark.

PART II of "The Wicked City."—*The Advantages of a Tucked-up Flat and Wilted Food—Driving Through Twenty-eighth Street Behind John and Molly—The Extinct Broadway Stages*

By EUGENE WOOD

Illustrated by ARTHUR WILLIAM BROWN

PART I of "The Wicked City" appeared in the issue of April 3

Driving an anachronism

IT ISN'T alone that you can better your financial condition by coming to the Wicked City, though that you can do so must be apparent at a glance. The man that draws a pay-envelope with only $15 a week in it in one of these jay towns outside of New York can only by the most scrimping economy support himself and family on $14.50 a week. His abilities could just as well as not bring him in $30 a week in New York City, where by the same scrimping economy he could support himself and family on $29, provided he had no bad luck and nothing happened. Life is so much larger in New York. Think how lonesome it is in country towns in summer time. No cheerful human sounds float in through open windows. You can't hear 83 pianos all going at once, all on different tunes, to say nothing of the 3 street-pianos that are normally in front of every apartment house; you can't hear 8 vocal students doing their scales, or 28 coronets, 14 fiddles, 6 clarinets, 103 phonographs, 10 parrots, and 2 men hallooing: "Line up, lady?" And how chilly and forlorn the country must be with nothing but hot-water heating and open fireplaces to get warm by and no homelike steam radiators that send you off to bed at ten because that's when the janitor tucks the fire in for the night, and that wake you bright and early in the morning with the joyous crackling of their pipes. And there are the nice cold-storage eggs and poultry you get in New York, not the raw, crude country stuff that hasn't had time to age properly, and the vegetables so delicately "fatigued," as they say in French, not stiff and awkward as in the country. And apples only five cents apiece, instead of three dollars a barrel. And the rooms all so cozy and comfortable, so that you don't have to be on the continual trot, but can just stand in the middle of any room and reach anything in it you may need. And if people come to visit you in town you have an infallible test of whether or not they really care for you, whether their affection is sincere. Because, if they are willing to sleep on the couch with a portière for a cover and a beaded cushion for a pillow, which is all that you can offer them, theirs is a friendship worth the having. Depend upon it.

Add to the financial betterment consequent upon living in New York these creature comforts, and add on top of all the self-respect that is as necessary as our breath itself, and I don't see how you can dispute me when I say that only one circumstance keeps the Wicked City from having a population of some eighty-five million people instead of a beggarly four million as at present. And that circumstance is that, with our existing systems of transportation, many people could not get downtown to business in the morning or back to their homes at night. If to the trolley-cars and "L" roads, the subways and the bridges, the tunnels present and projected, the ferry-boats and the commuters' trains were added air-darkening flocks of swift and sure flying-machines, able to handle the crowd each way in some sort of fashion, no matter what, we should all move to New York before the month was out, leaving this broad land of ours as bare of population as a hard-boiled egg is bare of hair, excepting only locked-up criminals and lunatics, the sick-a-beds, and such as do not read the papers to know what's going on in the world. Get the transportation facilities and you'll get the housing fast enough for eighty-five million people residing in Greater New York.

That would be sheer ruin, though. Left to ourselves we'd rush headlong down to destruction, but here the angel side of the Wicked City appears to view. "Young fellow, you're better off without it," says New York, and firmly declines to be a party to any such catastrophe by refusing to improve the transportation facilities. No other theory than that of a great moral agency operating to save the country adequately explains the phenomenon. Why, here. A street-car will hold 125 persons if packed carefully. The profit on each is 3 cents, or $3.75 any time you run the car out. Call it $3 because sometimes it isn't cram-jam full. If it were only money-making they had in view in the Wicked City, as some will tell you, they'd put more cars on and more cars on *ad infinitum*, knowing that there is no human limit to the number of 3 cents' clear profit they could make. But no. Every 125 persons thus taken away from productive employment and set to tapping typewriters means the deduction from the grand total of what things to eat and wear and use 125 persons could bring from the all-yielding earth, means just that much nearer a grand bust-up and everlasting smash. And for its own personal profit should the Wicked City precipitate this horror?

Not much!

The reason why the city is at all is that one kind of transportation ends there and another one begins. There's a deep harbor at New York, safe against storms from any quarter, and three ways of getting into it. Just the place for Commerce, just the place for pricemaking. Any lonesome corner with a spur-track into it will do for Industry and overalls, but Business and a white collar demands that you must crowd up close where you can look the other fellow in the eye.

And this whole exodus from without into the city has for its Moses a titter. For the man that keeps the store at Johnnycake Corners titters at the whoa-haw farmers with their pants in their boots until the farmer can not stand it any longer, and rents his farm that he may enjoy the social privileges of Johnnycake Corners too. But Johnnycake Corners is laughed at by those who live in larger towns, and these in turn, even the biggest of them, are laughed at by New York. Culture? Tee-hee! It gets under our hide at last and rankles there. Yes, by jimmineddy, it rankles, and we keep the latest time-tables always handy, so that we can catch an East-bound train to New York the minute we have made our million dollars to knock their eye out with. We'll show 'em. Alas and alas! It's always a little farther on, the Promised Land is. Get right down to it, and New York's a one-night stand, a jay town, a kind of whoa-haw place with the price-tag still sticking to its store clothes. New York and Terry Hut, they're about the same thing to London. Terry Hut makes fun of New York's slow-poke ways, and New York makes fun of London's slow-poke ways, but they both know they are cheap skates of towns.

On our first visit to New York we marveled, I don't deny, at the strange way the folks lived, all jammed in together, layer upon layer, up one long street and down another. We wandered over to where the poor trash lived, noting, by the way, how proportionately larger the Hardscrabble section of the Wicked City was than the corresponding part of our own home town; and when they told us that in one block ("square" we should have named it) twice as many dwelt as in the town of Cardington, which is a station where the trains stop, we murmured: "Gosh all fishhooks!" or whatever our cuss word of astonishment was in those days. We wandered uptown to look at the fine houses of the big-bugs, and there was ne'er a sign of a front walk with another gate and driveway for buggies to come in; no smooth greensward with the lawn-mower snarling over it; no three-story cake-stand of a cast iron fountain painted white; no plaster-of-paris boy balancing a basket of geraniums and portulacas on his head; no crimson rambler over the front porch— No front porch, by golly! No, nor a cu-pa-lo. They weren't at all the sort of houses big-bugs should live in, but one chug up against another, one chug up against another, like Morrison's Row in our town, where Tilly, our washwoman, lived. All were of a dismal, dirty brown sandstone. All were architecturally just alike, a cross between Odd Fellows' Hall and the First National Bank. It certainly did look funny to us that folks with all that money should have to live the way they did, in such mournful streets, in such a tucked-up way, not such a sight better off, so far as elbow-room went, than the poor trash in the Hardscrabble section on the East Side. All that saved the uptown neighborhood was that there wasn't such a lot of young ones whooping and hollering, underfoot, and in the way. A tucked-up way of living surely, but we saw then it wasn't that way for the lack of houseroom. Out toward the edge of town, up beyond Eightieth Street, there was lots of room; rocky room, to be sure, but a few hundred tons of dynamite would fix that all right into building lots. It was getting downtown and back, to and from these scabbards made of lath and plaster, these brownstone tights, these carpentered capsules, these clothes-presses piped with water and gas that New Yorkers comically call "homes"—that was the main point.

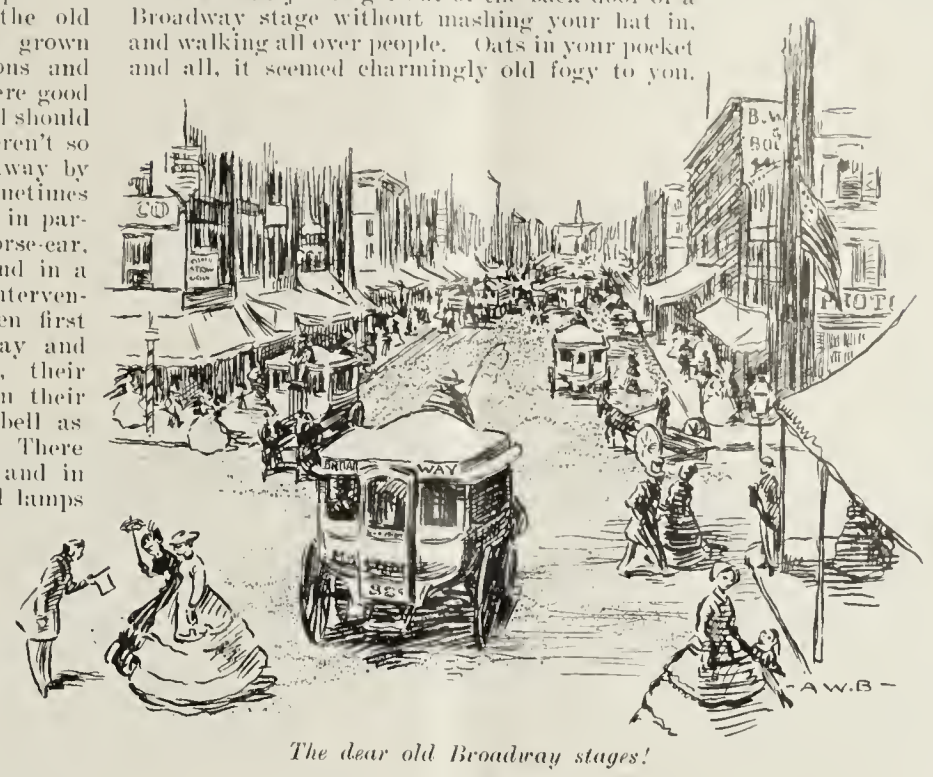
The agent's office

Transportation facilities

Green, on Broadway

GENTLE reader, as you and I walked up Broadway that never-to-be-forgotten day, green as we were, with the oats spilling out of our pockets, we perceived that the Broadway stage was an anachronism, though we did not then perceive the saving grace that made it so. It seemed just romantic to us. It was as if they wanted to remind us that it was all so, what it said in the school history about General George Washington and those old fellows. If the policemen standing on the street-corners had worn tight breeches, and scarlet coats with the tails buttoned back, powdered cues, and tall peaked hats—had been, in fact, the Hessian hirelings under Lord Howe—the picture had been complete. And, too, it kind of made you think of the Carson City stage, and if from around some corner, say, of Broome Street, a whole bunch of painted Indians had rushed out, flapped their hands before their mouths with a wild and thrilling, "Hoo-woo-woo-woo-woo!" and had begun to tomahawk and scalp the passengers, why, that picture also would have been complete. Who could complain because the Great Metrol . . . Metrolo . . . the biggest city on the continent, still had stages that old Nate Wells, the livery man in our town, was so ashamed of he only ran them to the night-trains? Why, you had Weems's "Life of Washington," and "Wild Western Scenes," and "Sunshine and Shadow of New York" all under one canvas, for the price of one admission only, thus making it, ladies and gentlemen, The Greatest Show upon the Continent.

As we now see it, the blot in the escutcheon was that the driver of the stage that slewed and tacked from curb to curb held up his finger at you and beckoned to you to come and take a ride. That was kind of green and countrified, as we know now, but we never gave it a thought then. It seemed all right. The motor-man on that very same Broadway to-day, if, through no fault of his, he chances to catch sight of you motioning to him to slow up the least little bit for you to swing on, clamps his jaws with high resolve, mutters to himself, "Not if I can help it!" and throws on the juice to Full Speed.



It looked all right to us then, though, for the driver to be accommodating. When we were back home not long ago, and rode in the trolley-cars they have there,

the other passengers looked at us as much as to say: "Why! Has the man gone plumb crazy?" when we laughed out loud because the motor-man backed up the car a couple of feet to the cross-walk so that the lady could get off without muddying her shoes. That looked all right to them. What's funny in being willing to oblige?

Behind John and Molly

IT'S kind o' nice, though, this spirit of conservatism that clings to the old things, long after they have grown musty and frowsy, constitutions and customs and street-cars that were good enough for our granddaddies and should be good enough for us if we weren't so persnickety, so easily carried away by the clamor of irresponsible demagogues. Sometimes when I am in no hurry at all, and have no place in particular to go, I take the Twenty-eighth Street horse-car, which is just the line to take in such a case, and in a moment, in the twinkling of an eye, all the intervening years between to-day and the long-ago when first I set my foot upon these shores, are fled away and gone. John and Molly still doze at stops, their hoofs still clatter on the cobbles as they dig in their toes to start the car, and the tinkle of their bell as they jog on is somehow pastoral and soothing. There is the same tapestry Brussels on the car-seats, and in alternate corners of the car the same dim coal-oil lamps twinkle at me from their tin boxes. As of yore, when some obstruction blocks the way, the driver urges the horses with mighty shouts of: "Geet ep, they, JOHN! Geet ep, MOLLay-ay-ay!" and the car turns out of the tracks, and teeters and jolts and yaws along the street till, after it is by the blockade, it sidles into the tracks again, and we tinkle along once more. Our youth returns to us again, and we— Fond dream! Fond dream! The horse-ear of to-day is not the horse-car of the olden time. There is no straw knee-deep for us to snuggle our feet into of a slushy day, no frost upon the window for us to scratch away when we want to make sure we shan't be carried past. Our breaths no longer cloud the air as if we were so many tea-kettles sitting in a row. In spite of warnings from the editors of leading newspapers that to heat the street-cars, and have the passengers go out from them into the weather, would give us all our death o' cold, the clamor of irresponsible demagogues was heeded, and you'll find in every car a coal-stove squatting in the best seat and taking up the room of one cash-fare each trip. That was what brought on the panic of '93, putting in stoves in street-cars.

The dear old Broadway stages! Away with those abominations on Fifth Avenue! They're not the real thing, the rig-a-ma-jigs that go without horses, and have a lot of benches on the top that you can climb up to by a stairway. A stairway! Good Lord! Youth loves adventure and excitement, and wasn't it adventure and excitement which the white chariot with a prairie fire painted in an oval on its white side, with its top rounded like the back of some kind of a bug, drew up to the sidewalk's edge and you essayed to clamber up to that exclusive seat beside the driver? You put your foot upon the hub, a long step up, a good and long step up (what if the horses should start suddenly? Whoa! Whoa, there!), and then another long step up to the slippery tire, and then another to a miraculously narrow ledge, and then the driver pulled you the rest of the way, and you nearly lost your hat, but there you were, away up on that dizzy eminence, and the driver told you about his horses, which was John and which was Molly, and how much he got a day, and there was Jay Gould going by—you'd heard of him, no doubt—and what street that was, and keeping track of the fares, and making change, and pulling the strap to shut the back door to after somebody had got out. A neat job to get out of the back door of a Broadway stage without mashing your hat in, and walking all over people. Oats in your pocket and all, it seemed charmingly old fogy to you.

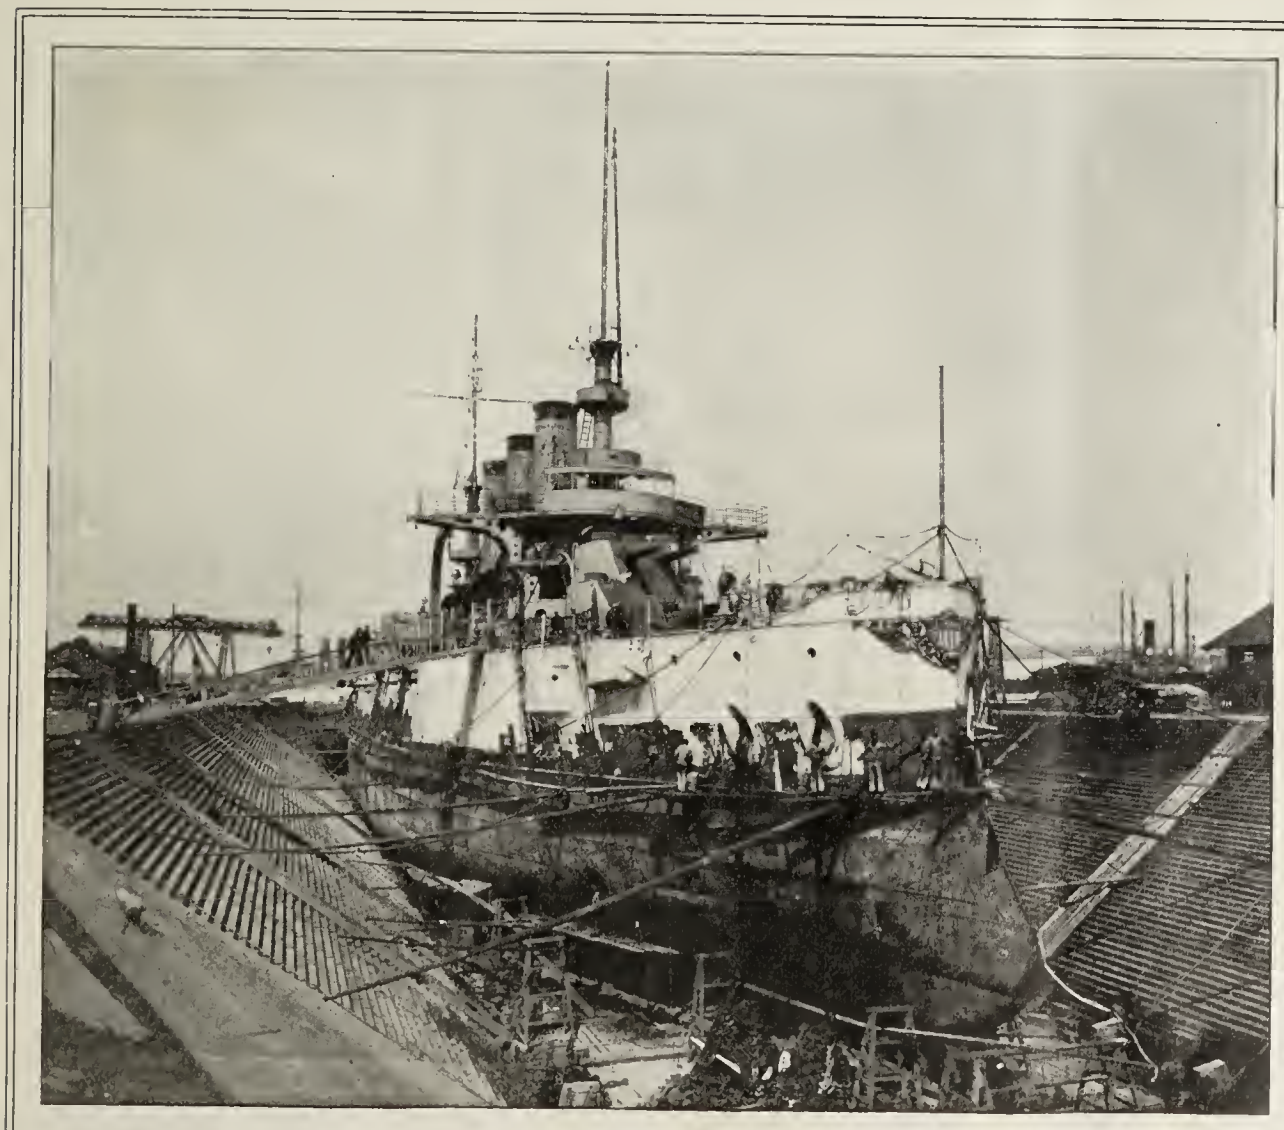
The dear old Broadway stages!

Some day somebody that can will write this exodus from country to city so that we can see the whys and wherefores of it all; this exodus, of which your first visit to New York was the preliminary spying out the land; this exodus from the Egypt of green fields, the sweet breath of cows, and the melodious whistling of birds in boughs into the stony wilderness of streets and houses, sickly smells and nerve-scraping noises.

The Fiery Barrier of the Footlights

THE recollections of the first visit to New York when you were young and green, how unresponsive to the questions we would put, how voluble in what we do not care a snap about! Scattered, dispersed, and unrelated, they mulishly refuse to range themselves in ordered ranks that we may reasonably and at our ease review them. A Spaniard, making conversation with us to improve his English, melts, like a dissolving view, into the yellow square of a theater stage with Mrs. Yeamans in the center of it, saying: "Loike the laadee in the plaay, an' ahl her eroy was, 'Dimuns! Dimuns! Gimme dimuns!'" that in its turn fading into the big wine jar in Graee Chureh yard, and that again into the long ride to Coney Island, where the water was really salt, as set forth in the advertisements, and that again . . . A series of bright pictures framed in the gray fog of mere forgetfulness.

One thing, however, is very distinct with you, nakedly clear, complete. A great ambition did [illegible] beyond hope of resurrection. You remember [illegible] "The Clipper," and the dramatic columns of the [illegible] day newspapers you read with hungry eyes. [illegible] do as well as those fellows. You could [illegible] as they spoke their lines, your native intelligence told you the accent should be on this word, not on that, this quality of voice for such a sentiment. [illegible] they used. Talent you most surely had, not to say a genius for it. You felt that inside of you. Right in here. But what could even genius do in that jay town? New York was where they started from.



So to New York you'd take your way, and to the agent you would say: "Mister, let me go on the stage—" Well, I didn't intend it to be poetry, but I might as well be hanged for an old sheep as killed for a young lamb, so— "and be the Roscius of the age." And he'd find a position for you, and the dreary old job you had would never see you again. It all comes back to you now, doesn't it? The fiery barrier of the footlights, the misty theater beyond, the rows of eager listeners entranced, their thunderous applause, fame, travel, even riches. . . .

How mercilessly sharp and commonplace the details of the agent's office? You can see the pattern of the oilcloth on the floor to this day, the yellowing photographs on the walls, the raw pine railing with the half-open gate, the pointing features of the leading lady, and her indignant: "I'll see him further first!" Away back against the wall you sat for an hour or so, hoping to screw your courage to the point where you could walk up to the agent and meekly bleat: "Mister, let me go on the stage." And you couldn't. The longer you sat there, the more you couldn't. You were afraid he'd titter at you for a greenhorn. After an age, you got up and went down to the sidewalk, to the real, original "Rialto," the south side of Union Square. And there you met an actor you had got acquainted with in your country at a summer snap the year before. He was pleasant to you, chatted with you, and introduced you to a young fellow who had just got his first engagement. That should have encouraged you. They've all got to begin some time, you know. But it didn't encourage you a bit. Such natty shoes as this beginner wore, such modish clothing. The daintiest necktie! And his waistcoat! His waistcoat! By itself it should have put him on the stage, though he had stuttered like a fanning-mill. You looked at your own clothes, your rained-on hand-me-downs, your round-toed three-dollar shoes, and presently you slunk away. In your chill inwards was an ambition, mortally wounded, bleeding to death.

After that you knew it never was to be. If it had been, nothing could have held you back, not rained on hand-me-downs, or clumsy shoes, not fear of being thought a greenhorn. You would have stormed the agent's poor defense, his titter, and taken your kingdom by violence, for it is Gall that does it, not Genius with its finger in its mouth.

Well, it's just about as good to find out what you can't do as what you can. It simplifies the problem by just that much.

Only a few days the Wicked City held you on that first visit. But how many ages older were you when you left it than when you entered it?

The Line of Courage

A Tale of the Fallen House, the Imprisoned Woman, and the Two Police Surgeons

By CHURCHILL WILLIAMS

Illustrated by HOWARD V. BROWN

Six engines with their crews were finishing their work on the west side of the block

THE man with a bad headache had received advice and the prescription for a simple remedy and had paid for these out of a fat wallet. But ten minutes later he was still in Selfridge's office, talking, and apparently the headache was forgotten. In young Dr. Selfridge's mind suspicion hardened into belief that there had been no headache. An uncomfortable prescience made him wish the dollar bill of his fee were back in the pocket of this well-fed person in a big black coat, whose knees bent the wrong way under his bulk, and whose manner, voice, and smile advertised him as everybody's friend. It was in the air that his errand remained to be told. No, it was no longer in the air, for the visitor's roving eyes had fallen upon the small writing-table and his jocular reference to the coming elections trailed off into silence while he studied the envelope held down by the stethoscope. Then he lifted his gaze to Selfridge's face. It was as if he said: "Take a good look and judge for yourself if I'm not on the square."

Selfridge instantly decided that exactly the opposite was true. "I'll have to ask you to excuse me," he said. "I have a case—"

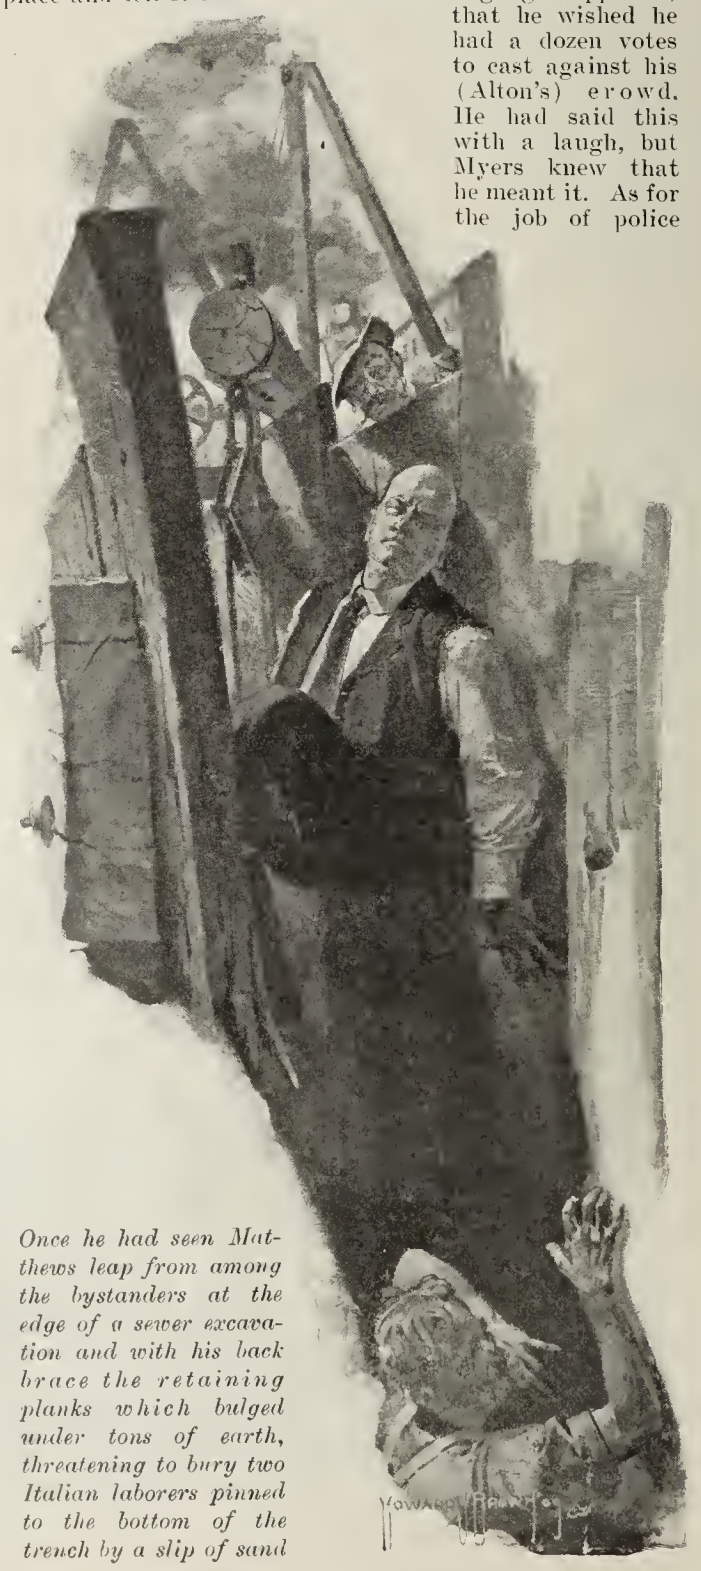
"Only a minute," interposed the other. Then, speaking slowly and with evident self-reproach: "I'm always butting in and getting what's coming to me for it. But I can't help that. It's my way, and you can take or leave what I say for what it's worth, and no harm done. You see, I noticed that envelope on your table from the City Committee, and I know what's in it, for I've seen lots of them. It's the last call to dinner for that election. And you—you're going to chuck it away, I suppose—like the others they sent you—because you're against the—gang." He paused and smiled. But Selfridge did not respond. So he went on: "Call 'em that, if you want to; they ain't angels, that's sure. But they *are* going to win. You know that as well as I do, and when it happens, there'll be a big push after the jobs they have to give out. Now *you* have one of those jobs, and *you*—"

Abruptly Selfridge awakened. He had a paper-cutter in his hand; he gripped it hard, and his short, slight figure grew tense. But five years of self-denial had cultivated a restraint not furnished by his temperament, and his voice was almost colorless. "You'll have to excuse me," he said.

"Oh, come, Doc," the other expostulated. Then, seeing that he had failed beyond retrieval, he reluctantly picked up his hat. "Think it over, anyhow," he said. "I was only speaking that way because I took a shine to you and knew it would be a hard crack."

Selfridge sat down at the table after he had heard the front door close and stared at the paper-cutter, jabbing holes with it in the blotter. He *had* thrown away those other envelopes, unopened. He would do the same with this. His mind was made up, and it would not change. But also he was sure of something which so far he had managed to put aside whenever it recurred to him, not because it was bitterly unpleasant, but because it was inevitable and therefore unprofitable to deplore. Now, this thought insisted on being considered. The man who had just left had been sent to give him warning. And that warning was: Toe the mark on Tuesday next with a vote for our men or be ready to give up the silver badge you got when you were made a police surgeon. And *that* meant—

Selfridge figured out exactly what it did mean. He had been a police surgeon for nearly two years. Last year his fees from station-house cases and five calls had brought him five hundred and forty dollars. That, he remembered with a wry smile, was just one-third of his total earnings for the same period. For the nine months past he had done a little better, yet all of Eleanor's modest house accounts had had to be met with what came from his "steady job," as she called his police duties. In grim earnestness they were his steady job, he realized, and that was both the comfort and the shame of it. If they paid bills which he would not have known how else to pay, also they made ten calls upon his services for every one which came to him because he was a practising physician, as announced by the small brass plate on the white window-sill. Why this was he had only lately begun to see and even yet obstinately tried not to believe. But his inclination was neither here nor there. The facts remained. Other men in the profession, some of them younger than he, most of them with no better start, had forged ahead of him, and this Eleanor must know as well as he. That stung him, stung him the more because he saw easily through her brave little efforts to deceive them both. She must realize where the fault lay; she must understand that his idea of what men demanded in a man was false, whatever its balm to his self-respect. All along when others had pushed themselves forward, he had wrapped himself in ineffectual dignity and held his ground; when they yielded a point with a smile, he turned his back on compromise. Always he was retreating deeper within himself, interposing an ill-concealed suspicion or contempt between himself and his opportunities. Even his appointment as a police surgeon, received through the temporary influence of an old-time friend of his father, he had accepted with thanks which left no doubt that acceptance was forced upon him by his necessities. Perhaps he was respected; he had begun to doubt even that. Certainly he was not generally liked by those with whom he had to deal. Behind his back he felt that he was scorned for a physical unfitness which often left him exhausted at an hour when others were only fairly beginning their fight. To the bitterness which this misfortune planted in his heart was added the gall of serving under a man younger than himself and of wholly another kind—blithe, blond, and burly Tad Matthews, chief surgeon, and—by way of explaining this, as Selfridge invariably reminded himself—the son of Jim Matthews, boss and municipal contractor, anathematized by every one whom Selfridge called respectable, yet who held in his big, square fingers every tiny twisted string of the city's political web.



How Jim Matthews had won and continued to hold that power, Selfridge had made perfectly clear to himself. To him the contractor's triumphs were the conceptions of a low cunning, the achievements of a bully without scruple. He conceded him nothing more than this, unless it were an inherited and unenlightened capacity for hard work. Once he had seen Matthews leap from among the bystanders at the edge of a sewer excavation and with his back brace the retaining planks which bulged under tons of earth, threatening to bury two Italian laborers pinned to the bottom of the trench by a slip of sand. And, for an instant, a lump had come into Selfridge's throat. But when, the danger averted, Matthews had crawled out and a score of hands were reached to brush the clay from his clothes and some one started a cheer for "Giant Jim," Selfridge turned away, a sneer drawing down his lips. "That was worth five hundred votes to him, and he knew it when he jumped," he said to himself.

Thinking over the incident that night, he was suddenly confronted by the question: "But what would you have done in his place?" And abruptly he thrust the question from him, for he was not certain what he would have done, and the uncertainty was disturbing. In the theater, more than once, the call of the cornets and drums had stirred him to some imagined deed of single-handed heroism in which he faced the crisis dramatically, and so real for the moment was the fancy that the stage and the audience resolved themselves into the setting for his figure, and his eyes grew moist in exaltation. But, without the lights and music, imagination failed him, and from that simple question, "What would you have done in Matthews's place?" he shrunk ashamed.

So now, faced with another issue of courage, it was immensely flattering to find himself without hesitation, determined—unafraid, though defeat was certain. He would vote as he thought best, no matter what it brought. If for no other reason, then because no one should say he gave way to a threat. Yes, that was what it was—a threat. He drove the paper-cutter into the table-top so that it sprung from his fingers, and pushed his chair away and got up. He called to Eleanor that he was going out, and left the house. On the street he walked with chin up and shoulders thrown back, his hands thrust into his coat pockets aggressively. Vaguely he was aware of a wish that some one would challenge his right of way. And so, for an hour almost, he indulged his self-satisfaction.

But as the sun fell behind the hills he found himself far to the westward, on the bridge, and there he paused. Leaning on the railing, he looked down on the steam craft crowding up from the bay, threading the course of ferry-boats packed to the guards with men and women home-bound from their work. Against his shoulders he felt the pressure of that other stream of men and women seeking home. He heard them laughing, talking. They, too, were coming from work. And to-morrow morning all of them, he knew, would be hurrying the other way to where work awaited them. Work! Work! Every one of these men and women was busy—earning a livelihood. Every one but himself. He was throwing a livelihood away. Suddenly he was conscious of a chill in the air. Eleanor would be waiting for him. He turned and began to walk home. But something had fled from him; he neglected to square his shoulders, and defiance was forgotten.

Yet his resolve remained unshaken, and at the luncheon table on the following Tuesday it was with a manner transparently casual he told Eleanor of what he had done and how he had done it. The details of this, with the telling, assumed large importance. He had voted early. It would not have done to allow them to think that he hesitated to carry out his decision. He had asked particularly for the number of his ballot so he could identify it, in case of any question. But that was improbable. They—"the gang"—had things too thoroughly in their hands. If they saw fit to do so, of course, they would throw out his vote. About that he did not worry. He did not expect to help the election of an honest man, which was an impossible outcome. The essential thing was to make clear his own position. If they had had any doubts about that, by now they knew where he stood and that their threat, like their persuasions, had failed. He was his own man; he had declared that his franchise was not for sale on any terms. Indeed, he had taken pains to stop a minute outside the polling-place and tell Alton Myers, who was a "gang" supporter, that he wished he had a dozen votes to cast against his (Alton's) crowd. He had said this with a laugh, but Myers knew that he meant it. As for the job of police

Once he had seen Matthews leap from among the bystanders at the edge of a sewer excavation and with his back brace the retaining planks which bulged under tons of earth, threatening to bury two Italian laborers pinned to the bottom of the trench by a slip of sand

surgeon—there Selfridge took a fresh grip on his confidence—*it* could go hang! Without it he would have more time for his private practise and would soon make up for any difference in his earnings.

Eleanor's eyes, which glowed at the bold announcement of his defiance, wavered for an instant at the sudden intrusion of cold realities; then she covered his hand with her own. "Of course you will," she said. "You never did have a fair chance with all those station calls, and now you will get a full night's sleep, too. As for the rest, I—I can find a way to cut down the house bills, I'm sure." She came to a little pause and her smile died away. Then her eyes lightened again, and with a lift to her voice of which she was barely conscious, she finished: "But, perhaps, you won't lose the position, after all. Maybe they'll have so many votes for their men—they won't remember you didn't vote their way."

Did the words fan a smoldering ember of hope in Selfridge's breast? At least he was conscious of an impulse that he knew was disloyal and was stirred to indignant denial. "I wouldn't keep the job now," he cried. "Not if they came and begged me. If I thought they wouldn't know how I voted—I'd go and tell Jim Matthews himself. What are you thinking of? Don't you see what this means to me?"

Eleanor's fingers closed on his own and her face flushed hotly. "I do—yes, of course, I do," she hastened to say. "I didn't mean anything, Billy. Really I didn't. It—it just—slipped out without my thinking. Of course you are right."

But there was no unsaying those words. Their suggestion remained. The cloud upon which Selfridge had floated himself was dispelled, and soon he left the table and went into the office and closed the door. In the presence of Eleanor, remembering the momentary flush of joy which had kindled her eyes, he felt himself attacked again by doubts which made him ashamed. Nor could he wholly rid himself of them when alone. Beset by a sense of impotency that made pitiful his attempts at justification, he spent the afternoon in restless wandering, the night in sleepless tossing.

II

A DRIZZLING rain was silvering Selfridge's overcoat when, at five o'clock on Sunday morning, a week later, he gave up the struggle against cold and exhaustion and left the ruins of what the night before had been a big five-story factory building. Six engines with their crews were finishing their work on the west side of the block, where the flames had threatened a row of small houses. Four men had been sent to the hospital in that eight-hour fight and Selfridge himself had treated twice as many more on the spot. He had come on duty with the second alarm at a little before ten o'clock, and, soon after, soaked with the spray from a burst hose, had spent the succeeding hours with chattering teeth and smarting eyes, forgetting his own misery only when some fresh catastrophe threatened or his hands were busy with bandages. Even for an hour after the danger of more of this sort of thing was passed he remained on the ground, wrapped in a horse blanket from one of the patrol-vans, held by a morbid belief that, as surely as he left, it would be to learn that he had deserted his post at the time he was most needed. It was an observant assistant fire chief who finally persuaded him to go, with a half-truth, to the effect that there wouldn't be a spark worth killing soon and that he was going himself as soon as he should order away all but two of the engines.

Selfridge walked six blocks to the nearest trolley line and boarded a car. He was the only passenger. Stuck beneath the guard-rails of the window opposite his seat was a morning paper, and the headlines on its outer fold fell under his eyes. He pulled the paper out and ran through the few paragraphs under the heading. His own name stared him in the face. He was one of three police surgeons whose resignations, so the report had it, were to be asked for immediately—"for the good of the service." Selfridge knew that the newspaper he read was friendly to Matthews and that probably what it printed came through him. Yet the phrase, "for the good of the service," struck him like a blow in the face. He had not expected that, and though he knew it was but the subterfuge of a man without a reason that would better stand scrutiny, there was that atom of miserable truth in the accusation which sharpened its edge and drove it into his heart.

An early milkman spoke a cheerful good morning as Selfridge opened his front door, but Selfridge hardly heard him. A sort of stupor was upon him, and he made his way upstairs to the spare room and, half-undressed, got into bed, and almost immediately fell into a sleep. But it was a heavy sleep, peopled with phantasmagoria of firemen, newspaper reporters, his man with a headache who had brought him that warning, and Jim Matthews and his son. In a dozen disguises they came and went, laughing at him and showing him newspaper clippings. At last there rose a voice, repeating his name louder and louder, until he could hear nothing else, and then, suddenly, the figures were all whisked away in a thick mist through which struggled a line of bright light. With a start that made him gasp he lifted himself on his elbows and found himself staring at the curtains at his window, through whose nearest edge struck in a beam of dazzling sunlight. From the other side of the door came Eleanor's voice, calling him. He answered her and, still weak from the oppression of his dream, crawled out of bed and let her in.

"Oh, Billy!" she exclaimed, "what is the matter? It's nine o'clock and I've been trying for five minutes to waken you. They've telephoned from the Fifteenth District that you're wanted right away. A house has fallen down and a lot of people are hurt. Do hurry up. Where are your clothes?" Then seeing that he was partly dressed, she understood and put an arm about his shoulders. "How could I forget?" she said contritely. "You were out all night and you're dead tired. Are you able to go?"

"Of course," he answered, in a voice he intended should be confident. "I *was* tired, but I'll be all right now. 'Phone them, won't you, that I'll start in five minutes? And get me a cup of coffee, please."

NO WARNING which they could understand had been given the family in that rickety little three-story brick house on a side street far uptown when, on this Sunday morning, with a rumbling crash its walls, floors, and roof folded themselves together, as if a giant hand had laid hold of the foundations and snatched them from under it. It was while the man slept upstairs and the old woman and her married daughter watched the children at play on the kitchen floor that the time of the house came; and so, when Selfridge turned the corner and crept under the police rope which crossed the street, there gaped at the pavement's edge a great hole, and in this hole was piled a ruin of bricks and mortar and beams, the jagged fragment of a gaily-papered wall still bearing its multi-colored and gilt-framed motto, "God Bless Our Home," rising in the rear. From the ruins came the sound of ripping wood where the men from two fire-trucks swarmed and burrowed into the pile, breaking a path with axes where shattered masonry and the tangled beams could not be dislodged and dragged away. From the summit of the pile a fire chief shouted orders. Over the hole hung a veil of dust, thickening with each fresh attack, dwindling as it rose above the surrounding roofs. And pressed against the police ropes at either end of the street, filling every window and door near by, lining every house-top, was the crowd, gaping at the wreck, telling over and over again what had been happening, who had been saved, who was yet underneath the walls.

Tad Matthews stood on the curb, and to him Selfridge reported at once. He fancied that behind Matthews's ready smile there lurked a satisfaction at his tardy arrival; but the grip of his hand was prompt and hearty, and he offered Selfridge a cigar, explaining while he relighted his own. The man of the house, the wife, and their children had been taken out of the house alive, though the woman was badly hurt and had been sent to the hospital. As far as known, only one person remained in the ruins—the old grandmother. She had not been found, but as many of the truckmen as could get at the place were tunneling a way into the cellar, where they thought they had heard a cry from her a little while before. No more could be done. It [illegible] away swiftly without stop, but always [illegible] not to loosen whatever supported the pile [illegible] and for the rest, hope that they would [illegible]

Selfridge went over and got down on his [illegible] to where the men, choking with dust, [illegible] reddened, half-closed eyes, were delving into the [illegible] age. Now they backed out, dragging after them a broken piece of floor-beam, a lump of brick and mortar, a cake of lath and plaster, now dived back into the hole for more that had been detached from the mass. From the depths of the excavation their voices came, muffled, unintelligible. Then, while Selfridge still knelt and peered, one of them, working his way out swiftly, stood up and let out a yell: "We've found the woman. But she's jammed tight."

From the top of the ruins the fire chief started, scrambling over projecting beams, sliding down the slope of part of the roof. A roar of joy and excitement went up from the crowd. Selfridge's pulses leaped. Matthews ran to the spot. The fire chief dove into the tunnel after the man who had yelled. Ten minutes went by, and from the depths of the pile came only the indistinguishable orders of the chief, the blows of an ax, the ripping of timber. Then these ceased, and for five minutes more there was silence. Even the men who had been working on the outside of the ruin clustered about the mouth of the hole and stood waiting. Abruptly the figure of the chief appeared, scrambling out of the hole. After him came his men. The last man, in his hurry, fell over the one in front of him. He had a bad cut on his temple, his cap was gone. The chief looked back as if to see that they were all there. Then he began to speak to Matthews: "The old woman in there is sitting in a rocking-chair. There's a beam across her lap, and it's smashed her arm and pinned her down. She's very near all in. Ain't there something you can give her to boost her up till we can get her out?"

"A hypodermic would do the job, I guess," said Matthews. "Can you get near enough her for that?"

"Yes," said the chief, "you can get near her all right. The trouble is whether you can get out, once you're in. It's this way—" He stopped. "Well—it's about an even chance whether the next fellow that goes in there ever comes out. There's a big section of that brick wall right over her head. It's wedged up by a lot of stuff that rests on that beam. We can't get her out without cutting the beam or moving it, and maybe it won't wait even for that. It nearly came down when we tried to loosen the beam just now. That's why we got out in such a hurry. If it does—it's good day to whoever's in there."

He was sweating, despite the cold north wind, and to Selfridge, who knew some of the things the man had done, this was evidence of the danger more positive than anything he had said. Matthews was shaking his head.

The chief, drawing a hand from his eyes, saw this. "Hold on!" he cried. "Don't you get in wrong on this. We're going to bring the old woman out. I'm going back myself in a minute. There ain't one of the boys'll back down on it. But it'll take time—maybe an hour, maybe two, and she won't last that long the way she is. It's up to you, Doc, to keep her going while we work. And I had to tell you it wasn't any picnic in there, but— Well, that's all."

Matthews crouched again and looked into the hole. Jagged ends of wood thrust themselves out from its top and sides. Half a dozen feet from its mouth all was blackness. He stood up and surveyed the ruin of timber and brick above. There were tons of it, tangled and crushed together, here and there an opening where some beam suspended the mass, threatening collapse at the first jar. From the depths something snapped, there was a splintering of wood, the grinding of brick against brick; a part of the wreckage settled slowly.

Matthews sprang back and called to the chief. His face was turned toward Selfridge. It was pale, his lips quivered. Selfridge heard his low spoken words. "That's no fit place to send a man. I can't stop you, but I won't let anybody under me go in. They'd only be killed and I'd be blamed. The old woman's probably dead, anyhow." He shook his head, mumbling: "No, I won't let anybody under me go in."

Selfridge could not see the chief's face, he could not hear what he said. But he knew he was arguing, begging. Then, abruptly, the man threw up one shoulder. It was the shoulder turned toward Matthews. It might have been the beginning of a blow, checked at the start; it might have been a gesture of disgust. From it Matthews shrank away, still muttering. And the chief, swinging on his heel, for an instant looked Selfridge in the face. His lips were tight, but there was a question in his eyes which Selfridge read clearly.

It came to Selfridge all in an instant what he, Selfridge, was going to do. When he heard that some one must go in there and minister to the old woman he had never thought of any one but Matthews. It was Matthews's place, because he was chief surgeon, but more because he was strong, healthy, brave, and this was a risk he would welcome. He was the man for the job. Even now, when Selfridge knew that Matthews had refused to go, what contempt for him he might have felt was swallowed up in surprise at his own position. Could this all be real and not one of those dreams? Was he going to do it in flesh and blood? He was horribly afraid, and his fingers shook as he felt at his breast and found the case which held the hypodermic needle. But

(Concluded on page 26)

From his mouth he took the hypodermic needle. . . . "I'm going to stay here and have a little talk with grandmother"

The Niagara River in Winter's Grip

Ice piled up at the foot of the Falls. The annual carnival of ice has made the past season a memorable one to the dwellers in the Falls country. The ice-jam was tremendous at different points along the river and did great damage to public and private property on the water-front The Ontario power plant on the Canadian side was flooded with water driven over its window-sills by the great pressure of river ice; along the lower rapids below the whirlpool the tracks of the "Great Gorge Route" were completely destroyed, and the ice in the stretch of still water running into Lake Ontario was covered with a solid mass of ice that piled up on the banks on either side to the height of fifty feet

The Sultan of Turkey, Abdul Hamid, riding through Constantinople, and cheered by crowds soon after the new Constitution of last summer had been granted. It is his plotting against the Young Turks who won that Constitution for their country that has brought on the present uprising

The Sultan's Last Stand

THE Sultan is a man of many wiles, and ill they jest who omit him or forget him. When the Young Turks swept all before them last summer it was too sudden and easy—too good to be uninterruptedly true. And now playing on the unfailing string of bigotry, Abdul Hamid II, after almost a year of plotting, has made reprisal on the young hosts of progress. A sure way of impeding and sometimes blocking reform is to spread the report that it is unreligious. This the Sultan did among the common soldiers. As in all absolute monarchies, the army is the key to the situation; so in turning their edge against the Young Turks, the Sultan was able to depose the Ministry and the Committee of Union and Progress. On April 13 mutinous Turkish troops surrounded the Parliament Houses in Constantinople and ousted the Cabinet of Hilmi Pasha, forced the appointment of Tewfik Pasha as Grand Vizier, and put into power the League of Mohammed. "Sultan and Koran!" was the cry of the mutineers, twenty thousand in number, who surged through the streets, drinking heavily, and discharging their rifles at random.

Promptly on the announcement of this overthrow of the bands of progress, and the restoration of the reactionary order of things, revolt spread throughout the Ottoman Empire. Turkish Armenia, Arabia, and even Macedonia were scenes of uprising within three days of the coup. As we go to press, word comes that the Young Turks are marching on the Yildiz Kiosk, demanding the Sultan's abdication and the reestablishment of the Liberal-Radical program. It is one of life's larger ironies that the Sultan should end his rule and endanger his head by his own plotting. If he had let well enough alone, and cooperated with the Young Turks, he would still be peacefully reigning by the Golden Horn.

Mr. Roosevelt at Rest

(1) The ex-President joins the judiciary—acting as judge in the apple-bobbing contest between Kermit Roosevelt and Lester Bonwit on board the "Hamburg." (2) He presides over the Gymkana, where his son defeats Captain Foran of the British Army in a cock-fight

What the World Is Doing

A Record of Current Events

The Resurrection of the Chinese Army

FROM an army that repeated medieval and impotent tactics, permitting its soldiers to be mowed down in squadrons, the Chinese are making themselves into first-class fighting men. The photographs on pages 16 and 17 tell the story. The old habits of drill, the obsolete uniforms and marching equipment, all the anachronisms in active service, tenting and fighting, have undergone a bloodless revolution, and a new army is springing up from the shell of the old. Like Pallas, it emerges fully equipped, when the other nations had not suspected so much as the germ. What was once a rather queer chaos, and on the field of battle as futile as it was brave, has quietly become a fighting unit. Since 1900 the tacticians and leaders have been busy with the men. In 1905 and 1906 Yuan Shi Kai placed troops on the maneuver fields who showed a flexibility and alertness that Chinese battalions had been lacking for a few centuries. Various sections of the empire are giving thought to the army, and recently a maneuver campaign was held in the center of the Yangtse region. It was hilly, inland country in the Anhui Province where two army corps, calling themselves the Army of the North and the Army of the South, collided in mimic battle.

Joe Petrosino

JOE PETROSINO was a lieutenant in the Detective Bureau of New York City, and was head of the Italian secret service branch of the bureau. He was fearless, popular, and clever. Threatening letters to well-to-do persons and murderous quarrels had increased in number in the Italian colonies of the city. Believing that this was the work of certain gangs, the roots of whose organization were in Italy, he went to Palermo, Sicily, to search out the ringleaders. He was shot down and killed in the streets of Palermo on March 12.

His body was returned to New York. Because of his loyal service as a police officer, and his high courage, proved in many episodes throughout his life, his funeral on April 12 was a civic event. Police and firemen, sixty Italian societies, and bands playing dirge music through the five miles of streets, made up a line of over seven thousand men in funeral procession. It was unusual in the presence of several thousand Italians, many of them ill-clad, and some of them gaunt and toil-worn, who by their act were expressing their affection for a fellow countryman, and, more, their loyalty to the United States and their abhorrence of the crime by which their friend had fallen.

A misunderstanding of the immigration situation and public clamor were, in part, to blame for the death of Petrosino. Several of the excitable newspapers and some ill-informed public opinions have put the police force, and particularly the detective force, into a state of panic in the matter of Italian crime. They feel that the public are watching them and criticizing them, demanding results. To make good, they must have a show of arrests, capture somebody and exploit his lurid "record," along with a hint of a syndicate of crime.

Any detective whose advent was as liberally advertised as that of Petrosino—plunging into the underworld of any modern city for the widely-heralded purpose of plucking out certain members of a criminal gang—would be in danger of assassination. If a detective from Naples crossed the water and began to dragnet the Bowery amid a blare of newspaper publicity, it is conceivable that he would be killed. It would be unfair to charge the Sinn Fein with the murder, even if an irate Irish saloon-keeper had handled the gun. Still more unfair and irritating it would be to haul the honest Irish laborers of Naples—if we may suppose an Irish colony there—from their work into Police Headquarters and treat them as a band of conspirators in league with the liquor-dealer of Avenue A, New York.

What is needed is wise public opinion that will aid the police in these international problems.

The push-cart men are at times unnecessarily harried by some of the police. The rake-off that some of the policemen on beat exact is at times excessive and almost cruel on a man whose earnings at best average rather less than half of those received by the officers of the law. The physical abuse, rarely maiming in its results and perhaps never fatal, to which certain policemen of the East Side and Bowery districts subject the Italian venders is annoying. It is a constant irritant, and tends to breed a sense of injustice in the victim. These bits of race dislike are among the determining factors in the so-called "Black-Hand" situation.

Kinetoscope for Lepers

SHUT in with their own misery, the lepers of the Molokai settlement in the Hawaiian Islands lead almost the loneliest life of human beings anywhere. It was in this leper colony that Father Damien lived in his last years. In the month of March of this year, the lepers were suddenly made aware of the outside world by the coming of a moving-picture machine. In Beretania Hall, their meeting-place, they saw the spectacle of healthy normal life and the unglimpsed wonders of sky-scrapers and great crowds. Many of them had never seen a city, fire-engines, or police. The machine has been permanently set up in the colony and will be operated by some of the lepers themselves.

Hadley, Hughes, and Unlimited Liquor

GOVERNOR HADLEY of Missouri is a keen analyst on the liquor problem. In a special message to the Legislature, on April 7, he said:

"When the brewer, the distiller, or the wholesaler of intoxicating liquors is permitted, directly or indirectly, to own, operate, or control dramshops, then there exists a necessary combine of power that results in the injury of the business itself and inevitably tends to pernicious and dangerous political activity and influence. The other evils incident to this condition are so many and so manifest that it is unnecessary for me to mention them here. It is, in my opinion, clearly advisable that another law should be passed which will enforce the complete separation of the brewery and the saloon, the wholesaler and the retailer."

That tie-in of the brewer with his saloons is fundamental in the problem. But it will be a difficult task to draft legislation to separate wholesaler and retailer without invading many kinds of innocent business. It is a common practise to-day for the wholesaler to own a chain of retailers. The chattel-mortgage system is the method of controlling channels of distribution. The modern wholesaler has to know with some precision the volume of business that the retailers will do.

Jewelry stores make a brave little window display. Those jewels and that gold aren't owned by the retailer. The big manufacturing jewelers simply loan these front-window goods. So with the big druggists and the multitude of retail dealers, who are their men.

In New York State, Governor Hughes has not committed himself on the liquor question. He has made a study of the evils of the unrestrained saloon, but he is hesitant about taking action, as he is far from sure of the way out of our manifold liquor troubles. He was very close to suggesting a saloon commission, a few months ago, to report on facts observed and make recommendations, looking to our relief from police blackmail, vice, and other ills of the brewer-controlled saloon.

Dr. John P. Peters, chairman of the Committee of Fourteen, and other citizens were able to avert this piece of careful investigation and to substitute a bill which, lacking the presentation of massed facts and the consequent education and arousal of public opinion, was sure to go down in committee, however wise and well considered its main provisions might be—and they were wise and well considered. So New York City is at present back in its chronic condition of vice tempered by blackmail. Whatever slight gain has been made in lessening the number and the enthusiasm of Raines Law hotels—and the most potent factor in this decrease is the financial ebb tide—has been amply compensated for by the furtive prostitution at present in our tenement houses—prostitution in the close and constant intercourse of enforced neighborhood with decent men, decent women, and children of both sexes and all ages.

It is still possible to agree with Samuel Bowles of the Springfield "Republican" and Edward T. Devine of "The Survey" and with clean brewers, that a Saloon Commission is the next step toward our redemption.

The Sick Man of the Caribbean

THE end—if it is the end—of Cipriano Castro fails in a somewhat melancholy way to continue one of the most cherished Caribbean traditions. Deposed dictators, like good Americans when they die, are supposed to go to Paris. The throne totters at just about the time that a satisfactory balance has been deposited in the Credit Lyonnais. And the ex-President, with others of his kind, with dusky exiles from the French West Indies, with all that curious variegated crew which finds a haven in Paris, is supposed to live out in easy luxury the rest of his untroubled days.

When Castro left for Europe, ostensibly to consult physicians, the many who thought that they knew the inside of Latin-American politics quietly winked the other eye. But, as a matter of fact, he was ill, and, contrary to romantic tradition, he had the strange taste to attempt to return—only to be refused admittance to his own country, denied hospitality in the usually hospitable Martinique, and, bullied by foreign warships, dragged from his hotel on a stretcher and sent back to Europe like a deported immigrant.

The little Andino was a very real person—a great one in a way. He came out of the western mountains, a mere nothing at all, and made himself king, as it were, and it is not at all easy to say that he ruled badly. Although the monopolies he created in the later years of his rule were undoubtedly the most flagrant sort of graft, it should nevertheless not be forgotten that in all these Caribbean countries, with their Indian and Negro populations, a certain amount of dictatorial government is necessary.

Egret Killing

EVERY "aigret" sold in the open market means the shooting of a useful bird and the starving to death of a little brood. The "aigret" of commerce—the snow-white plume that crowns a woman's hat—is obtained by shooting parent birds at nesting time. New York State is the chief market for the plume hunters who are devastating the bird colonies of Florida. A bill has passed the Assembly at Albany to prohibit the sale of the plumage of wild birds in all parts of New York State, irrespective of whether

A Million Dollar Tire Challenge

WE CHALLENGE every automobile owner now using

Diamond Tires

To buy and use one tire of **any other make.** Particularly, let the man who **never used** any but Diamond Tires, check up his **experience**—get **first hand** knowledge.

WE CHALLENGE every automobile owner **not** now using

Diamond Tires

To buy **just one** Diamond Tire—to put it on the right rear, the **hardest place** on his car, then check **comparative tire results** carefully and impartially.

A MILLION DOLLARS

For the aggregate saving in tire cost to Automobile Owners this year, as a result, is a **low estimate.** We are very earnest. We publish this advertisement in all seriousness and the utmost good faith. As an economic proposition every user of an automobile should make the test. Note that Diamond tires are made in all types.

the feathers are from birds killed in the State or elsewhere. If the bill becomes law, the traffic in "aigrets" ceases. The bill is being fought by plumage dealers, and has met the approval of Liberty H. Bailey, director of the New York State College of Agriculture, and Gifford Pinchot, chairman of the National Conservation Commission.

Dr. Pritchett on Education

HENRY SMITH PRITCHETT, formerly president of the Massachusetts Institute of Technology, and now head of the Carnegie Foundation for the Advancement of Teaching, is strategically placed to know the tendencies and direction of present-day education. He says:

There have been four distinct tendencies in education this last year:

1. The standardization of college entrance requirements. This is not an attempt to fix the means by which a certain intellectual attainment shall be reached. But it is an attempt to have entrance requirements rest on a basis of four high-school years and represent an intellectual attainment uniform in amount, though not in method.

2. The movement toward high-school education in the South. This has been so definite as to admit of being expressed numerically. In eight or ten States there has been an increase in number of high schools of an average of one hundred and fifty a State (in round numbers).

This is the result of general agitation in conventions, teachers' meetings, and the Southern Education Committee. Public interest has thus been awakened, and this has expressed itself in the action of the various State Legislatures, granting State help in high-school appropriations. This movement is of special interest to the whites, though some negroes reach the high schools.

3. The sharpening of the distinction between the "college" and the "university."

4. The movement toward industrial education, inchoate as yet, and not much further advanced than the feeling that we must have it.

Belief in the efficacy of industrial education is based on the conviction that there are many ways to reach intellectual attainment, and that it is the function of the school to fit for the life vocation as well as to train the mind.

Industrial education is being urged in a campaign of education—through speeches, articles, and conventions—and by experimental schools, conducted by manufacturers, municipalities, and institutions of learning. The Manhattan Trade School and the Hebrew Technical Institutes in New York are examples of successful experimental schools. So is a Cincinnati school, where there is an alternation of work among the pupils, so that half are in school and half in a practising group.

There are many things already in successful practise abroad, in Germany in particular, that could be usefully transferred here. It is probable that the Prussian system of education could not be imported, but the Charlottenburg Laboratory could be, to the advantage of the people. We have no laboratory in this country to which general physical, chemical, and biological problems can be brought for solution.

It was only recently that an engineer was in with a question about converting the sun's heat into energy. That is the sort of problem that every day presents.

"The Transcript"

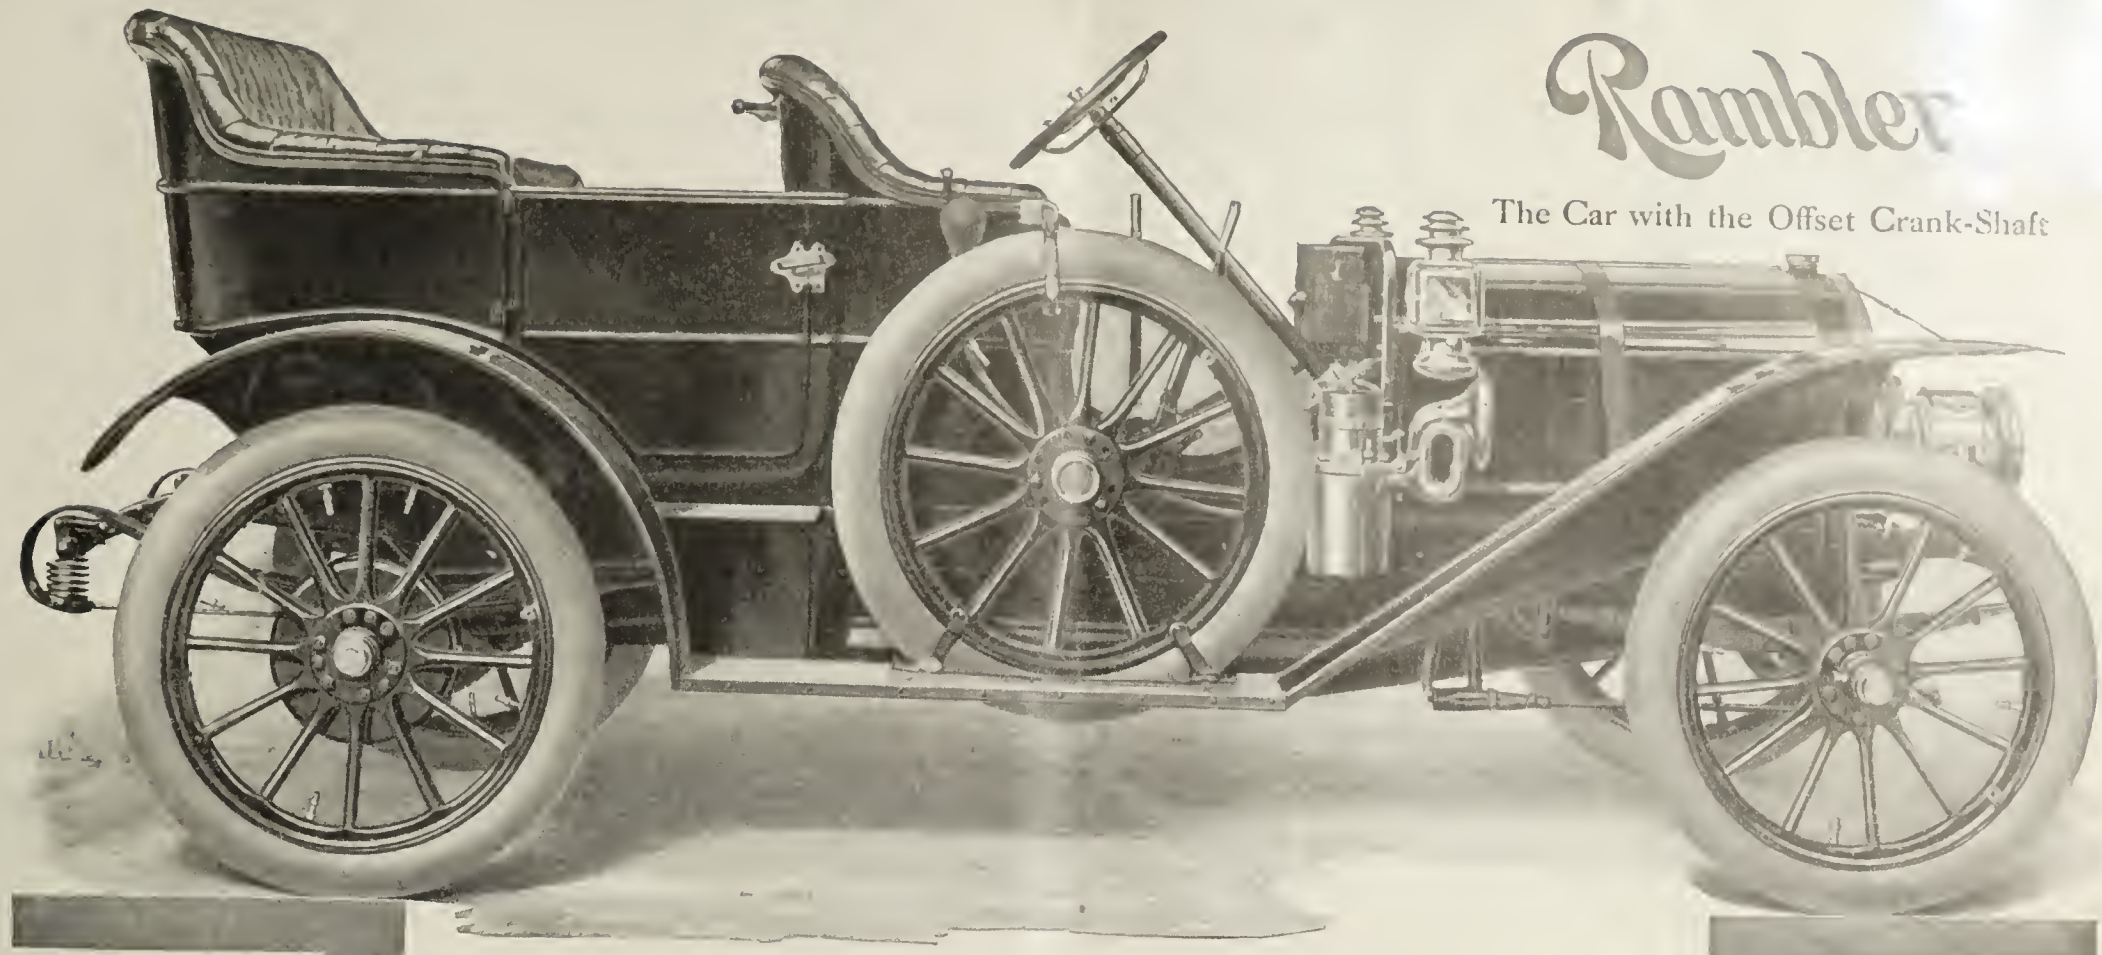
THE time has come to turn over William C. Jones of 35 Frankfort Street, New York, and his weekly paper, "The Transcript," to the crime prosecutor of the county. He has been flourishing and waxing fat in recent years by publishing a pink weekly paper, on sale and eagerly purchased at most of the outdoor news-stands and some of the indoor counters throughout New York. Six of its eight pages are tame reading, being used as a blind for the two pages of criminal advertising. Page one sings the praises of local productions in vaudeville and drama. Pages two and three give news items and jokes, along with two columns of real-estate advertisements. Page four is double-leaded with editorial paragraphs thoroughly harmless, on horses in cities, suffragettes, Edgar Allan Poe. Page five is devoted to a short and moral story. Page eight contains one of T. C. McClure's syndicated departments. It is the weekly outpourings of M. Quad on "The Bowsers."

Pages six and seven are the spearhead of the paper. They contain a directory to the disorderly flats of New York City. The paper is being universally used as a guide by men in search of evil. It is a New York edition of Tom Anderson's New Orleans Blue Book. And it is openly published and entered at the Brooklyn post-office as second-class matter. Names, addresses, and telephone numbers are here given of the places of prostitution. Each advertisement is apparently disguised under the heading of "Massage Given," and yet so bold has this rank sheet become that it will go on to tell of "Miss Ray Sterling assisted by Mariam and Rose." One advertisement tells of a "mother's care given infants and children." A few of the advertisements are unspeakable in what they offer. But most of them are plain bawdy-house

"The Transcript" has a large weekly sale at the leading news-stands of New York, including the Astor House news-stand, the Registrar's Office, City Hall, in the Produce Exchange, in the Hudson Building, and so on in every crowded corner of the greater city.

That out-of-town visitors may be well-informed as to New York's vilest resorts, "The Transcript" is advertised in its own columns as on sale at Clark's Hotel in Boston, Green's and the Continental in Philadelphia, the National Hotel news-stand in Washington, the Eutaw House news-stand in Baltimore. Outlying towns that see the commercial traveler in profusion find a ready market for "The Transcript." Such is South Norwalk, Connecticut, with the sales made by T. J. Magner.

The Can That Can't Be Opened



A MILK CAN has been devised that can't be tampered with. It is a can with a hermetical seal and an apparatus for drawing off the contents in composite samples of uniform quality by means of sterilized compressed air. Its avowed purpose is "to prevent adulteration and contamination of the contents during transportation and sale."

The can will be filled, sealed, and locked at the dairy where the milk is produced, and will not be unlocked or opened until its return to the same dairy for cleaning and sterilization. The fittings, provided to permit removal of the contents of the can at the places of sale, are light brass piping tinned inside and outside. There are check valves that prevent removal of the contents except at the proper exit, and that prevent adding liquid or other materials to the can ahead of its return to the dairy. If, for instance, water is forced in, the can will refuse to work. It is emptied without opening. Sterilized air under moderate pressure forces out the milk when it is needed. And the application of this air gives a thorough mixture of the milk before any sample is drawn, so that the samples in each part of the can are of uniform quality.

Copenhagen has had a similar system of locked cans, but the method of extracting the milk was clumsy and made widespread use and popularity improbable. It remains to be seen how well the cans will stand the hard wear of railway travel and how low the price of the can may be brought. Whatever the durability and the cost, these cans make it impossible to "water" milk.

Lessening Disease Among Immigrants

EFFICIENCY and good-will at Ellis Island touch the welfare of 867,364 persons a year. It is doubtful if anywhere else on this planet a definite act will throw out a series of such immense and widening vibrations. To be human and cleanly at Ellis Island is to preach brotherhood and sanitation. A little more than eleven months ago Robert Watchorn, Commissioner of Immigration, remodeled the dormitories in which immigrants are detained for further examination. He put clean white tiling on the floors and lower wall-sides. Light and air were let in. The beds and bedding were so constructed, sterilized, and boiled as to eliminate bugs and microbes. The remodeled dormitories are flushed daily with a hose. They smell sweet and look clean. This is an esthetic change from the days of the long, dark, and dirty dormitories. But it is more than a pleasurable reform in the nose of the casual visitor. It has affected the health of the newcomers. In those old days of dirt and unventilated overcrowding, the three maladies of measles, scarlet fever, and diphtheria marked out three cases a week from among the immigrants held in detention. That was the steady average of sickness before cleanliness, ventilation, and sanitation received a fair trial. In the eleven months of their régime, no case of the three diseases has manifested itself among those immigrants who on entering the dormitories were not already infected. That is concrete proof of the value of sunlight, ventilation, clean bedding, and the disinfectant properties of hot-water flushing in handling crowded humanity. Public institutions dealing with the problem of lodging immense careless masses of people are learning the lesson that contagious disease is largely unnecessary.

Model Forty-four, 34 H. P., $2,250.
Spare Wheel, with Inflated Tire, Brackets, and Tools, $74. Magneto, $150.

Quality in the Rambler

That quality of refinement in workmanship and material which dominates every detail of the new Rambler is most apparent when it is compared, part for part, with cars costing hundreds and thousands of dollars more.

The perfection of every detail in the making of this automobile can be attributed to that infinite care and pride in his work which every Rambler mechanic brings to his individual task. The selection, indifferent to cost, of the materials used and the finished skill applied to fashioning each part stamps the Rambler as a car of character.

The Rambler Spare Wheel, Offset Crank-Shaft, and other exclusive Rambler features are but evidences of our constant effort to provide for the comfort and satisfaction of Rambler owners.

May we send you the new Rambler catalog or a free copy of the Rambler Magazine, a monthly publication for owners? Rambler automobiles, $1,150 to $2,500.

THE CAR OF STEADY SERVICE

The SWOBODA System of Physiological Exercise

Without medicine or apparatus whatever, I am building vigorous brains and superb human bodies, capable of overcoming and resisting disease,—and establishing great nervous force.

WHEN I say that I teach a different kind of exercise, something new, more scientific, more rational, more effective and immeasurably superior to anything ever before devised, I am repeating what thousands of prominent **men** and **women** are saying for me who have profited by my instructions.

My instruction embodies the ideal principles of attaining and preserving perfect health. It is not a problematical theory, but a system of physiological exercise based upon absolutely correct, scientific facts. If you will follow my instructions for a few weeks, I will promise you such a superb muscular development and such a degree of vigorous health as to forever convince you that intelligent direction of muscular effort is just as essential to success in life as intelligent mental effort.

Medicines Are Inadequate

No pupil of mine will need to digest his food with pepsin or assist nature with a dose of physic. I will give you an appetite and a strong stomach to take care of it; a digestive system that will fill your arteries with rich blood; a strong heart that will regulate circulation and improve assimilation; a pair of lungs that will purify your blood; a liver that will work as nature designed it should; a set of nerves that will keep you up to the standard of physical and mental energy.

Brain Is Weakened By a Poor Body

I will increase your nervous force and capacity for mental labor, making your daily work a pleasure. You will sleep as a man ought to sleep. You will start the day as a mental worker must who would get the best of which his brain is capable.

I have no book, no chart, no apparatus whatever. My system is for each individual; my instructions for you would be just as personal as if you were my only pupil. My pupils range from 18 to 86 years, and include both men and women.

When a man's health fails, it seems inherent by nature to look for some magic cure, something he can take into his stomach that will do the work of his digestive organs, bowels, liver or kidneys. The first dose may afford him some relief, but with each succeeding one he finds the effect of the medicine lessened, until he is eventually in a worse condition, for he has allowed a stimulant to perform the work of his vital organs.

Successively he wends his way through various treatments, but his reason finally prevails and teaches him that he must look for a natural method, one that will build up the organs themselves and make them perform their functions naturally. Such a method I offer, so why waste time and money in these futile attempts when you can take the reliable road to health and strength?

Here Are Some Quotations From Letters Received From a Few of My Pupils

"Effect was almost beyond belief."
"Chest increases 5½ inches in 60 days."
"All your promises have been fulfilled."
"Swoboda System is an intense pleasure."
"All run down; built up in a month."
"Muscles developed to a remarkable degree."
"Thought it impossible to get such results."
"10 minutes of your system better than hours of any other."
"Almost a skeleton; increased weight 65 pounds."
"Just the thing for professional men."

The Swoboda System is taught by mail with perfect success; no medicine or apparatus used; requires but a few minutes, at your most convenient time, in your own room. I will send you detailed information about the Swoboda System, free. Write for it today.

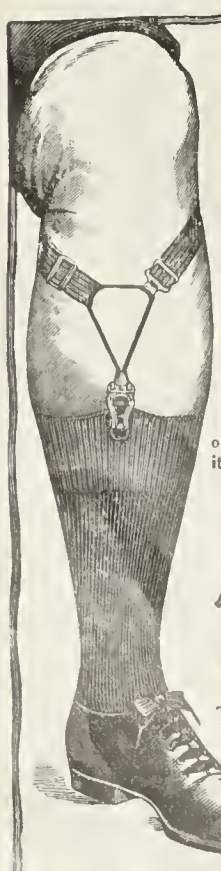
ALOIS P. SWOBODA, 445 Union Trust Building Washington, D. C.

The Line of Courage

(*Concluded from page 21*)

he dissolved the morphia tablet and filled the syringe quickly. The instrument he slipped between his teeth. Once in that forbidding tunnel, his hands, he knew, would be busy with something else.

He had said nothing, but the chief understood. He put a hand on Selfridge's shoulder. "You'll have to go first," he said. "It's close quarters. If I'm ahead, you can't get at her." Selfridge nodded, and started in.



On his hands and knees he advanced a dozen feet into the blackness, his chest constricted, his heart leaping at his throat. Then, all at once, he could go no farther. Something held him fast and panic seized him. He thrust out with a leg in a frenzy of terror, and felt it gripped. The chief's voice steadied him. "Take it easy; it's only a splinter's stuck in your coat." He was released, and, for a moment, his arms gave way and he lay on his stomach, the sweat of fear bathing his body. His muscles seemed to be jelly, as he did his best to make them lift him, and he began repeating to himself: "God, God, take care of me." The chief's hand pressed on him, and he dragged himself forward until the cracking of wood and a fall of powdered brick upon his head crumpled him up once more alongside of a timber. Behind him he could hear the chief urging him on; but, for a minute, he could not move. His lips worked mutely with the words: "God, God, take care of me."

But gradually he became aware of a pencil of light filtering from above. It made the blackness blacker, yet, as if it were the open road to sunshine and air, he regarded it and from it gained the strength to go on. Abruptly he felt that the mass above him was not so close, the darkness not so dense. He reached out a hand, and it rested on something which yielded. He knew this instantly for what it was, and, with the recognition, fear dropped from him as it were a cloak. *This* was flesh. *This* was a woman. He raised himself to his knees and spoke: "You're all right now," he said, and he was speaking, not to himself, but to her. "I'm the doctor. I'm going to give you something to take away all the pain. And then we'll get you out of here in a jiffy."

From his mouth he took the hypodermic needle and, over his shoulder, he said to the chief: "You'd better go back now and start your men. I'm going to stay here and have a little talk with grandmother."

THEY say that for two days after the collapse of that little house, Jim Matthews, for the first time in his life, kept to his home and denied himself to every one. To every one but the fire chief who had been in charge at the ruins. He was sent for by Matthews, and came away from the house swearing that he wouldn't stand for being called a liar, and that if he wasn't "fired" he'd resign. But neither of these things happened, though something else did happen. Chief Surgeon Matthews, it became known, was in a bad way physically and was ordered by his physician to go West and stay there. City Hall chuckled—behind its hand; for somehow the story had leaked, and to confirm it, was the spectacle of Giant Jim, the lines of his heavy face deepened, his eyes dull, of a sudden the presentment of an old man. An old man who, according to his creed, had set him up an idol, only to have it fail him in the hour of trial. But also an old man whose grip had not yet loosened and who was bigger than he knew. One morning in his mail Selfridge found his appointment as chief surgeon. No reason was given for his selection, and memories which he kept to himself forbade him to guess. After all, as he was acutely conscious, it was but a hair-breadth's edge which courage traversed, and it was very easy to slip. If others knew—? But they, it seemed, did not know, or, again, perhaps the world was more generous than Selfridge believed.

And so, walking out of his office at City Hall one day, he came upon Jim Matthews. He had never met him, and instinctively he turned away. But Matthews called him by name and stopped him. His arm was extended, there was something in his face that Selfridge wondered he had never noticed before. "I hear that was a tight squeeze you had getting at the old lady the other day, Doctor," he said. "And I—just wanted to shake hands with you."

In the World's Workshop

Devoted to Facts, Observations, and Thoughts Concerning Common Industrial Methods, Products, and Influences

By WALDO P. WARREN

TELEGRAPH LANGUAGE

THE telegram occupies a unique place in business, entirely aside from the quick transmission of intelligence. The brief language that has been universally adopted as appropriate for telegraphing enables a business man to put his case to another in a way that he could not do by letter or telephone.

In writing a letter to a manufacturer to ship a duplicate order by a certain date you would almost naturally allow your own mind to question his ability to meet your schedule, and you would think it proper to let him say whether he could do it or not. Your own plans would be altered to suit his convenience, whereas if you had known that in the first place you might have made other arrangements all around. If you telephoned it might work the same way.

But when you telegraph him you think it all out, estimate the time necessary to execute the order, and then send this message:

"Ship Friday—duplicate last order; if can't fill, cancel, and wire at once."

The effect is far different than it might be from the use of a letter. The manufacturer must either fill the order or cancel it. If he fills it he will accept your schedules, or if he cancels it he will doubtless tell you the nearest he could come to it.

You could write a letter in the same wording you would use in a telegram. But it wouldn't come with the same effect, because it isn't customary, and it would sound curt and out of place, and in nine cases out of ten you wouldn't really do it. The recipient knows that you don't pay for your letters by the word, and that extreme brevity would be affectation.

It is in the common acceptance of the briefly worded vernacular of telegraphic communication that the telegraph holds a peculiar point of advantage which will not be usurped by quicker mail service or cheaper telephone rates.

The possibilities of public education on the unique utility of telegraphic brevity are very great, and doubtless constitute a line of development which will some day greatly augment the popularity of the telegraph not only for business but for social communications.

LESS NOISE

SOME of the world's inventive geniuses should turn their attention to the problem of eliminating noise in factories. For hundreds of men and women to work day after day in a factory room where the noise is so deafening that a man can't hear another shouting into his ear through both hands is a condition worse than any human being ought to be required to endure.

From an economic point of view, the waste of human energy and the deadening of faculties that normally would grow more acute would be appalling if it could be measured and appreciated. In many places even ordinary precautions against noise are not taken, but in others the machinery is so constructed that nothing but some mechanical device designed to suppress noise could make any noticeable difference. The principle of confining the noisy parts in metal shells, such as are used on noiseless automobiles, may be the possible line of development, or it may be some new principle not now in use.

Until the economic claims can be urged as a reason for giving definite attention to this problem, public sentiment should bring what pressure it can to bear upon manufacturers and others who might at least direct the attention of inventive genius to the matter, and at least afford the amelioration of right effort. Trace down one hundred varieties of noise and you will find that in ninety-nine cases no real effort has ever been made to eliminate the noise, and ninety-eight of the owners solve the problem for themselves by getting far enough away from their own plants

The Garland Way

The Old Way

Madame, don't stoop

You do not stoop if you use a Garland Elevated or Cabinet Gas Range.

You stand erect, do all your baking or broiling in the natural, easy way.

Think of the pleasure and comfort you can have when cooking—no more back breaking—no more stooping.

This Elevated Range is an *original* Garland innovation. But there are scores of imitations—none so good as Garlands.

A **Garland** costs you no more than inferior grades.

Safety Lighters

Garland Gas Ranges have the only perfect safety lighting attachment.

When the oven door closes or opens, automatically, a shutter over the lighter closes or opens with it.

So you see it's absolutely safe, for no gas can escape—or reach the flame. The oven burners cannot be lighted until the oven doors have been opened. Any gas that may accumulate flows out—and no flash or explosion could occur.

Safety Latch

On every oven door of a Garland Elevated Gas Range is our patented Safety Latch—another safety feature found only on the **"Garlands."** If any gas should leak into the oven and ignite while oven door is closed, the force alone opens the door slowly—just enough for it all to escape.

The whole oven is aluminized, making it absolutely clean and sanitary.

Garland Gas Ranges with proper care will last a lifetime. Over 50 styles to choose from.

Garland Copper Coil Water Heaters

Most efficient, satisfactory and economical.

No rusty water. No leaky joints.

A luxurious bath for 2 cents.

37 Years

We have been making "Garlands" continually since 1872. They command the largest sale of any stove made. Their popularity has made us the "largest makers of stoves and ranges in the world."

Using only the costliest materials, employing the most skilled mechanics, and combined with our 37 years' experience, has made the "Garland" known the world over as the "world's best."

Jim Heddon's Favorite Casting Rod

Here is my own Casting Rod. I am having it made for all fishermen who want it, at my factory for the first time this season. It has my own pet ideas. That's why you can make a longer and more accurate cast with it.

There's my patent locking reel band which locks and releases the reel by a slight hand movement. This is a two-piece rod with the resilience of a one-piece rod and almost the carrying convenience of a three-piece. I use only select imported bamboo and only the butt cuts (first 6 feet). These are air dried for months.

Of course I guarantee this rod—guarantee it against any breakage from reasonable use. It will outlast any other style of rod made—wood or steel.

Send for My Free Pamphlet on Bait Casting

I've just got out a new catalog with several pages on "The Art of Bait Casting"—the best points of my own experience, and my articles for the outing publications. If you are a bait caster, or want to be one, it will give you some valuable tips. It has a lot of colored illustrations, and it shows my Dowagiac Split Bamboo Bait Casting Rods—some of finer detail and finish than others, but all guaranteed. Write me.

Am placing many of my students as instructors in commercial colleges. If you wish to become a better penman, write me. I will send you FREE one of my Favorite Pens and a copy of the Ransomerian Journal.

C. W. RANSOM
289 Reliance Bldg., Kansas City, Mo.

so they forget how much noise their machinery makes. But millions of human beings can not get away. They must stand over the throbbing and buzzing machinery hour after hour and day after day and year after year. The blessings of many generations will fall upon the head of whoever can silence the noises that make unendurable the din of the world.

Whatever measures any one has found effective in the suppression of noise should be given the widest possible publicity.

SPECIALIZED WORK

WHATEVER may be said of the soul-warping aspects of the minute subdivision of labor, it must be admitted that certain universal ends are gained by it which otherwise would be impossible. It makes possible the employment of millions of persons whose intelligence and skill might not be such as to enable them to earn a living if more executive ability were required of them. It develops the economy of specialized skill, in which every user of manufactured products ultimately shares. It makes it possible for a genius to multiply his abilities a thousandfold, and bring the results of his work to a vastly larger circle of users. It lifts the load of trouble from many whose minds are so organized that the necessity of doing a variety of things and making them fit together would be a severe nervous strain. It has its faults—this system of making one man do one little process all his life. It limits the horizon of many a mind that is worthy of greater things. But it may be working out lessons in character which could not be learned by a larger freedom. The whole test of universal worth is not whether or not a certain form of work is pleasant. Millions do not know what is good for them, and would, if they could, overthrow the very influences that are alternately leading and driving them higher in the scale of usefulness. One of these universal influences is the subdivision of labor. It may have its unpleasant side, but the world can not do without it, and perhaps never will; and the very man who rebels against the system, and sighs for the old days when one man made the whole pair of shoes, or the whole chair, may be the man who most needs the process of being fitted to some useful groove in the work the world needs to have done.

PENCILS

OF THE millions of people who use pencils, perhaps only a few hundreds, aside from the factory people, ever saw them made. It is an interesting process, involving some fifty different steps, a great deal of specially constructed machinery, and a number of interesting forms of specialized skill. Owing to the time required for certain processes, such as boiling and drying the cedar, it takes eight weeks to make a pencil—perhaps five times as long as it might take to make an automobile. There are many varieties of pencils—upward of one hundred—each fitted to certain uses. In order to have the right pencil reach the right man, it is necessary for the pencil-maker to educate the public as to the advantages of using certain pencils for certain work. The man who thinks of pencils as hard, soft, and medium, and supposes that is all there is to the science of pencil selection, has much to learn as to the satisfying response of a pencil that is scientifically attuned to a certain kind of work.

TOUCH-BUTTONS

The best of yesterday may be the mediocre of to-day and the worst of to-morrow.

Beyond the high ideal is another ideal—the part of the dream that can be built on the earth.

The solution of every problem requires chiefly the receptivity of available wisdom and the utilization of accessible opportunity.

Seek the work that you can love; where the heart is there the head is also, and even the arms need the head and heart.

The successful flash of genius after years of fruitless effort may attest the humility of self-assurance after repeated failure.

CAPITOL Boilers & Radiators Pay Compound Interest On Your CAPITAL

The healthfulness and economy of heating your home with hot water or low pressure steam has the earnest endorsement of physicians and scientists—the men who know.

CAPITOL BOILERS are so designed and made as to give every possible inch of heating surface to the fire, thus assuring a greater heating efficiency than is found in any other boiler—this also means economy in fuel. There is not much difference in the cost of installing—but there's a saving difference in operating expenses, if you put in

CAPITOL BOILERS AND RADIATORS
Hot Water or Low Pressure Steam

CAPITOL BOILERS require little attention—a woman or child can operate them. They can be placed in any home at any time—without inconvenience, without disturbing the daily life—and the home heated with CAPITOL BOILERS and RADIATORS will have every room warm—a healthy summery atmosphere—for less money than with any other form of heating. Write Dept. Q. for free book "Heating the Right Way." It will pay you to read it.

CAPITOL BOILERS and RADIATORS are equally desirable for Churches, Schools, Flat and Office Buildings.

United States Heater Company

A Living From Poultry on a City Lot

$1,500 in Ten Months from Sixty Hens on a Corner of a City Lot

TO the average poultryman that would seem impossible and when we tell you we have actually done a $1,500 poultry business with sixty hens on a corner in the city garden, 40 feet wide by 40 feet long, we are simply stating facts. IT WOULD NOT SEEM POSSIBLE TO GET SUCH RETURNS by any one of the systems of poultry keeping recommended and practiced by the American people, still it is an easy matter when the new PHILO SYSTEM is adopted.

The Philo System is Unlike All Other Ways of Keeping Poultry

and in many respects just the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard-of results that are hard to believe without seeing.

The New Syatem Covera All Branches of the Work Necessary for Success

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner.

Two-Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss, and the broilers are of the very best quality, bringing here three cents per pound above the highest market price.

Our Six-Montha-Old Pulleta Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone of any description is fed, and the food used is inexpensive as compared with food others are using.

Our new book, the PHILO SYSTEM OF POULTRY KEEPING, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and 15 pages of illustrations showing all branches of the work from start to finish.

Don't Let the Chicka Die in the Shell

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick and believed to be the secret of the ancient Egyptians and Chinese which enabled them to sell the chicks at 10 cents a dozen.

Chicken Feed at 15 Cents a Buahel

Our book tells how to make the best green food with but little trouble and have a good supply, any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food as it is to keep a cow without hay or fodder.

Our New Brooder Savea 2 Cents on Each Chicken

No lamp required. No danger of chilling, over-heating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all the lice off the chickens automatically or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can easily be made in an hour at a cost of 25 TO 50 CENTS.

Send $1.00 and a copy of the latest revised edition of the Philo System will be sent by return mail. The latest edition has many pages of additional reading matter, and by ordering direct you are sure to get the latest and most approved book.

A TESTIMONIAL

VALLEY FALLS, N. Y., October 22, 1908.

DEAR SIR: A year's observation and some experience of my own, confirm me in what I wrote September 5, 1907. The system has been tried so long and by so many, that there can be no doubt as to its worth and adaptability. It is especially valuable to parties having but a small place for chickens. Seven feet square is plenty for a flock of seven.

Brickbats and Bouquets

Kind Words and Bitter Spoken by Editors, Subscribers, and Readers, Regular and Occasional About Collier's

"CHATTANOOGA, TENN.

"As a frequent reader and a warm admirer of your valuable paper, because of the excellent quality of reading matter it always contains, and also for the fairness and conservative tone it entertains at all times toward this section, I therefore, as an humble adopted citizen of the Southland, take it upon myself to express thanks and appreciation. J. C. YOKUM."

✣

"NEW YORK.

"After receiving COLLIER'S, I have come to the conclusion that it is hardly worth while reading, much less waste my time on it. A. DEYOUNG."

✣

"CORNELL UNIVERSITY, ITHACA, N. Y.

"COLLIER'S editorials are always fearless, strong, and interesting. Behind them one feels the personality of the writer. COLLIER'S fairness toward all parts of the country excites my growing admiration. I am a Southerner, 'bawn and bred,' and I doubtless possess that sensitiveness to criticism that most Southerners possess; yet I never read an editorial in COLLIER'S about the South that offended me, or with which I did not agree. Your editorials concerning that great section of our country are filled with sympathy and insight. "SMILEY BLANTON."

✣

"NEILLSVILLE, WIS.

"I return unfilled the blank you sent to-day for subscription renewal, because of your narrow views in regard to matters of personal liberty. L. J. ELERT."

✣

"It is at times necessary for an editor to remove some epidermis. A good job merits applause. COLLIER'S, using A. L. Erlanger of the Theatrical Trust as a subject, sets a mark which future newspaper and magazine hide-merchants will find hard to reach. It is submitted here as the best and most artistic job of skinning that has fallen under the eye of the writer in many a long day."

—Topeka (Kans.) *Capital.*

✣

"Klaw and Erlanger do not advertise in the Collier publication."—*Town Topics.*

✣

"COLLIER'S has begun vigorous war against the Erlanger theatrical trust. We hope the fight will be successful. The probabilities are in its favor. COLLIER'S is a great force to begin with, and it may enlist to its aid some of the newspapers which are not afraid to say their souls are their own."

—Richmond (Va.) *News-Leader.*

✣

"NEW YORK.

"I read your paper pretty thoroughly and I like your editorials. They are usually clear-headed and temperately expressed. But it seems to me that you lost your balance when you wrote that editorial on Erlanger. I have a notion that the situation you speak of is serious, but your wrath kept you from making it plain. Now that you've had time to cool off, won't you please explain what it's all about? EDWARD F. MASURY."

✣

"MT. CLEMENS, MICH.

"At times I wonder whether there is a limit to the editorial foolishness of your publication. FRANK E. NELLIS."

✣

"This is strong language, and, coming from a journal of so much influence, will have great weight throughout the North. Should the other influential journals of the North adopt this policy, the barriers existing between the two sections would soon be wiped out."

—Roanoke (Va.) *Times.*

✣

"There may be a better paper published in America than COLLIER'S, but we do not believe there is. Certainly we have never

IN CONFERENCE—*Owners of buildings, factory superintendents, architects, heads of industrial concerns, invariably decide upon The Carey Roof Standard, whenever a careful and thorough study of all known roofing materials is made—for service, durability, safety, economy of upkeep and absolute insurance of uniform standard construction. The same for nearly a quarter of a century.*

THE STANDARD is Carey's Flexible Cement Roofing—the ideal roof covering for any building.

It is the only standard roof. Standard in manufacture, standard in quality, standard in thickness and in weight, year in and year out the world over. Always uniform.

Carey's is a combination of an inner plastic compound with outer coverings of wear-resisting materials that improve with age and give the highest degree of protection and efficiency. It is the only perfect finished roofing ready to apply.

The Carey Roof Standard

Carey's Flexible Cement Roofing is not dependent on the workmen who lay it. It is built complete at the factory. There is no way for the workmen who lay it, or for any one else, to lessen the quality of its material or cheapen the work.

No roof can be a perfect roof that must be manufactured on top of the building. "Built up" roofs are failures because the manufacturer of the materials cannot regulate or oversee their construction.

Carey's Flexible Cement Roofing is easy to buy. It is carried in stock at 45 distributing points, and by leading dealers everywhere.

FREE SAMPLE. *A sample of Carey's Flexible Cement Roofing showing our Standardized Construction, together with interesting Booklets on Roofing, will be forwarded upon request. Get this sample and this helpful printed matter before deciding upon any roof.*

The Howard Watch

ALMOST every day there is brought to light some new anecdote of the HOWARD Watch, or some interesting record of its excellence.

The *Daily Tribune*, of Goldfield, Nevada, recently contained the following news item under the heading, "A Watch with a History Among the Indians:"

"Dick Jones, of Ryolite, came to Goldfield yesterday with a valuable gold watch obtained from an Indian squaw in exchange for two ponies. The Indian, when questioned as to her possession of the watch said:

'Long ago pale faces come Death Valley: too hot, no water, they die, Injun get watch, put in ground many moons, now swap.'

"The watch," continues the *Tribune*, "is forty years old; it has an E. Howard movement of the date of 1868, and in spite of its years of service, burial in the ground and handling by the Indians, is still a marvel as a time-keeper." The price of each HOWARD watch—from the 17-jewel in a fine gold-filled case (guaranteed for 25 years) at $35.00, to the 23-jewel in a 14-K. solid gold case at $150.00—is fixed at the factory and a a printed ticket attached.

Drop us a postal card, Dept. A, and we will send you a HOWARD book of value to the watch buyer.

"COLLIER'S is regularly surcharged through and through with that fine American spirit that always has been and always will be free, fearless, and broad-minded."—Lawrence (Mass.) *Telegram*.

✣

"ALBUQUERQUE, N. M.

"COLLIER'S criticisms are quite often idiotic rather than unfair.

"Dr. MCMULL."

✣

"WATERTOWN, N. Y.

"Your short-story department is about forty miles behind the rest of your organization and is losing a lap or two each week. Please give us better stories.

"WILLIAM H. AUSTIN."

✣

"LULING, TEXAS.

"Am spending two cents to tell you that, aside from the 'Japanese Schoolboy Letters,' your paper is punk. What's the matter, did he get too high-priced for you? Hoping he will come back.

"S. C. DOEHRING."

✣

"The literature which COLLIER'S publishes is the very best in the language."

—Bangor (Me.) *News*.

✣

"The truth about the South, so many years crushed to earth, is beginning to rise again these days with somewhat astonishing frequency. Even poor old Justice and good old Common Sense are beginning to get a show. One must almost rub his eyes these days to be sure he is not nodding when he reads the opinions that some of the more enlightened of our Northern contemporaries hold in regard to the South and things Southern. Time is a great eye-opener; even Rip Van Winkle woke after twenty years—and some of our Northern contemporaries have not taken more than some forty years. Which, everything considered, and to speak in the vernacular, is 'going some.' It is genuinely encouraging.

"In a recent issue of COLLIER'S WEEKLY there is an editorial comment along this line that is astonishing in its frankness and refreshing in its disposition to measure all sections with the same yardstick. We take pleasure in reproducing it in full. . . .

"We congratulate COLLIER'S upon its publication of an editorial markedly sincere, just, clear-eyed, and good-hearted. So wholesome an attitude, when held to, must in the long run result in that journal's doing its country some service."

—Columbia (S. C.) *State*.

✣

"PHILADELPHIA, PA.

"What is the matter with Rudyard Kipling? Why doesn't he write a real story once in a while? His 'Little Foxes' was about as interesting as a city directory and not quite as exciting as a consular report on crops. As a sleep producer it has the Ostermoor mattress looking like a bag of chestnut burrs.

"RICHARD A. FOLEY."

✣

"MANILA, P. I.

"My copy gets pretty well worn before the last fellow in the mess has read it.

"ARTHUR A. HOOVER."

✣

"SALT LAKE CITY, UTAH.

"COLLIER'S shows a more sympathetic understanding of all parts of the country than any other paper has ever succeeded in doing. After former President Roosevelt, it is the greatest force for moral uplifting in America to-day. It is truly a national magazine. JOEL NIBLEY."

✣

"COLLIER'S handles topics that are up to date every week in the year."

—Michigan City (Ind.) *News*.

✣

"COLLIER'S must feel right proud of the result of its efforts to defeat 'Uncle Joe' Cannon for Speaker. Out of 217 Republicans in the House yesterday all but 13 voted for Cannon."

—Burlington (Ia.) *Hawkeye*.

✣

"What an ideal government we would have if we could abolish Congress and let COLLIER'S discharge the functions of the House of Representatives."

—Sioux City (Ia.) *Journal*.

YOUR Folks Used to Make Good Gravy

—maybe they do yet, but in many a household it is a lost art.

¶ Grandmother's gravy—how smooth it was—how good it tasted! That was because she thickened it with Kingsford's Corn Starch and ***not*** with flour. Flour makes lumpy gravy and that raw taste.

KINGSFORD'S CORN STARCH

is the right thickening for gravies, for sauces and for cream soups.

¶ Remember one thing—you can't make perfect pie-crust without it—one part Kingsford's to two parts flour is the recipe. Also, it makes a puff-paste that melts in the mouth.

¶ *A Word to Kingsford Friends*—Send us the name of any young housewife who thinks that Corn Starch is used only for puddings or desserts; we will send her our new little Book V, "What a Cook Ought to Know About Corn Starch." We will gladly mail you without cost a copy too if you like.

T. KINGSFORD & SON, OSWEGO, N. Y.
NATIONAL STARCH CO., Successors

The ANGELUS PLAYER-PIANO

Ever since its introduction in 1895, the ANGELUS—the pioneer piano-player—has made steady progress toward the goal of perfection, and thus, by keeping in advance of its imitators, has maintained its superiority. Now comes .

The New 88 Note Instrument

Heretofore, whether in cabinet form, or installed within the case of a piano, the ANGELUS has been made with a range of 65 notes—in this respect like other piano players—but now we are building it so it will play 88 notes, the entire keyboard of the piano. The new ANGELUS gives to its user, the same playing compass as that of the concert pianist, for it is thus possible to play every note, from the lowest in the bass to the highest in the treble.

The patented and exclusive features of the ANGELUS instruments, include the Phrasing Lever, MELODANT, the Diaphragm Pneumatics, the Melody Buttons, the ARTISTYLE music rolls, and the Duplex Spool.

The KNABE-ANGELUS, the EMERSON-ANGELUS, the ANGELUS-PIANO in the United States; the GOURLAY-ANGELUS and the ANGELUS-PIANO in Canada.

THE KING OF ALL ENCYCLOPEDIAS, AT PRICES NEVER BEFORE APPROACHED

You have always meant to get an Encyclopedia—every intelligent man does. NOW IS THE TIME. The possession of this latest and greatest of all ENCYCLOPEDIAS puts you ten years ahead of your less enterprising neighbor. Other books tell you about ONE thing; this tells you EVERYTHING. It covers every phase of human knowledge, discovery, experience and belief. It records every step in the stately march of human progress. It covers all epochs of literature, all forms of government, all systems of religion. All gallant deeds and stirring scenes, all victories of brain or brawn, all marvels of science and invention, all the glorious achievements that have made history luminous and civilization possible are found in the ten thousand teeming pages of these splendid volumes. Can YOU afford to do without it?

Its Matchless Authority. The most brilliant thinkers of the century are enrolled as its contributors. Its writers include such men of world-wide fame as Matthew Arnold, James Bryce, John Morley, Andrew Lang, St. George Mivart, Canon Farrar, Edmund Gosse, John Stuart Blackie, Leslie Stephen, Edward Freeman, Lord Kelvin, Robertson Smith, Sir Norman Lockyer, Thorold Rogers, Saintsbury, Swinburne, Simon Newcomb, John Fiske, Cardinal Gibbons, John Bach McMaster, Admiral Melville, Thomas B. Reed, Carroll Wright; and these with hundreds of others equally famous give it an authority so overwhelming, so incomparable that it reigns without a rival in the realm of scholarship.

Incomparably Up To Date. Our 1909 Edition is fresh from the press and contains events as recent as the election of President Taft, the latest airship flights of the Wrights and Zeppelin, the return of the United States Fleet from its momentous world-voyage and the great Italian Earthquake.

Special Half Price Offer. To emphasize the issue of the 1909 edition of this magnificent work we are making for a limited time only a special introductory offer at just ONE-HALF the regular price. The cloth set we price at $37, the half morocco at $46. Moreover, with each of the first hundred orders to reach us we will send absolutely FREE Webster's Huge New Encyclopedic Dictionary, retailing regularly at $8.50. It is bound in Full Sheep, marbled edges, gold stamped and indexed. This combination of the world's most famous Encyclopedia and equally famous Dictionary gives you a magnificent reference library of enormous extent and unmatchable value.

Send No Money Now. Sign and mail the attached coupon and we will ship you a complete set for five days' FREE examination. You can return them AT OUR EXPENSE if they fail to give you entire satisfaction. We pay all transportation charges. Should you desire to purchase, then send us $1.00 as first payment and pay the balance at the rate of $2.00 per month for the cloth and $2.50 per month for the half morocco.

Do Not Delay. At these phenomenal prices the introductory sets will vanish like magic. It is the opportunity of a life-time. Enrich your mind, adorn your library, delight your family with this stupendous work. Write TO-DAY. Remember, No risk! No obligation! You purchase only if satisfied.

When A Man Dines

WHEN a man dines he should be in a pleasant state of mind. He should not be subject to any annoyance, little or big.

For example, he shouldn't take up a salt shaker and find it clogged. That is bad for his pleasure at the time and for his digestion afterwards.

Perhaps that is why we put only Shaker Salt on our tables.

THE SHANLEY COMPANY

M. J. Shanley

"The famous New York *Restaurateur*."

The Salt that Always Flows Freely

SHAKER Table Salt is the salt that always flows freely. Simply tip the shaker and out flows Shaker Table Salt *every time*—always "loose"—always dry.

No bother—no time nor temper lost—no shaking—no pounding—no poking as there is with *other* salt.

The Table Salt that is Properly Packed and Protected

Shaker Table Salt is the table salt that is properly packed and protected. It comes to you in a convenient and sanitary salt box, having a patented spout for filling salt shakers without bother or waste. This box is air-tight, water-proof, dirt and dust-proof, germ and odor-proof—keeping Shaker Table Salt protected from contaminating germs, odors and impurities of the grocery and kitchen which *all* bag salt *must* absorb.

The Only Table Salt that is Free of Dangerous Impurities

Gypsum is the *most* dangerous impurity that *nature* has placed in *all salt*. Gypsum makes splendid *fertilizer* and *plaster of paris*, but it's a dangerous thing to *eat*, because it combines with water in your body—forms little balls of plaster—gravel—gall stones. Your doctor will tell you that this is the reason why the gypsum in ordinary salt often causes such serious disorders of the liver, kidneys and spleen.

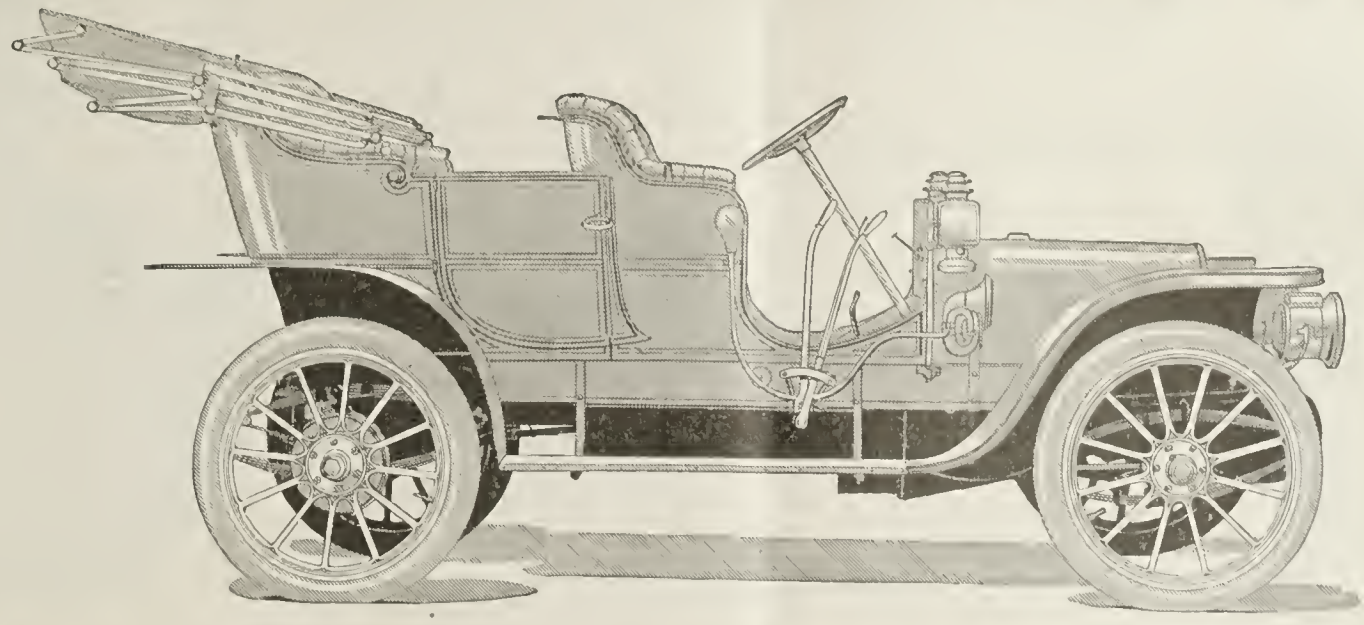
We are *sole owners* of the *only* process of salt *refining*—the *only* process which removes the gypsum and other *dangerous* impurities which naturally contaminate *all* salt. That is *why* Shaker Table Salt is the *only* table salt that is absolutely free of dangerously unhealthful impurities—the *only* salt that is *safe* and fit for your table. We will gladly send you, upon request, Government proof of all this.

Its freedom from dangerous, rank impurities gives Shaker Table Salt a pure, delicate flavor—a "saltiness" and savor not found in other table salt, and the fineness of grain in Shaker Table Salt enables you to flavor food as delicately as the most fastidious taste could wish.

Avoid Dangerous Substitutes —Order Shaker Table Salt From Your Grocer Today

Shaker Table Salt costs about 10 cents a *year* more than common, rank, sharp, bitter-tasting, coarse, gritty, soggy, lumpy, dangerously impure salt.

The Diamond Crystal Salt Co., Station E9, St. Clair, Mich.



Shaker Table Salt. Diamond Crystal Cooking Salt. Makers of

The Only Salt 99 7-10 per cent Pure —Proved Best by Government Test

Model D
$2800

FRANKLIN AUTOMOBILES

The Franklin idea is common sense, and that is what you want

THE fundamental Franklin principle is light weight. Useless weight is unscientific and wasteful. The starting point of Franklin light weight is Franklin air-cooling. All the weight of water-cooling apparatus and the heavier construction necessary to carry it are obviated. The advantage of light weight is developed throughout. There are simplicity and compactness in every part. Strength is obtained, not by bulky and heavy construction, but by the use of the most suitable materials scientifically treated and distributed.

The gain in ability and safety through light weight, together with the saving in operating cost, especially tire cost, is of supreme importance. Tires are the most expensive item in automobile maintenance. Weight is the biggest factor in wearing out tires. Tire saving alone makes Franklins the most economical of all automobiles.

Road shocks and vibrations are a serious problem in motoring. Franklin construction goes to the heart of the question. Comfort is founded in the design and built into the structure. Shocks and vibrations are taken up and absorbed before they reach the vehicle and the passengers. This is done through a full-elliptic spring suspension and resilient wood chassis frame. This combination of spring suspension and resilient frame gives a degree of easy riding obtainable by no other means. There is entire freedom from jar and vibration; you can make time over all roads, thus greatly increasing touring mileage and adding to the enjoyment of automobiling.

That Franklins possess these advantages over other automobiles is something you can determine for yourself. Ask any of the thousands of Franklin owners. Weigh and examine a Franklin. Ride in it. Then weigh and examine other automobiles and ride in them over the same roads at the same speed.

Franklin Model D

Model D is the most sensible in size and weight of all five-passenger automobiles. It is not burdened with needless complication and cumbersome apparatus. Weather and roads that put other automobiles out of service do not stop Model D. Its ability and economy for everyday service are unmatched. You can afford to use it.

Model D gives an easy-riding comfort and delight unknown in the heavy, rigid automobiles.

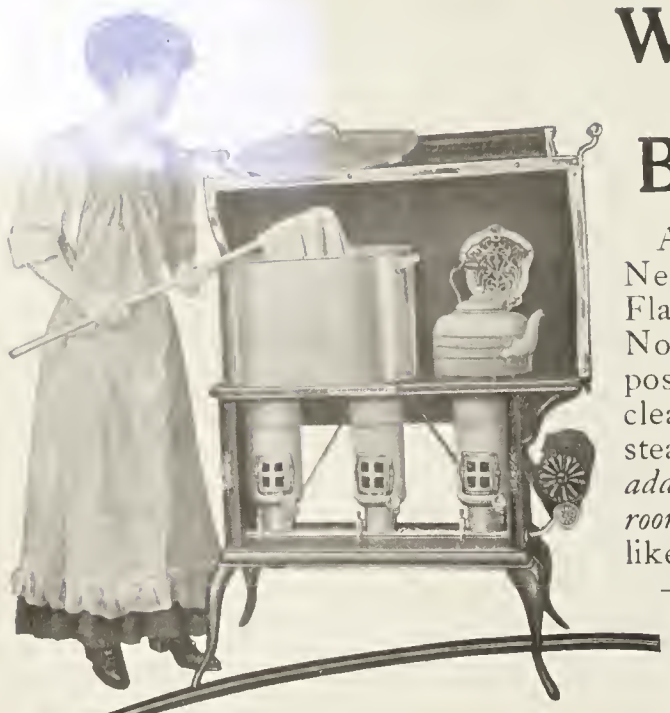
And you have practically no tire trouble.

As a test of strength and endurance Model D has held unchallenged for nearly two years the Chicago–New York record of 40 hours. And in five consecutive reliability contests last season the 1909 Model D won perfect scores. No other automobile won a perfect score in more than two of these contests. In the Worcester contest nearly all the contestants went through the run without road stops, but Model D was the only one to withstand the examination after the run. All others suffered penalizations due to broken, strained or loosened parts. Having semi-elliptic springs and hardened-steel chassis frames, they suffered from strains and shocks at speed over rough roads.

Model D weighs 2200 pounds. It has a four-cylinder, 28 horse-power engine, 36-inch wheels, 106-inch wheel base, disc clutch, selective transmission, Bosch high tension magneto.

The Six-cylinder Franklin

Horse-power does not mean anything by itself. The thing that counts is the power actually at the disposal of the driver.



It is a mistake to buy any automobile on power rating alone. The average six-cylinder automobile has a big engine and big horse-power. But it is seldom you can use the power to advantage. The automobile itself is ponderous and heavy. Practically the whole advantage of the six-cylinder principle is missed. The main advantage of six-cylinders is to get a high proportion of power to weight. A six-cylinder engine gives steady torque —an explosion every one-third of a revolution. Steady torque, since it reduces the stress on all the working and supporting members, allows lighter construction throughout the automobile. In the Six-cylinder Franklin this advantage is fully utilized. With 50 per cent more power than Model D the Franklin Six weighs only 20 per cent more—and it carries seven passengers. You get speed and ability without excessive weight. Your engine, instead of lugging a useless load, is giving you carrying and climbing ability. Your 42 horse-power is as good as 55 or 60 in the heavy sixes, and you avoid their enormous tire and operating expense.

This Franklin Six (Model H) holds the San Francisco–New York record of 15 days—the most severe test of strength and endurance ever made. And a 1909 Model H went through the last Glidden Tour without tire trouble, not even a puncture.

We make strong claims for Franklin automobiles. But these claims are the history of the Franklin from the start seven years ago. Then as now the Franklin idea was common sense. The first Franklin, still in use, was light. It had the wood chassis frame, full-elliptic springs and air-cooled motor.

The last edition of our 1909 catalogue de luxe is nearly exhausted. If you want a book that treats the whole automobile question from a broad viewpoint, write for it. It will interest you regardless of what make of automobile you own or favor

H H FRANKLIN MANUFACTURING COMPANY Syracuse N Y

Wash Day to Baking Day

All days are alike to the New Perfection Wick Blue Flame Oil Cook-Stove. No matter for what purpose you need a quick, clean, hot flame, or a slow, steady flame—*without an added degree of heat in the room*—there is no stove like the "New Perfection"—the wonderful oil stove that has revolutionized housekeeping. The

NEW PERFECTION
Wick Blue Flame Oil Cook-Stove

besides being the perfect stove for summer, is just as efficient for year-round use. It is built with a CABINET TOP that makes it possible to warm dishes and keep food hot after it is cooked, and adds many other conveniences.

The "New Perfection" is the most complete and most efficient oil stove ever made. Made in three sizes. Can be had either with or without Cabinet Top. If not at your dealer's, write our nearest agency

The **Rayo LAMP** is unsurpassed for home illumination. Floods the room with light if you wish it—gives a restful, mellow glow if you prefer it. Just the lamp for daily use everywhere. If not with your dealer, write our nearest agency.

We Share the Profit With You

"Field Club"
No. 1—2 in.
No. 2—2¼ in.

Your Dividend Payable Today

In refusing to come to the machine processes almost universally adopted by manufacturers of two-for-a-quarter collars, we share our profit with wearers of

Corliss-Coon Hand Made Collars
2 for 25c

Your double "dividend"—greater individuality of style and longer wear—is payable *on demand*. Simply demand Corliss-Coon Collars each time you purchase and collect your share of the profit regularly.

"On deposit" with discriminating furnishers everywhere. If you experience any difficulty in "collecting" through your furnisher, you have recourse through our Factory. Your order with twenty-five cents mailed to Corliss, Coon & Co., Dept. T, Troy, N. Y., will bring two of these extra value collars (any style or size) to your door. Our New Style Book to help you make selection will be mailed to any address on request.

"Field Club" illustrated above is an "extra dividend" collar. The accuracy required in a collar which must exactly meet in front and stay together through a hard day's wear adds to the expense of making. But you get more style than is possible in any other shape of fold collar. The required exactness is found only in the Corliss-Coon "Field Club." Two Heights. "Field Club" No. 1–2 in.; "Field Club" No. 2—2¼ in. Regular and Quarter Sizes.

Corliss, Coon & Company, Dept. T, Troy, N. Y.

You Can't Shave Wrong with a KEEN KUTTER Safety Razor

You're bound to shave right with a Keen Kutter Safety Razor—you can't help it. It is set at just exactly the proper angle so it will not pull or scrape or slip over the beard.

Pick up a Keen Kutter Safety Razor and shave—that's all there is to it. The details of angle and adjustment have been carefully and accurately taken care of by the makers.

Try a shave with a Keen Kutter Safety Razor. See how much easier, quicker, smoother and more comfortable it is than any other. See how much better your face feels. No matter how tender your skin or how wiry your beard—this razor will give you a velvety shave. Put up in a leather case with 12 guaranteed Norwegian steel blades of Keen Kutter quality, ready for instant use. Money refunded if not entirely satisfactory.

The Problem of Your Summer Outing

Is solved in these three booklets which will be sent you for the asking. You have an opportunity **this** summer to **see** more, **learn** more, **enjoy** more than has ever been possible before--the proof is in these attractive publications. They tell all about that glorious trip, which so many thousands will make this summer, through "Wonderland" to the great Alaska-Yukon-Pacific Exposition. Illustrated profusely--with handsome covers in colors --they are decidedly out of the ordinary. Send your name and address **today,** with two 2-cent stamps to cover postage, to A. M. CLELAND, General Passenger Agent, Northern Pacific Railway, Dept. S, St. Paul, and the booklets will be forwarded at once.

¶We have other books describing the agricultural and industrial possibilities of the Northwest, for the benefit of the Homeseeker and the Business Man--the "Opportunity Hunter"--which will be worth much to you. For literature of this character write to C. W. MOTT, General Emigration Agent, Northern Pacific Railway, Dept. S, St. Paul, stating the section in which you are interested. ¶New summer train service effective May 23d and round-trip Summer Tourist Tickets on sale daily, May 20 to Sept. 30. Through service between Chicago, St. Paul, Minneapolis, St. Louis, Kansas City and the North Pacific Coast. ¶Full particulars with the booklets. Write **today** and plan your trip **now.**

ADVERTISING BULLETIN

ADVERTISERS NOT IN COLLIER'S

THERE are two good reasons why Collier's does not carry the advertisements of quite a few national advertisers. First: there are some who are not as yet convinced that Collier's would be a practical medium—or their appropriation is not large enough—or they have used Collier's and did not receive profitable returns. Second: there are many advertisers that are not permitted to use Collier's.

In the first class are found advertisers who do not believe that Collier's reaches the clientele they most desire—such as women's goods, corsets, and so forth; and another class who are prejudiced against Collier's for reasons best known to themselves, and there are advertisers who can not use all the good mediums that appeal to them, so we have to wait our turn.

Every known publication has records of advertisers who have used their columns and failed to get returns, and Collier's is no exception. A man would be hailed as a wizard who could tell the real reasons for these failures, but one thing is certain, the publications as a rule are not on trial. It is usually the copy or the article advertised.

Now, a word about the advertisers who are not permitted to use Collier's. There are some who are not honest, but these we will dismiss without further thought, they can not use any decent publication. We do not admit to our publication advertisements of beer, whisky, or any alcoholic liquors, nor any advertisements of patent medicines or those making claim for medical effect. No investment advertising promising extraordinary returns, such as stocks in mining or rubber companies, is admitted. We reserve the right to and do exclude advertisements which we consider extravagant or offensive to good taste. There are not more than two or three publications printed that live up to such a standard. It cost Collier's over $100,000 last year. *The advertisers in Collier's endorse this policy, and we believe you do.*

Knabe Pianos may be bought of any Knabe representative at New York prices with added cost of freight and delivery.

WM. KNABE & CO.

BALTIMORE NEW YORK WASHINGTON

Accurate— at 1 mile or 100

The Warner Auto-Meter is the only speed indicating instrument you can buy—no matter what price you may pay—which is *accurate at all speeds* when you get it, and which will *remain accurate* as long as you have a car to use it on.

The Auto-Meter correctly indicates the slightest forward movement of the car, and with equal accuracy *every range of speed* up to as fast as you dare to drive.

All other "speed indicators" show no indication of speed whatever under 5 to 10 miles per hour. Watch them in use.

The Auto-Meter, because perfectly balanced in all its parts, works without internal vibration. Therefore the indicating dial is always steady and readable. No jar or jolt of the car can affect it. *Speed alone* moves it.

On all other "speed indicators" the indicating hand continually flutters over a space on the speed dial representing 5 to 10 miles. The supposed speed is somewhere between these points. You must guess where.

The Auto-Meter, because of the Magnetic Induction principle on which it works, can be and is made so sturdy and strong, and with such refinements of construction, that practical tests have shown that it will withstand a MILLION MILES of the hardest kind of driving, without appreciable wear or departing from absolute accuracy more than *10 feet to the mile.*

All other instruments are made on the centrifugal principle. All contain weights, which occupy so much space that the remaining parts must be small and weak. Cams, small pins and delicate coiled springs are used. There is sliding friction everywhere. After a few months' use, wear of these delicate parts, and weakening of coiled springs when multiplied dozens of times through the indicating hand, renders centrifugal instruments so grossly inaccurate that they are worse than useless.

The Auto-Meter alone can be adjusted at the factory in a few minutes to correct the slightest inaccuracy—though this has never yet been necessary except in instruments injured by accidents.

In centrifugal instruments no provision is made or can be made for adjustments or corrections. When inaccurate they must be thrown away. Their accuracy at the best is limited by a few weeks or months. Then they are far worse than useless.

* * *

The Auto-Meter is built like an expensive Chronometer. It has but two moving parts. These revolve. There is no sliding friction. The bearings are sapphire jewels and imported Hoffman Balls. Every part must test accurately to 1-1000 of an inch or it is thrown out. Such bearings will practically last a lifetime without wear.

The Auto-Meter, because made on the only correct principle, is unvaryingly accurate and so durable that it will outlast a dozen cars.

No centrifugal instrument—though the price may be the same—can be considered in the same class, any more than a $1 watch can be classed with a $200 Chronometer.

* * *

The Odometer used in connection with the Auto-Meter is our own construction. It is as strongly and durably built as the Auto-Meter itself. Season dial registers 100,000 miles. Other odometers register 10,000 miles only. This is often insufficient for a *single season.* Future mileage has been lost. The trip dial registers 1,000 miles and repeat. Other odometers register 100 miles only. A single turn of a button resets to zero. It is the only self-contained odometer on which the figures are not partly concealed by the speed indicating hand.

* * *

We want every automobile owner to know the comparative tests which will enable him to prove the truth of every claim we have made. We have put these in a book which will be sent to anyone for the asking. In your own interest, buy no speed indicator of any kind until you know. To buy the wrong instrument is to waste your money.

Housecleaning this Spring is Different

THE OLD WAY

GET ONE FOR YOUR SPRING CLEANING BEFORE TOO LATE

The Ideal Vacuum Cleaner

It Eats Up the Dirt

THE NEW WAY

You Don't Have to Pound the Dust Out

The terrors of the old primitive way of housecleaning—of ripping up and tearing down, of carrying to and fro and out and in, of endless confusion and toil and drudgery—all are now abolished.

Keep Your Carpets and Rugs on the Floor!
Keep Your Wall Decorations Hanging!
Keep Your Upholstered Furniture in its Place!

Right where they are, the ***IDEAL VACUUM CLEANER*** will lift out of them, by its suction force, every particle of dirt and dust and every germ, moth and egg of vermin. It will renovate everything in your home. It will make everything clean, wholesome, sanitary and sweet—outside and in and through and through.

Everybody Can Afford It

Completely equipped for hand operation, the ***IDEAL*** Vacuum Cleaner ***COSTS ONLY $25.*** Equipped with electric motor for direct current, $55; for alternating current, $60. The motor is of the best standard type. It uses only about two cents' worth of electricity an hour. All you have to do is to attach it to your electric light fixture.

So tremendous is the saving effected by the ***IDEAL VACUUM CLEANER*** in time, labor, health and actual money that its small price is quickly returned many times over.

Anybody Can Operate It

Operated either by hand or electric motor, the ***IDEAL VACUUM CLEANER*** does the work of power plants costing a thousand dollars and upwards, and does it better and with more convenience. No skill needed either to use or maintain it.

The hand machine puts no tax on the strength—your 8-year-old boy might well scorn the task as too easy—compared with sweeping, it is play. The electric motor is not a necessity, but a luxury.

THE OLD WAY

CHANGE IN PRICE—
After June first next, the price of each motor equipped cleaner will be increased $5.00.

Why pound the life out of your carpets and rugs under the mistaken notion that you are pounding the dirt out of them? Or why send your valuable fabrics away to be treated you don't know how?

The
Ideal Vacuum Cleaner
renovates every time it cleans. Its cost is less than what is ordinarily paid a professional renovator for just one cleaning. And it remains to serve you all the year 'round.

Send your order for one of these valuable machines at once. Our Free Illustrated Booklet tells a story that will mean *a new era* in your home. Write for it today.

Fine-Form TRADE MARK **MATERNITY SKIRT**
Registered in U.S. Pat Office

of great interest to
Every Prospective Mother.

Something new — only scientific garment of the kind ever invented. Combines solid comfort and ease with "fine form" and elegant appearance in the home, on the street, and in society. — **Always drapes evenly in front and back** — no bulkiness — no draw-strings — no lacing — no ripping or basting — **Can be worn the year round.**

Made in several styles, and at prices lower than you can buy the material and have them made at home

FREE Send for our **Fine Illustrated Book — "Fine-Form Maternity Skirt"** — It's FREE to every woman writing for it. Tells all about these skirts, their advantages, styles, material, and cost. Gives opinions of physicians, dressmakers, and users. **10 Days Free Trial.** When you get our book, if your dealer has not yet been supplied with Fine-Form Maternity Skirts, make your selection of material and style, and we will make the garment to your order. When you get it, **wear it ten days**, and **if you don't find it exactly as represented**, send it back and we will cheerfully **refund every cent** paid **Other Skirts** — If not in need of a maternity skirt, remember our famous B & W dress and walking skirts will positively please you — **same guarantee** — Illustrated book free Which book shall we send? Write to-day to

Beyer & Williams Co., Dept. 51, Buffalo, N. Y.

WARNING

To protect you against disappointment we caution you that the **Fine-Form Maternity Skirt** is the only "Maternity Skirt" on the market, as it is the only skirt which can always be made to drape evenly, front and back—all substitutes offered will rise in front during development—a fault so repulsive to every woman of refined tastes. No pattern can be purchased anywhere for this garment. Its special features are protected by patents.

A Happy Marriage

Depends largely on a knowledge of the whole truth about self and sex and their relation to life and health. This knowledge does not come intelligently of itself, nor correctly from ordinary everyday sources.

A Revival of the Bacon-Shakespeare Controversy

¶ *The old question is up again. The question that caused the writing of nearly three hundred books, pamphlets, and essays, during the last half of the nineteenth century, is once more to the front.*

"Did Bacon write the works attributed to Shakespeare?"

This question, like a certain noted volcano that sometimes sleeps for years and then breaks out again, has been showing new signs of life—signs so ominous as to disturb the inhabitants of Stratford and all those dwelling in the satisfied conclusion of Shakespearian authorship of the immortal plays.

The controversy, once so prominent, quieted down not so much because of the failure of the Baconians to furnish a preponderance of evidence in support of their contention as on account of the wave of puerile sentiment that swept in from the shallows of pedantic conservatism and made scholarly investigations on the subject unpopular.

The present awakening of the controversy has been occasioned by the discovery of facts which, if they be not accounted for on the theory of Bacon's authorship, at once raise a question even more perplexing as to what disposition a rational mind is to make of these facts.

In next week's issue we shall give conspicuous place to the new evidences in an article by William L. Stoddard, entitled "Facts About Francis Bacon and Some About Shakespeare."

This article is based on the recent discoveries of William Stone Booth of Cambridge, Massachusetts (not of Harvard), and set forth in his recent book, "Some Acrostic Signatures of Francis Bacon."

The "fact" which is set forth is the evidence, open to any one who will study it out, that in hundreds of places in the plays the signature of Francis Bacon is cunningly, and with mathematical uniformity, interwoven with the text. That similar acrostics are to be found in writings that openly bear the name of Bacon on the title-page adds peculiar interest to the acrostics in the plays.

More About Baseball

¶ *Will Irwin's second article on Baseball, "Working Out the Game," takes up the subject where it ends in the present issue, and gives many interesting pictures of the game in evolution—when they first began to pitch curves, how they used to substitute balls of a different weight, the introduction of gloves, the gradual revision of the rules, and many such matters. The amateur teams did much to spread abroad the popularity of the game, especially during the Civil War, but it remained for the professionals to reduce the game to a science. Playing for gate receipts, with the added necessity of furnishing a quick-action game that would please the public, did much to inspire endeavor that brought the standards of the game quite beyond amateur skill.*

Gibson on Baseball

¶ *A double-page drawing by Charles Dana Gibson, entitled "The Baseball Season Opens," will appear in next week's issue.*

Murphy Knew

Suppose your employer sent for YOU to solve some knotty point. —COULD YOU DO IT?

Yes—If you had the special training such as the International Correspondence Schools can impart to you *in your spare time*. Such a training will make you invaluable—will ensure promotion—*will raise your salary.*

P. F. COLLIER & SON, *Publishers*

Peter Fenelon Collier—Robert J. Collier, 416 430 West Thirteenth Street

NEW YORK

May 8, 1909

Mr. Collier

THERE IS NO BLACK around this editorial. The trappings and the suits of grief are gone. Formalities are ended, the daily labors taken up. Only the reality of loss remains, to be greater month by month. We speak calmly, as one who tells an outside world the truth. There was much in Mr. COLLIER worthy of notice on this earth which he has left. A little of it, in sorrow and humility, is written here.

He was a man of faith. More than most men, he *believed in life*. Never was he known to hint that the struggle did not repay the effort, that the goal was unworthy of the race. No man ever heard from his lips a syllable of discouragement or of fundamental doubt. The stumbling of denial he never knew. He never looked aside because the path seemed difficult to climb. In youth he turned with fury on every simple task presented. In prosperity a complex world could never dim the hunger of his mind. In sickness and in health he sped right onward. The faltering heart was strange to him. It seemed as if that initial healthfulness of temper would have carried him through a century, filled with ambition and ideals, had not the fast-driven bodily machine broken in the middle of his course. At a hundred his eye would have sparkled in response, his heart would have answered to the call.

This almost furious speed of life was harnessed to Fidelity. His business was personal. He had made it, he loved it, he knew it to be good. Of poetry, of history, of high fiction he had sent millions of volumes among the people, and he was glad. His own favorites, in a wide, persistent reading, had been SHAKESPEARE, BYRON, BALZAC. He had won his right to noble friends, and he drove his soul, that millions through him might also have such friends at hand. He knew what a good book meant in a humble home. He knew, indeed, what it had meant to him. On the last morning of his life he talked of "Tom Sawyer," of which he happened to be only then making the acquaintance. His body bent forward, his eyes snapped, as he talked of his new-found Tom and Huck, of boyhood and the everlasting spirit of adventure. And to those beings, also, who had helped him in his race along this path of light, he was ever faithful. Before his own publishing house was started he was selling Bibles for another. He had tramped all day and none had bought. Bibles were expensive then. One scrubwoman had said: "No, me boy, I have not that much money. I will give ye a dollar now and fifty cents iviry week till it is paid." He had no authority for such a sale, but he went home, slept upon the Irishwoman's wish, explained it eloquently to his employer, and on the morrow he sold fifty Bibles, and thus the sale of books upon instalment was begun. Later for that widow he built a home, and watched over her, and watched over her son when she was gone. Bibles are cheaper now, in no small degree because PETER COLLIER worked and thought. It was among the realest sorrows of his life that the cost of books is being driven again upward, by forces beyond his ability to stem.

Related to fidelity is ever Courage. He was proud that this newspaper is not a meaningless piece of merchandise, even as he took righteous pride in the excellence of his books. When the weekly started on some perilous course, where the penalties were to fall on him, all he asked was to be assured that the step was necessary and right. When we undertook to lessen the power of a certain publication, which blackmails men and soils the lives of women, he knew, and we knew, that the vengeance of the viper-sheet must be concentrated on him; but, even in the moment of fully realizing the price, he urged us forward, with Godspeed to the cause. Can you wonder, then, that the tears crowd forward? We had intended not to let them come. He himself, in similar straits, after the first break of feeling, would have brushed them hurriedly away. They are forced by memories of battles fought together, with him unswerving in the breach.

Fancy not this abounding force was only strenuous in the mood which it inspired. Often it was delightful in picturesque surprise. Mr. COLLIER, according to the almanac, was approaching sixty when, one evening, as he was hurrying along a Jersey road, a bottle, flung by a boy, crashed against his car. Immediately he told the chauffeur to stop. The boy fled. Mr. COLLIER flew after him. The boy was fast. His pursuer was still more fast. The boy thought he saw a haven. Under a neighboring barn was sufficient space for him to crawl, and he made his way painfully between earth and floor. Under the barn also went Mr. COLLIER, who emerged dragging the culprit by a foot. Having administered punishment according to the need, he proceeded on his way. Behind him there remained a youth who had learned that not every gray-haired citizen lacks energy to deal with situations promptly as they come.

He lies upon a hill, in a grove of trees. For miles in each direction stretches the country over which he rode. It is dotted with the homes of farmers whom he knew. In a pasture stand a group of horses gazing at the scenes of triumphs now no more. There is heard the distant baying of a hunting dog. The buds are breaking into leaf. Yonder pasture is white with youth, promising fruit when summer comes. Dying winter retires before the spring. Everywhere is peace. Everywhere is life. Everywhere the heart of nature beats. There, upon the hill, one heart forever rests, one burning soul has flickered, and left to other men the load which he bore so bravely up.

A Step Ahead

NOW, FRIENDS, to the world's daily work again. As good one place as another to begin. Here is something of value which men are beginning in Missouri. Let us have a look at that. Forty years ago six or eight steamboats came into Kansas City every day, from Cincinnati, St. Louis, Omaha, Fort Benton. Finally this traffic on the Missouri River died. The steamers failed to keep pace with the railways. To understand why, it is requisite only to glance at the steamboat used on the inland rivers now. Apparently there is little difference between the boat of 1909 and the one of 1869—same three-story white frame house, same old type of engine and boilers up to the crowned smokestack, with the gold trotting hoss or spread-eagle suspended between them. Nor have their methods of freight-handling changed—the same irresponsible negro roustabouts, toting freight across a shaky plank to an unprotected levee. The trucks to haul it to the warehouses, also, are the same. Think what state the railways would be in were they using the equipment and methods of forty years ago! Kansas City has recalled the fact that it has a big, idle river waiting to be put to work. A company has been formed to install light-draft freight boats, with nothing above deck except pilot-house and quarters for crew; compound engines, forced draft; modern loading and unloading devices; warehouses with freight-handling machinery; 1909 equipment and 1909 methods; the system used in Germany's shallow streams, to be applied with modifications to the Missouri. This company does not plan to buy a million dollars worth of boats and terminals and do all the river business for Kansas City. It intends to prove that with modern equipment river navigation is profitable to a company with six boats, or to an individual with one boat. It proposes to make the Missouri River a traffic highway. It is not a "hurrah" movement. The men behind it are moving as carefully as if it were the sole affair of each of them. They are not looking to the Federal Government to do a few million dollars' worth of preliminary work. They have set out to show the Southwest that it has water transportation at its front door—and to make the proof by their own strength, their own money, and their own understanding.

The Lord of Wheat

THE HEBREW PROPHETS make excellent reading in these days of so-called peace. They often strike sharp spiritual notes, which the adaptable mind can readily turn into modern symbols and apply to our own problems of every day. To JAMES A. PATTEN of Chicago we suggest Amos, v. 11, wherein to certain froward men, "forasmuch . . . as your treading is upon the poor, and ye take from him burdens of wheat," future discomfort is foretold.

Gambling

INVESTIGATING Wall Street, Governor HUGHES'S committee found plenty of difference of opinion about remedies, and even about facts, but some of the testimony to which they listened has a decided general interest for the country. A Stock Exchange member of forty years' standing stated that every one who enters Wall Street, except as a broker, loses. In a partnership contract to preclude a junior's speculating, this man made a bona-fide offer of $5,000 for the name and address of every verified winning customer of any Wall Street house—provided only that the customer had so traded for two years as to make his account an "active" one. Another, for twelve years a member of a prominent brokerage house, stated that in all this time, after very broad operations, not a single customer ever took out a dollar of net winnings. An ex-broker stated that a ten-year search, covering scores of trading friends and acquaintances, as well as the records of five brokerage houses and one bucket-shop, failed to find a single net winner. Most brokers estimate that between ninety and ninety-eight per cent of customers lose. As practically every marginal trader loses, every bucket-shop and Wall Street house has a complete new list of customers in from three to five years. If you intend to begin risking your savings, we recommend the following steps:

(*a*) Ask your broker for figures about his customers.

(*b*) Ask your trading friends for their net balance.

(*c*) If you have gambled before, ask yourself. Balance your own account.

Few do.

Boa-constrictors

THE GUGGENHEIM SMELTER TRUST has been one of the most exacting and unscrupulous monopolies that have fastened on the industrial harvests of the West. It was to feed the American Smelting and Refining Company that Colorado engaged in a civil war which brought misery to thousands, made exiles of hundreds, and dragged the courts of that State through public contempt. The country will watch with interest, although not with pity, the events which are about to succeed the widely advertised announcement of the covert purpose of Standard Oil, through the Cole-Ryan syndicate, to bankrupt the GUGGENHEIMS—for such is the palpable meaning of the announcement of the formation of the International Smelting Company. There is an erroneous public impression, by the way, that the RYAN of the Cole-Ryan syndicate is TOM RYAN. He is JOHN D. RYAN, the managing director of the Amalgamated Copper Company in Montana. COLE is a Michigan man. Both RYAN and COLE have been organizing for years a lot of mining companies for the Amalgamated crowd, so that the "crowd" could skim the cream of the new ventures, instead of putting them into Amalgamated and giving Amalgamated stockholders at large the benefit of the properties. When the Standard Oil financiers look covetously upon a railroad, a mine, an oil well, or a politician, the object is as helpless as the coon commonly, although erroneously, connected with DAVY CROCKETT. Whether the organization of the International Smelting Company is a "bluff" to bring the GUGGENHEIMS to terms, or whether it is the initial step in one of those crushing Standard Oil campaigns, matters not. It behooves the GUGGENHEIMS to put their affairs in order. The lesson the Standard Oil will teach them has been taught by the GUGGENHEIMS to others. The GUGGENHEIMS may observe the higher and more exquisite art of destroying an enemy without subsidizing State troops. It is their turn to salute Cæsar and to pass from the stage without vulgar emotion.

Opinion of a President

A GENERAL REACTION regarding industrial matters seems very likely to set in. Successfully arguing against harmful noise, the possessors of snaps are likely also successfully to stop progress. Who knows? At any rate, read this:

> "I hope very much that a new spirit is growing in the West about railway agitation, and think the various chambers of commerce could do a great deal of good, if they, before the next meeting of the State Legislatures, would pass resolutions directed to the Representatives, stating that they do not want any more laws at present, but want development."

This opinion was written by HOWARD ELLIOTT. Mr. ELLIOTT is president of the Northern Pacific. It was written to a Montana chamber of commerce. The Northern Pacific might first voluntarily return to the State of Montana, and to the miners whose courage made possible the building of its road, the vast domains of mineral land which it filched from them by a wrong second only to the attempted looting of Alaska. It might voluntarily, for another thing, go out of the business of owning land offices and officials, whose salaries and office-rent the Government pays. It might voluntarily stop subscribing the money of its stockholders to purchase the election of its candidates for the Federal Senate.

A Beginning

WHAT MAKES TURKEY interesting at the present moment is less the immediate drama than the suggested stretches of internal change ahead. Of course, the possibility of intervention and sudden conflagration all over Europe has been the most serious worry to the world, but it is difficult to believe, in spite of hysteria and "An Eng[illegible] man's [illegible]me," that the financiers of England, France, and Germany will allow humanity to set itself so far backward in loss of substance and of bread-winning, able-bodied men, to say nothing of the bloody destruction of slowly acquired ideals of reason, sympathy, and peace. What it is legitimate to hope is, that Turkey has started on a new régime, which means not merely a change in forms of government, but in the welfare of a whole people. Probably it means that the government of that country is no longer to be an outworn form, unintelligently pandering to the desires of a few, but an effort to do the best that may be done for the millions of ordinary inhabitants.

Superiority

OF RUSKIN COLLEGE, Oxford, that attempt to give young artisans and laborers an education, the London "Standard" says that the students devote themselves to political economy, political philosophy, sociology, "and the other things which are not matters of knowledge but of opinion." The paper is very broad-minded. "We do not say that the universities should be barred to promising lads of the industrial classes. As a matter of fact, they are not. The ladder is down to the gutter now and the slope is not too steep." What is knowledge? Not, evidently, the minimum of expense required to provide decent food, light, and air for a family in a given locality. Nothing is knowledge which directly allies itself with life. Teachers, physicians, and health boards should not face the conditions of modern industrialism. Knowledge is not knowledge if it affects conduct or tempers legislation. Sociology has the same difficult task in justifying itself to the playful Philistines of modern journalism as astronomy, medicine, or the evolutionary theory. For nearly half a century we had the "monkey" joke. We are living through a probationary term with the patient but buffeted figure of the "Sociologist," tinkering, investigating, legislating, and intruding where the wise and the witty practise indifference and spin the merry jest.

Something Done

A PITTSBURG DRUGGIST has obtained a verdict for $40,000 against the estimable WILLIAM D'ALTON MANN. The judge did credit to the bench:

> "These damages," he said, "are highly punitive, and I think that punitive damages were highly justified in this case. On the merits I may say that I never tried a case in which the evidence more thoroughly warranted a verdict."

It was a typical bit of "Town Topics" scandal, including an attack on a woman's reputation. What was not so typical was the courage of the plaintiff. He did not go whining around. He faced all the mud in the possession of Colonel MANN and hit him a blow worthy of a citizen and a man. If one-twentieth of the persons libeled by MANN'S blackmailing publication had the courage to begin and conduct a libel suit, this king of scandal-sellers would speedily seek some less injurious occupation. He battens on the general cowardice, or, to be more lenient, on the general unwillingness to drag one's whole private life into the public glare, even in order to put an end to such a dirty and vicious nuisance as Colonel MANN. It is a case where nothing is needed for victory except determination.

Enthusiasm

CERTAIN REMARKS partake so profoundly of the qualities of slop that they seem hopelessly to lower a man of good record, heretofore admired. What did Senator CUMMINS seek when he asserted that ROOSEVELT was a stronger man than GEORGE WASHINGTON? Has he any adequate conception of what WASHINGTON endured and did? If not, better had he hold his peace. He added that when he finishes his term TAFT will be the greatest man America has produced. Does he get anything for this? It is enough to sicken even a patriot with public life. Doubtless when the time comes to please TAFT'S successor CUMMINS will find him surpassing WASHINGTON in strength, LINCOLN in wisdom, FRANKLIN in shrewdness, WEBSTER in eloquence, JEFFERSON in philosophy, HAMILTON in finance. Let us hope the Senator from Iowa will gain much. For any small advantage such degradation of one's intelligence would be granted at too high a price.

Summing It Up

THOSE WHO FAVOR direct nominations and those who oppose are moved by definite principles easily understood. Such nominations are favored because:

1. They make the participation of the general public in politics easy instead of difficult.
2. They cause public servants to be more often responsive to general opinion and less often subservient to bosses and to special money interests.

Direct nominations are opposed because:

1. In the words of one distinguished Senator, they are un-American, socialistic, and anarchistic.
2. They are unnecessary, because once in a long time, in times of special stress, the popular will is listened to even in spite of the obstructive convention system.
3. Because direct nominations have proved popular in the West, and any man who comes from Kansas resembles the Missing Link.

Comment About Congress

By MARK SULLIVAN

IS THERE a Democratic Party? And if there is, who will set down the body of common principles behind which a majority of its members are willing to unite? On this page there has already been printed a list of twenty-three Democrats who broke away from their party and voted with the Republicans in the fight on the rules when the House was organized. There has been printed, also, a list of thirty-eight Democrats who voted for a tariff on lumber, although the Democratic national platform calls for free lumber. Below is printed a list of twenty-nine Democrats who—the Republicans having put hides on the free list of the Payne bill—voted in favor of an amendment to put a duty of ten per cent on hides. Together, these three groups make more than a majority of all the Democrats in Congress. Those who voted to put a duty on hides are:

From Texas: MORRIS SHEPPARD of Texarkana, MARTIN DIES of Beaumont, CHOICE BOSWELL RANDELL of Sherman, JACK BEALL of Waxahachie, RUFUS HARDY of Corsicana, ALEXANDER WHITE GREGG of Palestine, JOHN MATTHEW MOORE of Richmond, GEORGE FARMER BURGESS of Gonzales, ROBERT LEE HENRY of Waco, JOHN HALL STEPHENS of Vernon, JAMES L. SLAYDEN of San Antonio, JOHN NANCE GARNER of Uvalde, WILLIAM ROBERT SMITH of Colorado, ALBERT SIDNEY BURLESON of Austin.

From Louisiana: ROBERT F. BROUSSARD of New Iberia, ARSÈNE PAULIN PUJO of Lake Charles.

From Missouri: WILLIAM PATTERSON BORLAND of Kansas City, COURTNEY WALKER HAMLIN of Springfield.

From Colorado: EDWARD THOMAS TAYLOR of Glenwood Springs, ATTERSON WALDEN RUCKER of Fort Logan, JOHN A. MARTIN of Pueblo.

From Alabama: GEORGE WASHINGTON TAYLOR of Demopolis, JOHN LAWSON BURNETT of Gadsden.

From Indiana: WILLIAM ELIJAH COX of Jasper, JOHN A. M. ADAIR of Portland.

From Nevada: GEORGE A. BARTLETT of Tonopah.

From Tennessee: GEORGE WASHINGTON GORDON of Memphis.

From Georgia: WILLIAM GORDON BRANTLEY of Brunswick.

From Illinois: JAMES THOMAS MCDERMOTT of Chicago.

The position of a Democrat who has an industry in his own district that clamors for protection is difficult. When William Jennings Bryan was in Congress it was proposed to put a duty on beet sugar. This dialogue occurs in the Congressional Record for 1892:

"MR. PERKINS: Are you to be understood as opposed to a State or National protection to be extended to the beet-sugar industry?

"MR. BRYAN: I am, most assuredly. [Loud applause on the Democratic side.] And when it is necessary to come down to Congress and ask for a protection or a bounty for an industry in my own State, which I should refuse, as wrong to an industry in another State, I shall cease to represent Nebraska in Congress. [Great applause on the Democratic side.]"

Champ Clark, in the present Congress, has taken the same point of view. He was put in a difficult position by the demand, on the part of his constituents, for a tariff on zinc. Clark was outspoken:

"I want to repeat, and we might as well settle it and be through with it, I am not going to help any man plunder the American people because he happens to live in Missouri. I will go out of public life before I do it."

If Mr. Clark and Mr. Bryan are right, these twenty-nine Democrats who voted for a tariff on hides, and the thirty-eight who voted for a tariff on lumber, belong in another party. Senator Bailey of Texas has tried to straddle this situation by saying:

"It is not an abandonment of the principles of the Democratic Party for a Senator to insist that the same principles which apply to other constituencies shall likewise be applied to his. . . . That these principles shall be applied without discrimination does not signify that we are in favor of applying them."

What it all emphasizes is the extent to which the words "Democrat" and "Republican" have become meaningless. Maybe we shall in time change the party labels to "Conservative" and "Progressive"—with Aldrich, Cannon, and the sugar Democrats of Louisiana, "Fingy" Conners, Penrose, and the Tammany friends of the corporations lined up on one side, while Republicans like Murdock, Cooper, and Bristow stand side by side with Democrats like Folk and Johnson of Minnesota.

Four Good Speeches

THE best four speeches delivered in the tariff debate up to the date of this writing are those of Sereno E. Payne of New York, Champ Clark of Missouri, Francis W. Cushman of Washington, and Claude Kitchin of North Carolina. Practically every member of Congress has made a long set speech on the Payne bill. For the most part they are dreary and of little value. The Southern members run to poetical quotations and fervid outbursts in the manner of the orators of a generation ago. The speeches of the Northern members, as a rule, are dull beyond endurance, the bulk of them made up of pages of undigested statistics and long newspaper extracts. But the speeches of the four men mentioned are genuinely worth while. Payne's speech, of course, is the exposition of his own bill. And Chairman Payne does know his subject. The Democratic opposition leader, Champ Clark, in opening his formal attack on Payne's bill, said:

"I want to be fair. The chairman of the Ways and Means Committee [Mr. Payne] knows more about tariff schedules than any other man on top of the ground—I think his conclusions are frequently erroneous, but he knows more about exports and imports, and he knows more about what the tariff rates have been."

The speech of Mr. Clark himself is not only well-informed as to tariff facts, but is richly touched with humor. It has the flavor of a racy personality and abounds in qualities which make even a tariff speech readable. For humor, though, the speech beyond comparison is that of Francis W. Cushman of Washington. Cushman could make a better living as a professional humorist than as a member of Congress, and the country would be his debtor for the change. The judicial temper of his views on public affairs is indicated by this quotation from his tariff speech:

"I am a protectionist, without any qualifying adjectives. I am not only a protectionist, but a high protectionist. . . . I believe in it like the heathen believes in his idol."

But as a teller of stories which are at once funny and apt, Cushman is decidedly the best in Congress, and the distinction is sufficiently rare in a somber world to deserve well of his fellow men. The speech of Claude Kitchin is scholarly and interesting in its discussion of those Democrats who have voted with the Republicans for partial protection. It is interspersed with debate and repartee brought about by interruptions from Mr. Fordney and other Republicans. Any person interested in the tariff, or, in a broader way, interested in public speaking and debate, would do well to get these four speeches. Reprints of them, as well as of any other speech delivered in Congress, can be had by a request to the member who delivered it.

Enable the President to See the People

THE President of the United States gets $75,000 a year. The necessary exactions which make holes in this are many. A single evening's entertainment, of the kind of which rigid custom makes him give several each winter, costs upward of $1,000. As the law is now, he must pay his own traveling expenses. He can not travel like a private citizen. It is not merely a matter of dignity or personal comfort—that he must take a whole car for himself and his party is so obvious as to be beyond argument. A single trip from Washington to New York and back costs him upward of $250. President Taft is fond of traveling. He likes to meet the people. Of his own choice, he would cover the country once each year, touching the Pacific Coast four times during his term, compared to the once each term that Roosevelt and McKinley visited California. Unquestionably, the people wish this. An allowance of $25,000 a year for traveling expenses would make it possible. The matter is pressing now, for probably the possibility of a trip to Seattle and Alaska late this summer must depend upon it. Congress should make this appropriation.

The Effect of High Protection

DURING the debate in the House on the Payne bill, Congressman Longworth of Cincinnati read a letter from one of his constituents, which said in part:

"As a manufacturer of clothing for a period of almost fifty years, I can truthfully state that I never handled cloth of so inferior a quality for the price as I do now. The masses, consisting of laborers, mechanics, and farmers, the real users of ready-made clothing, are receiving practically no value for their money."

The Payne bill does not substantially change the tariff on woolen goods.

340 Days

IT IS 340 days from the date of this paper until any member of the present Congress comes up for reelection. The chief issue in the election of the next Congress will be Cannon. Every one of the 218 Republicans now in Congress knows that, as he turns back to his constituents, he carries the burden of Cannon. Cannon knows that just so many Republicans—perhaps twenty, possibly fifty—will fail of reelection because of him. Will Cannon let this happen? If he is unwilling to save his fellow Republicans, direct primaries will do the work. Of the thirty-one Republican "insurgents," all but five came to Congress from direct-primary districts.

Books for an Old Man

WE HAVE assumed a task which we conceive to be not only a private kindness, but also not without dignity as a public service—the pointing out of those quiet pleasures which would make—we use the potential mood with care—which would make a serene old age in a substantial home on the outskirts of Danville, Illinois, preferable to the tumult and hurly-burly which are inevitable in an assemblage of 391 somewhat boisterous men in a single room on Pennsylvania Avenue, Washington, District of Columbia. President Eliot of Harvard University is at the present time engaged in compiling a set which he aptly calls "five feet of books," a compilation of those 100 volumes which, among all printed books, are of most worth. The idea is full of subtle appeal. We wish Dr. Eliot would now address himself to a more limited task. We would like to have from him a list of, say, fifty books best adapted to a man of seventy-four who has passed his years in arduous political life, but now sees an opportunity for escape to quiet retirement and indulgence in those pleasures of taste to which he has long denied himself. We should like a list which would appeal powerfully to such a man, which would cause him to recall long-forgotten aspirations for the charm of cultivation and learning—a list, the contemplation of which would help such a man to make decision between the clamor and strife of politics on the one hand, and, on the other, the fender and the book—a list so alluring that it would brace him to resist the demand of the public that he continue to serve them. As a start toward such a list, we suggest these (the titles of acceptable additions to the list will be welcomed):

Cicero: "De Senectute" (in the original).
Emerson: "The Over-Soul."
Wordsworth: "An Evening Walk."

These books and slippered immunity from the exactions of public life, long days of quiet in Danville, Illinois—these would appeal to us; we wish they would appeal to him.

Baseball as It Was.—*The second championship game between the Atlantics of Brooklyn and the Athletics of Philadelphia, 1866. Score 33 to 33—game called on account of darkness at the end of the seventh inning. Notice the underhand pitcher, the gloveless catcher keeping a respectful distance behind the bat, the wide swing of the batsman, the basemen playing frozen to their bags. The gentleman sitting with his feet on a box on the first base line is the umpire. The men at the table are scorers. The gamblers waving bills, the pickpocket caught in the act, the drunkards, in the foreground, illustrate the tendencies which were creeping into the game*

FROM AN OLD PRINT IN THE POSSESSION OF T. H. MURNANE

Baseball Reporting in 1856

THE JUNIUS BRUTUS BOOTH STYLE

"THIS *noble American game, which all the seductions of the scientific game of cricket have not been able to undermine, is growing more and more in favor every day. No less than three matches were played last week, and the attendance at each was not only very large, but made brilliant by great gatherings of ladies, whose interest in the sport seemed to be not at all short of that experienced by the most occupied observer of the other sex. We are inclined to think, too, that this feature of these occasions has no little effect in inspiring the players in the game, and that the last energy of every contestant is taxed by the consciousness that he must win or lose in the minds of an exceedingly keen and scrutinizing class of lookers-on. We are much pleased to see the beautiful and fair of this city lend the charm of their presence to the healthful out-of-doors sports and exercises, and we have a shrewd opinion that more than one of them attends the grounds with a view of sharply measuring among the players the qualities of what might make a serviceable future husband. Among the matches we allude to, the return game between the Baltic Club of this city and the Union Club of Morrisania may be mentioned as the most prominent, from the great attendance that was present. It was played Wednesday of last week, but was suspended in consequence of being overtaken by the shades of night. At the time of the adjournment the score stood 15 runs in favor of the Union and 12 runs for the Baltic. The matter is to stand thus till the resumption of the game, but no day was named.*" —Porter's "Spirit of the Times," September 6, 1856.

BASEBALL

I—Before the Professionals Came

By WILL IRWIN

"We got our language from the English and most of our institutions from the Dagos and the Dutch. But there are two things, I tell the boys, that are all American. One's the good old flag and one's baseball." —*Remarks of Tim Murnane.*

FOR the first seventy-five years of our national existence we worried along without a national game. We were a hardy people, but not an athletic one. Our lusty young men were employing their strength, their agility, and their fortitude on the work of taming a continent. If there was an American sport in that period it was probably wrestling —the game at which Washington and Lincoln were adepts—a rough kind of catch-as-catch-can. In Philadelphia and other Eastern centers a very few played cricket; the "sporty," a limited class in those times, followed the prize-ring or drove fast horses.

All the time, however, the boys of America, unhonored and unsung, were quietly making the national game. As far back as the Colonial period they were playing, on the commons of the East, the clearings of the frontier, and the vacant lots of new towns, a crude game of ball. It is easy to establish the connection of this game with "rounders," an English schoolboy game which may be traced back as far as the age of Elizabeth. Indeed, there is evidence leading to the belief that rounders was once called "baseball" in certain parts of England, notably Suffolk. In America the corresponding game generally went under the name of "round-ball" and, because it was played at the time of town [illegible], "town-ball." But as far back as the thirties of the last century—probably even farther back—they called it, in certain localities, "baseball." When, in the forties, the modern game, originating in New York, made its conquering advance, the boys called this old game the "Boston game," or the "Massachusetts game," to distinguish it from the newfangled "New York game." It was played in various ways in various parts of the country. (Those boys' games, having no written rules, tend always to local variations.) Its first cousin, "rounders," is to-day as many games as there are counties in England and Ireland. But let a description of "Massachusetts baseball," as played on Boston Common during the thirties, stand for the rest.

Baseball Reporting in 1908

THE GEORGE M. COHAN STYLE

"SUMMON *up that second set, fellows, and we will pass judgment. Who is that leading off? Little Anathema Evers, no less. We remember you very well, little Evers. Where are you going? To first? Oh! very well; but look you, Herzog, be a bit more accurate in your throws after this. This may prove costly. And here is Steinfeldt—Steinfeldt who fanned at a critical period of Monday's game, and you know how Steinfeldt—well, what is it this time, Steinfeldt? A double, and it please you. And there is Evers crossing the plate. And now what? Simply that Howard is safe on Devlin's bad throw, and he and Tinker, who follows him, run into a double play while Steinfeldt scores. It is two runs and it is disgusting, and many thousands of us say as much . . . but there is Pfeister. And if we do hit him, there is Pfeister's fielding support to make a mock of us, and so it goes until the sixth inning, by which time all the fans are wet and McGraw poutful and Chance is bragging and everybody is peevish at everybody else, and it's a mighty poor time to attempt a pleasantry; and, of course, it must be this pestiferous Evers who again is first to bat, and, of course, he must single to center. Ah, well! Make a good job of it, Cubfellows!*"—W. W. Aulick in New York "Times," August 12, 1908.

The number of players on a side might vary from six to twenty; but eight was the regulation number. The field, as shown in the illustration, was an irregular polygon. There were really five bases, for the home base and the batter's base were not coincident. The ball was made of any soft and elastic material, such as wound yarn, a sturgeon's nose, and, later, hollow rubber. The pitcher—known as the "thrower" or "giver" —stood midway of the polygon. The catcher stood up close behind the bat; but he had a "scout" to assist him, since this game, like cricket, made no distinction between fair and foul balls—anything off the bat was a hit. There were no basemen, for a runner off base was put out—just as in rounders—by being *hit* with the ball. Five scouts assisted in fielding balls and "soaking" the runner. Hence the soft ball. A ball caught off the bat, or on first bound, was out. Even after real baseball came, this game had a long survival; I myself played it on the Colorado frontier in the early eighties.

Then, as suddenly and as unaccountably as a "mutation" in evolution, real baseball, the crude form of the modern game, sprang into existence in New York.

The present site of Madison Square Garden was, in

the late thirties and the early forties, a level, vacant lot. There, on summer afternoons, the boys and young men used to kick footballs, run races, toss balls, and "bat flies." According to the best information I have, "town" or "round" ball was never played in or about New York; but the boys *did* play "one-two-and-three-old-cat." In the seasons of 1840-42, "one-old-cat" became a fad. In 1842 the railroad took that field for freight yards. The boys moved on to the Murray Hill grounds, east of Fourth Avenue and north of Thirty-fourth Street. One fine afternoon Alex. J. Cartwright came among them and said:

"Boys, I'll show you a better game than that!"

"Show us," they said.

And Cartwright, scratching with a stick in the dust, marked off the diagram of a baseball diamond.

They listened to him; and they laid off the field according to his directions, using stones for the bases and the plate. He set a man on each base and three "scouts" in the outfield; and so, with eight men on a side, the boys of New York played their first game of real baseball.

Magna Charta of Baseball

THE details, the score, even the exact date of that historical event, are lost. We know, however, that they pruned here and added there for two or three years, and that by the end of their first season they founded the Knickerbocker Club. From the first they perceived that it was difficult to hit a ball thrown full arm; further, such a ball was fearfully hard on a barehanded catcher. So they invented an artificial delivery for the pitcher. He must "pitch" the ball—deliver it underhand without "throw" or "jerk." It was like the motion of a tenpin bowler. That limitation on the game was not fully removed until 1883. At some time in the first season the Knickerbockers learned that the outfielders, taking a long grounder, could hardly field it to the plate without assistance. So they added a loose fielder, and named him "short-stop." He was the scrub of the team; he was not expected to help with the infield plays, but only to assist the outfielders. It was a matter of ten years before "Dicky" Pearce, a scrub shortstop who developed unexpected ability, took to fielding infield hits ahead of the basemen, and made a real position out of shortstop. The yarn ball which they used in 1842 gave place to a ball larger and heavier than the one we use at present, and covered with sheepskin. This cover was sewed on in four sections by a shoemaker; and a complete ball cost about $2—a big sum for the boys of that time.

Within a few years the Knickerbockers had a rival—the Gotham Club. Before that—in 1845—they published the first set of fourteen rules. Of those rules only three have been wholly changed. The dimensions of the field, with the sole exception of the pitcher's position, remain to-day as they were then. We have amplified them to meet new inventions, but we have altered them but little. Here is that Magna Charta of baseball:

Section 1—The bases shall be from "home" to second base forty-two paces; from first to third base forty-two paces equidistant.

Section 2—The game to consist of twenty-one counts or aces, but at the conclusion an equal number of hands must be played.

Section 3—The ball must be pitched and not thrown for the bat.

Section 4—A ball knocked outside the range of the first or third base is foul.

Section 5—Three balls being struck at and missed, and the last one caught, is a hand out; if not caught is considered fair, and the striker bound to run.

Section 6.—A ball being struck or tipped, and caught either flying or on the first bound, is a hand out.

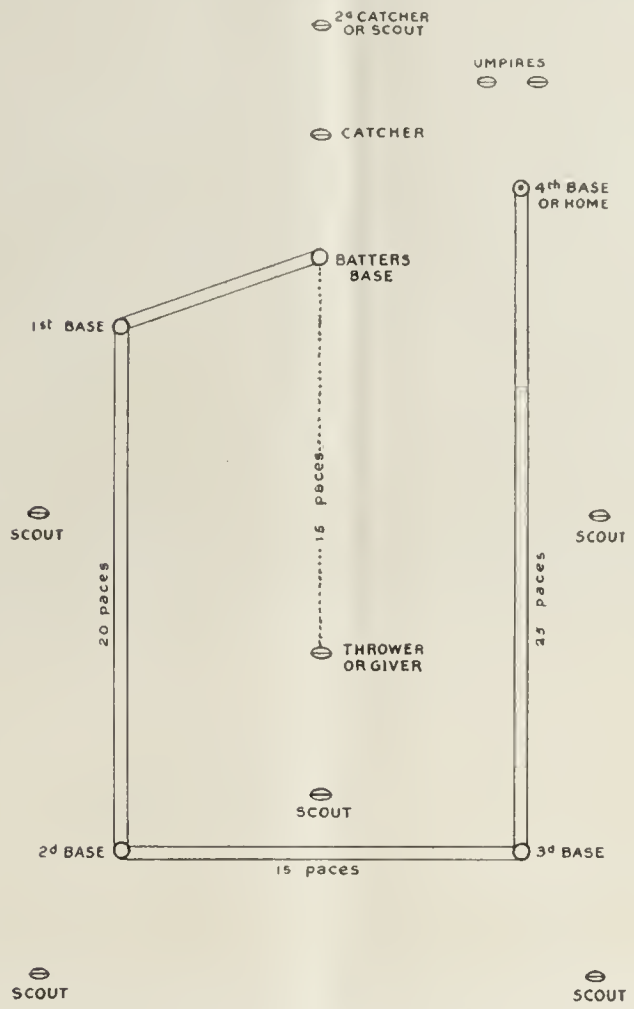
Section 7—A player, running the bases, shall be out if the ball is in the hands of an adversary on the base, or the runner is touched by it before he makes his base—it being understood, however, that in no instance is a ball to be thrown *at him*.

Section 8—A player running who shall prevent an adversary from catching or getting the ball before making his base is a hand out.

Section 9—If two hands are already out, a player running home at the time a ball is struck can not make an ace if the striker is caught out.

Section 10—Three hands out, all out.

Section 11—Players must take their strike in regular turn.



Section 12—No ace or base can be made on a foul strike.

Section 13—A runner can not be put out in making one base when a balk is made by the pitcher.

Section 14—But one base allowed when the ball bounds out of the field when struck.

Just a word, before I go further, about the controversy over the "rounders origin" of baseball, than which no question before the sporting public has stirred up more human ire. That Mr. Cartwright came among the New York boys with a full-fledged game, a novelty to them, is pretty well established. Nothing further is known about the life of Mr. Cartwright; and it seems a little strange to one of this generation that he should have invented "out of his head" a thing so like the old Massachusetts game. Further, it was called "baseball" from the very first; and the name "baseball" for rounders and its modifications goes back to England. Notice, also, in Section 7, that *at him* is italicized, indicating knowledge of a game in which the runner was put out by being hit with the ball—which was the rule in both rounders and townball. Again, they scored the game in that day by twenty-one points; *and twenty-one points is the method of scoring rounders in many parts of England and Ireland to this day.* So it seems likely, to one studying the data in this age of baseball, that Mr. Cartwright had seen a game of townball, roundball or rounders, and that he worked the game out from his recollections or else modified it consciously. That very thing happened when the American colleges tried to play Rugby football from books; did we not know its history so well, there might be a controversy over the "Rugby origin" of American football.

Two other things bear on the question. A special committee of the Baseball Commission has lately declared against the "rounders" theory. They present among their data a letter from Abner Graves, an old mining engineer of Denver. Mr. Graves says that in 1839, while a student at Green's Select School in Cooperstown, New York, General Abner Doubleday invented the modern game, named it "baseball," and set two teams of boys to playing it. General Doubleday certainly did not invent the name "baseball"; and in 1839 he was at

"Roundball," "Townball," or "Boston Baseball."—*As played on Boston Common in the last century. The scouts resembled our basemen, but they put the runner out by hitting him with the ball while he was off the base*

West Point. However, Mr. Cartwright may have got his game from Cooperstown and not out of his head. Again, old members of the Knickerbocker Club have told John Montgomery Ward, the star shortstop of the eighties, that when they began playing baseball in 1842-43 they were reviving a game which they had played in their childhood. These are the contradictory data in a controversy which has rent clubs and estranged friends.

The game was now fairly launched; before 1855 it was the local sport of Manhattan. At about that time the English residents and Anglomaniacs imported cricket. At first cricket seemed likely to swamp baseball. But the factor which makes baseball so peculiarly fitted to the American temperament—its quick action—gave it the advantage. By 1856, when the sporting papers first began to notice the game, baseball and cricket drew about equal space. The Murray Hill grounds had vanished by that time; the Elysian Fields at Hoboken, just across the river from New York, came to be the Polo Grounds of that period. There a dozen odd [illegible] from Manhattan, Brooklyn, Hoboken, and other [illegible] about New York Bay played home-and-home matches. Says Porter's "Spirit of the Times": "This noble American game, which all the seductions of the scientific game of cricket have not been able to undermine, is growing more and more in favor every day. No less than three matches were played last week."

The spirit and practise of the game were purely amateur. These young fellows, many of them members of old Knickerbocker families, played for fun. Challenges were formal affairs. A committee met to arrange the details, and to choose two umpires and a referee—"positions of great dignity," says the "Spirit of the Times." The teams played in open fields before their plighted ladies and the delighted small boys of the Jersey shore. When the game was over they adjourned, usually, to the Red Wing Tavern in Harlem, where the vanquished dined the victors; then home in a carryall by moonlight.

It was a crude game, but merry. In theory, the pitcher was there only to give the boys a chance to "soak the ball." "First bound" was still out. The unfortunate catcher, handling a heavy, lively ball without mask, glove, or protector, stood up near the bat when men were on bases if he had the skill and courage; the early guides recommend him "to do so when he can." Had not the pitcher been restricted to an artificial throw, scarce a catcher would have lived to tell the tale. Many catchers took everything "on first bounce," and managed at that to prevent much base-stealing—base-running also was in its infancy. "Smith," says the "Spirit of the Times," "caught a remarkable game, having but five passed balls scored against him." Here and there we get a glimpse which shows how crude it all was—what a matter of hit-and-miss natural force. In the fifties, Dicky Pearce shone without a peer as an infielder: he used to stop grounders with his hand and foot!

Waiting for a "Good One"

THE theory of bases on balls was not as yet. When it began to dawn on the pitchers that they could puzzle the batters and so hold down hitting, the game promised to become as long-drawn-out as cricket. The pitcher could deliver wild balls in every direction; it mattered not; the batter simply waited patiently for a good one—waited, sometimes, for a quarter of an hour. The umpires and referee, standing crowned with tall hats on the sidelines, had at first no power to make the pitcher behave. So, also, the batter did not need to strike at "good ones" if they did not suit his fancy. He just waited until he had what he wanted.

Yet a few "first things" did appear. In 1848 they changed the method of putting a man out on bases to the present rule—"catch him out at first, touch him out at second, third, and home." When that happened, certain hardy souls took to sliding bases—feet first. The accepted uniform being firemen's shirts and long trousers without padding, they did it but gingerly. The batsmen learned that a steady series of short hits paid better in the long run than a perpetual attempt at home runs. "Muffin" is a piece of baseball slang of that time, now lost to the language; its meaning stood half-way between "lemon" and "dub." And "muffin hitters" they termed those who knew nothing but to slug. The basemen learned that they could cover more territory by playing a little off the sack. Harry Chadwick, called, a little fulsomely, "The Father of Baseball," began to write the game for the sporting papers.

By the late fifties, baseball was spreading out from New York. E. G. Saltzman, a member of the Knickerbockers, moved to Boston and took the game with him. The Tri-Mountains of Boston had just organized themselves to play the old Massachusetts game on the Common. Saltzman came among them with his own game. The boys saw New York baseball in action—"and there was nothing to it." The Boston game dwindled and died. Portland formed a club in 1858. Buffalo and Rochester caught the fever. The Chicago boys had played townball—which they called *(Continued on page 32)*

Site of the old Murray Hill grounds, New York, to-day. It is uncertain whether the Knickerbockers played their first baseball here or on the present site of Madison Square Garden. The best authority favors the Murray Hill grounds

The Turk

Characteristics of the People Who Deposed Abdul Hamid II and Put His Brother on the Throne—as Seen by a Byzantine Greek

By NICHOLAS C. ADOSSIDES

THE author's father, a Byzantine Greek, was a high official under four sultans, being successively Governor of Crete, Prince of Samos, Minister of Interior, Imperial Commissioner of Rumania, and Envoy Extraordinary to the Dalmatian Provinces. Because of his liberal views he and his family were subjected by Abdul Hamid to seven years of espionage. Mr. Adossides himself, while connected with the Foreign Office, was forced to flee because of his liberal sympathies.

THE Turk is a fatalist. "Each nation has its term," says the Koran. With a mind schooled in resignation, he endures without a murmur the greatest privations, while in good fortune he is neither arrogant nor unduly elated. Proud of his race and content with his religion, he venerates the memory of his ancestors and lies becalmed at the wharfs of custom while other nations leave their ancient moorings for the unknown sea.

Endowed with a remarkable physique and of a strong constitution, the Turk is temperate, hospitable, and generous. In many places in Asia Minor, bargains and sales are made without accounts, contracts, or receipts. This could not be so if avarice were prevalent. And, as the Turk has been taught that wealth is only passing, it is not often that he will commit a crime for money.

Turks, however, are of two kinds—the Government official and the man of the people—and of these the one is the very antithesis of the other. Just as the former is false, cruel, servile, arrogant, and unjust, so is the latter simple, honorable, and hospitable. Hospitality, indeed, is the Turk's greatest virtue. Should you travel among the true Turks in Asia Minor you will find, instead of inns and hotels, a warm welcome in every house. The chief men of the village will dispute with each other for the honor of being your host, and he who has won that privilege is envied by his neighbors. If not rich enough to afford a "moussafir odassi," or guest-chamber, he will place his own room at your disposal; but wherever you may lodge you will always find in large Turkish lettters this traditional inscription: "Here is received the Stranger! In the name of God! the Compassionate! the Merciful!"

Nor are introductions necessary. Whatever your creed or condition, your rank or your country, whether Christian or Moslem, wealthy or poor, you will be lodged and entertained as long as you choose to remain. While a guest you are not only not allowed to expend a penny, but are not even permitted to offer a "tip" to the servants, for this would be considered a great insult to your host. Nor must it be supposed that this is true only of the rich or the well-to-do; it is characteristic also of the poorest peasants. They do not wait simply to receive you; they will go out to find you. In many villages a guest-chamber is kept at the public expense.

An ordinary Turkish interior is the mirror of the national character. Though the harem is usually more or less luxurious, the selamlik, or apartment for the men, is simple to bareness. Of carpets, curtains, chairs, tables, pictures, books, and bookcases, not a sign. You will see instead only a whitewashed wall, a mat on the floor, one or two divans, and a frame holding a verse of the Koran, letters of gold on a ground of blue or vermilion; for the Turk, having a natural dislike of furniture, loves to see a room empty and bare. All he wishes is air and light. Hence you will observe many windows, and these, moreover, are usually without blinds.

In the mansions of the great, as in those of the pa[illegible] it is [illegible]wise. Here one can find luxury in ev[illegible]orm: Damascens tables inlaid with ivory, Persian carpets, Kutahieh vases, panels of Oriental faience, and modern marvels of every description.

Should you dine with a Turk, you will observe many peculiarities, to some of which you will find it hard to accustom yourself. The host and his guests, squatted upon little mats, await the servants who, bringing a tray, place it before the company upon a low stool. On this tray, in several hollow bowls with round covers, are the viands. Forks and spoons being dispensed with, each man, stretching out his right hand, deeply scoops up, with thumb, first finger, and middle finger held together, one or two mouthfuls from each bowl. At the conclusion of the dinner the guests file out one by one, to make their ablutions at the fountain.

As a Turk always invites himself to dinner, it often happens that a guest is unknown to his host. All the better, indeed, if he be a stranger; and thus at the houses of the rich pashas one often meets a motley crowd: high functionaries of state, officers, merchants, and tradesmen.

Once at the palace of the Grand Vizier, Hatil-Rifaat Pasha, while at dinner I found myself sitting next to a charcoal-burner. He had simply asked himself to dinner. I must hasten to add that, as for myself, I had been invited by the pasha's son. You must not think that by staying to a late hour you will inconvenience your host. The latter simply sends you a night-robe, a pair of babooshes (slippers), and a brief good night; and then on a rug, stretched on the floor of the selamlik, you are expected to sleep till dawn. Often a visitor remains two or three days without informing his family where he is.

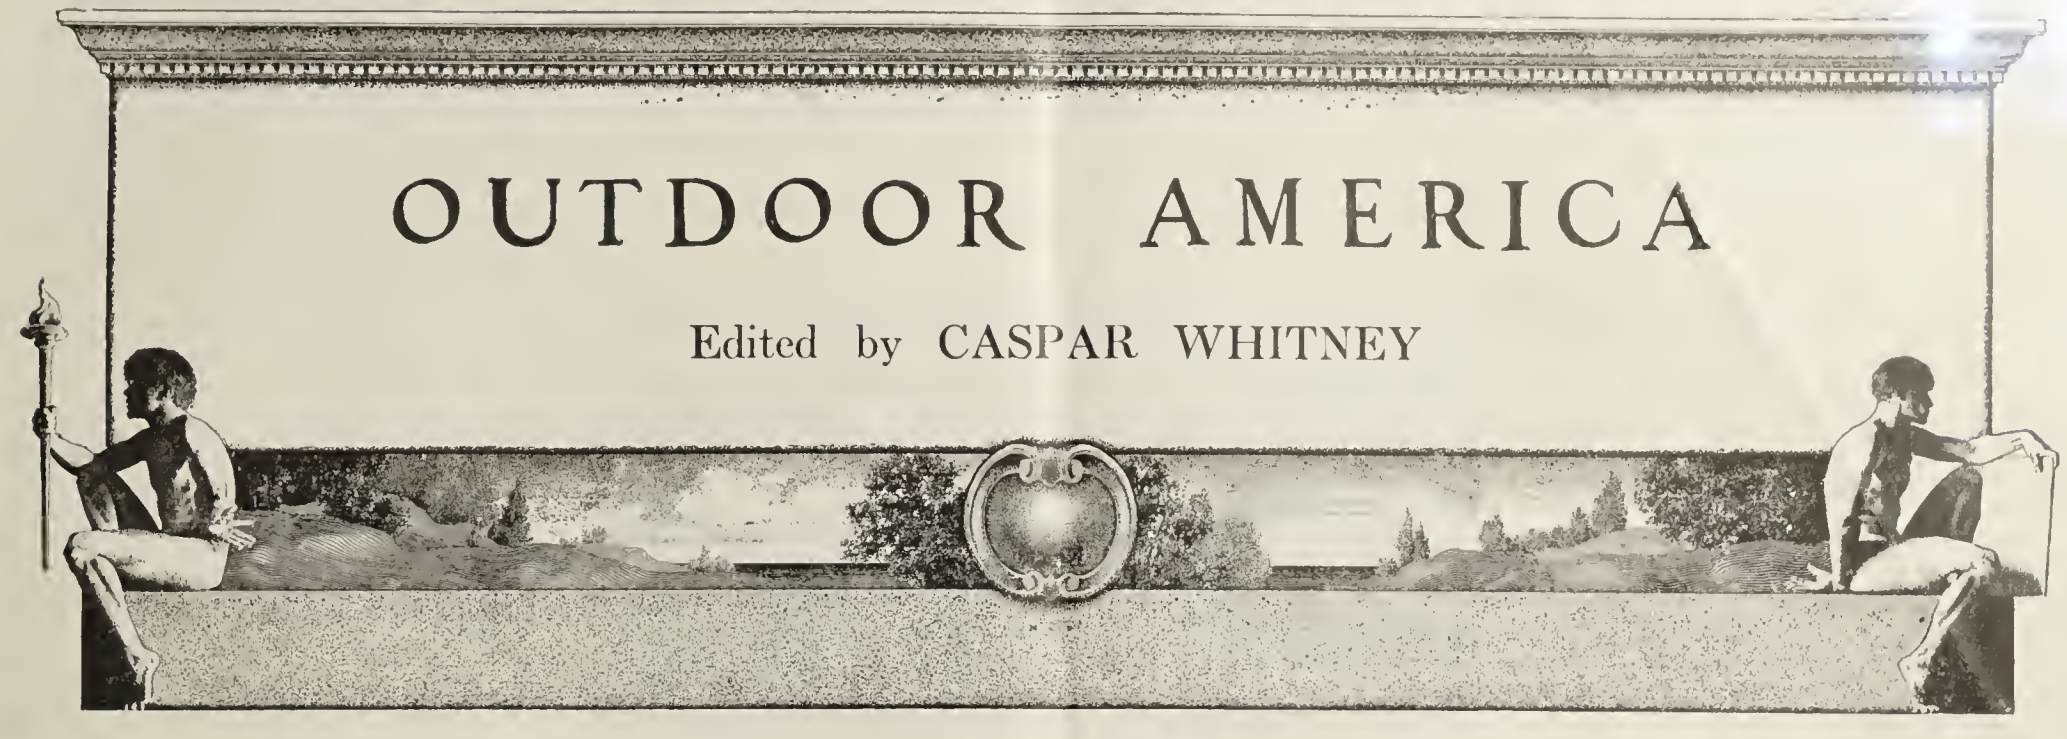
The Turk still keeps to the patriarchal form of the early ages. He is never happy except when under his own roof. There are thousands of people in Constantinople who know no other part of the city than their own immediate vicinage. Balls, concerts, and theaters are absolutely unknown. Their only two forms of public entertainment are: one the karagnes, the Turkish clowns who, accompanied by drums and cymbals, or by couplets of poetry and some wild musical air, act in booths on the street; and the popular pehlivans, or wrestlers, who are seen in squares and on the outskirts.

These are the only diversions of the common people. As for the dance, a Turk once asked me: "How is it that you Christians do the dancing yourselves when you are rich enough to get others to do it for you?"

Being a lover of light, the Turk is an early riser. Clothed in a long caftan, he leaves the harem at an early hour, and going to the selamlik (the quarters of the men) in his bare feet covered with light slippers, he remains there, hour after hour, reclining on a divan, smoking. It is thus that he prepares himself for the arduous duties of the day, which consist, as a rule, of meditating upon the "vanity of human wishes."

The higher his rank the more numerous his visitors. All who come are welcome, though the politeness of the master of the house varies according to the station of his guest. If the caller be of his own rank, the host rises to meet him, and then the two salaam interminably.

The conversation is laborious. Between grave question and weighty reply there is silence so heavy that one might expect the birth of an epic. One might imagine that he was about to hear two philosophers, so wrapped is each in a mist of profundity. But when at last they condescend to speak, one hears only time-worn platitudes, which, however, are delivered with the solemnity of a Solon. The voices, though soft and subdued, are monotonous to weariness; the conversation, usually pointless, is at its best a réchauffé of old proverbs. Nothing is ever said to surprise or to amuse; nothing, moreover, about politics, religion, philosophy, science, literature, or concerning any of the great problems which elsewhere absorb the mind of man. Instead of this you will hear little except the constant repetition of those pompous phrases which Oriental etiquette demands. "Your exalted Highness," "May your health be increased," "I am your unworthy slave," "The dust of your mighty feet"—such are the ponderous expressions one hears in a Turkish drawing-room.



The Dogs Came Back

THE dogs of Constantinople constitute, as it were, a second population. They are everywhere a republic of vagabonds, seeming to be a mixture of dog, fox, wolf, and jackal. Of their origin little is known save that they are descendants of the dogs brought in by the suite of Mohammed II, the Conqueror, when he wrested Constantinople from the Grecks. The Turks protect them with tender care, for they rely upon them to help them, not only against the Christians, but even against the Government itself. They are the seavengers of the city, devouring every scrap of refuse, and they live always in the streets; for, as, according to the Koran, the dog is an impure animal, no Turk will allow one to enter his house. Notwithstanding this, the Turk is almost as jealous of the dogs, which are all owned collectively, as of his religion, and for this reason they have been left masters of the situation, free to multiply themselves without limit. That great reformer, the Sultan Mahmoud II, who was not troubled by scruples, once, it is true, undertook to banish them. Though he had not hesitated to exterminate the janizaries, yet, knowing the prejudices of his countrymen, he dared not kill the dogs. Accordingly he expelled the whole canine population to an island in the Sea of Marmora. To this banishment, however, the dogs were not reconciled, and they howled so dismally that the sympathizing Turks were on the point of starting an insurrection in their behalf when, by an imperial edict, the exiles were recalled. On their return they were received by the populace with demonstrations of enthusiasm, and the day was celebrated throughout the whole city.

In the streets of Constantinople, except in the Pera, Galata, and the Christian quarters, one sees neither impromptu gatherings nor drunken brawls. For the Turk is sparing of word and gesture. This grave and contemplative air does not denote a depth of thought. Far from it; it is but the cloak of unillumined dulness.

The whole philosophy of the Turk, his whole history,

(*Continued on page 30*)

OUTDOOR AMERICA

Edited by CASPAR WHITNEY

A Work Only Women Can Do

WOMEN ought to have some interest beyond their household—it's broadening as well as becoming. The most ravishing sight in the world is a woman with her cheeks aglow and her eyes sparkling with the spirit of contest. And when the interest is a worth-while one, she's a winner every time. Often she wastes her forces, as we men do, phantom chasing. Now if those gentle creatures who are giving mental and physical energy ('ware wrinkles, ladies!) so generously to the unraveling of psychic, sociologic, and other mental phenomena, would only organize against the wearing of wild bird plumage on their hats, what a splendid and a real practical service they would be doing a cause certain to return results for their efforts! The only way to stop the slaughter of birds for plumage is to stop the demand for their sale; and the only way to put an end to the demand for their sale is for women to refuse to buy hats trimmed with wild bird plumage.

To make plumaged-trimmed hats unfashionable—that would, indeed, be a real practical, a needed, and a magnificent achievement.

One live bird in the bush is worth three dead ones on a hat.

I suppose, as a matter of fact, it is too practical to invite that class of restless women who mostly dabble in new though convulsions and other vibrations; but if only a portion of the women would organize in such an effort, results would follow. Certainly the slaughter of birds of plumage for millinery purposes has reached a fearsome state, despite the continued and unsparing efforts of the Audubon Society. If women do not get together in such an organized effort to save the birds, the cause is doomed; for only by such a method may the birds be saved. Here is a glorious chance for some intelligent woman of kindly impulse, who lives in New York, to do a great work by organizing such a club or society. And if a group of prominent women would so organize and send out the decree, "No wild bird plumage on hats," the campaign would sweep over the country like wildfire; for the majority of women are really in sympathy with the protection of these birds, only none singly, or no town alone, dares fly in the face of fashion.

The Audubon Society has spent thousands of dollars in Florida, and lost two of its wardens by murder, in the effort to prevent the slaughter of these plumage birds; and thousands of dollars are still being spent to create a sentiment in Florida among the people themselves to save their egrets, herons, pelicans, spoonbills, and others from the market butcher, but little is accomplished, because this is not the right end of the problem. The real people to labor with are the women, for whose adornment these birds are killed. Are there not some public-spirited women who can put aside suffrage discussion long enough to unite on this question of saving the rapidly disappearing birds of plumage from our extreme Southern States?

If women will agree not to wear a hat trimmed with feathers of these Florida birds, the question of their protection instantly becomes a dead issue.

'Tis better to restrain plume-hunting than to suffragette.

Canned Baseball

THE only unhappy incident of the spring season is Yale's return to professional coaching for her baseball. The reason for doing so, as frankly stated by the captain of the team, is an extra effort "to win a baseball championship at New Haven, or to at least defeat Harvard." That's the curse of college athletics; that placing of the mere winning above all other considerations:—and the gate receipts and the professional coach are its abettors. When our college faculties and committees teach (and insist) that just as much fun and benefit and glory comes out of baseball that isn't developed to the ultimate degree of excellence, then they will evince some comprehension of undergraduate athletic-physical requirements, and we shall have play on the amateur basis of sport for sport's sake. College teams do not reach the standard of professionals, and they never will, no matter how much professional coaching they receive. It isn't that I inveigh against the professional in his own legitimate field; it is that the employment of a professional coach at once changes the spirit of the men and the atmosphere of college ball; it puts the desire to win as the sole *raison d'être* of the team's life; it introduces unsportsmanly tricks—and it establishes no sporting traditions for the university. Yale can hardly be criticized for returning to professional coaching, since her chief rivals also employ them, and it's asking a great deal of boys to stand steady for a principle in the face of defeat by rivals who are violating that very principle with no reprimand.

And yet without the principle the play is valueless. Believe me, young gentlemen, sticking to principle, "in spite of hell and high water," is worth more to you than mere winning of a game; sticking to principle, fighting for it, is a game—the greatest game man plays. Try it.

Some day somebody in the college world will have the nerve to step forth and fight for a principle, even if he fights the fight alone. Meanwhile, we are developing canned baseball at our colleges. If you don't believe it, watch the next Yale game and see every batter as he goes to the plate take his instructions from Lush, the professional coach. The professional coach in college baseball is destroying the initiative of the batter.

And speaking of men who fight for a principle reminds me of the George A. Adee boat-house, for which Julian Curtiss is endeavoring to raise money. His appeal ought to secure ready response from every Yale man. This is more than a boat-house; it is a memorial to George A. Adee, than whom no man did more for Yale, and who had the principle and the courage to fight for a worthy object, regardless of cost.

Broaden Out

GOLFING circles seem to be agog over the time-honored question of government without representation. The Western golfers want a fairly representative voice in the legislation of the United States Golf Association, and, in my opinion, they are quite right. If an organization pretends to national government, it must have national representation among its legislators. No sectional body can rightfully aspire to national influence. As my acquaintance goes among Western golfers, this desire is no mere insurgent movement; there is a deep feeling that the present association should reorganize on wider and more fairly representative lines. As a matter of fact, it seems to me it would be an excellent idea for the United States Golf Association either to broaden its lines according to the need or join with the Western Golf Association in organizing an American Golf Association. The Atlantic Coast isn't the whole country; often we of the East forget that.

Turning to the Open

IT SEEMS to me that the failure of the recent six days' go-as-you-please pedestrian match in the Madison Square Garden, coming immediately after the remarkably popular successes of the Automobile, Sportsman's, and the Motor Boat shows, is a most significant demonstration of the turning of the popular mind to the open and to healthier activities. There was a time some years ago, I remember, when the six-day pedestrian matches set the town afire and crowded the old Garden. But people have been getting into the fields and the woods since those days, and I think the frost which visited the recent six-day match is about as concrete evidence of the new trend as has come under my notice. When you consider that as many as ten thousand people visited the Motor Boat Show in a single night, you realize that this country movement is not all on paper, nor even the fond speculation of the editor.

Pocket-book Sentiment

EVEN from the viewpoint of the idealist, there is virtue in the commercial spirit which some affect to look upon with contempt; at least it leaves open a vulnerable point of attack.

One touch of pocket makes the whole world kin.

Last year, when devouring hosts of the gipsy moth were ravaging New England, the pleadings of the—"sentimentalists," shall I say?—for protection of the insectivorous birds fell upon ears deaf to argument based on economic grounds, and thousands of dollars were spent without avail in efforts of one kind and another, scientific and otherwise, to stay the devastating army. The loss to those regions where the gipsy and the brown-tailed destroyers made their way is reckoned by the millions of dollars. And now, finally, some precocious legislator has bethought him to try Nature's remedy, which the "sentimentalists" have been imploring him to recognize. New York is the first in the field with a bill not only to protect insectivorous birds, but to recruit an additional force of them. From the cross-roads' grocery-store on through the ranks of the milkman, the baker, and even the peregrinating and intensely practical-minded butcher, has the virtue of bird protection manifested itself in town and country through study of the 1908 profit and loss account left by the retreating moth. And thus it comes to pass that when "little Willie" this spring exhibits to "pa" the robin he has slung-shotted to death he will be surprised to receive a warm smack—you know where, son—instead of the indifference or the amused half-interest "pa" has hitherto accorded his like predatory excursions.

Could a more convincing illustration of the practical value of bird protection be placed before you? Take a leaf from the experience of New England with its ravished foliage, you doubting residents of the West and the South. The certain way to insure yourself against insect invasion is to employ bird defenders, and if you would be guaranteed such defenders, you must protect them—and now. That is only *quid pro quo*, isn't it, and entirely fair? And these defending bird regiments are composed of robins, woodpeckers, orioles, grosbeaks, and all other kind that prey upon insects.

The Francis bill, recently introduced into New York, marks a notable and a new era of enlightenment, because it asks for the protection of these birds "in the interest of commerce." Do you hear that, you tried friends of bird protection?—"in the interest of commerce"—and you may be sure there is no sentiment above the pocket in the New York Legislature. By the light of this action in New York, the conspiracy disclosed during the last session of Congress among Representatives Mondell of Wyoming, Macon of Arkansas, Bartlett of Georgia, and Foster of Vermont to defeat an appropriation for the protection of water fowl on two reservations in North Dakota which Mr. Roosevelt had set aside, becomes rather an interesting example of both ignorance and selfishness.

What Washington needs, it seems to me, is an information bureau for the enlightenment of the "people's choice."

Cut Out the Graft

I NOTE with pleasure that the several erstwhile warring automobile associations have settled their differences and agreed upon a reorganization to control racing. It is quite right the automobile manufacturers should have an important, if not a controlling voice in such government, because it is the racing and the endurance tests which mark the progress of the American manufacturer's product. While offering my congratulations, I wish also to add that if the manufacturers would get together and stop the graft of the dealers in sundries, of the garage shops, and of the chauffeurs they would do as much for the sale of their machine as, through the racing agreement, they have done for its trying out. At present the owner of an automobile is buncoed and robbed from the moment he installs a chauffeur and his car enters the garage. It is the supply shops who seduce the chauffeur, and the manufacturers can stop the temptations which are used to his undoing, in the way of commissions, etc., quite as easily as they have handled the racing situation, and with much credit to themselves.

Marathon Mania

IF THE Marathon craze continues we shall have to inoculate the A. A. U. with an English bacillus. As usual, we are running the thing into the ground. What is at best a "freak" event, only justified on sentimental grounds at Olympic games, for instance, has been made an every-day amusement. No boy under eighteen should be permitted to enter one of these races, and not then unless he has undergone a physical examination. To allow schoolboys to enter these long-distance races is criminal.

Racquets

IT WAS Young Lochinvar (Harold F.) McCormick who came out of the West this year to carry off the Racquet Championship and the Tuxedo Gold Cup. Eastern experts have played better than [illegible] showed; but that is not saying they can beat McCormick. Harold

Baseball from the Bleachers

Sidelights on the Diamond

By AN EX-YALE CAPTAIN

YOU are a man—or, maybe, a boy—on the bleacher of the baseball field who is a novice in the sport. If so, sit with some critic of the game to catch—on the fly—from his lips those nicer points of the game that come in too slowly from the written word. You are, *per contra*, a veteran of the game. If so, you may even give points to the critic who writes. But much more likely you are a kind of middleman of the bleacher and typical of that great mass of spectators, young and old, who see the game in a kind of landscape view, unwitting of subtle detail, watching for its dramatics rather than for its nicer factors, appreciative enough of the long hit and brilliant catch, but with utter vacuity of eye for team play, taking in the sport as a composite whole rather than by analysis. For such a bleacher man, mainly, these words are penned, that in his sight the inner beauties of the sport may blend with outward pleasures and make both intensive.

You have seen both professional and college nines on the field, perhaps one pitted against the other! Mark, at the outset, one of the basic differences of play which, in nine cases out of ten, gives the professionals the leading score. It is not merely harder hitting and more precise field play, but a difference of action rooted in experience. The college player is not only nervous, but he never knows exactly what to do. He plays a little too far in or a little too far out. Once in three or four times at the bat he "bunts" when he should strike or the reverse. The pitcher, nowadays overmuch the king-pin of the field, on the college nine rarely studies his man at the bat; and at a critical point a little flaw of team play lets in a couple of runs and "rattles" the nine. How different the whole action and playing form of the professional! His long habit of play has crystallized into a quick instinct. He does the right thing and at the right time and place without having to think what the right thing is, and he does it instantly, gaining that foot or two of distance which the amateur loses in his half-second of thinking. In the psychology of the game it is a case of automatic impulse *versus* slower reason; and in the scientific baseball game of to-day, made up of an aggregate of small things, it is the former, the trained intuition, that wins. This fundamental variance between amateur and professional applies in almost equal terms alike to the individual and to team play.

Next take up briefly and in their order the positions of the players, though here only a few pointers out of many are cited: There is, first, the catcher. He may otherwise be skilled, but falls to the second class if he lacks either one of two traits—stopping the wild ball and making the quick, accurate throw to second base. To compass these he must be what we may call "the straight line" catcher, who, firm on foot, wastes no motion, whose limbs and whole body act mechanically along those straight lines which economize space and distance. In the pitcher, with his other qualities, good or bad, whatever they may be, watch for two bed-rock traits—variety, plus degree of curve, and control of the ball. The radical test of the first baseman is his handling, as against the swift runner, the slow ball dribbled between himself and pitcher, and—a point constantly overlooked—the quickness with which, when the runner is at his base, he retakes his proper fielding position after the delivery of the ball by pitcher. Second baseman and shortstop may be bracketed in two essential tests, the sharp fielding of slow balls and the running catch of the ball thrown to second base by catcher. The third baseman, holding perhaps the hardest position on the nine, is measured best by his fielding of slow balls—including the bunt—and the pace and accuracy with which he delivers it to first base. And, finally, the three outfielders have their two essentials, the long throw home on the first bound and "marking down" the fly ball. Of the two the last is first. The crack outfielder judges the drop of the ball just before the apex of the curve. He never staggers, twists, or hesitates. The ball may fly overhead for a home run, but even then he has pointed straight for its drop as well as in his running catch. Next to the catcher, the crack outfielder symbolizes that "straight-line" principle which is a keynote of baseball efficiency.

Allurements of the Game

TURN from such vital technique to the broader allurements of the game! For just an instant, when the long sky hit is made, forget whether or not the outfielder is to capture it in your study of the beauty of its curve and its curved variants—for no sky hit or line hit or any other hit has ever been like any other. The ball hit just a little above its center drops sharply; hit a little below it falls slowly; hit a little sidewise and on the quarter it has the picturesque "hook" at its fall which so often tricks the green fielder. Nine men out of ten on the bleacher, after their first glance at the sky ball, instead of following it, drop the eye to the fielder and miss the prime beauties of the hit itself with its graces—[illegible] of curve! Better seen, yet seldom justly appreciated, is the charm of the throw which, for example, made by the good third baseman well in territory beyond his bag, delivers the ball like a bullet to first base so evenly that its curve is all but invisible to the eye. Such a ball hardly rises after it leaves the hand. It may catch the swift runner or it may not, but the charm of the throw itself is there. In vulgar baseball esteem the long hit outclasses such a fine line throw and draws the cheers of bleacher and grand stand, yet the hit may be but accidental, while the perfect line throw betokens always intrinsic and normal merit.

"Ay—you McCarthy—Run!"

The Bleacher Critic

AND in a still broader and more general way it is for a habit of just such an equitable measure of merit and demerit in the plays that the young critic of the bleacher should strive. Such a habit is the index of his sportsmanlike spirit—and in other things than baseball. He sees, for example, the difference between the player's error of judgment and his error of execution. He has severe judgment for the one, charity for the other. He holds that the mental error far outranks in bad eminence the mechanical error—that the player who uncovers his base at the wrong time or fails to "back up" his mate is far more culpable than is he who fumbles a grounder or misses an easy fly—for the best of fielders must now and then slip in his play as a handcraft. It is the same spirit of sporting justice which looks behind the noise of the partizan bleacher; gives the presumption of right to the ruling of the umpire; cherishes the amateur temper; sets recreation before winning; and marks down with abiding personal stigma the tricky player who obstructs an opponent or cuts a base in his run. The critic who is also the true sportsman often indeed must also be a partizan in feeling and sympathies. But his is a partizanship which is ever in abeyance both to fair play and to honest judgment.

Would you view the game in yet wider aspects and from the more esthetic viewpoint? Not much of poetry of scene, one would say offhand, pertains to the big league game of the great city. Its background of murky building and its skyline, broken only by the angles of street and roof, are not the elements of an artistic perspective. But it has its natural charms all the same and accented by contrast. It has its carpet of greensward, refreshing to the city dweller's eye. Its mere openness and horizon have a stimulating breadth and breeziness compared with the pent-up cañons of the skyscraper. There are over it the real clouds, and, even though dimmed by the city's smoke, there are genuine cloud shadows which float over the field. And, finally but not least, there is the dignity and intensity of multitude, that subtle but strong current of "human interest" which any great gathering centered on the rivalry of men awakens. Those long lines of faces gleaming in the sun seem indeed a single great organism when stirred by an exciting play. Or is the game a match of country nines on the rural sward? Pause for a while between innings to study the background of the field, its edgings of waving tree-top and distant hill, its cloudlands of the sky. And then, last, but best, there is that baseball climacteric, the great college game, when to nature's setting is added the noise-spectacle and academic color schemes expressed in badge and banner.

Yet again there are technical side lights of the game in minor flashes. Do you wish to study it racially? Look over the surnames on the score-card and note how many of them are of foreign extraction as distinguished from the pure Anglo-Saxon and native breed—and, especially, how the Hibernian strain persists in baseball as it does in urban politics. Do you wish to analyze and measure certain factors of the sport? Keep, for an example, on a separate score-card the figures for "bases on balls" with the runs directly resulting and, after, say, twenty games, ratio such runs to the total. In college games, at least, the outcome will usually be found surprising as an index of wild pitching and its deadly sequels—only less deadly because the base on balls of one side is apt to offset that of the other. It is even more interesting to keep a score based rigidly upon your own private judgment and later compare it with the score official and published.

But on the ball field there are back lights as well as side lights. The veteran of the diamond has his far-away looks as well as present vision. He can suggest to the young critic points of the game, enlarge his technique, urge his high ideals, impart a bit of fresh judgment, and maybe clarify his atmosphere of the game, and hint at its qualities, artistic or scenic. But he can not impart the memories that at each new match light up before the old ball player's eye. Again he sees the old sunlit diamonds, the frontal line of crowded bleacher and stand, and, as through mist, the familiar forms of old mates of the field. Whither have they gone?

What You Can't Buy

Melons from Your Own Garden

By JULIAN BURROUGHS

SOME morning in May when you go out to the garden, a wren, the first you have seen since last summer, will dart along the ground, flying to a fence-post top, and gaily begin to sing. In the North this always marks the beginning of the time for summer gardening, the time for planting or transplanting the fruits and vegetables that can not resist frost—the lima beans, the main corn crop, the melons, cucumbers, and so on. Among these, let us give the muskmelon first place. Though you may buy as good corn or beans as you can grow, you can not buy a really good muskmelon. We have tried to buy them, getting from all sources, from the country pedler to the wholesale commission-houses of the big cities, without ever getting anything that could compare with those I grow in my own garden. Aside from the expense of buying melons, which is considerable if you have what you really want to eat, the joy of the triumph of growing them yourself is worth much.

Three things are necessary for an abundance of sweet and aromatic melons: first, a foliage that is healthy; second, a properly prepared soil; third, a more or less sheltered and sunny location. Besides, the melon itself must be picked at the right time. Though second in importance, the requirement of soil must come first in point of operations. I have tried both making hills, with much labor and time, and just planting the seed anyway as you would beets or corn, and I find that the first way pays. The commercial growers plow open a big furrow, which they fill partly with manure, ground bone, cotton-seed meal, etc. In the garden the plow can not be used at this time of year—or but seldom—and hand-work is necessary. I get best results by marking off the places for the hills, and then, with a shovel, digging a good-sized hole down into the yellow subsoil, filling this hole half-full of well-rotted stable manure, then the remainder with the top soil mixed with hen manure, fertilizer, and wood ashes. Where the soil is sandy the problem is much easier; where it is heavy or clayey some sand, muck, or sifted coal ashes must be used to lighten and warm it. Where manure can not be had, sod, mixed or sprinkled with a commercial fertilizer rich in nitrogen or ammonia, should be put in the bottom of the hill. A complete commercial fertilizer can take the place of everything else unless the soil is sour, in which case plenty of wood ashes or lime is necessary. Also it is absolutely necessary to lighten a heavy soil. Where manure is used, especially hen manure, the commercial fertilizer should be rich in phosphoric acid and potash, otherwise the melons may run too much to vine and lack sweetness. Good hardwood ashes are often difficult to get; they are ideal for making sweet melons, however.

Be Generous with the Water

WHERE one is so fortunate as to have water, some provision should be made for watering at the time of making the hills. This will prevent trampling or dragging hose and baking or puddling the top of the ground later on in the drought. This year I hope to have time to rig up some old leader-pipe, or, at least, to make a wooden trough with a gate at each hill. Under this I will make a hole filled with loose manure, into which the water can pour, and so seep away slowly without loss or caking the ground. If you water at all, put on abundance. A little water, like learning, is dangerous. If a building stands near the garden, the water from its eaves could be run in the end of the melon trough, thus getting some good from those light showers that so often wet the top of the ground without reaching the roots of the plants. This water would be warm and have those subtle virtues of rain-water which well or spring water seem to lack. Of course a gate should be so placed that heavy rains can be shut off.

When the soil is thus properly prepared and fertilized, it is only necessary to guard against blight and insects

to have healthy foliage, the prime requisite for sweet melons. For the first of these use Bordeaux mixture. Be sure to have plenty of good lime in the mixture, keep it constantly shaken up or stirred while using, or the lime may quickly settle and so burn the leaves with the part that lacks it, and try to get it on the under side of the foliage. Spray early, as soon as the vines begin to run nicely, and follow it up at least every two weeks, covering them "head and ears," as the hired man says, every time. This is not only the best blight remedy, but it helps to make life unbearable for the insects that cluster about the melon hill.

Get After Insects Early

OF THE many insect enemies of muskmelons, a volume might be written, so many are the remedies or, rather, preventives for them. On one point all agree: they must be forestalled in time. I have found that it is really a simple matter to defeat the half-dozen or so bugs that eat melons provided I got into the game with the kick-off. Like a fire that is easily snuffed out at the start, once under way it is beyond control. First come the yellow and black cucumber beetles that sit round on the hills waiting for the melons to come up, then the "Johnny-jumpers," then the aphides or black plant-lice, then the wireworms, cutworms, and squash-bugs. Seldom are all these creatures troublesome in one locality. If possible, let a flock of hens scratch over the garden in spring before planting. Later, several broods of little chickens, with the mother hen securely cooped up, are a great help in the melon-patch. The next best thing is hand-frames of boards and glass, or simply two half barrel-hoops covered with cheese-cloth; these both protect the young plants from the cold nights as well as insect pests. When the vines begin to run, remove these little shelters and put them away for next year. Failing or lacking these, plant a great many seed, with radish seed mixed with the melons and squash trap-vines near by. Then dust with insect powder, black death, bug death, etc., while the dew is on. Put moth-balls, tobacco stems, lime sprinkled with turpentine, whichever is at hand, about the vines, especially where they come out of the ground. This last is to keep the beetle from going down to lay her eggs on the roots. It will also keep wire and cut worms away. The squash trap-vines will collect most of the bugs, where they can be killed with kerosene or Paris green. Watch for the appearance of the aphides or black plant-lice, and pick them off as fast as they come. This is important, and unless it is done the lice will spread with incredible rapidity, whereupon it will be necessary to pull up the vines, sadly vowing to do better next year, or else spray with kerosene emulsion or fumigate with tobacco dust under a cover or tent of paper put over each hill in turn. Wherever you see a leaf curling, look on the under side and destroy all eggs found there. Kill all wire and cut worms found in the soil when making the hills. Boards or shingles lain on the ground so that there is a slight space under them will collect most of the bugs at night, where they can be killed.

Melons and Ripe Melons

IN PICKING the melons, wait until they crack loose from the stem—they should drop off at a touch. Then put them at once in a cool place.

After trying every kind of melon, I have settled down to the Emerald Gem. This melon is not grown for market because it is not hard and tough enough to stand shipping. I may add that the trouble with melons in market is either from picking them while green—never buy a muskmelon with the stem hanging to it or one which looks as if the stem had been cut or pulled off instead of ripening loose or from blight-struck foliage. Squash and cucumbers planted near have no effect on the flavor of melons. Have your ground sweet and your vines green; let the melons ripen on the vine and they will be heavy for their size, aromatic, juicy, and delicious; or, in the words of the seed-catalogue man, "melting and luscious." Further, in trying other or newer varieties, remember that the heavily ribbed melons are apt to split open in wet seasons and that, as a rule, the larger kinds are both less prolific and harder to ripen in our short summers.

The melon-patch should have the sunniest place, free from any noontime shade of trees or buildings. A hedge or fence on the north is good.

When possible, it is a good plan to start the melons in paper boxes, paper-lined quart cups, pots, etc., in a hot-bed, greenhouse, or sunny window. Set them in the open ground about May 15, planning to hit the beginning of a warm spell, if possible. I was able to make some hand-frames of old boxes and photo plates from which the films had been removed. Cheese-cloth can take the place of the glass, or oiled muslin, to keep off the early cold rains. By such methods two [illegible] gained.

And what a satisfaction it is to have really sweet, delicious muskmelons! Not once in a while one, but a whole trayful at a time, cold from the ice-box—before breakfast, at dinner, between times, four or five to each person, so plentiful and good that eating them is "like the finish of a tub race."

New Whale Discoveries

The Highest Peak on Earth

By CYRUS C. ADAMS

IF WE had visited the extreme south Atlantic in its summer just ended, we might have observed remarkable activity on the island of South Georgia. Most of the world does not yet know that the whaleries on the edge of the Antarctic Ocean, dead for a century or more, have had a wonderful revival; and South Georgia, one hundred and thirty miles long, with its backbone of high mountains and its deep bays and fiords, is revealed, even before it comes into view, by clouds of black smoke rising from huge kettles in which whale oil is extracted from blubber.

Five hundred men are living there in the summer, stripping blubber from whales that are towed to the island, trying out the oil, and running boarding-houses, bakeries, and laundries. About twenty vessels are now engaged in the industry, and the eager quest for wealth threatens, in a few years, to deplete the new-found whalery, just as the whaling grounds of the Arctic have been nearly ruined by overfishing.

Captain Larsen Finds Whales

THESE new enterprises in the lonely waters of the far south originated by a Norwegian and four Dundee whaling vessels being sent in 1892 to discover if, in that region, the prosperity of the whaling industry might not be revived. East, west, and south they cruised all summer over the comparatively shallow waters of the southern sea, but they met few whales, and these were not of commercial varieties. The Dundee vessels went home empty-handed, and the prize which Captain Larsen, the Norwegian skipper, took home brought no joy to his employers. In his quest he sailed far south to West Antarctica and skirted for many miles a coast that no one had seen before. His discoveries along the shores of Graham Land brought him one of the honors of the Royal Geographical Society; but not a drop of whale oil rewarded the men who had paid for the expedition.

Every one thought these investigations settled the question of the supposed southern whaleries and that it would be futile to look farther. So it happened, ten years later, when Larsen commanded the steamer *Antarctic*, which took the Nordenskjöld party to Graham Land in 1903, that he had no idea of keeping an eye out for whales. He was to land the explorers and then cruise north for the purpose of making oceanographical researches till time to return for Nordenskjöld. It was while the scientific men on his ship were engaged in their labors that Larsen suddenly began to take notes of his own. As he crossed the waters far and wide around South Georgia, he found he was in a region teeming with whales. Here was plenty of the food on which whales thrive, and in this shallow sea, on the southern edge of Atlantic depths, whales had found a refuge where the hunter never came and the leviathan might breed in peace. South Georgia, far from the ocean highways, has been nearly as isolated as any polar land.

The old whaling captain did not tell all he knew, and his comrades had time to forget much they had learned in the terrible days that followed; for while steaming southward to find the explorers and take them home, the *Antarctic* was crushed in the ice off the east coast of West Antarctica, and the large party, reaching an island, nearly perished in the months before rescued in summer. Explorers and castaways were taken to Buenos Ayres by an Argentine relief vessel, and there Larsen told what he had discovered and became a member of a company organized to carry on whaling in the waters around South Georgia.

Height of Mount Everest

THOUSANDS of barrels of whale oil are now landed at Buenos Ayres every season. Two Dundee companies are already engaged in the South Georgia industry and two more were organized last fall and are equipping vessels for the next season. The largest center of the whaling interest is now in waters bordering the Antarctic; and the curious fact is that the ships sent out by two nations to find whales in the far south had their trouble for their pains, while explorers who had no thought of this great sea industry dropped accidentally upon rich whaling grounds.

The near departure of the Duke of Abruzzi for the Himalayas gives new interest to the fact that Mount Everest, the highest mountain in the world, is now found to be higher than the figures heretofore assigned to it. It is over fifty years since the height given to this eminence was fixed at 29,002 feet. Many have thought it ridiculous to tack on those two final feet over the even thousands, but the facts show that it was proper to do so. While the Indian Government was making its surveys within sight of the great mountain it took six trigonometrical measurements to the highest point of Everest from six different stations, and the mean of these values gave the height of 29,002 feet. Recently six other determinations of its height have been made at five stations, all but one of which are nearer the mountain than any of the earlier stations. The average of these latest determinations give a mean value of 29,141 feet, which is nearer the truth than the figures so long accepted. The survey reports that the mountain is undoubtedly of this height and probably higher, for there are still sources of error which can not be eliminated till problems of refraction and of deviation of gravity are more satisfactorily solved. It is intended to keep the old figure of the height on the maps of the survey until the very best determination is made by more accurate means than are now available.

Argentina's Skyscraper

IT WAS long thought that a mountain might yet be discovered on the Tibetan side of the Himalayas which would overtop Everest, but this idea is no longer tenable, for the entire range of high summits has now been seen from the northern side, and there is nothing in view that is comparable in height with the peak that has so long been reputed to hold its head higher than any other in the world. No doubt now remains that Everest will continue to bear the palm.

The difficulty of ascertaining the exact height of mountains is well illustrated by this latest report of the Indian Survey. Mount Aconcagua, in Argentina, is believed to be the crowning summit of the western world, but there are still plenty of unmeasured high peaks in the Andes, and Aconcagua may yet be compelled to take second or third place. The latest determination of its height was made by Mr. Schrader, the French geographer. His work gives a value of 22,812 feet, which is 56 feet lower than the results obtained by any of his predecessors.

"Little Brothers of the Air"

Winning a Bird's Confidence

By CLINTON G. ABBOTT

Photographs by the Author

TO THE average person birds suggest themselves as the retiring inhabitants of tall trees or unfrequented fields. Occasionally they please the eye with a glimpse of brilliant plumage; more often they are the unseen source of delightful music; but, beyond this, they are regarded by most people as timid and elusive beings, suspicious of man and all his contrivances.

On the other hand, there are the fortunate few who, by their more intimate communion with wild nature, are enabled to enter into closer acquaintance with the birds—to make real friends of them, so to speak. For them, birds exist not merely as animated fluff and feathers, but as individual entities, each with its own characteristics and peculiarities—"little brothers of the air," one sympathetic writer has expressed it.

Blessed with an inborn love of birds, it has ever been my delight to follow them in their wild haunts, and my trips afield have led me into many an out-of-the-way spot; but no more interesting experience have I enjoyed than the close friendship I was able to strike up one summer with a family of field sparrows at Montclair, New Jersey. The field sparrow, as its name indicates, is a bird of the open country. It loves scrubby and overgrown pastures, but never makes its home close to the residences of men, and hence is less accustomed to association with human beings than many other kinds of birds. My first advances were certainly not indicative of much success, for the birds would fly from the neighborhood of their nest almost as soon as I appeared above the horizon. However, I made it a point to visit them frequently, at the same time gradually cutting for myself a little pathway into the clump of bay bushes, amid which the nest was situated. After a while, from scolding at a distance, the birds came to waiting close at hand, and soon the female merely slipped from her nest at my approach, returning to it as soon as I retired. Already they seemed to be learning that I intended them no harm. This was the opportunity to bring the camera into play, and, by stealing up to the nest just before dusk, I was able to secure a photograph of the brooding bird. Apart from the general subject, the picture I obtained was interesting in showing the ruffled condition of the field sparrow's plumage. In the popular conception, all birds are sleek and neat creatures, with never a feather misplaced; but the camera has here revealed to us that even in the bird world the careworn housewife occasionally permits herself to lapse into untidiness of dress.

When the time came for the little ones to be hatched, I was still allowed within the sacred precincts. I must by this time have come to be regarded almost as a family friend, for I was permitted to stand close by and to watch just how bird babies should be properly reared. I followed the process with interest from the time that the naked and blind nestlings could assimilate only regurgitated and macerated food, until, fully feathered, they were able to rise with shouts of delight to greet the full-sized grubs and caterpillars that were thrust into their gaping craws. Incidentally I was able myself to be of some slight assistance in the field sparrows' domestic economy, both by occasionally feeding the young birds and chiefly by shielding them from the heat of the sun's direct rays, to which the little pruning necessary for photography had exposed the nest during certain hours of the day. For this purpose I held an improvised screen over the nest, under the cooling shadow of which the faithful mother soon learned to come unhesitatingly. The male bird, however, was much more wary, and spent most of his time uttering his note of anxiety—the monotonous monosyllable *chip*—at the average rate (by actual count) of forty-five times a minute! Now and again he would seem suddenly to awaken to his duty as father and husband, and disappear in an industrious search for food, returning in a short time with a luscious grub in his bill. Much more lengthy *chipping* would ensue, at the end of which, unable to resist the temptation longer, he would invariably swallow the grub himself, vigorously wipe his bill on a twig, and start off in search of more! Not once did he ever go to the nest while I was standing near. The female bird, on the contrary, came and went with the utmost freedom. She even had a habit, after she had fed the youngsters and attended to the sanitary conditions of the nest, of lingering over her babies, almost as though gazing upon them in love and admiration.

As soon as the little fellows were old enough I removed them from their nest and placed them on a convenient branch, near which the camera was arranged in focus. At once they set up the periodic chirp which nature has provided as a sort of automatic annunciator of the whereabouts of young birds that are out of their nest. The parents, attracted by the sound, soon appeared and were evidently astonished at the early peregrination of their precocious offspring. In fact, at first they were quite unable to comprehend the situation, and frequently returned, by force of habit, to the empty nest. In the mean time the youngsters, so long unvisited, became drowsy and dozed on their perch. Occasionally they would wake up with one accord, and each evidently mistaking his brother for a parent arriving with food, the most ludicrous strainings and *chee-cheeings* would result, which only subsided with sheer exhaustion.

Getting Acquainted with the Camera
